Based upon this larger work, the merits of which are too extensively known to need dilution on them, Matthew Paris, in the latter part of his life, made still another historical compilation, extending from A.D. 1066 to 1253, since obscurely known to a few among the learned as the 'Historia Minor,' the 'Chronicon,' and the 'Liber Chronicorum,' and which Sir Frederic Madden has edited in the present volumes, under the preferable title, on the authority of Paris himself, of the 'Historia Anglorum.' There is but a single early manuscript copy of this work now known to exist—the folio marked 14 C. vii., in the Old Royal Library in the British Museum. The history of its devolutions, as traced by the learned editor, since the time when it was penned by the industrious hand of Paris himself, in 1250 and the succeeding years, and presented by him to the monastery whose memories he so fondly cherished, is singularly curious. In 1419 there is evidence that it was still in the Abbey; but at some time between that year and 1447, the period of his death, it passed in all probability into the possession of "good Duke" Humphrey of Gloucester, by gift, possibly, of Abbot Whethamstede, an intimate friend of his; then being still to be traced, by chemical agency, or the final leaf, in the Duke's handwriting—"Ceste livre est a moi, Homfrey Duc de Glowcestre." It does not appear to have been among the manuscripts presented by the Duke in his lifetime to the University of Oxford, but is next met with in the possession of John

tussell, Bishop of Lincoln (translated from Rochester in 1480), who, from a written memorandum on the fly-leaf, seems to have intended to restore it to the monks of St. Alban's, should it prove to have formerly belonged to them; but if not, in conformity with the condition under which it had come into his hands, it was to be given to St. Mary's College (now known as New College), in Oxford.

Polydore Vergil, an English historian, though an Italian by birth, appears next as its possessor, it bearing evidence of his having read it attentively, in the marginal notes in his handwriting throughout the greater part of it. Somewhere between 1500 and 1550 it must have found its way into the King's Library, as it was there when Bale consulted it, about A.D. 1550-2. Then borrowing it from the library, he took it with him to Ireland, it being mentioned by name in the list of his manuscripts there. After his death, in 1563, it became the property of Henry Fitz-Alan, Earl of Arundel, from whom it was borrowed by Archbishop Parker for a time. On the Earl's death, his library descended to John, Lord Lumley; at whose decease, in 1609, the whole collection was purchased by King James the First for the use of Prince Henry, and so became reunited to the Royal Library, which was eventually presented to the British Museum in 1757.

On the second fly-leaf of the volume, we learn from Sir Frederic Madden, is written the name "Johannes Minshew," probably, as he says, of the seventeenth century. He has omitted, however, to suggest that this is, almost beyond a doubt, the autograph of worthy John Minshew, an industrious lexicographer of the reign of James the First, and author of the 'Dictionary of Nine Languages,' said to have been the first book printed in this country with a list of its subscribers. Whether Minshew was for a time possessor of the manuscript, or whether he may have inserted his name on consulting it, it is probably impossible now to determine.

The manuscript, like others in the British Museum and the Parker Collection from the same hand, is enriched with various maps, paintings, and shields of arms, executed by Matthew Paris himself, who was in repute for being as skilful a limner and artist as he was a laborious chronicler and historian. The shields of arms are given in outline in the margins of the present Rolls volumes, and so form a feature of additional interest in the work.

The value of this Lesser Chronicle of Matthew Paris was recognized at once from the time that it first came under the notice of the scholars of the sixteenth century; indeed, it seems to have very narrowly escaped publication at the hands of Archbishop Parker and his somnolent scribes. Besides being consulted by Polydore Vergil, Bale, and Flacius Illyricus, a learned correspondent of Archbishop Parker, and professor in the University of Jena, it was made considerable use of by Parker himself in his work, 'De Antiquitate Britannicæ Ecclesiæ,' 1572, by Joscelin, Parker's secretary, in his historical collection preserved in MS. Cotton, Vitell. E. xiv, and by Lambard in his 'Dictionarium Angliæ Topographicum,' compiled 1565-77, but first published in 1730. Subsequently to the time of Sir Roger Twysden, who made a transcript of it in 1648, it seems to have been forgotten by the learned until the remembrance of it was resuscitated by the Rev. Joseph Stevenson, who has remarked in the notes to his excellent edition of the 'Scalacronica,' 1836 (p. 211), that it varies so much from the 'Greater Chronicle' of the same author,—"as to assume the appearance of a distinct version, and a

version, too, which in many points is fuller, stronger, and better than the one already given to the public." A similar opinion is expressed also by the Rev. H. O. Coxe in the supplemental volume to his edition of Wendover, 1844.

As to the plan upon which the 'Historia Anglorum' has been edited, we leave Sir Frederic to speak for himself:—

"As the work of Wendover forms the basis of the one now published as far as the year 1235, references have been made in the margin to Mr. Coxe's edition, and, in order to point out more readily the new matter introduced by Matthew Paris, dots have been added opposite such passages as are not found in Wendover, or are re-written and altered. Portions, however, of these passages sometimes occur in the 'Greater Chronicle' of Paris. In general the marginal additions and corrections are peculiar to the present work, and are not met with elsewhere. Subsequent to 1235, it was at first proposed to add references to Wats's edition of the larger work; but, on further consideration, it was thought unnecessary and, in some respects, inexpedient."

Approving as we do the plan of thus indicating the new matter added to the text of Wendover, we are inclined to think that it is, perhaps, to be regretted that the learned editor has not adopted some similar means of enabling the reader to discern at a glance such matter in the 'Historia Anglorum' (after 1235) as has found no place in the 'Greater Chronicle' of the same writer.

Want of space in the present volume, Sir Frederic informs us, and the advantage of having the whole of the text first printed off, have induced him to defer to a future occasion the consideration of such biographical and other notices as we possess of Matthew Paris, as also an estimate of the historical value of the work now first published. This will appear in the Preface to the third volume. We hope, therefore, upon the appearance of that volume, to have an opportunity ourselves of reverting to the internal merits of the work.

For the present it only remains for us to add, that from Sir Frederic Madden's Preface we learn that the *verax questio* as to the authorship of the 'Flores Historiarum,' hitherto attributed to an unknown "Matthew of Westminster," has at length received a satisfactory solution at his hands. He has discovered the original copy of the work, No. 6712 in the Chetham Library, at Manchester, and from it has ascertained, "beyond all doubt, that the largest portion of the 'Flores Historiarum,' attributed to the pseudo Matthew of Westminster, was written at St. Alban's, under the eye, and by direction, of Matthew Paris, as an abridgment of his 'Greater Chronicle,' and the text from the close of 1241 to about two-thirds of 1249 is in his own handwriting." It was then continued by other hands down to the battle of Evesham, in 1265, after which it ceased to be written at St. Alban's, and, passing into the Library of St. Peter's, Westminster, was continued by monks of that house to 1325. Its new locality, no doubt, gave one portion of its title to the manuscript, while the tradition of its original authorship was continued in the name given to its assumed Westmonasterian writer.

After the Storm; or, Jonathan and his Neighbours in 1565-6. By J. E. Hilary Skinner, Barrister-at-law. 2 vols. (Bentley.)

Immediately after the final submission of the South, when all parties on this side the Atlantic were asking "What next?" with regard to American affairs, when timorous advocates of compulsory labour were apprehensive of insur-

rectionary movements on the part of the freedmen of Dixie's land, and when the friendly observers no less than the opponents of the Northern Government were making conjectures as to the difficulties which President Johnson would encounter in dealing with Confederate interests, Mr. Hilary Skinner started for the States, in order that he might get information on the spot, might visit the chief scenes of the late struggle, and might be a personal witness of the changes wrought by war since his first visit to the Union, made when secession was only a menace on one side and a vague fear on the other. Having made his inspection and returned in safety, he presents his report, which is as readable and thoroughly entertaining a book about American life and politics as any we have read for some time past. That it furnishes full information on all the points concerning which English readers are looking for further instruction we cannot say; that it will completely satisfy the requirements of statisticians and political students we do not venture to predict; but we have no hesitation in commending it as a faithful reflexion of the surface of American society at the present crisis in those localities where the writer looked about him with intelligent and impartial eyes. The tone of the book is healthy and conciliatory. Cherishing a cordial dislike of slavery, and on proper occasions condemning it in terms which manifest no wish to palliate crime with pleasant speeches, the writer is at the same time just towards Southern proprietors, and even generous in his recognition of the gallantry with which they fought for that which they conscientiously believed to be a good cause. In this respect Mr. Skinner deserves emphatic praise. Nor is he to be commended in a less degree for his sagacity in reading character, and the lightness and skill with which he tells a good story.

So far as Canada is concerned this commendation must be qualified. Partly because Canada is a subject on which nothing new can just now be said, but chiefly because the existing conditions of her social life are tame and commonplace by the side of the revolutionary progress of the States, Mr. Skinner seems to flag, and he exhibits an occasional tendency to "talk guide-book" in his chapters on the defences, resources and probable future of the chief of our American dependencies. But so long as he speaks about the States or Mexico he is a delightful as well as intelligent companion.

Amongst the signs of the recent struggle which Mr. Skinner encountered on his arrival at New York in July, 1865, not the least painful was the number of young men who had lost limbs under fire or the amputating knife. In times of peace surgeons have leisure and opportunities for the practice of conservative surgery; but in the crowded and inadequately furnished hospitals to which soldiers are brought from hard-fought fields for surgical treatment, the amputating knife is necessarily had recourse to in a vast number of cases which under more favourable circumstances could be successfully treated without the loss of a single member. "We had a skirmish before St. Petersburg," observed the twentieth maimed man whom the author encountered during a morning's walk, "and my leg was broken. It seemed as if it might have come right, but the surgeon whipped it off whilst I was asleep. . . . Surgeons are much like other folk, and want to hurry up their work. . . . There was a comrade of mine that had an idee he'd be wounded some day, and was fearful of losing his limbs without cause. He gave me fifty dollars to carry for him just before the big fight at the Wilderness.

'Now,' said he, 'if I get a hole knocked in my skin, you give the surgeon that's looking after me them fifty dollars, and beg him to save every bone if he can fix it.' I promised him, and then came the battle. My comrade was hit in the arm and leg. They took him to the rear, and it wasn't for several hours after that I could get leave to visit him. Five hundred dollars wouldn't have saved his limbs then, for they were both taken slick off. 'Wal, sir, you've been smart about it,' said I to the surgeon. 'Yes, sir,' said he, 'guess we have. Both sides uppermost with care won't do here. We've hard work to get through at any price.' And he was right, sir. The amount of arms and legs they had taken off was quite surprisin'." To meet the consequent demand for artificial limbs some shrewd speculators have started the "American Arm and Leg Company," with an establishment at No. 28, Four-and-a-half Street, Washington.

In his notes on Northern society the writer pays attention to certain misconceptions concerning American life widely prevalent amongst English readers who have taken their views on the subject from books written to amuse rather than to instruct. "Most English people," he says, "entertain the erroneous idea that domestic seclusion is unknown in America. Great caravanseries with marble floors and troops of nimble waiters are thought to be the only homes of Jonathan's nomadic children. They live in public and die early through 'bolting' meat three times a day. Such is the popular belief. Yet these Americans of long journeys and large hotels will reside quietly for ten months of the year in their brown-faced town mansions, or in their wooden country-houses." Introducing him to the country residence of an American gentleman, the book enables the reader to witness an American wedding and all the attendant festivities. The bride is a beautiful and well-born girl; the ceremony is performed in her father's drawing-room at an early hour of the afternoon by an Episcopalian clergyman; a feast follows the sacred celebration, which differs from the English wedding-breakfast in the substitution of jovial conversation for those wretched speeches and toasts which contribute so largely to the clumsiness and heavy formality of our marriage-festivals. There is no feudal entertainment of humble neighbours under canvas, or at a lower table; for no Northern gentleman would presume to invite within his doors guests whom he was not prepared to treat as equals. But though the poorer and less refined neighbours of the bride are not present at the gay doings, they manifest a pleasant interest in them:—

"The village blacksmith sends his compliments and a request for some cake to dream on, and the butcher, who has looked round as usual, guesses that 'they're going to have a time.' Every one is smiling and cordial, although there will be no roasted ox nor flowing ale." As the evening begins to close in the bride and bridegroom leave for the nearest railway-station in "an open carriage, with three seats," and, having room for others as well as themselves in the capacious vehicle, they take with them a pair of friends who wish to catch the same train. "No chariot and post-boys," observes Mr. Skinner,—"more deviation from English forms—but a hearty unaffected start in life that it is refreshing to see. And they will travel in a car with fifty other people, where Lady Alexandrina Crosbie's bonnet would have been quite safe. A different view of the honeymoon to ours, though quite as reasonable."

In Virginia, and as he journeyed southwards, Mr. Skinner heard many and conflicting judgments passed upon the moral and intellectual

worth of Sambo, and he was entertained with an equal variety of predictions as to the consequences of emancipation. Indeed, the irrepressible negro was the chief topic of conversation in railway-cars and on river-boats; and though the discussion on this subject was often loud and stormy, abolitionists no longer held their tongues through fear of their antagonist's revolvers. In contrast to Southern savages muttering threats of vengeance on the victorious Yankee, and declaring their hope of living to see the restoration of slavery, Southern gentlemen of superior enlightenment and temper expressed their readiness to accept cordially the conclusion of the war, and spoke hopefully of the future. Instead of wishing to recall the "peculiar institution," these Southerners of high station and unquestionable humanity seemed thankful for their freedom from a system which their conscience condemned as a crime, and their intellect recognized as a political blunder. They were of opinion that the negroes would be less industrious as freedmen than they had been as slaves; but they thought their people would anyhow give them enough labour for wages, to ensure fair crops of cotton. General York, late of the Confederate Army, a gallant soldier who served under Stonewall Jackson, spoke warmly on this point, when Mr. Skinner questioned him about the labourers whom he had employed to cut wood at a dollar a cord. "They'll work," the General answered; "they have worked in chopping this wood, and I am confident of getting a thousand bales next season. I shall make it worth their while to stand by me, and by — if they do I'll stand by them." By another employer of black workmen—a French planter who had long been a settler in Louisiana—Mr. Skinner's inquiries were thus answered: "Yes, Sare, two hundred bales I will have next year, if I scratch de ground vid my fingers and my toes. I have promise my men half de crop, if only dey vill work; and I have de hope dat dey vill. Dis a fine country: vid half de crop, yes, Sare, only half de crop, I am paid." In reply to an inquiry "Whether the darkeys would work as well for wages as they had worked under the former system," a third witness answered, "No, Sir, they won't. But we shall get a cotton crop for all that; and round there where I live they are not working badly, I tell you." This testimony, it should be observed, came from the lips of an enthusiastic "rebel," who, notwithstanding his submission to the decision of war, took occasion to assure Mr. Skinner that he should still "account a nigger inferior to a white man, whatever those — abolitionists might say."

So far as the traveller could see the state of the case, masters of the better sort had met their negroes with fair offers, and in return had obtained a sufficient number of workmen who were as well disposed towards industry as free workmen usually are. For a time after the fall of Richmond there was a manifest tendency amongst a considerable proportion of the blacks to travel over considerable distances of country; but there is reason to believe that in most cases this tendency was less due to a taste for objectless vagrancy, than to a natural wish on the part of the wanderers to revisit the scenes of their early years, or obtain sight of children or friends from whom they had been severed for many years by the cruel operation of the slave-trade. For the most part, the negroes seemed keenly grateful for the result of the war, and were looking forwards to better days for themselves and their children. Moreover, the school-master had already begun to busy himself with the rising generation of Sambo's people; and though his operations were watched with sus-

picion and anger by a minority of brutalized whites, they met with encouragement rather than disapproval from Southerners of better morality and sense. "There are some here," observed a not ultra-liberal Southerner in an undertone to Mr. Skinner, "that would take it ill if they heard me say so much, but I am for elevating the nigger as high as he can be brought before we make up our minds how much he's worth. I hate all abolitionists, though I cannot help feeling that the 'institution' was the grindstone which broke us up. You see it got tighter and tighter as the end drew near, until my folks at home persuaded themselves there was something of Providential about it." Of the more humorous conversations about negroes and their ability to discharge the functions of freedmen, the following passage is a specimen:—

"There was talk of bales and hogheads in the saloon, as also of that all-important question negro labour. One gentleman was positive that nothing but severe measures could keep the hands on a plantation. Another ex-slaveholder, who professed his willingness to accept what had been done as final, and to make the best of existing laws, told me how valuable preaching had been found in keeping the negroes steadily at work: 'Why, Sir,' said he, 'long before this emancipation I knew a hard old sinner that was running a place with several hundred people on it, and he found punishing them seemed to do no good. Well, he bought a fiddler and got a dancing-room fixed up, so that every Saturday the niggers might have a ball. They're mad on dancing, and this fiddler made the hands more cheerful like, so as only a few of them would go off to the swamp. But that wasn't enough. The old man wanted his place to be perfect, so he bought a preacher, an ignorant coloured man, you know, Sir. Well, them darkeys are death on preaching. The old man got a chapel fixed up for his pious nigger, and by G—, Sir, he found his overseer might give them h—l before they'd run, with dancing and preaching going on together.' My informant paused; but as I felt by his manner that there was more to be heard, I muttered 'Pray proceed,' or 'Your story interests me,' as do obliging theatrical characters when the hero is allowed a moment to recover his breath. 'Wal, there is more of it,' he said with marked emphasis; 'that old man would sometimes step in to hear the preacher himself. He was proud of owning a nigger that could keep it up just like a real minister, and, Sir, one day the darkey converted him. After that old Massa would sit just as regular as Sambo to hear the preaching, and he swore if this one died there should be another bought, for it did them all good. By —, Sir, it was a hard place, and they wanted some enjoyment, I can tell you.'"

Though newly-acquired freedom had not turned their heads or disposed them to insolence, it was evident to Mr. Skinner that the negroes were fully prepared to defend their rights with spirit, and that liberty had rendered them impatient of such outrage as any manly nature would resent. Of this change for the better the following scene, which occurred at New Orleans, is an illustration:—

"An incident on the levee, which I observed somewhat later than my visit to the battle-ground, shall now find place. There was a darkey ashore one of the steamers, and as he stepped ashore he brushed slightly against a white passer-by. Whitechap hit Sambo in the face, whereupon Sambo paused for a moment to consider his position, remembered that he was free, and followed the aggressor with a broad grin. 'What do you want, you — nigger?' inquired Whitechap, on perceiving that he should have to say something. 'What do I want? — you!' responded Sambo, 'just hit me agin, that's all. Why, I'd whip two of you!' They faced each other during several minutes, and Sambo uttered a torrent of oaths unmoved. 'Hit me agin, that's all!' said he. But his opponent, not having a taste for rough-and-tumble played at by two, though willing to perform a solo on the human

countenance, slowly evaporated amid the jeers of the spectators. 'Yes, Sir,' remarked an elderly gentleman, who was present, 'there has come a sad change in society here; the nigger couldn't have spoken like that formerly without being shot down. If he'd done it to me now, I'd have taken a stick or something and tried to break his skull!'"

Here is a comic incident illustrative of Southern manners amongst the "mean whites":—

"From where K— lives, in a comfortable wooden house mounted on wooden piers, it is not far to a doctor's office, a grog-shop, and a smithy. The three institutions thus classed together had each its share of patronage as I first beheld them; that is to say, each had a group of loafers collected before it—grave at the medical department, impatient at the smithy, and jovial at the grog-shop. 'Hallo. Mister, hold on there a minute!' was shouted from this last, as my footsteps, after lingering near the smithy, were turned towards K—'s abode, and two gentlemen of haggard appearance stalked up to me.—'In what can I oblige you, Sir?' was my question to the wildest looking of the pair. He hesitated, as though embarrassed, and doubting how to proceed; but his companion remarked huskily that they'd 'got to do it, so there was no use making a long speech.' I may have seemed surprised and inclined to refuse any further concession, for the wilder-looking man observed, with a grim smile, 'No offence, Mister, only there's a treat depending on the size of your hat, and we're the committee to measure it.'—'Gentlemen,' I replied, handing them the property in question, 'Kench & Son would be proud to think they have astonished you.' The husky gentleman anathematized all haters for the prices they were charging, whilst he of the wilder looks measured my hat with an air of triumph. They then muttered some indistinct thanks, and quitted me abruptly to make their report at the grog-shop door."

Of course Mr. Skinner heard many an anecdote of the war from soldiers who had fought under Lee or Grant. Recalling the stories of his Northern friends, he says—

"The veterans told me of their hunts for food in Southern farmyards, and showed small prizes which they had brought away. One had a photographic album, filled with likenesses of rebels great and small. Another boasted that half-a-dozen silver spoons were stowed in his sack. Very few would own to having taken money, and they denied that their corps had committed personal outrage upon the inhabitants. 'The worst I did to any rebel woman was making an old gal down Lynchburg way trade her watch for mine,' said a small Unionist, who looked about eighteen. 'And that was wrong of you,' broke in Sergeant Warren, 'the President had forbidden trade with rebels.'—'Wal, my watch had the inwards out of order, so she had a bad exchange; wasn't that enough?' Warren looked grave. 'Tell you, boys,' said he, 'thur's been some dreadful suffering among them proud Southern families, and its hard times for any people that have a war in their country.' The audience assented. 'Division of property is what I say,' remarked an elderly soldier. 'Kinned to a house with the mistress crying before a drawerful of money. So I said, 'I'd count them right away, and she should keep half and I'd take half, and that would make all smooth between us.' Wal, there were a hundred dollars in gold, and I took fifty. Guess that war fair.'"

For Mr. Skinner's notes respecting Cuba, Vera Cruz, the city of Mexico under French occupation, the Mexico cricket club's chief quarters at Tacubaya, punting on Lake Texcoco, and life at La Puebla, readers are referred to the second of these lively volumes.

NEW POETRY.

Dramatic Studies. By Augusta Webster. (Macmillan & Co.)

In spite of some serious faults, Miss Augusta Webster has written a remarkable book. She endeavours to translate herself thoroughly into

the characters which she conceives; and, although there is a family likeness in most of them, the phases of life presented are sufficiently varied to avoid monotony. Her "Preacher," who thinks more deeply than he chooses his flock to know, and feeds them, half by habit, upon conventions rather than upon convictions,—her "Painter," who has to sacrifice his ideal of Art to the needs of the hour, and who, when he has done something better to satisfy his ambition, can only say,

I think the world would praise it were I known,—her "Sister Annunciata," in whom is embodied the whole struggle of a young heart quickened with human love, and condemned to seek heaven not through the purification but through the stifling of its instincts,—the sad pathetic reverie of the plain girl yearning for love—"By the Looking-Glass,"—are all expositions of separate individualities profoundly studied and minutely realized. Amongst these, "Sister Annunciata" holds the foremost place. The long vigil of the devoted sister, in which she struggles to wean herself from memories of the love which will recur,—the touching self-sophistry through which that love asserts its life, even in the attempt to write its epitaph, and the way in which the sweet nature of the sufferer stumbles over the ruin of its hopes to a higher life, and, with a right impulse but exhausted power, falls worn-out at last on the threshold of heaven, are worthy, in point of conception, of high praise, and show a peculiar psychological insight which suggests (with little detriment to the present writer's originality) the influence of Mr. Browning. Miss Webster, indeed, also recalls to us Miss Rossetti, and, though inferior to her in range of sympathy, and very inferior in completeness of execution, approaches her more closely than any poetess of our time in the power to fathom the secrets of the heart and to unravel their intricacies. The extract which follows loses much of its significance by being detached from the context; but, in spite of this disadvantage, the intrusion of the old human love upon the aspirations of the striving saint is painted with a truth and a delicacy which will compel recognition:—

Nay, it must not be.

Oh once my own beloved, now a mere name,
A name of something that one day was dear,
In an old world, to one who is no more,
Vex me no more with idle communings.—
Love me, love her, what matters it to me?
I stand as far apart as angels are
From earthly passion—not by my own strength,
But by the grace shown in me, and the bar
Of my divine epousal. Stand far off
Even in thought.

Yes, though this was thy word,

That long fond evening when we stole apart
Out of the music and the talking, when
We stood below the orange-boughs abloom,
And the sweet night was silent, and the waves
Were rocking softly underneath the moon,
Asleep in the white calm, and we, alone,
Were whispering all our hearts each into each:
"Eva, my Eva, darling of my life,
If they should part us, still you are my all.
I will not love the other. She might bear
My name, gild with the purchase-money for it
Our houses' tarnished splendours, rear the heirs
Of its new greatness.—You, you, only you
In your cold prison, would be wife to me,
Wife of my soul. Are we not one, love, so?
They could not beat down that; and I would live
In a secret world with you, so that in Heaven
I could claim you boldly, 'this was my own wife,'
And all the angels know it true."

Ah me!

How long that wild rapt promise hindered me
In my first struggles for the Saints' cold peace,
Because he spoke it in a certain tone—
Sometimes he used it—that had a strange power
To thrill me with strange pleasure through and through,
And leave long after echoes still possessed
Of something more than most tones, even his,
And easier to recall at will: and these
Remained with me; I could not quite forego
Their dangerous sweetness.

It is pity that such high capacity as the book evinces should be so often marred by a loose and diffuse style, which a little patient

revision might have cured. Making every allowance for the colloquial reality which is often proper and effective in dramatic composition, it is hard to tell the distinction between poetry and prose, if such lines as these can be assigned to the former:—

And then the critics say, "You should have waited.
'Tis the fault of the age, our young men will not wait."
And the fashionable world says, "To be sure—
The fault of the age! Indeed he should have waited:
We might have bought his pictures then:" and flies
With open purse, on a race for who bids first,
To its latest darling's studio—takes all there,
If he did it awake, or sleeping, or by proxy,
At equal price. What matter? There's his name!

Surely a writer who can think out her conceptions so fully might take the comparatively slight pains of clothing them in compact and well-considered language. That Miss Webster can do this, the frequent glimpses she gives us of beauty in description or illustration abundantly show. She has evidently a future before her if she cares to win it. We would only further suggest to a writer in whose mind the forces of thought and emotion blend, that she should employ, if possible, her double power for healthy uses. Once more we have in her book a statement of the sad problems of life, while the suggestions which everywhere abound for hope and fortitude are comparatively ignored. The lessons of trust in Divine goodness, which might be learnt from the beneficent processes of Nature, from the aptitudes of humanity for a higher life, from the noble instincts of the heart which, in their strength and purity, can subdue circumstance and defy Time:—these are truths which surely deserve poetic expression—truths sufficient to guide us onward in spite of the mystery which surrounds us. And let it be remembered, that without such mystery existence would at once become tame and disenchanting—a dull sea with a fixed horizon which, because it never recedes, never allures.

The Dole of Malaga: an Episode of History dramatized. By Digby P. Starkey. (Cassell & Co.)

THE interest of Mr. Starkey's drama turns less upon the riveting passage of history with which it professedly deals, than upon a tale of domestic love interwoven with it. Mr. Starkey's dialogue is carefully written; but he lacks capacity for conceiving and painting public characters and events: hence his Ferdinand and Isabella, with their brilliant surroundings, are little more than lay figures tolerably draped. The domestic incidents, as we have said, form the attraction of the drama. These, though they might have been conveyed in a more vivid style, are interesting in themselves and will carry on most readers to the close.

Hannibal: a Poem. Part I. By Charles Rann Kennedy. (Birmingham, Howell & Day; London, Simpkin, Marshall & Co.)

This poem presents the career of the great Carthaginian in heroic verse. We have some doubts whether a long, martial narrative will suit the existing taste of poetical readers, and whether Mr. Kennedy has all the imagination needed to revive an interest in the class of theme which he has chosen. He grapples, however, manfully with his difficult task, and gives us descriptions wanting neither in force, individuality, nor picturesqueness—this of battle, for instance:—

The field is all aglow
With noise and dust, and speeding to and fro
Of message and command, and marshalling
Of rank and file, and horsemen on the wing,
And trooping of light-armed with dart and sling,
And hawk-eyed archers notching to the string
Their flight of feathered arrows, to prelude
The sterner shock of arms, whose skirmish rude
Affrights the welkin. Thick as winter hail
Rattles the stormy shot on plate and mail,
Until the sun-bright standards in advance
Display the ordered squadrons, steel and lance

Panting for onslaught, and the heavy bands
Of infantry, with yet unpurpled hands
Wielding their various implements of death :
The Roman, slow of pace, and holding breath,
The savage foe's demeanour to peruse ;
The Celt, half naked in his plaid and trews,
And snowy-frocked Iberian at his side,
With hideous yells approaching, their long stride
Quickening to a run, in moony curve
Pushing their medley war.

—We have no space for further quotation, though the scene grows in vigour as it proceeds.

Amongst the writers whom we should like to praise, and who will, perhaps, some day justify our bias, are Charles Seabridge, author of *Connected Poems* (Trübner & Co.), and Lorenzo Somerville, to whom we are indebted for *Eros* (Trübner & Co.). Both these authors have fancy and suggestiveness; but the delicacy of their styles fades into a perplexing haziness, which, after a time, will tire the reader whom their better qualities may attract. This is a fault which time and patience may remove, and we shall not be surprised if it should become hereafter our pleasant duty to report more favourably of the writers in question. We make a gentle descent from their qualified merits when we open the mild but not unmeaning pages of *The World's Epitaph: a Poem* (printed for private circulation). The descent is more abrupt when we come to a commonplace yet fairly-executed imitation of Walter Scott—*A Tale of Ludlow Castle*, by the Rev. W. W. Skeat, M.A. (Bell & Daldy)—and to the mediocrity, relieved by occasional satirical smartness, which Mr. W. Buchanan, B.A., displays in his volume of *Verse, Serious, Humorous and Satirical* (Edinburgh, Menzies). On this still gradual slope of merit we recognize well-intended verse, which sometimes touches by genuine feeling, though without fancy or imagination—like that contained in *Israh; or, Jephthah's Vow: a Poem in Six Cantos*, by Isabella de Paton (Binns & Co.), in *Lyra Domestica, &c.*, by Agatha, to which are added a few poems by her Husband (Lindley), and in *Sulus: an Allegory, in three Parts*, by Fictor (Nisbet & Co.). The descent becomes sheer indeed in the case of *The Duke of Friedland: a Play in Four Acts*, by William Boerhaave (Murray & Co.). The proportion between the writer's capacity and his attempt will expose him to the ridicule of the ill-natured. We forbear to quote the book. To misjudge one's vocation is merely a mistake, and should not be dealt with too harshly. In concluding our notices for the week, we may mention *The Wild Garland*, selected and arranged by Isaac J. Reeve. Vol. II. (Pitman), which is a collection of epigrams so extensive and diversified that the reader is sure to find much to amuse; and *Dublin Acrostics* (Hodges, Smith & Co.), which have also the merits of ingenuity and variety.

OUR LIBRARY TABLE.

God save the Green! A few Words to the Irish People. By Mrs. S. C. Hall. (Partridge.)

"God save the Green!" so far from being a seditious cry, is one in which every loyal Irishman may join. An Englishman may shout "Rule Britannia!" without being suspected of a distaste to "God save the Queen!" Mrs. Hall sees this perfectly, and she "improves the occasion." In a brief, but pretty story, told in her old and well-known manner,—with her characters all real, Irish of the sod and speech, in peculiarities and bearing,—touched slightly here, but gracefully as a well-skilled artist might do,—the accomplished author shows very excellent reasons why her countrymen should shout "God save the Queen and the Green!" We may best illustrate the story by a couple of extracts. Here is an illustration addressed to folks who quarrel without having aught to quarrel about:—"The chest of drawers will be a faithful under the

window," said Tom Lavery. "Under the window!" repeated his wife—as pretty a little woman as you'd see in a day's walk, but with a cruel tongue that would give nineteen to the dozen any day, and not think it a trouble—"under the window," she said again, with a scornful curl on her lip, "it shall never go under the window while I have breath in my body; no, it shall stand forenent the window, where it will be seen and admired; under the window, indeed! I wonder you don't say up the chimney!"—"It shall go under the window, Moyna Lavery; it's too say going I have been with you, intirely. You are never satisfied, full or fasting, and think all the world must curtesy to you; it shall go under the window, and you'd better not dare hinder it!"—"It never shall," said Moyna; "I'll pitch the window into the street first."—"And I'd pitch you after it for company," said Tom. On this Moyna raised a "wirriathru" that you'd hear from this to Bantry, and Tom's loud voice had more noise than sense in it,—and Tom took the stick to his wife,—and she screamed murder, and at the lucky minute the door opened, and there, sure enough, stood Father Barry, and, as became a holy and good man, he asked them what they were at and what they were after, and as Moyna had the nimblest tongue, she said "her husband was that Omathawn that he would have the chest of drawers under the window, which she never would give in to, never! she'd lay her bones in the green churchyard first!"—"But where's the chest of drawers?" said Father Barry,—and may be the fool's look didn't come over both their faces: "The chest of drawers," said one; "Is it the chest of drawers," said the other; "oh, sorra a chest of drawers we have at all—yet." And, as a novel grievance to Ireland, the following is worth noting:—"You know, uncle, that time differs in all countries; that when it's midday here, it's midnight in Australia; and that when it's 12 o'clock in London, it's nearly half-past 12 in Dublin, and so on. Well, I was standing, not long ago, in the railway station at Liverpool; it was just ten minutes past 10; when up rushes a gentleman, and I knew at once he was one of my own countrymen: 'I am going to London by the 10 o'clock train,' says he to the porter. 'Train's gone, sir,' says the porter. 'Can't be,' says the gentleman, in a flurry, 'it's not 10 yet,' pulling out his watch and showing it. 'Ah! sir,' says the porter, 'you forget that our time is twenty minutes before yours.' 'Twenty minutes before ours!' exclaimed the gentleman angrily and indignantly; 'do ye call that justice to Ireland?'—The hand that drew the sketches, and the pen that told the tales of the Irish peasantry will be recognized in this story as having been efficiently and right worthily employed.

Plain Papers. By Pikestaff. (Trübner & Co.)

It is very true that there are working men who, if they take up a book after labour, find increase of, and not rest from, labour in vainly attempting to read or understand it. To remedy this evil, the writer of these Papers addresses himself to supply a widely-felt want. He gives plain pages wherefrom plain men may derive profit and pleasure. Whether these Papers may be more profitable and pleasurable to them than "the village green" may be doubted, though converse with the work may be more so than resort to "the city music-hall and the nowhere absent pot-house." The intent is good; but there is no method in the book, and instruction cannot follow to much advantage. The step made, however, is in the right direction.

Play-hours in London. By L. J. S. (Mozley.)

THERE is a small amount of novelty in this little book, which is not always to be discovered in more ambitious and important productions, and which consists in showing how children far removed from hay-fields and the numerous charms of the country, may still find amusement in their play-time, combined also with instruction to be obtained in visits to the Tower and like places. The children described are not so angelic in disposition as model children usually are; and one has the satisfaction of finding them in small troubles occasionally, which is always highly appreciated by the young reader. We think this little work may be a favourite in the nursery.

Jonathan le Visionnaire. Par X. B. Saintine. (Hachette & Co.)

M. Saintine's collection of stories is here offered in a new edition, with many emendations by the author. To the collection is added, 'The History of our Antediluvian Civilization.' This is a Utopian romance, and the author's conclusions seem to be that Orpheus, Homer, Hesiod, Moses, Zoroaster, Lycurgus, Numa, and all civilizers, owed their success in civilizing to the cleverness of their lying, and that a lie is the basis on which human society is founded, though it may only be able to flourish through a cultivation of truth. Such a history is a bad joke, although it be told in French worthy of a Tourangeau.

Photographs of Terra-Cotta Columns modelled for the Lecture Theatre of the South Kensington Museum. By Godfrey Sykes. With Descriptions, and a Memoir of the Artist's Life. (Arundel Society.)

WHATEVER may be thought of the value of such works as the late Mr. Godfrey Sykes produced, there are few who do not regard them as admirable in feeling for the peculiar phase of style he adopted, and singularly felicitous in the decorative effect he aimed at. There is no denying the very great earnestness and ability of the artist who, almost in his dying hour, suffered himself to be raised by ropes to the scaffolding where his pupils were at work, as this memoir assures us was done by Mr. Sykes, in order that he might personally inspect their progress: he was a valiant as well as a valuable man. We admire one who did this, and honour the doer, although his sort of Art is not wholly to our taste. His work was often beautiful, although it has neither the rude vigour of the early Gothic decorations, nor the exquisite grace and subtlety of the later phases of the same style, wherein a noble art existed and flourished in development. It was more charming than most of the so-called Elizabethan and Jacobean productions in this order, because it was more refined, although weaker; also that it followed models which were based on a purer taste than theirs. Thus much for the picturesque aspect of the subject. On the other hand, the style of Mr. Sykes's adoption is less noble and grave than that revived order of classic design which found favour in the last century by means of its elevation and ineffable chastity of beauty; its superb reticence in form and colour, which, satisfying its votaries only in something like perfection, was in itself an education to the observer who could see with discerning eyes what Flaxman practised, what Stothard felt and drew, what Wedgwood loved with all his heart. Our preference involves questions of large scope, well worthy to be thought over. From them we may turn to what Mr. Sykes did as decorator of that edifice at South Kensington which is now nearly ready for use, and will be found beyond all comparison the pleasantest to the eye of recent public works. This is not saying much, the reader will aver; we will add, that, although with obvious faults, Capt. Fowke's latest design deserves, and will surely win, applause, and amply justifies what has been said of his merits in architecture. No small part of its charm is due to the singular felicity with which Mr. Godfrey Sykes adapted his own taste in decoration to the wants and aims of the architect he served so well. Few things of the class please the eye, in their richness and varied beauty, so well as the four-fold lines of shafts of terra-cotta, with their highly picturesque frustra, moulded with figures in relief; in each of these is placed three bands of sculptures, of design well varied within their limited scope; the spaces between the annulets that inclose these lines of figures are fluted, and have twining about them delicately-moulded leaves and branches. If we object to any part of the design for these columns, it must be to the needless restlessness that is expressed by the introduction of these branches; we object to this as strongly as to the naturalistic, imitative manner of their execution. Having entered thus far into detail on this subject, we are bound to add, that few things of the sort could be better adapted for the place and use to which they are here devoted than the lines of figures that

appear on the sculptured frustra; the collar of eaves at the bases of the shafts and the capitals above are equally worthy of admiration. As we have already described at length the characteristics and purport of the designs, it will be needless to do so again. We have not now to criticize in detail Capt. Fowke's new building, with which the decorations here photographed are so intimately connected. However, as Mr. Sykes contributed so much to their success, it was inexpedient to omit an opportunity for applauding the singularly happy results of the united labours of the friends. Mr. Sykes has, we understand, left a place which will not be filled or even occupied for the present.

Adventures in the Far Interior of South Africa, including a Journey to Lake Ngami, and Rambles in Honduras: to which is appended a Short Treatise on the Best Mode of Skinning and Preserving Birds, Animals, &c.; also, Receipts for making Preservatives. By J. Leyland. (Routledge & Co.)

THE author of this little volume publishes reluctantly, under the pressure of private friendship. His style is unpretending, and the incidents he has to narrate are not of a startling nature. To young naturalists, and to persons unable to procure more expensive works on Africa, the book, however, will commend itself. It does not increase the knowledge which older naturalists and students of the African mystery have already acquired; but the young and the uninitiated will find instruction and amusement in it. We perceive, now that the white man is becoming a more frequent visitor than of yore to Africa, the doctors who drive away locusts and bring down rain attribute all their failures to the pale-faced intruders. It was time they could find some excuse, for their own dupes had begun to doubt the power of their deceivers.

LIST OF NEW BOOKS.

Atlantic Telegraph, its History, &c., by A. S. 1/6 s.d.
 Aunt Margaret's Trouble, by a New Writer, post 8vo. 8/6 cl.
 Bedlake's Practical Arithmetic, 12mo. 2/6 cl.
 Bell's Manual of Surgical Operations, 12mo. 6/6 cl.
 Book of Birthdays, fcap. 8vo. 3/6 cl.
 Bradon's Trail of the Serpent, by A. S. 6/6 cl.
 Craig's Aids to Spiritual Religion, 8vo. 2/6 cl.

 Smith's Guilty or Not Guilty, 12mo. 2/6 cl.
 Views and Opinions, by Matthew Browne, 8vo. 6/6 cl.
 Ward's My Mother, or Home Scenes in Yorkshire, 12mo. 3/6 cl.
 Webb's Glorious Gospel, 8vo. 8/6 cl.
 Whalley's Dictionary of Reduplicated Words, 8vo. 3/6 s.d.

NATIONAL PORTRAIT EXHIBITION.

IN No. 371, *Sir John Spencer*, by G. Stretes, we have a very fine portrait by one of the least-known of early English painters, remarkable for its evident recognition of chiaroscuro, tone and conception of the work as a whole. Walpole, that is, Vertue, quotes Stretes to the effect that Stretes was painter to King Edward in 1551; to him Dallaway attributed that noble whole-length of *Henry Howard, Earl of Surrey*, at Arundel Castle, of which the description perfectly agrees with the superb picture here from Knoke (No. 121), and absurdly ascribed to Holbein: the poet in a bronze-embroidered, tight Italian dress, leaning on a broken column, inscribed *Sat superest*. As the annotator speaks of the picture at Knoke as a copy and half-length, it is more than probable that No. 121 is the picture to which he referred, but erroneously described. Both Nos. 121 and 371 are evidently Italian in style, if not in their origin.

Among other noteworthy things here is the representation, in the portrait of *Edward the Sixth* (172), ascribed to Holbein, of two ostrich feathers, instead of three, as is now common in the badge of the Princes of Wales. It was not, we believe, until the eldest son of James the First adopted

the modern arrangement and number of these ensigns that the present fashion was settled.—In No. 162, *Sir N. Carew*, appears another pendant,—the finest, to our minds, in the whole collection; it is in fine Holbein taste.—In No. 170 notice the beautiful colour of parts of the picture, *Henry the Eighth and his Family*, ascribed, of course, to Holbein: see the figure of Princess Mary to the right; note also the capital humorous expression of the face of Will Somers's wife—a spirited study. Despite the splendour and rich gilding of the architecture there represented, that architecture is really barbarously grandiose. Great attention is due to the profusion of gold employed here; also to its manner of application to the surface and ornaments of the walls and pillars.—We do not know if, among the countless explanations that have been attempted with regard to the so-called Holbein, *Sir Thomas More and his Family* (163),—the large picture belonging to Mr. C. Winn,—any light has been thrown on the action of the hands of the seated figure of one of the daughters, who seems to be using the finger alphabet. That she is really doing so, of course, out of the question.—The portrait of *Sir A. More* (186), by himself, is fine, and deserves a better place; such a change is due to *Sir T. Gresham* (273),—a much better picture than 279; both by the same.—To the account in the Catalogue of 267 (*Queen Elizabeth*), the noteworthy portrait with eyes and ears depicted on the robe, mention should be made of the mouths which are also apparent there; the heart-shaped carbuncle that is pendent from the serpent's jaws, as embroidered on the left sleeve of this portrait, appears also, with the serpent, in No. 252 (the property of Lord Hardwicke),—a work which resembles the former in many respects; here are the ears again: note the jewelled gauntlet on the ruff. There is an error in the description of No. 252; the book is in Her Majesty's right hand, the sceptre in the left, not vice versa; she is by no means young.

Almost every visitor here feels the difficulty of leaving the upper galleries that contain the older portraits of English worthies. We are loth to quit them, tardy at parting from the treasures that are spread out there never to be seen again together, in this generation at least. Knowledge of old Art has been extended vastly in this country by this gathering. Our warmest thanks are due, first to those who lent the pictures, secondly to those who arranged them. Much criticism has been expended upon the works, many blunders have been pointed out, corrections made, and artists' works identified. Faces that passed for those of unquestionable ancestors have been shown to be none such, but of other folks, and ancestors of strangers; "originals" have been found to be copies; "copies" have been found to be wrongly ascribed, as well as wrongly named. One of the most interesting works here has found a better name; this is the so-called *Sir J. Finett* (541), which was amazingly attributed to Jansen, but is, doubtless, a Tintoretto, and very probably represents a Venetian gentleman, no Finett at all. Much light has been thrown upon Holbein's works; the public will be the better able to appreciate Mr. Worrum's forthcoming biography of the man, which will be doubly welcome now. We may take this opportunity of stating that the long-expected 'Holbein und seine Zeit' has just been issued by Messrs. Williams & Norgate. This work embodies the results of Dr. Woltmann's researches in the subject. We shall take an early occasion to examine the book.

One of the first pictures in the lower galleries to which our attention is invoked reminds us that a new world, very different from that of the men above, has been entered on, not exactly abruptly, but, such is the effect of changed locality, with decision. This is No. 686, *Sir William Fairfax*, a work not without vigour in the painting of the face; otherwise, equal to a sign-board: see the figure. It is, nevertheless, a state portrait, if one is permitted to judge by the magnificent array of that extraordinary sash of dark-green velvet, embroidered with gold, the broad fringe of which nearly touches the ankles, reaching from the shoulders. The thick buff coat and grey leather breeches form a sort of armour beneath the corset;

the stiff boot-ruffs of starched linen, which stand up about the legs, are noteworthy. Fees meet here quietly enough. The last-named Fairfax was slain while in battle against Lord Byron (688).—Readers of 'The Boscombe Tracts' will recognize an old acquaintance in *The Seventh Earl of Derby* (689),—a rather questionable Vandyke, certainly an unusually heavily-painted picture for his hand. No. 691 shows the same, somewhat later in life, we think; not an absolute copy from the last: in armour. A capital portrait, but not a Vandyke probably; still, it is too soft and delicately painted for Dobson, the only other likely producer.—No. 693, *Julian, Lady Musgrave*, (of Eden Hall, the Countess of Derby's friend) is probably by John Stone, and reminiscent of Jansen, in the use of black, red and yellow: see, however, the picture by Old Stone, *The Countess of Cumberland* (553).—The picture of *Charlotte de la Tremouille, Countess of Derby*, (694) is one of the earliest portraits here which has what is really a landscape background painted with complete freedom: a row of poplars seen by what was meant for moonlight. The lady, in a widow's dress, contrasts strangely with the dashing damsel, as painted by some one of the Rubens school, in youth (554). *Lady Arundell of Wardour* (695) is a very good Lely, of his best time; the face much cracked, the probable effect of varnish: see the broad and superb painting of the cinnamon-coloured dress she wears.—*Sir Simon Harcourt* (698), in "a Roman habit," without a painter's name, is probably the work of Mirevelt.

A noble Rubens has had its face spoilt, not, we think, irredeemably, in No. 723, *The Earl of Arundel and Surrey*: see the magnificent painting of the armour, its splendid lighting. Some ignorant mortal has worked his will on the face.—*The First Duke of Hamilton* (699), by Vandyke, is a very interesting portrait; in character extremely like those of Charles the First, the Duke's boy-friend, but without the traitorous look in the eyes that monarch had—more Scottish: see the disproportion of the legs to the body in this picture, the inferior execution of the background.—No. 703 is a beautifully drawn chalk-study for a portrait, *Col. J. Penruddock*, probably by John Hoskins,—a handsome, melancholy face with a worn, eager character, so often seen in pictures of the time, rarely before, and still more rarely in the next period of English history.—*Col. T. Sanders* (705) is not by that admirable painter R. Walker, but, we are inclined to think, by J. Sadler, and, at a comparatively recent date, painted on and spoilt. A bluff English face; the nostrils are out of drawing now.—Mr. Reginald Cholmondeley's *Thomas Parr* (704) is less than a questionable daub.—The ascription of *Richard Gibson* (709) to Cuyper is nearly equal in absurdity to that which told us Jansen painted *Sir J. Finett* (541), or Vandyke *The Second Lord Falkland* (619).—Notice Bower's capital portrait of *Ferdinando, Second Lord Fairfax*, (707) with its inscribed ray of light in the background.—*The Duke of Newcastle* (711) is a very good Vandyke.—No. 645, *The First Earl of Sunderland*, was never a Walker. That very beautiful unfinished portrait, *Henry Lawes* (717), the property of Dr. Okes, may be by this fine painter, who sketched with extraordinary freedom and sense of breadth in effect: see the other sketch, *General Lambert* (800), doubtless by him. As a picture, that is, pictorially, this is one of the most interesting works here: not fifty surpass it. In style it reminds us of a very noble portrait of *Sir Theodore Turquet de Mayerne* (745), which appears to be that which W. Elder engraved for the folio edition of Mayerne's works, 1701. Both these pictures (Nos. 717, 745) are anonymous here. The latter deserves a better place, on account of its firm, broad style. Dallaway says that Rubens painted a portrait of Mayerne; Bromley ('Catalogue of Engraved British Portraits,' page 101) refers to W. Elder's print: see also Stanley's "Bryan," under "Elder, W." The picture belongs to the College of Physicians. It has a skull in the left hand, is remarkable for breadth, and that peculiar conception of the whole which we observe so rarely here, best in Stretes's single picture, and in No. 717. The chiaroscuro, so far as we can speak of such a quality in a picture so badly hung as this

one is, is superb. Bromley gives no name of the painter of the portrait Elder engraved.

No. 716. *The Third Earl of Northampton*, is absurdly ascribed to Vandyke; it may have been a Dobson, severely repainted. See, however, No. 879, *Sir Thomas Chicheley*; no doubt ascribed with truth to Dobson, which repeats the attitude of No. 716, and, if not a likeness of the same man, presents one of the most singular cases of resemblance we know. We believe Lady Delawarr's Earl of Northampton (716) to be Sir Thomas Chicheley, and a Dobson spoilt.—No. 719, *The Tenth Earl of Northumberland, Countess and Child*, looks like a heavily-painted Vandyke: the draperies are very inferior to the mass of those in Sir Anthony's portraits. Compare the style of these portraits with that of No. 689, *The Seventh Earl of Derby*, before mentioned.—The triple portraits of *Drs. Dolben, Allestry, and Fell*, (725) are absurdly ascribed to Lely, as No. 724, *Sir R. Lane*, is to Mytens.—No. 726, *Sir Thomas Browne*, author of 'Religio Medici,' is a miserable portrait.—See the demonstrative *Earls of Bristol and Bedford* (728), by Vandyke; the attitude of the former reminds us of Pepys's account of him.—In No. 729 we have Mrs. Hutchinson's dyspeptic-looking hero, *Colonel Hutchinson*.—In the *Family of the First Earl of Bolingbroke* (732) is a valuable picture, some parts of which strangely recall the manner of Reynolds: see the background, the term of Mercury, &c. The face of the eldest daughter, *Lady Rockfort*, is certainly not in Vandyke's fine manner: notice the drawing of the eyes.—No. 734, *Sir W. St. Leger*, we think not a Dobson, but a very good Lely: compare it with No. 661, *Prince Rupert*, which is doubtless a Lely.—No. 733, *Dr. William Harvey* (see also 756), does not look like the man who could sit quiet under a hedge, with his royal pupils, at Edgehill Fight, and take out a book, as Aubrey says he did, with his pupils, subsequently Charles and James the Second.—In No. 721, *Peter Oliver*, we have a capital example of Hanneman's rather hard and grimy manner of painting, masculine withal.—See next R. Walker's *John Bradshaw* (737), President of the Court of Justice: a fine picture, an acute face.—In *Charles the First* (740), which has been engraved, we have a mere daub, belonging to All Souls College, Oxford.—*William Prynne* (743), the shock-headed, but by no means sour-faced author of 'Histriomastix,' and nearly two hundred volumes more: a pleasant face for a poor fellow who suffered so much imprisonment in so many prisons. A rather pragmatic-looking man.—In *Admiral Sir Francis Basset* (778) we have no Vandyke, despite the assertion of the Catalogue.—The portrait of *Colonel Philip Jones* (783) suggests the Spanish manner of painting.

FORDS ON THE THAMES.

Sandford Park, Oxon, August 6, 1866.

In your last number I find a criticism on a statement of mine, that from the forest district near Marlow to the sea, "there is but one place on the banks of the Thames which bears a name ending in the word *ford*." This single solitary place is Halliford, at the Coway stakes." Your Correspondent, A. Z., considers me to be "oblivious of Brentford, and also of the passage in the Saxon Chronicle which states that King Edmund, with his army, passed the Thames at Brentford twice in the year 1016. Bishop Gibson, in his edition of Camden's 'Britannia' (p. 327), tells us that the Thames, at Old Brentford, was anciently forded with great ease, and was so still in Bishop Gibson's time, there being then at low ebb not above three feet of water."

It is usual to construe language with reference to the subject-matter. I was discussing the fords over the Thames, and, to prove my inaccuracy, A. Z. points to a ford over the Brent. The ford by which the Roman road from London to Staines crossed this latter river was called by our ancestors Brentford. It lay near the mouth of the river, and therefore near the bank of the Thames, and the name, though it certainly contradicts the letter of my statement, is in perfect agreement with its spirit and import. A. Z. seems to assume—indeed, without such assumption his reasoning has no

coherency—that the name of Brentford was applied to some ford over the Thames. He is greatly mistaken. *Ex vi termini*, Brentford means a ford over the Brent.

It is well to distinguish between a ford which is passable under the ordinary circumstances of the river, and a shallow which can only be passed under circumstances which are special and extraordinary. There are shallows in the Thames east of Teddington which certain fishermen will tell you can be waded over, while others will as stoutly deny such to be the case, the probability being that, in a time of drought, some one really succeeded in the attempt. That there ever was a "ford" over the Thames at Brentford I do not believe, notwithstanding the testimony adduced by your Correspondent; and how dangerous was the passage over the shallow by which Edmund crossed appears from the statement in the Chronicle that "there was a great loss of English folk by drowning, owing to their own carelessness." The silt brought up by the spring tides, no doubt, left traces behind it in the bights of the river, and also in the tails of the several "eyots," and when the scour of the river was weakened by the erection of a bridge at London, these deposits would naturally tend to form shallows. Of the bridge which spanned the river in the eleventh century we know but little; we may, however, assume that, like its successor, it rested upon huge substructions, and consequently that its action upon the tides and the scour of the river was very similar to that of Old London Bridge. Every one knows how much the river was deepened by the increased scour which resulted from widening the water-way when the old bridge was removed; but few, probably, have inquired how far these altered conditions of the river extended. If my information can be relied on, and I think it trustworthy, they were in some degree felt even as high up the river as Teddington. In Cæsar's time, before London bridges were thought of, or London itself existed, I believe the downward current swept every obstruction before it, from the Coway stakes to the Nore.

It struck me that one means of testing the truth of these speculations was afforded us by the topography of the Thames valley. The names of the villages and hamlets are of great antiquity, and probably date from the period when our ancestors first settled in the district. They seemed to me to confirm in a very remarkable manner the statement of Cæsar that the Thames was fordable "only in one place." From Marlow to the sea, i.e. for upwards of 100 miles, I found no village or hamlet on the banks of the Thames whose name indicated a ford across it, with one exception—Halliford, at the Coway stakes. I have taken some trouble in this matter, but have hitherto failed in my attempt to find another exception. Brentford certainly is not one.

EDWIN GUEST.

THE CLÉMENCEAU CASE.

Paris, August, 1866.

THE younger Dumas has lost none of his power. His step is as light on the well-trodden ground as it was when first he touched it. He is a daring artist, dealing with a society that has, or should have, if shame were not well-nigh dead in it, much to hide. He dissects it, and lays bare the whole disease. In the 'Demi-Monde,' the 'Dame aux Camélias,' and the 'Trois Hommes Forts,' he has held the mirror up to Nature in order to show his generation the brilliant, the amusing, the seductive, and the splendid side of vice. In the 'Trois Hommes Forts,'—perhaps the most masterly of his performances,—he first shows us how divine a thing a woman may be made, only to drag her through the mire. The school-girl is painted in all the sweetness of bright and perfect innocence, only to be developed by a series of events into the most inexcusably guilty of wives. The various power with which the descent is imagined and described heightens the reader's resentment. The effect is dismal, and no generous mind will accept the conclusion which it conveys.

Where the younger Dumas flogs the vices of his time and country, where he lays his remorseless finger on the spotted fruit in his *panier à quinze sous*, he does good service. But we tire of one

theme, rich and many as the variations on it are. We have had enough of the over-gilt boudoirs, the audacious sallies, the beflowered Victorias, the rapacity and the shameless eccentricities of the demi-monde—the *lorettes*, the *cocottes*!

The reading public are too familiar with the splendid vice of Paris already. A captivating aspect has been given to it: it has become a familiar presence, which the moral must condemn, but which does not shock them as it did when it was kept far in the distance. The *cocotte* lifts her *lorgnon*, in the Bois de Boulogne, at Madame la Comtesse, who is driving out with her daughters; and the Comtesse, in her turn, talks in her *salons* of the gaudy liveries and latest exploits of the *cocottes*. The subject is tolerated, nay, it becomes attractive, for it has a humorous—a witty side! *Ces dames* provide the *chroniqueurs* with *mot*s. The younger Dumas has brought them in vogue as a literary subject. His success has provoked imitation among the leading contemporary writers of France. Edmond About could not resist the subject of 'Madelon':—but to describe the followers in the wake of the younger Dumas would occupy pages, not columns. The Second Empire will be marked in the historian's page as one of the literature of social vice. The honest and quiet paths of life are almost untrodden by the living romance-writers of France. Who dwells by the "untrodden ways" is safe from their observation. They gather their inspiration under the gas-lamps of Mabile, and their souls are stirred by the screech of *Thérèse*. The evil effect of this literature of immorality is only too apparent in the manners of the young generation of Frenchmen. Vanity leads even those whose natural inclination would have directed them safely through an honourable course of life, into the glittering sensuousness that is fashionable: and the *gandin* sports his mistress as he wears his *Gladstone* collar round his neck.

To read the lighter journals of Paris—the *Vie Parisienne*, *Figaro*, and the like—the ingenuous reader would imagine there was hardly a virtuous wife or a true husband within the fortifications. Every kind of comic aspect is given to marital unfaithfulness. What, I pray, are the opinions of that young generation likely to be that is fed upon such literature? Where can linger the respect for the mother in the mind that is hardly permitted to conceive such a thing as the honour of a wife! The young Frenchman finds the husband a comic character on his stage; he is in the nature of things a ridiculous thing,—a creature made to be a dupe. "Ma mère," it is true, still survives as an object of worship; but if "ma femme" be so disreputable, how can "ma mère" deserve such extravagant idolatry?

I confess that I had some hope of finding that the younger Dumas had broken new ground in the 'Affaire Clémenceau'; and that the force of his undoubted genius had been moved from the skirts of the Marguerite Gauthiers to the company of honest men and women. But here are only variations on the old air. Let the reader judge.—Pierre Clémenceau is a hasty; born of a fault, he bears its curse in his earliest years. His schoolfellows call him the *beau Dunois*, and draw offensive caricatures "to his address" in copy-books. He is thrown back within himself; he feels his shame, and the fire of hate is banked up within his young soul. A loving nature, with the wild beast at the back of it:—this is Clémenceau. He is fully and most artistically elaborated, until he becomes the close acquaintance of the reader. The younger Dumas has this power of realizing his characters to a marvellous degree; in this the secret of all, or nearly all, his popularity lies. His wit is not plentiful, nor of a very high quality; Méry, in this, was his master.

The pathetic, suffering phase of young Clémenceau's life is so well told and analyzed, that the reader is made to regret more and more the author's *penchant* for the frailties of women. The master hand that so deftly and delicately builds a temple, has no sooner fixed the cupola and raised the cross, than he begins the more congenial labour of undermining it. He seems to smile maliciously while the world contemplates his work; nor rests he until the broken cross is scattered over the *paré*!

Pierre becomes an artist. At a ball he meets Iza, a Polish maiden, the child of a wandering great lady, who is seeking a splendid match for her daughter. The great lady is one of those gorgeous perambulating mysteries, which are plentiful in Paris and other continental centres. Iza is a passionate girl, and she and the poor bastard artist love one another. The ambitious mother, not finding a princely consort for her daughter, would sell her. Iza runs away to the arms of Clémenceau, and offers to be his model and his mistress. He marries her. Iza is painted in very warm colours indeed. She is an innocent but vagabond girl: there is gipsy blood in her. She loves Clémenceau passionately. Their honeymoon! Its raptures are set forth to the reader without reserve. The passion is at white heat; but we are told it is pure. Iza gives birth to a child. The artist-husband adores mother and son. To this point does the younger Dumas lead his readers. He has lured them up to the height: wherefore? Iza, Clémenceau discovers, is a—well, she has had five lovers already! She sees nothing very unnatural in this. She is not smitten with remorse. We are told that she is a mistress by instinct—not a wife. She has the sensuality of the animal, with every grace and charm that could be found in the sweetest and noblest of women. Her infamy is a mission—which she is bound to accomplish. She smiles through her vagabondage in the realms of sensuous love, and turns mechanically from the deposed lover to the new one, as the bee flies from the empty flower-cup to the virgin pollen of another.

Of course the forsaken artist Pierre rushes away from the scene of his disgrace. He flies to Rome with his friend Constantin Ritz. He lives a life of anguish. His art is not powerful enough to dispel or soothe his sorrow. The drama is not yet filled up, however. The younger Dumas does not leave a mesh of a web of infamy untied. Constantin returns to Paris, and Iza becomes his mistress. She has become a prosperous courtesan. We approach the end. Pierre returns to Paris, and hies him direct to Iza's house. She owns that she is a courtesan—to be despised; but she tells him that she knows he loves her still. She implores him to be hers again—for a day—for an hour. "In other words, my wife is to be my mistress!" says Clémenceau, and he agrees. She falls asleep in the dead of the night, "calm as a virgin." Then, says Clémenceau, "I pressed my left hand upon her forehead, pushed her head back, and, with the full strength of my right hand, I plunged the knife into her, under the left breast."

This is the skeleton of the story. It is pitilessly told. The reader is startled over one page, and he shudders over the next. M. Dumas never could understand the uses of a veil. He opens wide the doors, and cries to the world, "Behold!"

I wish, for one, that, with his power of realization, and with the serious mind and intention which underlie his romances, he would paint some happy scenes; and let the world know that there are happy wives, and simple, virtuous women left in France. B. J.

LIFE IN SPAIN.

Valencia del Cid.

AFTER the occupation by a long generation of Moriscos of this model city, they were expelled in 1609 by Philip the Second, the orthodox faith triumphed, and the brains and money expended by the Moors fructified under Christian rule. The Moors had a long innings, and were masters within its walls until the renowned Cid lay siege to and captured it A.D. 1094. He held it for five years, and, the Arab historians say, ruled, a cruel and absolute dictator, until his death, A.D. 1099. These remarks, exclusively from a Moorish source, may be taken with the "grain of salt" always permitted on perusal of an *ex parte* statement. When our Cid, so says the poem, was banished from Castile, and after he had borrowed upon the questionable security of two chests of sand a large sum of money from Rachel y Vidas, the Jews, he set forth upon what truth demands we should call a marauding, black-mail expedition; and, having looted right and left, seized Alcocer. The suffering Moriscos sent

ambassadors to the King of Valencia; they were courteously received, and a large force despatched under the command of two Moorish kings, Fariz and Galva. These forces invested Alcocer, and my Cid must either fight or die of hunger and thirst. After discussing the point with his companions, he wisely adopts the former alternative. Having ravaged the surrounding country ere he made Alcocer his headquarters, and news of the same being carried to the Moorish king, the poem says:—

Then rose Valencia's king, and said,
"Shall we rest idly here?
Three thousand Moors equip at once
With helmet, sword and spear.
Three thousand Moors with sword and spear
Shall in their saddles be;
And as ye ride our friends will join,
And swell your company.
Hither bring this trait'rous chief,
He shall answer for this strife,
Ravaging thus our peaceful lands;
Seize him, but spare his life.
Three thousand Moors in saddle sit,
They scarce can rein their steeds;
That night they rest at Negovia,
The next on Cillas meads.

And so they go on gathering strength until they encamp before Alcocer and invest it. After a time,—

Within the walls of Alcocer,
Water doth slowly fail;
Some counsel, "Let us sally forth
And test the Moormen's mail."
My Cid, "In good hour born," dissents,
And firmly saith them "Nay":
For three long weeks they lie besieged,
No rest nor night nor day.
Three weeks have passed, a fourth at hand,
My Cid a council calls:
"Our bread's nigh spent, the water fails,
Horses lie dead within their stalls;
We cannot steal away by night,
The Moors surround the walls."

They consult, and Minaya advises a sally. He says:

"A good six hundred of us here,
Well armed and stout of heart;
Heaven will help us in our strait,
Let us at dawn depart."

They expel the Moors from the town, and by dawn are all in saddle. My Cid gives Bermuez his pennon, strictly charging him not to move to the attack until he commands the charge:—

He kneels to kiss my Cid's right hand,
The blessed pennon takes;
The gates thrust open, they gallop forth,
The drum the Moor now wakes.
They hurry up and down the camp,
You hear the clang of arms,
The drums beat loud, the trumpets bray,
Earth shakes with war's alarms!

The Moors form in battle array, but my Cid counsels his followers not to attack. Bermuez is impatient, and hardly cares to rein his pawing steed:—

Bermuez's spirit frets him sore,
He grasps the pennon tight,
And spurs full deep his plunging barb,
Impatient for the fight.
"Thy pennon will I wave on high
In the midst of yonder band,
Shorten rein and sit well down,
And charge with lance in hand!"
"No, not so, Bermuez," cries my Cid,
"For heaven's sake, Bermuez, nay."
"For naught I hold," Bermuez cries;
His steed, free, bounds away.
Moors press where'er that pennon waves,
They fight, but cannot kill.
My Cid cries, "Charge for charity,
His blood they shall not spill!"
Before their breasts they press their shields,
Their lances lowered in rests,
Their faces bent to saddle-bow,
Their reins upon their breasts.
"He in happy hour born" now cries,
With shouts Moors hear afar,
"Charge, Cavaliers, for mercy's sake,
I'm Ruy Diaz, champion of Bivar!"
They charge the Moorish ranks to where
Bermuez shows his head;
Three hundred pennon'd lances thrust,
Three hundred Moors lie dead;
They wheel and charge, three hundred more
Lie lifeless on the plain;
You see them raise their pennons now,
Each wet with gory stain,
The breastplates of the Moslem
Are rent by force in twain,
And horses empty saddled scour
Wildly o'er the plain,
For they who rode them at the dawn
Lie numbered with the slain.
The Moors shout loud Mahomet!
On Saint James the Christians call.
Thirteen hundred Moors lie dead,
Piled like a ruined wall.

In the original this bit is quite Homeric, and I am sensible of the weakness of the translation. There is, of course, a good deal more fighting, and the Moors are conquered. There is another Homeric bit, which I am tempted to give, although I fear I am poaching upon valuable space:—

My Cid, "In happy hour born,"
Deals three sword-cuts with might;
Two harmless fall on kingly steel,
The third hits true and right,
The blood distils his breastplate through;
King Fariz turns to flee.
That blow hath put the Moors to flight.
Antolinez wounds Galvé;
The rubies from his helm fly out,
The helm is cut in twain.
Fariz and Galvé conquered flee,
They dare not slacken rein.

The Moorish camp is pillaged, and so ends this fight. Probably our worthy Cid remembered this circumstance when he became, later, master of Valencia.

The Irrigation Parliament, before alluded to, holds its session upon benches within the shadow of the cathedral porch. N.B. No lawyers are admitted, and pens and ink are dispensed with. Of course it is despotism, but works well.

The melons here, "sandias," are of the prize-gooseberry school, gigantic,—

Used the melon by Valencia's swarthy race is,
To eat and drink, as well to wash their faces.

The Convent del Carmen contains a large number of pictures; but I prefer the old convent, with its well-worn "patio," to the pictures,—many have been cleaned to death, and might, as far as their merit is concerned, have been left dirty. There are some few specimens of the Valencian school, which judges pronounce to be good; but the majority are decidedly of the "Orbaneja" school, so feelingly alluded to by Cervantes. The Convent building is brimful of interest; the well-worn stones of the patios and the stairs speak of the traffic of a bygone age—foot-prints on the stones of time; and while staggering a little over the uneven footway, you may moralize profitably upon the vanity of human wishes. By the way, I encountered here 'Russelas' done into Castilian, and an humble imitation of Mr. Addison, in the 'Pensador Matritense,' published in 1726,—the contents consisting of seventy "ideas" à la Spectator, one being a criticism of "Bull-fights," in which the favourite amusement is severely handled,—another, a dialogue "with Pluto upon the ambiguity of Poets,"—another, upon the "science of worldliness and a criticism upon Charlatans,"—one of the best is a scorching criticism upon the "Auto-Sacramental," or religious plays,—another, upon the "cost of matrimony, in a letter from a Barber,"—another "against idle vagabonds,"—and, last of all, one upon the plan of Mr. and Mrs. Naggleton, the subject, Dress, in which the husband complains of expensive fans "and the rage for costly attire as ruinous to a Madrid husband."

One guide-book says you may see Valencia in a day. I could spend a fortnight delightfully in this Paradise, where the salt is always dry and the sun always shines. You may spend a week hunting up old editions at the cost of time and a little extra soap; but then you may not find anything you care to purchase. You have had, however, the pleasure of turning over sundry musty tomes, and that is something. Vale, Valencia! F. W. C.

OUR WEEKLY GOSSIP.

THE Archaeological Institute will henceforth, by direct permission of Her Majesty, be styled The Royal Archaeological Institute of Great Britain and Ireland. The obtaining of this privilege was the last official act of the late President, the Marquis Camden.

Mr. Edmund Yates is about to commence a new novel in the pages of *All the Year Round*. The title which he has chosen is 'Black Sheep.'

'Ecce Homines,' a poem, by an Oxford Don, will be issued in a few days by Messrs. Adams & Francis.

Mr. R. S. Poole has been appointed Assistant-Keeper of Coins and Medals in the British Museum.

Those students who have found how useful is the 'Concise Glossary of Terms in Architecture,' by Mr. J. H. Parker, will be glad to learn that a new and revised edition of that work has been published by Messrs. J. Parker & Co.

Miss Braddon complains, not unreasonably, of the American publishers, Hilton & Co., having put forth a novel, 'What is this Mystery?' and advertising it as that lady's "latest and best." Of this book Miss Braddon never wrote a line, and we make record of this fact with all sympathy. —In another way Mr. E. M. Ward, R.A., has been victimized in France. One of the illustrated journals gives a wood-engraving of Mr. Ward's 'Family of Louis the Sixteenth in the Temple,' and suppressing the name of the artist altogether, describes the picture as the work of a French painter!

The annual excursion of the Surrey Archæological Society will take place this day, Saturday, the 11th, under the presidency of Charles Buxton, Esq., M.P. The following places will be visited, —Slyfield, Stoke d'Abernon Church, Cobham Church, the King's House, Byfleet. The Society is reported as being in a very satisfactory condition.

Old London is disappearing almost as fast as Old Paris. In the latter city English visitors will soon look in vain for the house, near St.-Germain-l'Auxerrois, in which Coligny was slain, in which the Duchesse de Montbazou (whose death made her young lover, De Ranocé, turn Trappist) died, under the wreck of her beauty by small-pox, and where the most audacious of French female wit, Sophie Arnould, was born. The hand of the demolisher is on it. With us here at home, Tower Hill no longer shows us those historical houses, from the windows of which many a broken heart silently sent forth its last greeting to friend or kinsman mounting the adjacent scaffold. Within a few days only the old College of Physicians, with its gilded pill on the top, in Warwick Lane, has gone down into the dust. It was built by Wren, after the fire had destroyed the old college at Amen Corner, to which corner the members had migrated, after long meeting in the house of their founder, Linacre, in Knight-rider Street. The College in Warwick Lane was occupied from 1674 till the removal of the members to the present building at the corner of Trafalgar Square, some score of years ago. Another feature of Old London has silently passed away in what used to be called the New Mall (made by order of Charles the Second), in St. James's Park. The once gay, open-air dairy, with its crowd of cows and fashionables, which dwindled down, indeed, to penny ginger-beer stalls, and children and slipshod girls who could not pay for the beverage, has been swept away altogether. Those who only remember its seedy condition can hardly realize what it once was when bareheaded beaux fluttered round it, and gallant young curates in new sashes handed fresh milk from the cow to simpering ladies, and Frenchified fops went about with both hands in their pockets, holding up their plaited coats before to show their silk breeches, and the flirtations of lovers and the discussions of senators were interrupted by the cry of the milk-venders—"Can of milk, ladies! Can of red cow's milk, sir!" The joyous scene which Tom Browne painted in words, and which Bishop Hurd recommended to Mason, as affording in its cows and milkwomen noble hints for pastorals, contemplated from Spring Gardens, became at last a night resort for the crapulous. There Mrs. Abington, the original Lady Teazle, when she had no other name but that of Nosegay Nan, sold her roses; and that is among the last of the picturesque reminiscences of "The Mall" in St. James's Park.

We are sorry to observe that one of the old inn-signs of Cheapside, the Nag's Head,—which until lately was to be seen on the front of the house, No. 39 in that thoroughfare, as referred to by us last week,—has been removed, or plastered over in the course of renovating the premises so numbered. This site was originally that of the house which was once a meeting-place for the clergy and the alleged scene of the false story about the consecration of Archbishop Parker, 1559.

The Ministerial Whitebait Dinner has its session

as regularly as that of Parliament, but its origin has probably been forgotten by many. In the old days, when the close of the session was near, Sir Robert Preston (M.P. for Dover) used to invite George Rose, Secretary of the Treasury, to his Fishing Cottage, on Dagenham Lake, Essex. Fish, venison and rare wines graced the board, at which Mr. Pitt subsequently became an annual guest. To better accommodate the minister, Sir Robert transferred the place of meeting to Greenwich; and to the number of invited guests were added Lord Camden and Mr. Long (afterwards Lord Farnborough). As besides these other guests were soon invited, an arrangement was agreed upon that Sir Robert should only, in future, contribute a buck and champagne annually, and that the other guests should defray all remaining expenses. Thus matters stood till Pitt's death; after which Sir Robert continued to send out the invitations annually, generally to Cabinet Ministers, and usually then for Trinity Monday. This arrangement continued till Sir Robert's death in 1834. Lord Farnborough then issued the invitations; and since that time the "Fish Dinner" has grown into an annual institution, at which the Cabinet Ministers and their friends celebrate the supposed end of toil and the beginning of an imaginary holiday.

Miss Gifford, author of the 'Marine Botanist,' thus addresses us:—

"Parks, Minehead, Somerset, August 6, 1866.

"My bookseller sent me the other day a work published by Messrs. Warne in 1865, entitled 'Common Seaweeds,' by Mrs. L. Lane Clarke. This lady in her concluding remarks on her book says, 'In it I have written from my own collection and looked into the tide-pools day by day.' Nevertheless it is evident that she has also looked into the third edition of my 'Marine Botanist,' and not only looked, but taken therefrom, without acknowledgment, all my descriptions of the classes, tribes and genera, including them together in the first eight pages of her work under the designation, 'Synopsis of the Tribes.' Mrs. Clarke adds, at page 138, 'If I have forgotten or omitted any worthy seaweed, I shall with pleasure add it to the next edition of my book.' This promise to her readers has made me trouble you with this appeal, for I fear that, otherwise, so unscrupulous a collector would not hesitate to abstract my descriptions of the seaweeds in full; as her work now stands, it wants these additions. Had Mrs. Clarke fairly and openly referred to the pages of the 'Marine Botanist,' I should have rejoiced at her doing so; for my desire in writing upon the subject was to induce a love of it, and well-known authorities have accorded to me the merit 'of having first led attention, in a simple, popular, as well as strictly scientific manner, to a branch of botany previously little studied.' ISABELLA GIFFORD."

Mr. Buckstone's speech on the last night of the Haymarket season was, as we said, "smart" against the crowded music-halls. The Haymarket manager seems to think that a time may come when audiences will not be kept together without refreshment. The fact is that the last thing thought of in many of our theatres is the comfort of the audience. Private boxes seem constructed purposely to deter those who have been in them from entering them again. There is neither seeing nor hearing from, nor breathing in, them. It is little better in the public boxes, so cribbed, cabined, and confined are the unhappy occupants. Poor wretches in the pit are packed like Norfolk biffins, when a pit is full; and the way that some galleries are built is illustrated at the Surrey Theatre, where the new gallery is already being replaced by another, from which the people there may have a sight of the stage. As for the stalls, they have been constructed by invading the rights and destroying the comfort of the pit. The whole internal arrangements of our theatres require revision; at present the majority of them are the most comfortless and unhealthy places to which the public are invited.

The estimates voted for the British Museum by the House of Commons on account of the current year comprised a provision, whereby Mr. Panizzi retires on full salary, after having, for the twelve months just past, given his services gratuitously.

This arrangement will be highly satisfactory to all who have received the benefit of the late Librarian's ability in his office, profited by his learning, and had their studies facilitated in any way by his means. It is almost needless to contradict the assertion that Mr. Panizzi was the architect of the Reading-Room: that was Mr. S. Smirke's work.

A subscriber to the Sothorn Testimonial Fund inquires if any account has been, or is likely to be, given of the result of the subscription; whether any testimonial has been, or is likely to be, decided upon; and whether, in case of nothing further being done, the sums paid in will be returned to the subscribers?

A Correspondent writes as follows about *tick* and *duns*.—"In your article on Capt. Crawley's book about *Cricket* you draw attention to the use of the word *tick* in the report (1 Wilson, 220) of the case of *Jeffreys v. Walter*, which arose in the year 1748 out of a 'bett upon tick.' In the lower grades of sporting life the practice of 'betting upon tick' still remains in force. Instead of merely entering their wagers in private note-books, the vagabonds who infest our race-courses and hang about the doors of sporting journals at periods of especial excitement on the turf, are wont to give the persons with whom they bet tickets acknowledging their contingent liabilities. In 16 Car. 2. cap. 16, 'for the better avoiding and preventing of all excessive and immoderate playing and gaming for the t. a. e. to come,' special mention is made of betting-tickets,— 'Be it enacted, that if any person shall play at any of the said games, or any other pastime whatsoever (otherwise than with and for ready money), or shall bet on the sides of such as shall play, and shall lose any sum of money, or other thing played for, exceeding the sum of one hundred pounds, at one time or meeting, upon ticket, or credit, or otherwise, and shall not pay down the same at the time, &c. In the seventeenth century *ticket* was the familiar term for a simple written acknowledgment of an obligation to pay money, either under circumstances existing at the time of giving the ticket, or upon the occurrence of circumstances that might probably or possibly occur after the transfer of the said paper. The still current abbreviation of ticket was at the same time and in the following century so frequently uttered in Westminster Hall that, instead of being regarded as a cant term, it was deemed a suitable word for the lips of lawyers and gentlemen. Hence, a person *living on credit*, in reference to the written acknowledgments which debtors are frequently required to make, came to be described as a person *living on tick*. In Jeremy Collier's 'Essay upon Gaming, in a Dialogue between Callimachus and Dolomedes,' Callimachus, after quoting a passage from 16 Car. 2. cap. 16, thus uses another word familiar to debtors:—'When people are plung'd in misfortune at play, they are glad to catch hold of anything, to prevent drowning. Hence it is that apprentices rob their masters' cash, and one partner defrauds another. They want a recruit, either to try their luck and recover their losses, to quiet a *Dun*, or supply their extravagance.' By the spendthrifts of Charles the First's time importunate creditors for small amounts were called '*duns*.' Thus, Bishop Earle, in the 'Microcosmographia; or, a Piece of the World characterized, in Essays and Characters,' says, 'An Universitie Dunne . . . is a gentleman's follower cheaply purchas'd, for his owne mony ha'd hired him. Hee is an inferior creditor, of some ten shillings or downwards, contracted for horse-hire or perchance drinke, too weake to be put in suite.' Gentlemen who are at the present time enduring the privations of poverty and the humiliations of insolvency may find consolation in reflecting that '*duns*' and '*tick*' were not unknown to the gallants of other days."

Ireland claims the invention of the needle-gun. Capt. James Whitley is named as the inventor, and as having had a breech-loading needle-gun made in 1823 by Messrs. Trulock, of Dublin. Discouraged by the indifference shown at Woolwich to Capt. Norton's elongated shot, Capt. Whitley did not carry out the design he had of patenting his invention, the secret of which has been mastered by another. Such is the story told in Ireland.

The notorious Duke de Gramont Caderousse, the cunning fencer who slew young Mr. Dillon, the English editor of *Le Sport*, in what was absurdly called a duel, died last year, older in sin than in years. People thought he had furnished a few pages to the literature which has such men for its subjects, and that there was an end of him. But he has also added a chapter to the history of *causes célèbres*, for his natural heirs have discovered that he has left the whole of his property to his doctor, Délat. An attempt is being made on their side to get the will annulled, on the ground of the insanity of the testator. If they can prove the wretched man's madness, they will serve his reputation as well as their own interests.

We learn from Paris that the three enamelled cups in the Fine Art Exhibition, by M. Lepece, respectively called 'La Volupté,' 'La Fantaisie,' and 'Angélique et Médor,' have excited universal admiration, but have not been acquired by French purchasers. "Amateurs from across the Channel," says the *Siecle*, "have filled them, brimming over, with English guineas." In France it is still believed that Englishmen spend "guineas" and not "le spleen."

In a *pastel* which attracts some attention in the Paris Exhibition, M. Juncker has satirized one of the unworthy celebrities of the day. The object is one of "still life": the spectator sees a collection of green gherkins, red pepper, pickled herring in a bottle, a pipe and a pot, and near them a book, the 'Mémoires de Thérèse,' and two or three of the slang songs to which the head of French dissipation has given a detestable vogue. The satire is enjoyed, and the singer continues to attract.

The Académie de Nancy recently invited the Académie Française to the ancient capital of Lorraine, in order to hold a literary celebration of the union of the old duchy to France. The meeting was forbidden by the authorities. On the centenary, which was not celebrated, "no one doubted," says the *Journal des Débats* with some wit, "that Lorraine was really incorporated with France."

The Paris Academy of Sciences has announced as the subject of the prize poem for the ensuing year 'The Death of Abraham Lincoln.'

The International Archaeological Congress, appointed to meet at Antwerp between the 12th and 21st inst., has been postponed until next year, on account of the state of political affairs and the prevalence of cholera in Belgium and other countries.

Letters have been received from Prof. De Filippi and Signor Giglioli, stating that great success has attended their botanical researches in Japan.

The inhabitants of Sydney have resolved to erect a monument in their town to commemorate the discovery of their country by Capt. Cook. The monument is to be completed in 1870, in which year precisely one century will have elapsed since the discovery of New South Wales by the English navigator.

Some years ago a Meteorological Commission was appointed at the Cape of Good Hope to collect weather observations from all parts of the colony, to institute and direct methods of observation, to note phenomena due to local conditions, and to publish their results. The Commission, recognizing the importance of the duty confided to them, have published their First Report, in which the meteorological phenomena of the locality are fairly though briefly discussed; the most interesting being, as they consider, "those relating to the connexion between the constituents of the atmosphere, the direction of the wind, and the amount of rain." In order to discover what are the facts under these particulars, ten stations have been chosen, viz., Clanwilliam Observatory, Simon's Town, Somerset West, Worcester, Beaufort, Mossel Bay, Graaf-Reynet, Colesberg, Graham's Town, and Queen's Town, where systematic observations are to be carried on. The instruments supplied to each of these stations are, barometer, maximum and minimum thermometer, hygrometer, wet and dry thermometer, and rain-gauge; so that valuable data may be looked for

from all parts of the colony, which will afford means of comparison with the observations taken at the Royal Observatory, Cape Town. The prospect of getting trustworthy information about the winds, the rainfall, and weather generally, of that part of Southern Africa will be gratifying to meteorologists, especially as the Commission seem desirous to make atmospheric phenomena a principal subject of study. They take pains to explain to their observers that the apparently capricious tremblings of the barometer are in some degree brought to take their place among determinable things; that, as may be inferred, the fine film of transparent substance in which the earth is wrapped not only breeds the wind, nurses the thunder, and spreads the rain abroad upon the earth, but may, in its variations, reveal an intercourse between our habitation and the most distant spaces occupied by material things; and that there is perhaps no relation the globe has, in regard to shape or force or distribution of substance, the effect of which may not ultimately be detected in the undulations of that liquid ocean in which we live. Clearly, if the Cape Commission fail in their object, it will not be for want of aiming high enough.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN DAILY, from Ten to Six.—Admission, 1s.; Catalogue, 6d.

GEORGE NICOL, Secretary.

MR. MORBY'S COLLECTION OF MODERN HIGH-CLASS PICTURES is ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt—J. Phillip, R.A.—T. Faed, R.A.—J. Lewis, R.A.—Ezz, R.A.—Frith, R.A.—Rosa Bonheur—Gouldall, R.A.—Cooke, R.A.—Grewick, R.A.—Pickersill, R.A.—Falderson, A.R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Andell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—P. Nasmyth—Linnell, sen.—Dobson, A.R.A.—Cooper, A.R.A.—Gale—Marka—F. Hardy—John Faed—Frère—Rulperz—Brillouin—Lidderdale—Geo. Smith—Dutverger, &c.—Admission on presentation of address card.

ROYAL POLYTECHNIC.—Exhibition of the Prussian Needle Gun and other Breech-loading Rifles in Professor Pepper's Lecture-daily at Two, and Saturdays at One—Henri Draxton's Musical Entertainments—Pepper and Tobin's Wonderful Illusions—The Cherubs floating in the Air—The Modern Delphic Oracle—and Shakespeare and his Creations, with Recitals by F. Damer Cape, Esq.—Dugway's Indian Feats—Lectures—And numerous other Entertainments.—Admission to the whole, 1s. Open from 12 to 5, and 7 to 10.

SCIENCE

The Antidotal Treatment of the Epidemic Cholera. By John Parkin, M.D. (Churchill & Sons.)

On Cholera, its Nature and Treatment; being the Debate in the Harveian Medical Society of London. (Hardwicke.)

Directions for the Preservation of Health, and Precautions to be taken during the Prevalence of Cholera, issued by order of the Vestry of St. James's, Westminster.

Weekly Report of Births and Deaths in London, issued by the Registrar-General.

Cholera Prospects. By Tilbury Fox, M.D. (Hardwicke.)

Report of the Council on Cholera Hospitals. (Epidemiological Society.)

Memorandum of a Plan of United Action in case of an Epidemic of Cholera. (Association of Medical Officers of Health.)

It will seem somewhat astounding to people at a distance to see that London is as little prepared to resist an outbreak of cholera in 1866 as in 1854. Yet such is absolutely the case. The deaths in the first and second weeks of the outbreak in this year are more numerous than they were in 1854. The astonishment produced by this fact will arise from the general conviction that since 1854 there has been a great amount of sanitary legislation, and consequently a great amount of sanitary activity. But let us inquire whether this is the case. The only piece of efficient legislation since 1854 has been the passing of the Metropolitan Management Act, in 1856. By that Act two great things have been done. The first was the appointment of medical officers of health in each

parish of London; and, second, the commencement of the main sewerage works for all London, and the consequent relieving of the Thames from the poison of the sewage. The works of the latter are not yet completed, but as far as they have gone they have, no doubt, relieved those who are supplied with water from the Thames from one great source of the cholera poison. The district not completed is that in which cholera is now raging. But what have the medical officers of health done? Appointed by the vestries, hampered at every step they have taken, and without an efficient staff of sanitary inspectors, they have done very little; and with these exceptions the great Act, which was to have been a Sanitary Act, has been almost a failure. Its fault has been, the committing of all power into the hands of the vestries, to whom the cost of disease and death are as things not seen, and about which they never trouble themselves till danger is at their very door. The consequence has been, that although we have had two years' warning of the approach of cholera, nothing has been done to prevent its access to our shores, and cholera finds certain districts as unprepared in 1866 as in 1854. There is no doubt that by the Metropolitan Management Act and other Acts the vestries of London have had power to act; but it is unfair to attribute to these bodies all the blame. There is a large public outside the vestries who have had legal power to compel vestries to act, but have neglected to do so. The members of our legislature have been quite aware of the defective nature of their legislation. They have been told over and over again that their sanitary Acts are useless. Their attention has been called to the permissive nature of all their sanitary legislation,—making nothing that concerned the health of the people compulsory, and thus allowing men to slay their fellow men by disease with impunity. Even the registration of deaths and births is not compulsory; and the weekly and yearly bills of birth and mortality of the Registrar-General are misleading documents. Again, the improved Public Health Bill of the present session—which is the only beneficial measure the Government has passed this session—is hampered with that respect for property and that disregard of human life, which will render it scarcely more efficient than past efforts of the same kind. The same authorities which have a thousand times over demonstrated their incompetency to deal with matters of health are intrusted with power; and the Parliament and the Government will imagine, as heretofore, because they have passed an Act of Parliament they have done all that is necessary for the health of the people. The vestries, directly they see this Act, will ascertain how little they can do, and if not frightened by cholera they will go on in their old way. Now, however, is the time for action. Recommendations that were flouted six months ago—nay, six weeks ago—are now acted on with vigour; and had we any one in the Government who either directly or indirectly understood the nature of disease, some practical legislation might be effected. But, alas! here we are on the eve of the 12th of August; and who ever heard of a British House of Commons giving up grouse-shooting for the welfare of the people?

We turn to the question of What are we to do? Our table groans with pamphlets, books, and papers on the subject of cholera. Out of this mass of facts and literature we may arrive at some definite conclusions. Foremost comes the Registrar-General's weekly Report, showing that above 3,000 cases of cholera have occurred in London in three weeks. It is very evident that these are principally confined to one

locality, and that other cases may be attributed either to ordinary diarrhoea or communication with the infected locality. The question then comes, how has cholera been introduced into this district? and how can it be prevented from spreading to other districts? There is no reason to believe that cholera has been generated in this district. There is no evidence that it ever is generated anew anywhere, any more than there is of men or oak-trees being generated *de novo*. It has clearly been brought from Mecca, through Turkey, to the South of Europe, and thence has crossed the Channel to England. Where so likely for the disease to break out as in the neighbourhood of those docks which are the *entrepôt* for the merchandise of the world? It has broken out in London, and it is now in Whitechapel, Bow, Stratford, and Bethnal Green—a district supplied with water by the River Lea. There can be little doubt that as the Thames poisoned the inhabitants of Lambeth in 1848 and 1854, so the River Lea is now poisoning the inhabitants of the East-end of London. The evidence seems almost complete that the poison of cholera is generated in the mucous membranes of those who are attacked with the disease; that it is capable of multiplication out of the body; and that water and damp soil composed of organic matter are media for its propagation. One great lesson taught by these facts is, that every person suffering from the disease should be regarded as a focus of contagion. No alarm need be felt by those coming in proximity with such individuals. The poison is not conveyed in the air, but by the touch; it is not absorbed by the mucous surface of the lungs, but by the mucous membrane of the alimentary passages. Such being the case, it is well known that nurses and medical men seldom take the disease in attending on the sick. The great means of preventing the disease is avoiding the contact of the mucous membrane of the mouth with the poison from the patient. The disgusting elements that come down the Thames from Windsor Castle and town, and also from Kingston, will certainly poison that part of London which receives its drinking water from the Thames, should outbreaks of cholera occur in Windsor or Kingston.

Another practical conclusion that follows from our knowledge of the nature of cholera is this, that during an epidemic of cholera an ordinary seizure of diarrhoea is not to be distinguished from the preliminary stage of cholera; hence the necessity of at once taking precautions in cases of diarrhoea as though they were cholera. This is very troublesome, very laborious to the well-to-do, but almost impossible for the poor; hence cholera is widely diffused before parish or medical authorities are aware of it. Who could anticipate that the thirty cases of cholera or diarrhoea of the first week in July would become three hundred in the second week, and twelve hundred in the third week? But it was because those first cases were not regarded as cholera that this fatal explosion has taken place. Now, this may occur in any town in the kingdom, in any part of London; and the wisdom and the duty of every community is at once to take precautions, and treat every case of diarrhoea as one of cholera. What, then, should be done? The suspected poison should be destroyed by the use of disinfectants, and all precautions taken to avoid the dissemination of the poison by water or other means.

We do not think it necessary here to enter into the question of the treatment of cholera. All writers on this disease speak of two stages—the premonitory and the stage of collapse. Most medical men speak hopefully of treatment

in the first stage, and doubtfully of all treatment in the second stage. We are struck, however, in going over the record of cases and treatment, at the different views taken by medical men. Nor can we point to any work where the subject of treatment is spoken of scientifically. There is no comparing of cases, no attempt at estimating the mortality of one treatment as compared with another; and the scientific medical practitioner places himself in the same position as the homœopath or the quack, and tells you he believes his treatment cured his patients because they got well. In 1854 we commented on Dr. George Johnson's elimination treatment, and showed that he brought forward no series of cases sufficient to demonstrate that such treatment warranted further confidence than being supported by an ingenious theory. The strangest remedy recommended is that by the homœopathic school of practitioners, who administer camphor, but not in infinitesimal doses. This seems to us abandoning altogether the principles of homœopathy; for surely camphor will not produce cholera or anything like cholera, and if it did the "dynamizing" power of division, according to Hahnemann, ought to render it more potent in proportion to the smallness of the dose; otherwise we see no objection to camphor. It is a good stimulant, as Dr. Copland has so long taught the profession.

We must, however, express our conviction that if anything is to be done in the premonitory stage of cholera,—during the preliminary diarrhoea,—it is by the administration of opium. We do not say this as a matter of individual experience—the experience of an individual is worthless in such a case as this; but when the experiences of many individuals are put together, truthful conclusions may be arrived at. Now, if any one will take the trouble of examining the various plans of treatment of cholera which have been advocated since Europe first became acquainted with this disease, they will discover that in four out of every five of these systems opium is an ingredient. It is the one remedy which the largest amount of experience recommends; and we think the evidence is sufficient to establish the fact that opium in some form or other is beneficial in the premonitory stage of cholera.

We must now leave this subject. It is not our function to enter into medical controversy, or we might have discussed more fully some of the points on which we have touched. We trust, however, that this epidemic will not pass away without some effort being made by our Government to discover something more of the causes and nature of this disease than is at present known. The anxiety betrayed by the Houses of Parliament on the Cattle Plague induced the Government to appoint a commission of inquiry, which has resulted in a more complete and faithful account of this disease than had hitherto been published; and if no new discoveries were made, the nature of the disease and the means of its prevention were demonstrated for all time to come. Will they not do for their human fellow creatures what they have done for their animals? Or shall it remain as a standing joke for the world to laugh at, that John Bull cared more for his cows than his fellow men?

SOCIETIES.

ENTOMOLOGICAL.—August 6.—Prof. Westwood, V.P., in the chair.—Mr. S. Stevens exhibited a new *Cetonia* from Sierra Leone, three species of *Pogonostoma*, sent by Mr. Gerrard from Madagascar, and a collection of Coleoptera made by Mr. Edwyn Reed at Bahia.—Mr. M'Lachlan mentioned the capture at Reigate of *Sisyra Dalii*,

and exhibited a number of caddis-worm cases, chiefly from Bavaria and the neighbourhood of Basle.—Mr. D'Orville sent for exhibition a remarkably dark specimen of *Cabera pusaria*.—Mr. Bond exhibited specimens of *Scoparia basistrigalis*, a new species recently characterized by Dr. Knaggs; also *Sericoris euphorbiana* and *Catoptria microgrammana*, both taken near Folkestone by Mr. Meek.—Mr. Janson exhibited a number of Coleoptera captured in the New Forest by Mr. C. Turner, amongst which was *Quedus dilatatus*, found in the burrows of the larvæ of *Cossus ligniperda*.—A communication was read respecting the recent plague of locusts in Algeria.

FINE ARTS

Gossip about Portraits, principally Engraved Portraits. By W. F. Tiffin. (Bohn.)

Mr. Tiffin, who enjoys a name well known in the chronicles of printselling, has produced at this apt time, while the National Portrait Exhibition is one of the chief subjects of study and conversation, a capital little volume about portraits, and, without being very "shoppy," contrives with a good deal of spirit to advocate the collecting of engraved likenesses; he says that to every one is not given a purse long enough to secure oil pictures of great men, while the means and the opportunities for acquiring such as have been engraved are at once more widely diffused and more frequent. These are his best arguments, if such they can be called, in favour of the pursuit he advocates; others here are not worth noticing.

Without having made any deep researches or exercising much critical acumen, the author has gathered the materials for a very pleasant and readable book, which we commend to those who have an hour or two to spare for its perusal. The reader must not be daunted, as we were at first, by the ridiculous adulation Mr. Tiffin, in his introductory chapter, also on p. 124, bestows on the Earl of Derby, on account of that gentleman's connexion with the National Portrait Exhibition. His Lordship's good offices have been fully acknowledged by the public; but it is a little too much to find a professed writer on portraits, when referring to the gathering at South Kensington, utterly silent about the ability, discretion, industry and care of some half a dozen men who have really done all the work which is in question. We believed the time was gone by for this nonsense.

Apart from such defects, there is much that is genial, and even tasteful, in the way in which the author has dealt with the many aspects of his subject. One of his anecdotes relates to the search after a portrait of a Dr. John Thomas, Bishop of Salisbury. This was told to the author by the late Mr. Corfe, organist to the cathedral of that see:—

"A stranger came to ask if he could procure him a sight of the portrait of Dr. Thomas, which he believed was in the palace. 'Which Dr. Thomas?' asked Mr. Corfe. 'Dr. Thomas, the Bishop,' said the stranger. 'But there were two Thomases, Bishops.' 'Yes, but Bishop of Salisbury I mean.' 'But they were both of Salisbury.' 'Well, the one whose christian name was John.' 'They were both christened John.' 'Then the one who flourished in the last century.' 'They both flourished in the last century.' 'How absurd!' 'But true!' 'Come then, the one who had a squint or cast in his eye.' 'They both had a squint or cast in the eye.' 'Tush! well, let me see! my man must have been Bishop of Salisbury somewhere between 1755 and 1765.' 'Sir, they were both Bishops of Salisbury within those years!' 'Nonsense!' 'Fact!' 'Oh! now I recollect, the one whose portrait I want was translated.' 'So was the other.' 'But I don't mean died! I mean to a different see.' 'So do I.' 'Well now, you won't say they were both translated in the same

year. My John Thomas was translated in 1757.'—'Ah,' said Mr. Corfe, 'now I know what you mean. The other was translated in 1761. But there are portraits of both in the palace; and, unless the names and dates are to them, you may take your choice.'

There were, strange to say, two such bishops; let us add that the one the inquirer wanted was George the Third's tutor, who was translated to Salisbury in 1757. This was Bishop John Thomas the First (erst of Peterborough), who held Salisbury until 1761, when he was removed to Winchester, which see he held for twenty years. He was succeeded at Salisbury by Dr. R. Drummond (erst of St. Asaph), who became Archbishop of York in the same year, and was followed by John Thomas the Second (erst of Lincoln), who remained Bishop of Salisbury until 1766. It is worth noting here that there were two Archbishops of York who bore the name of Matthew Hutton; the first held the dignity from 1595; the second from 1747, when he removed to Canterbury, and was succeeded by Secker in 1758. The following may be added to those numerous incentives to bibliomania of which every one has an instance. It has reference to an adventure which befell Mr. Brand:—

"The gentleman in passing through Bell Yard, Temple Bar, saw a dirty child eating a piece of bread and butter, who had one of these pamphlets (a rare tract of the genealogies of the Stuarts) in its hand, rather soiled. He inquired of the child its residence, which he found to be in a cellar, and on questioning the mother why she suffered the child to destroy the book, she said it was of no use, and he might have it if he would give the child sixpence; but upon his giving a shilling, the woman observed, 'The gentleman might as well have a clean one!' and to his astonishment produced a copy in the finest preservation. He had no difficulty in making terms for both, and there is no doubt rewarded the proprietor in a manner far above her expectations. I was present a short time ago when a clergyman, a most worthy and liberal man, preparing his father's library for sale, found between the leaves of one of the books a ten pound note, which he supposed had been taken by his father to pay some account, and placed in the book on his being called away on some business, and so forgotten. By the merest chance it escaped going to the bookseller, to be, perhaps, forwarded, unobserved, to some customer."

In the section on "Portraits and their Inscriptions" there are some readable notes by Mr. Tiffin; that on "False and Unsatisfactory Portraits, and Altered Portraits," is worth reading, rather for the "moral" it expresses than on account of any novelty it contains.

KITTY FISHER'S PORTRAIT.

August 6, 1866.

IN reply to F. C.'s letter it may be well to say that all inferences as to the date of a picture by Reynolds, derived from that of a payment noted in his ledger, are valueless. He was often paid before a portrait was begun, generally got half the money on beginning; indeed, he used two printed forms of receipt, for first and second payments. Before me are two of these for the first and second instalments, for a portrait, and dated with an interval of nearly twelve months. He was sometimes paid long after a picture was finished. For example, Mr. Amherst paid 21*l.*, Sept. 1775, for a portrait painted in 1760,—see Cotton's list. Thus the fact of P. Dawe's mezzotint of Miss Woolls being dated a year before the entry of the payment by Mr. Crewe, "for Kitty Fisher's portrait," as noted by F. C., is not conclusive. Kitty was dead when this payment was made for a portrait which was probably a copy of an earlier one; that earlier one may be the Lenox or the Munro picture.

The entry suffices to prove that Reynolds painted a "Kitty" for Mr. Crewe, which picture, unless the belief of the present Lord Crewe is insignificant, is identical with that now at the British Institution;

this portrait has to be accounted for if the one in question is really, as F. C. asserts, the work of Cosway. It is certain that Reynolds painted several "Kittys," which are missing, if those of Crewe Hall and Mr. Munro's collection are not by him, but by Cosway. It is impossible to doubt that these works represent the same person—a virtuous Miss Woolls or an unvirtuous Miss Fisher. Why Mr. Crewe should acquire a portrait of a comparatively unknown Miss Woolls, or what has become of the Reynolds he paid for, are mysteries your Correspondent may attempt to solve by the aid of an imaginative housekeeper. I know nothing of this domestic.

The portraits of Kitty Fisher ascribed to Reynolds differ only so much as is common in repetitions, and were, I suppose, adapted by minor changes to the views of the lady's lovers. Your Correspondent is hard upon the inscription on the engraving in Mr. Taylor's 'Life of Reynolds': a simpler inference than his may be drawn from it; it is apparently reduced from the new plate by Mr. Humphreys after Mr. Munro's "Kitty," which is published by Messrs. Colnaghi, and differs only from Lord Crewe's picture in such details as I have named, not in features, attitude, or air. Knowing nothing of Col. Lenox's version, I will confine myself to that of Lord Crewe; with it goes the Munro picture.

The likeness between the ladies does not affect the authorship of the Crewe picture; the testimony of Miss Woolls's relative is only good for this. What has come of that testimony I shall show. That Bromley catalogued a print of Miss Woolls, by Dawe, after Cosway, is good for nothing unless that print is found to be a copy from the portrait now in question and attributed to Reynolds. With the advantage of F. C.'s remarks, I have again seen this picture, and do not hesitate to repeat the opinion of the *Athenæum*, No. 2016, that it is the work of Reynolds. Having, with a practical education as an artist, not a collector, studied Art for more than a quarter of a century, I have had at least the opportunity of forming a judgment on this subject, and, without presumption, might venture to express it, even if I stood alone in opposition to F. C.; on the contrary, I find that all those numerous experts who have communicated with me on the subject think likewise; among these are men of the largest knowledge, experience beyond mine, and unchallengeable taste. Your Correspondent admits that he never saw a picture in oil by Cosway; yet, on the authority of an indifferent mezzotint, ventures to decide against those opinions.

As F. C. objects to *ex cathedra* statements, I will no longer rely upon education and opinion, but tell what came of that re-examination of the picture which he suggested. That I might conveniently make this examination, Messrs. Colnaghi kindly drew from their large stores an impression of the mezzotint of Miss Woolls, and produced an original drawing, in pencil, of that lady, by Cosway, the property of Mr. J. A. Woolls, of Farnham, whose name has been introduced to this discussion. If F. C. repeats the comparison I have made, he will surely regret having taken up an untenable position and needlessly troubled many persons.

The absurdity of F. C.'s theory was obvious when the works were brought face to face, and examined by Mr. Nicol, Secretary to the Directors of the British Institution, and myself. The chiaroscuro of the things differs *in toto*. Whereas Reynolds, as was his wont, relying on the brilliancy of his flesh, relieved the head on a middle tone, the print showed it relieved on dark, almost the darkest part of the work. No engraver who understood his business would make such a change as this. The light is spread over the picture, not so in the print. A mass of shadow, balancing other arrangements, fills a considerable space behind the couch in the painting. So far is this from being the case in the engraving, there is not even room for the shadow there, because the couch comes close to the margin; the arrangement and value of the sky are not alike in both; that of the painting goes broadly with the tone of the wall; in the print the edge of this wall is "cut out" and hard. There is a large curtain in both pictures, none in the print. As to form, the face in the print

is that of a commonplace, rather vulgar-looking young woman, with a decidedly large nose, and nostrils widely spread; underjawed, with weakly expressive eyebrows, and a "conceited" simper, which may be partly due to the engraver, yet, in a less degree, it appears also in the drawing. The ear of the mezzotint is placed on a line with the middle of the nose; the lips are set, their corners turned up affectedly; the cheeks are puffy, ill modelled, ill formed; the chin is infantine; the expression of the eyes is vague, and without a sign of mind. In the picture the features are clear, delicate, full of amorous sweetness, the nose charmingly piquant and refined at the nostrils. The difference between Miss Woolls's nostrils in the drawing and the print and those of the "Kitty" portrait is ineffable. The mouth of the latter is full of grace and character, the chin well developed, nearly to a line with the lower lip; the ear comes below the base of the nose (artists will appreciate this point); the features are as suave in their contours as Reynolds often painted. The eyes have different directions in the works; the one has a dreamy languor which is nowhere in the other. Two little "corkscrew" curls decorate the cheeks of Miss Woolls, not those of Miss Fisher. According to Reynolds's frequent practice, a long ringlet descends to the bosom of the latter, but not to that of the former. There are coronets in both, yet the angles at which they stand differ considerably, but not more so than the materials of the ornaments: that of Kitty Fisher is plain, of tortoiseshell; in the print it is moulded in high relief, with elaborate ornaments, and appears to be of metal. The picture has a black lace scarf about the shoulders, not so the print: round the neck of the Cosway is a black string with a pendent miniature, as in the Munro "Kitty"; that of Lord Crewe shows nothing of the sort. The ermine is common to both, but differs altogether in arrangement; that of the print being, as all its details are, inferior in taste and grace of disposition. The forms of the dresses differ: the print shows a puffed and slashed sleeve to the upper arm, going rather tightly thence to the wrist; the other is moderately full, not puffed or slashed. The bosoms are differently covered; the "cut" of the dresses is diverse. The bust of Miss Woolls is fuller than that of "Kitty," and more exposed. In fact, the difference between the women is so great and the inferiority of Miss Woolls so evident, that we agreed, however the latter might flatter herself, she would wisely give anything but her reputation for a real resemblance. Lastly, if these variations of feature, character, and costume are not enough to satisfy us that the print has no original in Lord Crewe's picture, which must be established ere we ascribe it to Cosway, the positions of the hands in the Crewe portrait are unlike those of the print; in the former they lie unoccupied on the lady's lap, an action consonant with the expression of the faces; in the print, Miss Woolls holds a large, opened letter, and her eyes look, if they look at all, over it; there is no ring on the forefinger. The doves are turned in opposite directions in the picture and the print.

I am sorry to trouble you with these minute descriptions; they seem unavoidable. With others I might have said no more than that the print, and, in a less degree, the pencil-drawing, are portraits of a commonplace damsel, virtuous, no doubt, but as inferior in charms to the seductive Kitty as she could well be. It would, however, not do thus to pronounce on what your Correspondent might aver to be matters of taste not to be dealt with *ex cathedra*. Nevertheless he will admit the importance of the statement which Mr. J. A. Woolls made to Mr. Nicol when they stood before Lord Crewe's picture, and the former declared himself satisfied that it represented no relative of his, and that it was no original to the mezzotint of which your Correspondent has made so much.

F. G. S.

On this subject we have, in addition, the following letter:—

"Salcombe Cottage, Woolstone, August 6, 1866.

"In answer to F. C.'s inquiries in the *Athenæum* of the 4th, I beg to say that the Lenox picture of

Kitty Fisher has a miniature of a gentleman on the neck; that there is no ring on the forefinger of the right hand, or paper held in it; the left hand holds a dove, and another looks down from the back of the seat; the fur on the neck is not ermine. I am quite sure of these facts, as I have now before me a copy of the picture, made by myself for my father before the picture left England. I also know that this copy was used by the engraver of the plate in the 'Life and Times of Sir Joshua Reynolds.'

ROBERT C. LESLIE.

The inscription to the print in Mr. Tom Taylor's 'Life and Times of Reynolds,' facing p. 165, vol. i., says "KITTY FISHER, from the pictures in the possession of H. Munro, Esq., and Lord Crewe." Here "some one has blundered" again.

FINE-ART GOSSIP.

THE Directors of the British Institution have given notice to artists accustomed to exhibit pictures in their gallery, Pall Mall, that in consequence of the lease of the premises terminating on Lady Day, 1867 (when it is understood the property will be sold by auction), and, from their being unable to obtain any temporary extension thereof, they are obliged, with regret, to announce that no exhibition, either of the works of British or of Ancient Masters, can take place in the Gallery next year.

The Report of the Directors of the British Institution for the past year, so far as concerns public interests, is to the following effect:—The two exhibitions, as compared with those which preceded them in the year before, show, in the receipts, a decrease from the Modern exhibition of 1864, and an increase from the Ancient exhibition of 1864. In the total amount received to the date of the Report, the 17th ult., it shows a falling off of 99l. The number of pictures sold from the Modern exhibition was 150. Last year it was 147. The capital of the Institution consists of 15,000l. Consols, and 400l. Exchequer bills. The Directors have had the satisfaction of receiving a requisition, signed by sixty-four artists and exhibitors, expressing their regret at the anticipated discontinuance of the exhibition, and their sense of the advantages which the exhibition has, for upwards of sixty years, afforded to artists. The receipts for the current year have been in all 1,587l. 2s.

At the Architectural Gallery may be seen some pictures and engravings by foreign painters, gathered by the International Society of Fine Arts. Among these, a few are worthy of notice. By M. Billon is *In the Wood* (No. 6), a woman waiting, presumably for her lover.—*The Breakfast* (20), by M. De Noter, two figures painted, as we suppose, some time since, by M. F. Willems.—M. E. De Schampheleer's *View in Holland* (21) is a capital landscape of its kind, expressive of the airiness and space, if not of the brilliant colour, of Nature.—Note also a *Landscape in Limbourg* (37) and the *Banks of the Meuse* (38), by M. Keelhoff; and *The Dunes, Boulogne-sur-Mer* (43), an expansive-looking picture by M. Papeleu.—A print, by M. Barthelme, after M. B. Vautier's *At Church* (150), shows admirable appreciation for character and great variety of expression.—There is a good etching, *Camels* (158), by M. Boilly; another, *The Convent* (201), by M. A. Gautier, and two more, *At Etretat* (217) and *At Rouen* (218), by M. A. Hervier.—M. J. Jacquemart's studies of flowers (220, 221, and others) are exquisitely broad and vigorous in treatment.

A Correspondent of a daily journal makes a capital suggestion as to the future housing of the Royal Academy. This writer truly says that, however suited to an Academy a site at South Kensington might be, it is for an exhibition not comparable with one near Charing Cross. Upon the latter the income of the body depends. Even the facilities to be offered by the Underground Railway will not equalize the values of the alternative sites; a journey of four or five miles through a stifling tunnel may be no pleasant preparation for a visit to a gallery of pictures. There is, however, a noble position on the north side

of Leicester Square, now indifferently occupied, and, in part, encumbered by ruins. This site might be had, no doubt, for a comparatively small sum. The Government is bound in honour to reinstate the Academy in no worse position than that which it at present holds. Probably the body would find part of the purchase-money in preference to accepting a suburban establishment. At Leicester Square is ample room,—a noble frontage at present disgraced by a ragged wilderness of an inclosure. This place will, when the inevitable street is made to connect the West Strand with Piccadilly, be in one of the most commanding positions in London, such as should be occupied by a handsome building.

We offer as a suggestion to the new Government that its advent should be signalized in the eyes of men of taste by prompt removal of the Big Duke and his horse to some fitter site, not necessarily less public than that it occupies at the top of the Green Park Arch. The last named structure is one of the few public works that are not utterly discreditable to the metropolis; we have disfigured it long enough. A rumour was circulated some time since that our ingenious ediles intended to decorate the Marble Arch with a pendent to the Big Duke on its companion structure, by placing the almost forgotten Wellington Vase, now at South Kensington, on its summit. Queer as the result of this would be, there is nothing more ridiculous in it than its fellow fully exhibits.

Lovers of Italian art in its early and best stages will regret the omission of a visit to the now open gallery in New Burlington Street, which contains a fine series of copies, by Mr. J. H. Wheelwright, from many of the most famous and beautiful of the works in question. Excepting that the copyist has repaired the injuries of time, accident and ignorance, so that his reproductions look rather too fresh, nothing can be more satisfactory than the manner and delicacy of these drawings. Mr. Wheelwright never fails to render the style of each master with commendable distinctness,—a highly valuable quality in such cases. Among them are the well-known 'Nozze Aldobrandini,' an antique picture; a fresco from the Baths of Titus, peculiarly interesting as a specimen of the Roman method in wall decoration; a work of the sixth century, from the catacombs of St. Calixtus, Rome, now in the Vatican, representing the 'Last Supper,' with great variety and spirit in the expressions and conventional arrangement of the figures. 'The Madonna and Saviour Enthroned,' the famous picture by Cimabue,—from which some date the revival of pictorial art,—is given here with great, too great, brilliancy, and remarkable taste and skill. Giotto's 'Presentation in the Temple,' Giotto's (Tommaso di Stefano's) *Pietà*, in the Uffizi,—a very beautiful and learned picture; several portraits from frescoes by S. Memmi, including those of Cimabue, Giotto, Taddeo Gaddi, and Memmi himself, are here, and will be examined with ever-fresh interest. Orcagna's 'Christ and Saints,' half-size, from Sta. Maria Novella, Florence; the quaint but extremely dramatic 'Deluge,' by P. Uccello, and his 'Portrait,' by himself. Few works exceed in their charm the noble heads in the 'Madonna and Child,' by Domenico Veneziano; the Mother is enthroned in a superbly inlaid chair of *opus Alexandrinum*, the colour of which combines admirably with that of the robes; the brooding expression of the Virgin's face, as she holds the naked Child upright on her knee, will be appreciated by students. Works by Masolino (?) and Masaccio, in the Brancacci Chapel, and elsewhere, are observable for their important artistic qualities: 'The Visit of St. Paul,' by F. Lippi, 'The Expulsion,' by Masaccio, and 'Peter Delivered from Prison,' by the first, will not be overlooked; the reproduction of their fresco-character is remarkable. A very brilliant copy from Fra Angelico's 'Coronation of the Virgin,' as restored, and now in the Louvre, is charming and noble. Other pictures, by Fra Angelico, F. Lippi, Botticelli,—a beautiful transcript from the Uffizi 'Virgin and Child, with Angels,'—Ghirlandajo, Pinturicchio, Fra Bartolommeo, M. Angelo, Del Sarto, B. Peruzzi, and Da Vinci.

The copies from Raphael are numerous and singularly successful; among these the 'Sibylla,' from Sta. Maria della Pace, Rome, is prominent. The student will appreciate, with growing admiration, the beautiful copy from the 'Head of a Monk' (No. 44), by Perugino, in the Accademia, Florence; this is an extraordinary and nearly perfect piece of drawing, modelling and colouring, exquisite in its form, and at once subtle and intensely effective in characterization—so fine an example of workmanship, that it is hard to quit one's place in front of it.

MUSIC AND THE DRAMA

ASTLEY'S.—This elegant THEATRE WILL OPEN for the SUMMER SEASON on SATURDAY, August 11, under the management of Miss Sophie Young, with an entirely New Version of Miss Braden's popular Norel, entitled THE MISTRESS OF AUBLEY COURT, with New Scenery, painted by Messrs. C. & W. Brew, and supported by the following talented company:—Messrs. George Jordan, H. Sinclair, Basil Potter, John Neville, and Ryder; Mesdames Maud Shelly, Marian, and Sophie Young. After which, a New Pantomimical Ballet d'Action, written and arranged by W. H. Payne, the Music by W. H. Montgomery, called ROSALIE; or, La Fiancée. Characters by W. H. Payne, Henry Payne, Fred. Payne, Paul Herring, Mdlle. Esta, and the Ladies of the Corps de Ballet from the Theatre Royal, Covent Garden.—Acting and Stage Manager, Mr. Ryder.

NEW PUBLICATIONS.

VOCAL MUSIC.

WHAT is to be done with regard to this mass of production will be sufficiently done in most cases by a simple transcript of title-pages. These are taken at random, beginning with the *Song of the Fisherman's Wife*, by Susan Dearman (Cocks & Co.).—*Gallant so gay*, by Mr. Harold Thomas (Ashdown & Parry), is a cheerful song of its kind, to words above the average.—Mrs. Merest presents two of her ballads, *My Fairy*, and *Farewell, it was only a dream!* (Hawes).—Mr. John Thomas offers *Home and Love* (Addison & Co.).—Mr. F. F. Courtenay (Hutchings & Romer), an exceedingly good setting of the good old words *Is it to try me!* and a charming *canzonetta*, *La Puccinina* (Ollivier & Co.).—*Hafiz*, by F. L. Ritter (two numbers, Ewer & Co.), is a set of songs in the most over-wrought style of the German *Lied*, with pianoforte accompaniment.—*Youth's First Lesson, Terzettino, Past and Present, and Three Serenades*, two songs, *Last Hopes*, and *My Lorn Heart*, are by A. C. Wellesley (Jewell & Co.); so is *Silent Night, a nocturno* (same publishers).—*O Summer Night so calm and fair* (Lamborn Cock & Co.), is by Mr. F. Westlake.—*Solitude*, by George Russell, is a setting of some of Kirke White's words (Chappell & Co.).—*The Perry-Boat*, the poetry by Tom Taylor, Esq., is by Mr. H. C. Deacon (Davison & Co.).—*My Boat is moored, The Sailor-Boy, The Sea-Maid's Grotto*, by C. E. Murphy (Holloway & Co.), are songs "as usual." So are *Wake, Lady, wake*, and the *Twain Spirits* (same publishers).—Here is a heap of Mrs. Arkwright's songs, arranged by Mrs. Groom (Lonsdale & Co.). That charming amateur singer, who fancied herself a composer, had the good habit of setting the best words to such music as she could decline. But her songs are no more real music than were the tunes fancied by Mrs. Hughes to the words of Mrs. Hemans.—*Alone to thee*, by Henry Lonsdale (Ashdown & Parry), *Lovely Spring*, by Coenen (Ewer & Co.), are two new things better is *Al Salir el Sol* (Davison & Co.), by Mr. Charles Salaman, written by those who recollect with pleasure Italian canzonets, which are some of modern time.—A number of Messrs. Lonsdale & Co. have given notice; neither can *Old Penn* be written and adapted to piano by Linley (Ewer & Co.); nor *My J. Alexander* (Augener & Co.), by Michael Noa (same publishers), by that excellent artist, is an effective setting to the majority of

HAYMARKET

played *Hester* by Mr. Tom Jones, an

Signor Ronconi is engaged for November 1st to Allen
will proceed thither accompanied by his wife to Queen's
signora Antonietta Ronconi. Er. College.
at hers may prove a case of it.

It is said that Mr. A. Sketchley and Mrs. Brown are going to America.

The Secretary of State the other night, in answer to Lord E. Bruce, announced that a Bill in relation to theatrical licences would be prepared during the recess, though he could not promise that it would adopt the provisions recommended by the Committee.

Mr. Tom Taylor has a drama in hand, founded on Mrs. S. C. Hall's story, 'The White Boy.'

Drury Lane Theatre has lost one of the most efficient of stage-managers by the death of Mr. Roxby, after a long illness. Mr. Roxby Beverley, to call him by his proper name, was a member of an old theatrical family, which has contributed not only many players of ability to the stage, but one of the most perfect of scenic artists, in the person of Mr. William Beverley, with whom his brother resided at the period of his death.

MISCELLANEA

Archæological Institute.—At the final meeting, in the Council Chamber of the Guildhall, on the 25th of July, the late Marquis of Camden (who died suddenly on the 6th instant) in the chair, a paper, 'On the Mediæval Seals of London,' by Mr. W. De Gray Birch, was read, and upwards of two hundred casts prepared by Mr. Ready, from original impressions in the British Museum and elsewhere, exhibited. The paper commenced with remarks on the seals of the various nations of antiquity, and the uses to which they were applied, and notices on the origin of leaden bullæ, gold, silver and bronze seals, of the counter-seal, and of the manner of sealing *en placard*. The colours of the waxes, the various sizes, shapes, numbers, and means of applications to documents received careful description, followed by details relating to forged seals, materials used for matrices, and the unique use of a piece of money by one person, and a black-handled knife by another, instead of a seal. Passing briefly in review the royal seals of France and England, the paper proceeded with a description of the seals of the Bishops of London, of St. Paul's Cathedral, chapters, deans, chancellors, canons, and other ecclesiastical officials of the various monastic institutions, especial mention being made of those of St. Bartholomew and Westminster Abbey. The seals of the Corporation of London, Port of London, guilds and companies, Mint, Herald's College, St. Mary-le-Bow Church, Charterhouse, the Priors of St. John and St. Mary, Clerkenwell, the monasteries of St. Martin-le-Grand and St. Mary Minories, the White, Grey, Black, Crutched, and Austin, Friars, together with many seals relating to other churches and institutions, were mentioned; and the paper concluded with an account of the use of heraldic and other personal seals, and of the decay of their importance, except in certain legal cases where their use became a mere formality.

The late John Gibson, R.A.—There is in my possession a design for a bas-relief by Gibson, signed as having been done in Rome in 1840. The subject is from Virgil, 'Eolus, at the desire of Juno, sending out the Four Winds to destroy the Trojan Fleet.' The drawing is singularly free and bold; the impetuous rush of the winds being in magnificent contrast with the stately dignity of Juno, and the attitude of command and authority assumed by Eolus. I should like greatly to know if this design was ever carried out; and if so, where the bas-relief is? The drawing is of peculiar grandeur and power, and the result would probably have been one of Gibson's finest works. If any of your readers can answer my inquiry, I shall take it as a great kindness. F. D. F.

Belfast, August 3, 1866.

Passages in 'Hamlet.'—1. Among the numerous emendations of that notoriously corrupt passage, act i, scene 4,—

The dram of sale
Doth all the noble substance of a doubt
To his own scandle,—

that which the Rev. Mr. Dyce has inserted into his text ("the dram of evil doth all the noble substance oft *debase*") certainly deserves the highest praise for its clear and unconstrained sense. It is,

however, so remote from the reading of the old editions that, if it was what Shakespeare wrote, we can hardly conceive how such a corruption could have crept into the text. I think a very near approach to the text, together with an unobjectionable sense, might be obtained by reading,—

The dram of evil
Doth all the noble substance often *dab*
To his own scandle.

2. In my edition of 'Hamlet' I have followed the later quartos in the passage:

For vsè almost can change the stamp of nature,
And *master* the deuil, or throw him out
With wondrous potency—

Act III, scene 4,

which leaves the verse incomplete. The lections of the latest editors,

And either *master* the devil, or throw him out,
and—

And either curb the devil, or throw him out,
fill up the verse, but are, as well as the lection adopted by myself, weak and tautological. I now suppose that Shakespeare wrote:

And either *usher* the devil, or throw him out.

The similarity of sound in the two succeeding words "either usher" may very likely have been the cause that the copyist or the compositor of the Quarto of 1604 only caught the former, and left out the latter. Seven lines *ant?* I now prefer "Of habits evil," to "Of habits, devil." 3. Instead of—

They aim at it.
And botch the words up fit to their own thoughts,
Act IV, scene 5,

I suspect we should read,—

They *gape* at it, &c.

4. Some time ago I communicated to my learned friend, Dr. F. A. Leo, of Berlin, an alteration of the well-known line (act i, scene 2),—

And stand a comma 'tween their amities,
into—

And stand a co-mate 'tween their amities.

He replied that this conjecture had already been made by Becket, whose 'Shakespeare's Himself Again' I have never seen yet, and I now find it quoted as Becket's in the Cambridge edition. To me this coincidence seems convincing. It is true that in the only passage in which the word "co-mate" occurs in Shakespeare it is accented on the second syllable:

Now, my co-mates, and brothers in exile,
As You Like It, act ii, scene 1.

There can, however, be little doubt that, like "exile," which, curiously enough, occurs in the same line, like "comrade," and a number of similar words, co-mate had a shifting accent, and Webster's Dictionary gives, indeed, "co-mate." The similarly-compounded "co-heir," also, has the accent on the first syllable. "Love," and "Peace," in the preceding lines, should be printed with capitals. 5. I cannot let this opportunity pass by without laying before the readers of the *Athenæum* another conjecture, which I have already proposed in my edition, page 230, but which has been overlooked by the learned Cambridge editors. Act iv, scene 5, we read:

The rabble call him lord;
And, as the world were now but to begin,
Antiquity forgot, custom not known,
The ratifiers and props of every word,
They cry, "Choose we; Laertes shall be king!"

As no appropriate sense can be made out of "the ratifiers and props of every word" (though, as far as I know, this is the unanimous reading of the old editions), Warburton has conjectured "of every *ward*," Johnson "of every *weal*," and Tyrwhitt "of every *work*." None of these conjectures, however, is a real improvement on the text. I have no doubt that we should read "of every *worth*," which would at once remove all difficulty. As far as his worth is concerned, Laertes would indeed be a proper person to be elected king. But the king is not to be chosen, as in the primeval times, for his worthiness alone; antiquity and custom come in for their share also; they are "the ratifiers and props of every word." DR. K. ELZE.

Dessau, August, 1866.

TO CORRESPONDENTS.—B. L.—R. S.—J. T.—H. O.—T. C.—received.

Erratum.—P. 152, col. 3, line 23, omit the word *no*.

SAMPSON LOW & CO.'S LIST OF NEW BOOKS.

THIRTY YEARS OF ARMY LIFE

on the BORDER. Comprising Descriptions of the Indian Nomads of the Plains; Explorations of New Territory. A Trip across the Rocky Mountains in the Winter; Descriptions of the Habits of different Animals found in the West, and the Methods of Hunting them; with Incidents in the Life of Frontier Men, &c. By Colonel H. B. MARCY, U.S.A., Author of 'The Prairie Traveller.' With numerous Illustrations. 8vo. price 12s. (This day.)

FAMILIAR WORDS: an Index Verborum, or Quotation Handbook. Affording an immediate Reference to Phrases and Sentences that have become embedded in the English Language. Crown 8vo. printed in Elzevir on toned paper, handsomely bound. Second and Enlarged Edition, greatly improved, with Copious Index, price 6s.

The PRISON LIFE of JEFFERSON

DAVIS: embracing Details and Incidents in his Captivity, together with Conversations on Topics of great Public Interest. By JOHN J. CRIVEN, M.D., Physician of the Prisoner during his Confinement. 1 vol. post 8vo. price 8s.

The PROFITS of PANICS: and other Revelations of a City Man. A New Book for the Million. By the Author of 'Bubbles of Finance.' In popular form, price 1s.

A HISTORY of SAVINGS' BANKS;

with an Account of the Origin and Progress of the Government Financial Measures for Post-office Banks, Annuities, and Life Insurance. By WILLIAM LEWINS, Author of 'Her Majesty's Mails.' 8vo. 16s.

"A more deeply interesting volume has seldom been offered to serious thinkers and practical reformers." *Illustrated London News.*

The LIFE and CORRESPONDENCE

of BENJAMIN SILLIMAN, M.D. LL.D., late Professor of Chemistry, Mineralogy, and Geology in Yale College, U.S.A. Chiefly from his own MSS and Diary. By GEORGE FISHER. 2 vols. post 8vo. with Portrait, price 24s.

The LIFE of the late Dr. MOUN-

TAIN, Bishop of Quebec. 8vo. cloth, price 10s. 6d.

SOUTH AUSTRALIA: its Progress

and Prospects. By A. FOSTER, Esq., late Member of the Legislative Council of Adelaide. Demy 8vo. with Map, cloth, 12s.

TRAVELLING in SPAIN in the

PRESENT DAY; being an Account of the Journey of a Party of Ladies and Gentlemen who lately Visited its Principal Cities. By HENRY BLACKBURN. With numerous Illustrations from Photographs and Drawings from Life, by John Phillip, R.A., E. Lundgren, Walter Severn, and the Author. Also, an Appendix of Routes, Fares, &c., the Expenses of the Journey, and a New Map of Spain. Price 18s.

A THOUSAND MILES in the ROE

ROY CANOE on the DANUBE, MOSELLE, RHINE, REUSE, AAR, MAINE, THAMES, MAINE, SEINE, MEUSE, and the LAKES of CONSTANCE and LUCERNE, &c. By J. MACGREGOR, Trin. Coll. Cambridge, Barrister at Law. With Illustrations. Small post 8vo. with a Map, price 5s. (Sixth Thousand now ready.)

LETTERS on ENGLAND. By Louis

BLANC. Translated under the Author's Revision. 2 vols. post 8vo. price 16s.

NEW NOVELS. Now ready.

The JOURNAL of a WAITING GENTLE-

WOMAN. Edited by BEATRICE A. JOURDAN. Post 8vo. price 8s. (This day.)

TOILERS of the SEA. By Victor Hugo.

Third Edition. 3 vols. post 8vo. price 34s.

"A fisherman encounters all the fury, and caprice, and treachery of outer nature in order to win a woman whom, on his return, he finds to have unconsciously, but irrevocably, lost her heart to another. But this plainer of stories is worked into genuine tragedy by an exercise of poetic power which, at least in some portions of its display, has very rarely been surpassed in literature." *Saturday Review.*

"As an idyl of homely love and simple heroism, we know nothing save parts of 'Erech Arden' that can compare with the touching sweetness of the closing scenes of the book." *Athenæum.*

"It is impossible for us not to feel chained to the book by the spell and sway of a master hand. The flight of man with sea and storm is rendered as it never has been rendered before, and probably will never be rendered again, by human pen."—*Spectator.*

EDUCATIONAL BOOKS

PUBLISHED BY

DEIGHTON, BELL & CO. CAMBRIDGE, Agents to the University.
BELL & DALDY, LONDON.

Now ready, price 5s. Second Edition, revised and corrected, in accordance with the Recent Regulations.

The STUDENT'S GUIDE to the UNIVERSITY OF CAMBRIDGE.

"Partly with the view of assisting parents, guardians, schoolmasters, and students intending to enter their names at the University—partly also for the benefit of undergraduates themselves—a very complete, though concise, volume has just been issued, which leaves little or nothing to be desired. For lucid arrangement, and a rigid adherence to what is positively useful, we know of few manuals that could compete with this 'Student's Guide.' It reflects no little credit on the University, to which it supplies an unpretending, but complete, introduction."

Saturday Review.

CAMBRIDGE GREEK and LATIN TEXTS, carefully reprinted from the best Editions.

This series is intended to supply for the use of schools and students cheap and accurate editions of the Classics, which shall be superior in mechanical execution to the small German editions now current in this country, and more convenient in form. As the Editors have formed their texts from a careful examination of the best editions extant, it is believed that no texts better for general use can be found. The volumes are well printed, at the Cambridge University Press, in a 16mo. size, and are neatly bound in cloth.

8vo. 10s. 6d.

PROBLEMS in ILLUSTRATION of the PRINCIPLES of THEORETICAL HYDROSTATICS and HYDRODYNAMICS. By W. WALTON, M.A.

CAMBRIDGE SCHOOL and COLLEGE TEXT BOOKS. A Series of Elementary Treatises adapted for the Use of Students in the Universities, Schools, and Candidates for the Public Examinations, uniformly printed at the University Press, in fcap. 8vo., and neatly bound in cloth.

In order to secure a general harmony in the treatment, these works will be edited by Members of the University of Cambridge, and the methods and processes employed in the University teaching will be followed. Principles will be carefully explained, clearness and simplicity will be aimed at, and an endeavour will be made to avoid the extreme brevity which has so frequently made the Cambridge treatises too difficult to be used by those who have not the advantage of a private tutor. Copious examples will be added.

ARITHMETIC. By A. WRIKLEY, M.A. 3s. 6d.

HYDROSTATICS. By W. H. BESANT, M.A. 4s.

STATICS. By H. GOODWIN, D.D. 3s.

DYNAMICS. By H. GOODWIN, D.D. 3s.

TRIGONOMETRY. By T. P. HUDSON, M.A. 3s. 6d.

MEASUREMENT. By B. T. MOORE, M.A. 5s.

In the Press.

AN INTRODUCTION to PLANE CO-ORDINATE GEOMETRY. By W. P. TURNBULL, M.A., Fellow of Trinity College.

TRILINEAR CO-ORDINATES, and OTHER METHODS of MODERN ANALYTICAL GEOMETRY of two Dimensions. By the Rev. W. ALLEN WILTHORTH, M.A., Professor of Mathematics in Queen's College, Liverpool, and late Scholar of St. John's College, Cambridge.

ELEMENTARY GEOMETRICAL CONIC SECTIONS. By W. P. TURNBULL, M.A.

In folio, pp. 8 (of cardboard), price 21s. cloth.

UNIVERSAL PROPORTION TABLE, enabling the Operator to perform by inspection, with greater accuracy than is generally required for commercial purposes, any Example of Multiplication, Division, Proportion, or Extraction of Square Root, either of Whole Numbers or Decimals. By J. D. EVERETT, D.C.L. F.R.S.E., Assistant Professor of Mathematics in the University of Glasgow.

London: Longmans, Green, and Co. Paternoster-row.

2 vols. royal 4to. price 4l.

EVANGELIARIUM HIERSOLYM-TANUM ex Codice Vaticano Palestino dempstrat, editio, Latine verit. Prolegomenis ac Glossario adornavit Comes F. Minascachi-Erizzo. Tom. I. Textus Syr. &c. Ver. Lat. Tom. II. Prolegomena, Lexicon, Indices. 2 vols. royal 4to. Verona.

These splendid volumes are an accurate reproduction in large Extrangelo type of the famous Palestinian Lectionary, which was first made known to scholars by J. G. Adler in his Treatise on the Syriac Versions of the New Testament, Copenhagen, 1790. The version from which these lessons are taken is highly interesting to the Biblical student as well as to the linguist; to the former, because of its peculiar readings; to the latter, on account of the dialect in which it is composed. It appears to have been translated directly from the Greek, for the use of the population of Palestine, and hence its language is rather a variety of the Chaldean than of the Syriac.

The first volume contains the text of the unique Vatican manuscript, with a literal Latin translation. The second volume comprises the Editor's Prolegomena and a complete Glossary.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Now ready, the 36th Thousand, post 8vo. price 7s. 6d.

EUCLID'S ELEMENTS of PLANE GEOMETRY, with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

By W. D. COOLEY, A.B., Author of the 'History of Maritime and Inland Discovery,' 'The Negroland of the Arabs,' &c.

"This is the best edition of the Elements which has yet appeared. By the occasional use of algebraic symbols for words, the author has both shortened and simplified the reasoning."—*Athenæum*.

Uniform with the 'Elements,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or, a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 120 Propositions, deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

"The propositions are demonstrated, in most instances, in the plainest and most direct manner; so that the work may justly claim, what it professes, to be a HELP to TEACHERS."—*Scholastic Journal*.

New Edition.—Fcap. 8vo. price 1s. 6d.

COOLEY'S FIGURES of EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations printed separately for Use in the Class-room.

Whittaker & Co. Ave Maria-lane, London.

For the New Novel,

BROUGHT TO LIGHT,

MR. DIXON'S NEW WORK.

"A REMARKABLE AND VERY ORIGINAL BOOK."—*Saturday Review*.

"BRILLIANT, LIFE-LIKE PICTURES."—*British Quarterly Review*.

Now ready, a SECOND EDITION of

THE HOLY LAND.

By WILLIAM HEPWORTH DIXON.

With Illustrations from Original Drawings and Photographs on Steel and Wood.

2 vols. demy 8vo. 24s.

"Mr. Dixon has written a singularly able book. His genius is essentially conservative. He contrives while sipping his coffee or smoking his cigarette to throw off sketches, with the careless boldness of a hand sure of its own accuracy, which challenge the closest criticism, and whilst professing only to give rough-and-ready pictures of places and scenes as they were in the day when Christ stood amidst them, the centre figure of the whole, he is really bringing the most subtle analysis to bear on the thought which after four thousand years of various development was found in a concrete form, stripped of its vitality and crystallised into the creeds of Pharisees and Sadducees. The sharp points of contact and antagonism, the manners, habits, and scenes of the strange race among whom Christ walked, are all graphically described in the work before us, and we think few would rise from a careful perusal of its pages without a deeper insight into the sacred story, possibly a wider understanding of the words of One who taught as having authority, and not as the scribes."—*Spectator*.

CHAPMAN & HALL, 193, Piccadilly.

JOHN MARCHMONT'S LEGACY

Opinion of *The Times* on 'JOHN MARCHMONT'S LEGACY.'

"Miss Braddon writes frankly for amusement; and in each succeeding novel she rises above herself. 'Lady Audley's Secret' was good, 'Aurora Floyd' better, 'Eleanor's Victory' still better, and now 'John Marchmont's Legacy' may be pronounced the best of all."—See *The Times*, Jan. 2, 1864.

LIBRARY EDITION OF MISS BRADDON'S NOVELS.

BREAKFAST. — EPPS'S COCOA (more commonly called Epps's Homoeopathic Cocoa, as being prepared and sold by James Epps, the Homoeopathic Chemist first established in England). The very agreeable character of this preparation has rendered it a general favourite. For breakfast no other beverage is equally invigorating and sustaining. This Cocoa is used by thousands who never used Cocoa before. "Cocoa stands far higher than tea or coffee," Dr. Hassall says.—Sold in 4 lb., 2 lb., and 1 lb. packets.

THE CULTIVATION OF TEA in the East India is an important feature, and the EAST INDIA TEA COMPANY have, on account of its great strength and exquisite flavour, promoted its sale by every means. The Company are now selling Assam, Cachar, Darjeeling, &c., at the reduced duty, viz., from 2s. 8d. to 3s. 8d. per lb., and China Teas as usual at 1s. 4d. per lb. and upwards. Warehouses, No. 9, GREAT ST. HELEN'S CHURCH-YARD, Bishopsgate.

HOUSEHOLD SOAP.—A saving of 25 per cent. by using the "COMPOSITE HOUSEHOLD SOAP," especially prepared for Housekeepers and large Establishments. Dried, out, in 4 lb. pieces, and stamped.

The City Soap Works—MILTON-STREET, LONDON, E.C. May be had through all respectable dealers in 50s. boxes, 54. chests (400 4 lb.), with lock and key, carriage paid.

Wholesale only at the Works.

. See Address on each Piece.

INDIGESTION.

At the HALF-YEARLY GENERAL MEETING of the Proprietors, held on Thursday, the 2nd August, 1866, at the London Tavern, Bishopsgate-street, the following Report for the Half-year ending the 30th June 1866, was read by the Secretary, WILLIAM NICOL, Esq., in the Chair.

REPORT.

The Directors, in submitting to the Proprietors the Balance-sheet of the Bank for the Half-year ending the 30th June last, have to report that, after payment of all charges, interest to customers, and making ample provision for bad and doubtful debts, the net profits amount to 85,498. 17s. 6d.; this with 14,537. 18s. 10d. brought forward from the last account, produces a total of 100,036. 1s. 6d.

They have declared the usual Dividend of 6 per cent. for the half-year, with a bonus in addition of 5 per cent. (equal to 25 per cent. per annum), which will amount to 52,500. s. and leave 17,486. 18s. 6d. to be carried forward to profit and loss new account.

Mr. John Edmund Anderson has been elected a member of the Board.

Mr. Hugh C. E. Childers, M.P., who retired from the Direction on assuming the position of Secretary to the Treasury in the late Government, being now released from the duties of his office, will, at the unanimous request of the Directors, resume his seat at the Board.

The Dividend and Bonus (together 25. 4s. per share), free of income-tax, will be payable at the Head Office, or at any of the Branches, on and after Monday, the 13th instant.

We, the undersigned, have examined the foregoing Balance-Sheet, and have found the same to be correct.

(Signed) WILLIAM NORMAN, Auditors.

R. H. SWAINE,

London and County Bank, July 30, 1866.

The foregoing Report having been read by the Secretary, the following Resolutions were proposed and unanimously adopted:—

1. That the Report be received and adopted, and printed for the use of the Shareholders.
2. That the capital of this Banking Company be increased by the creation of 20,000 additional Shares, of 50s. each; and that such Shares be issued at such times and in such manner as may be determined at some Annual or Half-Yearly General Meeting, or at an Extraordinary Meeting of the Shareholders, called and held in accordance with the provisions of the Deed of Settlement.
3. That the thanks of this Meeting be given to the Board of Directors for the able manner in which they have conducted the affairs of the Company.
4. That the thanks of this Meeting be presented to William M. Kewan, Esq., and to the Principal and other Officers of the Bank, for the seal and ability with which they have discharged their respective duties.

(Signed) W. NICOL, Chairman.

The Chairman having quitted the chair, it was resolved and carried unanimously.

And that the cordial thanks of this Meeting be presented to William Nicol, Esq., for his able and courteous conduct in the chair.

(Signed) W. CHAMPION JONES, Deputy Chairman.

Extracted from the Minutes.

(Signed) F. CLAPPISON, Secretary.

LONDON and COUNTY BANKING COMPANY.

NOTICE IS HEREBY GIVEN, that a DIVIDEND on the Capital Stock of the Company, at the rate of 6 per cent. for the Half-year ending the 30th June 1866, with a BONUS of 5 per cent., WILL BE PAID to the Proprietors, either at the Head Office, 21, Lombard-street, or at any of the Company's Branch Banks, on and after Monday, the 13th inst.

By the order of the Board.
W. M. KEWAN, General Manager.

August 12th, 1866.

The Lectures in the Faculty of Arts will commence on Monday,

October 8th.

The School will open on Tuesday, September 25th.

VOLLEGES, LADIES' SCHOOLS, &c.—

J. Prof. A. TRIBE, to undertake a series of Engagements for

LECTURES on EXPERIMENTAL CHEMISTRY during next

season. Private Instruction in Chemistry and the Experimental

sciences at 149, Great Portland-street, W.

KING'S COLLEGE, LONDON.—The Council

give notice that the Office of HEAD-MASTER of the SCHOOL will be VACANT at Christmas next, and that they will receive Applications for the Appointment not later than Wednesday, October 17.

For information, apply to J. W. CUNNINGHAM, Secretary.

ST. MARY'S HOSPITAL MEDICAL

SCHOOL.—THE SESSION WILL COMMENCE ON MONDAY, October 1, at 8 o'clock p.m., with an Introductory Address by Mr. Haynes Walton.

At this Hospital the Medical Appointments, including five House-Surgeons, the annual value of which exceeds as many Scholarships of 300l. each, and a Resident Registrarship at 100l. per annum, are open to the Pupils without fee. It has Obstetric and Ophthalmic Departments, and a Children's Ward (in the new wing). The Clinical and Pathological Instruction is carefully organised.

For Prospectus, Entry, and full Information as to Prizes, &c., apply to any of the Medical Officers and Lecturers, or to

ERNEST HART, Dean of the School.

MEDICAL EDUCATION.—THE ADDRESSES

ON MEDICAL EDUCATION delivered at ST. MARY'S HOSPITAL MEDICAL SCHOOL, Paddington, by the ARCH-BISHOP OF YORK (1864), Professor OWEN (1865), and Professor HUXLEY (1866), MAY BE OBTAINED, together with the Prospectus for the ensuing Winter Session, on application to

ERNEST HART, Dean of the School.

ST. GEORGE'S HOSPITAL MEDICAL

SCHOOL.—WINTER SESSION.

THE INTRODUCTORY LECTURE will be given by Dr. J. W. OGLE, on MONDAY, the 1st of October, at 7 p.m. Perpetual Pupil's Fee, 100l.; Compounder's, 50l.; Dental Pupil's, 45l.

ST. THOMAS'S HOSPITAL MEDICAL

SCHOOL.—SESSION, 1866 and 67.

A General INTRODUCTORY ADDRESS will be delivered by Dr. BAKER, on MONDAY, October 1, at 3 o'clock p.m., after which the Distribution of Prizes will take place.

Gentlemen entering have the option of paying 40l. for the first year, a similar sum for the second, and 10l. for each succeeding year; or, by paying 300l. at once, of becoming perpetual Students.

Medical Officers.

Dr. Barker, Dr. J. Risdon Bennett, Dr. Goolden, Dr. Peacock, Dr. Bristowe, Dr. Barnes, Mr. Solly, Mr. J. Gros Clark, Mr. Simon, Dr. Clapton, Dr. Gervis, Mr. Sydney Jones, Mr. J. Croft, Mr. Whitfield.

Medicine—Dr. Peacock. Surgery—Mr. Solly and Mr. Le Gros Clark. Physiology—Dr. Bristowe and Mr. Ord. Descriptive Anatomy—Mr. Sydney Jones. Anatomy in the Dissection-Room—Mr. Rainey, Mr. J. Croft, and Mr. W. Wagstaffe. Chemistry, Natural Philosophy, and Practical Chemistry—Dr. Albert J. Barnes. Midwifery—Dr. Barnes. General Pathology—Mr. Simon. Botany—Dr. J. Wale Hicks. Comparative Anatomy—Mr. Ord. Materia Medica—Dr. Clapton. Forensic Medicine—Dr. Stone. Ophthalmic Surgery—Mr. Sydney Jones. Dental Surgery—Mr. Elliott. Vaccination—Dr. Gervis. Students can reside with some of the Officers of the Hospital.

W. M. ORD, M.B., Dean.

R. G. WHITFIELD, Medical Secretary.

* For Entrance or Prospectuses, and for Information relating to Prizes and all other matters, apply to Mr. WHITFIELD, Medical Secretary, The Manor House, St. Thomas's Hospital, Newington, Surrey, S.

RAY SOCIETY.—THE ANNUAL GENERAL

MEETING OF THE RAY SOCIETY will be held at NOTTINGHAM, on FRIDAY, August 24th, 1866, at 3 p.m.

SIR JOHN LUBBOCK, Bart. F.R.S., in the Chair.

H. T. STANTON, F.L.S. F.G.S., Secretary.

NOTICE.

THE QUEEN'S UNIVERSITY IN

IRELAND.

A Meeting of the Convocation of the Queen's University in Ireland, will be held in Dublin, for the ELECTION of a SENATOR, on the next day after the Public Meeting of the University in October, 1866.

By order of the Senate,

G. JOHNSTONE STONEY, M.A. F.R.S., Secretary.

RAWDON HOUSE, FORTIS-GREEN,

FINCHLEY.—The Pupils under the care of Miss HELEN

TAYLOR, late of Huddesdon, will assemble at her NEW RESI-

DENCE, as above, on MONDAY, September 3rd.

SOMERSETSHIRE COLLEGE,

BATH.

Head-Master—The Rev. HAY S. ESCOTT, M.A.,

Balliol College, Oxford.

Secretary—P. C. SHEPPARD, Esq., Bathampton, Bath.

This College was founded in 1858, with the view of providing a course of education similar to that of our best public schools, with more attention to individual boys than the large forms of those schools render possible.

The effective character of the education actually given is sufficiently attested, both by the Reports of the Examiners, the Rev. J. Percival, late Fellow of Queen's College, Oxford, now Head-Master of Clifton College; the Rev. J. R. Magrath, Fellow, Dean, and Tutor of Queen's College, Oxford; W. A. Fearon, Esq., Fellow and Tutor of New College, Oxford; and also by the fact, that out of eleven pupils who have, up to this time, proceeded direct from the College to the University, (commencing with October, 1861,) six have gained open Scholarships, and subsequent honours in the schools; two have gained further Scholarships since residence; and one, who did not stand for a scholarship, has obtained honours in both the Public Examinations. Thus, in less than five years, out of eleven pupils, only eight of whom have as yet been in the Public Examinations, this College has obtained seventeen University distinctions.

EVENING CLASSES at UNIVERSITY

COLLEGE, London.—The PROSPECTUS of these Classes, to begin in October, for Classics, Modern Languages, Mathematics, Physical Science, History, the various branches of Law, and other subjects, is now ready, and may be obtained on application, either personal or by letter, at the office of the College, Gower-street, W.C. CHAS. C. ATKINSON, Secretary.

August 13th, 1866.

THE PRESS.—A YOUNG MAN, aged 29,

respectably connected and fully qualified, offers his SERVICES as Publisher, Assistant-Publisher, or Reader. Country not objected to. First-class references, and security if desired.—ALPHA, Post-Office, King-street, Covent-garden, W.C.

WANTED, by a Bookseller and Stationer, a

COMPETENT ASSISTANT.—Address R. H., care of Mr. John Heywood, Publisher, Deansgate, Manchester.

TO LECTURERS.—Gentlemen having Lecture

Engagements in Scotland during the ensuing Winter, or who are resident in Scotland and willing to deliver Popular Lectures on Scientific or Literary Subjects, are respectfully invited to communicate with the Secretary of the Aberdeen Mechanics Institution.—Aberdeen, August 7, 1866.

WANTED, a YOUNG MAN of good Cha-

acter, Education, and Address, to take charge of the Advertising Sheet, &c. of a religious Magazine. A Salary of 100l. will be given, and a Commission on the Annual Receipts. None need apply who cannot give good references, and a letter of guarantee for intrusions from some responsible person. Applicants should state age; whether possessing any knowledge of the Book Trade in Town, or of general advertising, and whether fitted by experience or taste for outdoor as well as indoor work. It is desirable that a Portrait be inclosed: this will be returned to the sender.—Address M.A., care of Messrs. C. Mitchell & Co., Newspaper Directory Office, 15 and 13, Red Lion-court, Fleet-street, E.C.

A PROSPECTUS of a New Work on the

LIFE and WRITINGS of SHAKESPEARE, printed for Subscribers only, to be profusely illustrated by Wood Engravings, will be sent free to any persons forwarding their Names and Addresses, legibly written, to J. O. HALLIWELL, Esq., No. 6, St. Mary's-place, West Brompton, near London.

NOTICE.—THE PUBLIC SCHOOL LATIN

PRIMER (edited with the sanction of the Head Masters of the Nine Public Schools named in Her Majesty's Commission) will be published on Thursday next, the 23rd instant, price Half-a-Crown.—The Publishers beg leave to state that the Book to which objections have appeared in several Journals was a mere Proof copy of the Primer, confidentially circulated for private criticism. This Copy had been wholly reprinted in a different form, and with much alteration, before the objections were made. The work has since undergone thorough revision, with especial reference to criticisms sent, and improvements suggested, by many scholars engaged in classical instruction; the result being, that a large number of those who had been cited as entertaining some objection to the Proof Copy have expressed general approbation of the revised Primer.—London: LONGMANS and Co.

LITERARY PROPERTY.—Any one wishing

to embark Capital, and assist in a Church and State Periodical of a political and literary nature, may hear of an advantageous opportunity for so doing on applying to E. Adams & Francis, Advertising Agents, &c., 59, Fleet-street, E.C.

TO NEWSPAPER PROPRIETORS.—A

MANAGER, with ten years' experience and connexion, is open to an ENGAGEMENT. The highest references can be given.—Address X. Y., care of Adams & Francis, Advertising Agents, 59, Fleet-street, E.C.

TO BE DISPOSED OF, a PART of an old-

established PROVINCIAL JOURNAL, of good circulation, making a large annual net profit, and of the highest respectability. There is a good Printing Business attached. The Office is complete with Machinery, type for Newspaper and Job-work (by steam-power), Presses, Type, &c., and all requisites. Satisfactory references will be required and every requisite information given. The advertiser would prefer treating with principals.—Apply by letter, stating necessary particulars, addressed to Newspaper Proprietors, care of Messrs. Treherne, Whites & Renard, 13, Barge-yard Chambers, Bucklersbury, London.

THE LONDON COLLEGE of the INTER-

NATIONAL EDUCATION SOCIETY (limited).

Head-Master—Dr. L. SCHMITZ, Ph.D. LL.D. F.R.S.E., late Rector of the High School of Edinburgh.

Masters.

Thomas Cox, M.A.
Frederick Millard, B.A.
Mr. W. F. Barrett.

M. Émile Barrère.
Dr. F. Althaus.
Mr. J. T. Duggan.

This COLLEGE will RE-OPEN on TUESDAY, the 18th of September. It is situated at Spring-grove, Middlesex, W., near the Spring-grove Station on the South-Western Railway, eight miles by road from Hyde Park-corner, and two from Kew or Richmond.

For Prospectuses, and further Information, apply to Dr. L. Schmitz, at the College, Spring-grove; or to the Secretary, at the Society's Office, 24, Old Bond-street, W.

NEW REFORM CLUB.—Temporary accom-

modation has been provided, and is now open, for the Members at DRAPER'S HOTEL, 25, Backville-street, Piccadilly. Pending the alteration and fitting up of the Club Premises in Jermyn-street. Gentlemen desirous of becoming Members are requested to send their Applications without delay to the Secretary, 71, Jermyn-street, St. James's, from whom Prospectuses and any Information on the subject may be obtained.

REV. W. M. THOMPSON'S POPULAR

LECTURES.—Martin Luther's and 'The Holy Land, &c.'—with large, brilliantly-illustrated Dissolving Views.—Testimonials from Revs. Samuel Martin, S. Thornton, M.A., H. Almon, Dr. Campbell, Dr. Leask, &c. Prospectuses, Terms, &c., 99, Tottenham-street, Finsbury, S.W.

QUEEN'S COLLEGE, LONDON,

E. H. PLUMPTRE, M.A., Dean.

QUEEN'S COLLEGE SCHOOL,
67 and 68, HARLEY-STREET, W.
Lady Superintendent—Miss Hay.
Assistant—Miss Walker.
The CLASSES of the SCHOOL will RE-OPEN on THURSDAY, September 27.
Pupils are received from the age of Five upwards.
Prospectuses, with full particulars as to Fees, may be had on application to Mrs. WILLIAMS, at the College Office.
E. H. PLUMPTRE, M.A., Dean.

EDUCATIONAL HOME.—PAU, Basses-Pyrénées, France.—Two accomplished and experienced English Ladies have made arrangements to RECEIVE a few YOUNG LADIES, for whom a mild climate is sought. They offer superior Educational advantages, joined to special attention to all that can insure the health and comfort of those entrusted to them. Inquiries may be addressed to one of the Ladies, who is now in England, ready to give ample references, and to make arrangements for the ensuing season.—Address M. P., 9, Montpellier-crescent, Brighton.

A LADY, of great experience in Tuition, desires RE-ENGAGEMENT as GOVERNESS. She is of the Established Church, and can present the most satisfactory Testimonials of Principles and Ability. She professes to teach English, French (acquired during a residence of some years in France), German, and Italian. Music thoroughly, though not a performer. She is also well versed in the Literature of her own and other countries.—Address C. T., Mr. Hughes, Bookseller, 6, Park-street, Regent's Park.

DENMARK HILL GRAMMAR SCHOOL,
near LONDON.
Principal—C. P. MASON, B.A. F.C.P.,
Fellow of University College, London.
At the above-named School, Boys of Seven to Eighteen years of age receive a sound and careful Education, and are prepared for the Universities, for the liberal Professions, and for Mercantile pursuits. The domestic arrangements are the most liberal and scale. The house is very large, and is surrounded by above seven acres of land, the greater part of which is appropriated to the boys' playgrounds and cricket field.
SCHOOL will RE-OPEN on THURSDAY, Sept. 13. Prospectuses may be obtained at the School, and of Messrs. Relife Brothers, School Booksellers, 150, Aldersgate-street, E.C.

THE COMMERCIAL, ENGINEERING and SCIENTIFIC COLLEGE, CHESTER, offers a thoroughly sound English Education, together with instruction in the Modern Languages and Classics.
In the Upper Classes particular attention is given to Mathematics, Mechanics, Chemistry, Physical Science, and Drawing.
The College has been recognized by the Secretary of State for India, "as possessing efficient Classes for Civil Engineering, Chemistry, and Physics."
Apply to the Rev. ARTHUR RIGG, College, Chester.

PUBLIC SCHOOLS.—A Married Clergyman, for many years engaged in Tuition, would be glad to hear of Companions to two little Boys, whom he now has preparing for a Public School. For particulars apply to Mr. E. G. G. Address Rev. M. E., care of Mr. G. Street, 30, Cornhill, London.

QUEENWOOD COLLEGE,
near STOCKBRIDGE, HANTS.
The Course of Study embraces the ordinary English branches, Drawing, Land-Surveying, the Classical and Modern Languages, The Natural Sciences and Practical Chemistry form a prominent feature, and instruction in them is very efficiently provided for.
For terms and further particulars, apply to
CHARLES WILLMORE, Principal.

EDUCATION.—OAKLEY HOUSE, WELLINGTON-PLACE, READING.
The next Session will commence on Thursday, September 20th. Mr. WATSON will be happy to forward references, &c. on application.

UNIVERSITY OF LONDON.—Mr. WILLIAM WATSON, B.A., formerly of Oakley House, London, will be able to RECEIVE, on or after September 20th, TWO additional PUPILS, to prepare for Matriculation or for Degrees in Arts, Terms, &c., a month.—For particulars apply to Mr. Watson, Oakley House, Wellington-place, Reading.

LONDON UNIVERSITY EXAMINATIONS.—A Wrangler and Classical Scholar, Graduate of Cambridge University, experienced in tuition, prepares EVENING PUPILS for the above Examinations.—Address E. R., 9, Regent's Park-terrace, N.W.

DEAF and DUMB.—A Private Tutor receives one Deaf-and-Dumb PUPIL to be educated with his six Private Pupils. He has been most successful in this the only rational method of teaching those thus afflicted.—Address X. Y. Z., Mr. Willis, Bookseller, 42, Charing Cross.

THE ATHENÆUM for GERMANY and EASTERN EUROPE. Mr. ALPHONS DUKER, of Leipzig, has announced that he has made arrangements for a weekly supply of THE ATHENÆUM JOURNAL. The Subscription will be 1 thaler for three months; 3 thalers for six months; and 6 for twelve. Issued at Leipzig on Thursday.
Orders to be sent direct to ALPHONS DUKER, Leipzig, Germany.
* German Advertisements for the ATHENÆUM Journal also received by ALPHONS DUKER, as above.

MENTAL AFFECTIONS.—A Physician, residing within an easy distance of London by rail, has at the present time VACANCIES in his house for TWO LADIES and ONE GENTLEMAN. This House has been established over 60 years for the reception of the high-class Patients only.—Address M. D., care of Messrs. Whicker & Blane, 67, St. James's-st., S.W.

TO THE FRIENDS OF EPILEPTIC and other INVALIDS.—Superior ACCOMMODATION with cheerful society and judicious management. First-rate medical references.—Apply to X., 16, Gloucester-crescent, Gloucester-gate, S.W.

GRATIS and POST FREE, a NEW CLASSIFIED LIST of Two Thousand MICROSCOPIC OBJECTS. The first class specimens, prepared and sold by EDMUND WHEELER, 42, Tollington-road, Hoxley, N.

TELESCOPE.—WANTED, a good ACHROMATIC, with Appendages. Object glass at least 5 inches. Tube not to exceed 3 feet.—Address A. B., Post-Office, Comrie, Crieff.

THE UNITED LIBRARIES, 307, Regent-street, W.—Subscriptions from one Guinea to any amount, according to the supply required. All the best new books, English, French, and German, immediately on publication. Prospectuses, with lists of New Publications and Catalogues of Cheap Books, gratis and post free.—Bentley's, Chancery-lane, and SATCHEL & ORME'S United Libraries, 307, Regent-street, near the Royal Polytechnic Institution.

ADAMS & FRANCIS insert ADVERTISEMENTS in all the London, Country, Colonial, and Foreign Newspapers and Periodicals.
* Terms, for transacting business, and List of London Papers, to be had on application to
ADAMS & FRANCIS, 50, Fleet-street, E.C.

61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

THE WELLESLEY MANUSCRIPTS.—Mr. QUARITCH, 15, Piccadilly, London, has just bought the major and most valuable portion of the extensive Collection of MANUSCRIPTS of the late Rev. Dr. WELLESLEY, Principal of New Inn Hall, Oxford. The Collection includes a curious Album Amicorum, 1796-1800. Alphabet of Arms; Greek Manuscripts; English County Manuscripts illustrative of Bedfordshire, Herefordshire, Shropshire, and Welsh Families; a remarkable series of Italian Armorial, especially of the Noble Families of Polona, Venetian, and Genoese; an early English Manuscript of the Knights of the Garter, temp. Henry VIII.; Herakle Papers of the XVIIIth and XVIIIth Centuries, consisting of Pedigrees by famous English Herald; Armorial of the Universities of Oxford and Cambridge; now on view at Mr. QUARITCH'S establishment, 15, Piccadilly, London.

EUROPEAN MANUSCRIPTS, Early Printed Books, curious, Livres d'Heures, Books on Palaeography, Bibliography, and Religious Worship.—A CATALOGUE of such Works just issued, gratis. It contains many articles of extreme RARITY and INTEREST, collected and offered for sale by BERNARD QUARITCH, Book-seller, 15, Piccadilly, London.
This Catalogue forms the first of a series, which will comprise Mr. Quaritch's entire stock of 20,000 first-class Works. Librarians, Collectors and Savants, desiring to receive the complete series, should favour him with 3s. in stamps to secure the free delivery by post.

THE TOPOGRAPHICAL and GENEALOGICAL LIBRARY of the late Rev. JOHN M. GRESLEY, M.A., sometime Rector of Seile, Leicestershire, and late Master of Etwall Hospital, Derbyshire. A Choice Selection of this Library is now on view at Mr. QUARITCH'S, No. 15, Piccadilly, including a set of the 'Annals of the Shirley Family, 4to. privately printed and very rare.
Nichols's History of Leicestershire, 4 vols. in 8, folio, 1800, very desirable, and excessively rare in that state.
Mr. GRESLEY'S Valuable MANUSCRIPT NOTES, above 500 beautifully and carefully-written pages, uniform in size with the History of the County, containing a mass of most valuable information as regards Family and County History. Drawings of Seals, Coats of Arms, &c., additional progress, the result of many years' labour and research, evidently intended for publication.
Thornton's Nottinghamshire, folio, 1677; or 3 vols. 4to. 1797.
Shaw's Staffordshire, 2 vols. folio, uncut.

Buxton and Gales, 2 vols. 8vo., Piccadilly, W.
* A Catalogue of Mr. Quaritch's extensive Stock of Topographical Genealogical and Antiquarian Works is in preparation.

HOMER ILLUSTRATED.

HOMERI ILIAS; with English Notes and Grammatical References. Edited by the Rev. THOMAS KERCHEVER ARNOLD, M.A., formerly Fellow of Trinity College, Cambridge. Third Edition, 12mo. 12s. half bound.

The argument of each book is broken into short parts, which are inserted in the text before the passages they describe. Lists of the Homeric substantives with peculiarities of form, of the adjectives with two forms, of the Homeric adverbs and adverbial phrases, and explanations of Homeric words by Buttmann, are given in the form of Appendices.

HOMERI ILIAS, Lib. I.—IV.; with a Critical Introduction, and copious English Notes. By the same Editor. Second Edition, 7s. 6d.

This Edition is intended to assist more advanced Students at Schools and Colleges.

HOMER for BEGINNERS; being the ILIAD, Books I.—III., with English Notes. By the same Editor. Third Edition, 3s. 6d.

CRISIUS'S GREEK and ENGLISH LEXICON for HOMER. With an Explanation of the most Difficult Passages and the Proper Names. Revised and Edited by the Rev. T. K. ARNOLD, M.A. Second Edition, 9s. half bound. Rivingtons, London, Oxford, and Cambridge.

ARNOLD'S PRACTICAL INTRODUCTIONS TO LATIN PROSE.

HENRY'S FIRST LATIN BOOK. Eighteenth Edition, carefully revised and much improved, 12mo. 2s.

The object of this Work is to enable the youngest boys to master the principal difficulties of the Latin language by easy steps. At first only the third person singular of a few tenses of the verb and the case of a noun are used, the dependent words in the sentence being gradually introduced. Each Lesson in Grammar is followed by a Vocabulary, an Exercise in English for translation into Latin, and one in Latin for translation into English, the work thus forming an easy progressive Grammar, Exercise, and Construing Book.

SUPPLEMENTARY EXERCISES to HENRY'S FIRST LATIN BOOK. By G. BIRKBECK HILL, B.A. Oxon., one of the Head-Masters of Bruce Castle School. 2s.

In many Schools where 'Henry's First Latin Book' is used, a want of additional Exercises has been felt. This it is now intended to supply by a little book merely supplementary, containing no new rules, and but few new words. The sentences are chiefly translations from some Latin author, by far the greater part of the phrases having been taken from Cæsar, Cicero, Livy, and Sallust.

A SECOND LATIN BOOK, and PRACTICAL GRAMMAR. Intended as a Sequel to 'Henry's First Latin Book.' Ninth Edition, 4s.

HISTORIÆ ANTIQUÆ EPI TOMÆ, from Cornelius Nepos, Justin, &c. With English Notes, Rules for Construing, Questions, Geographical Lists, &c. Seventh Edition, 4s.

This Work is an Epitome of Grecian, Persian, and Roman History, chronologically arranged. The chapters in Roman History from Eutropius are intended to be read first, being sufficiently easy for a pupil who has been through 'Henry's First Latin Book.' Historical questions on the different Periods, with answers, are added.

A FIRST CLASSICAL ATLAS, containing Fifteen Maps, coloured in outline; intended as a Companion to the 'Historiæ Antiquæ Epitome.' 8vo. 7s. 6d.

CORNELIUS NEPOS, Part I.; with Critical Questions and Answers, and an Imitative Exercise on each Chapter. Fourth Edition, 12mo. 4s.

The object of this Work is to accustom the pupil to make himself acquainted with the style of the author he is reading, and to note the peculiarities and differences of construction of Latin authors. For this purpose questions on the arrangement and construction of sentences, and on the usage and meanings of words, are given for each chapter, followed by an exercise, in which the different idioms are introduced.

A PRACTICAL INTRODUCTION to LATIN PROSE COMPOSITION. Part I. Thirteenth Edition, 8vo. 6s. 6d.

The rules for the government and arrangement of words, and the idioms of the Latin language, are illustrated by examples from the best authors. These are to be imitated in the exercises that follow, which are so arranged that the rules are impressed on the memory by very frequent repetition. Much attention has been paid to Synonyms and to the use of the Subjunctive in Oblique Narration, with Relatives and Relative Adverbs. Throughout the book one object is steadily kept in view, that of making the general construction of sentences of more importance than the mere government of cases.

LONGER LATIN EXERCISES. Third Edition, 4s.

The object of this Work is to supply boys with an easy collection of short passages, as an Exercise-book for those who have gone once, at least, through the First Part of the Editor's Practical Introduction to Latin Prose Composition.

A PRACTICAL INTRODUCTION to LATIN PROSE COMPOSITION. Part II. Containing the Doctrine of Latin Particles, with Vocabulary, an Antibarbarus, &c. Fourth Edition, 8vo. 8s.

GROTEFEND'S MATERIALS for TRANSLATION into LATIN. Translated from the German, with Notes and Excursions. Third Edition, 8vo. 7s. 6d.—The KEY, 4s.

In this Work historical extracts and dialogues have been selected for translation, accompanied by foot-notes on the construction and words to be used. At the end are some valuable Excursions on the Latin Adverbs, Conjunctions, Particles, &c., and on the meaning of words and distinction of synonyms.

ROMAN ANTIQUITIES. From the Swedish of BOJENSEN. Translated from Dr. Hoffa's German Version, by the Ven. Archdeacon PAUL. Second Edition, 3s. 6d. Rivingtons, London, Oxford, and Cambridge.

Now ready, price 4s.

SELECT ORATIONS of CICERO, with English Notes. By THOMAS KERCHEVER ARNOLD, M.A., formerly Fellow of Trinity College, Cambridge. Third Edition, carefully revised, with additional Notes by WILLIAM CHAMBERS, M.A., late Fellow and Tutor of Worcester College, Oxford. Rivingtons, London, Oxford, and Cambridge.

LATIN VERSE COMPOSITION.

Fourth and Cheaper Edition, considerably revised, price 2s. 6d.

A PRACTICAL INTRODUCTION to LATIN VERSE COMPOSITION. By THOMAS KERCHEVER ARNOLD, M.A., late Rector of Lyndon, and formerly Fellow of Trinity College, Cambridge.

This Work supposes the pupil to be already acquainted with the word treated of, and to be composing verses easily when the 'full sense' is given. Its object is to facilitate his transition to original composition in Elegiac and Hexameters, and to teach him to compose the Alcaic and Sapphic stanzas: explanations and a few exercises are also given on the other Homeric metres. A short Poetical Phraseology is added.

By the same Author,

A FIRST LATIN VERSE BOOK. Eighth Edition, 2s.

A FIRST VERSE BOOK, Part II., containing Additional Exercises in Hexameters and Pentameters. Second Edition, 1s.

GRADUS ad PARNASSUM NOVUS. 8vo. 10s. 6d. Contents:—1. A separate Notice of each Meaning of the Word treated of, and formerly Fellow of Trinity College, Cambridge; and W. FRAEDERSDORFF, Ph.D., Professor of Modern Languages at Queen's College, Belfast. Fifth Edition, 12mo. 5s. 6d.

Rivingtons, London, Oxford, and Cambridge.

ARNOLD'S INTRODUCTIONS TO GERMAN AND FRENCH.

THE FIRST GERMAN BOOK: on the Plan of 'Henry's First Latin Book.' By the Rev. T. K. ARNOLD, M.A., late Rector of Lyndon, and formerly Fellow of Trinity College, Cambridge; and W. FRAEDERSDORFF, Ph.D., Professor of Modern Languages at Queen's College, Belfast. Fifth Edition, 12mo. 5s. 6d.

This work (on the same plan as 'Henry's First Latin Book') is at once Grammar, Exercise, and Construing Book: the pupil is led by easy steps to gain a fair knowledge of the idioms of the language, and acquires an extensive Vocabulary. It is intended especially for use in Classical Schools.

KEY to the Exercises. By Dr. FRAEDERSDORFF. Third Edition, 2s. 6d.

A READING COMPANION to the FIRST GERMAN BOOK, containing Extracts from the best Authors, with Vocabulary and Explanatory Notes. By the same Editors. Second Edition, 4s.

The SECOND GERMAN BOOK: a Syntax, and Etymological Vocabulary, with copious Reading-Lessons and Exercises. Edited by Dr. FRAEDERSDORFF. 6s. 6d.

KEY to the Second German Book. 1s.

The FIRST FRENCH BOOK: on the same Plan as the First German Book. By the Rev. T. K. ARNOLD, M.A. Fifth Edition, 5s. 6d.

KEY to the Exercises. By M. DELILLE. Third Edition, 2s. 6d. Rivingtons, London, Oxford, and Cambridge.

ARNOLD'S PRACTICAL INTRODUCTIONS TO THE GREEK LANGUAGE.

THE FIRST GREEK BOOK; on the Plan of 'Henry's First Latin Book.' Fifth Edition, 12mo. 5s.

This is at once an easy Grammar, and Exercise Book; each lesson is followed by a Vocabulary and Exercises for translation into English and Greek; the rules for accentuation are gradually introduced into the lessons, so that the pupil is accustomed from the very beginning to write Greek words with their proper accents. Paradigms of declensions and conjugations are given, portions of which are to be learnt with each lesson. Syntactical rules and differences of idiom are added.

The SECOND GREEK BOOK (on the same Plan); containing an Elementary Treatise on the Greek Particles and the Formation of Greek Derivatives. 5s. 6d.

A PRACTICAL INTRODUCTION to GREEK ACCENTUATION; with Easy Exercises and Vocabulary. Seventh Edition, 8vo. 5s. 6d.

MADVIG'S SYNTAX of the GREEK LANGUAGE, especially of the Attic Dialect, for the use of Schools. Translated from the German by the Rev. HENRY BROWNE, M.A.; with an Appendix on the Greek Particles, by the Translator. 8vo. 8s. 6d.

A PRACTICAL INTRODUCTION to GREEK PROSE COMPOSITION. Tenth Edition, 8vo. 5s. 6d.

The Syntax is broken up into short lessons, each followed by a Vocabulary and Exercise, and preceded by Model Sentences in Greek, containing examples of the use of each exercise contains many examples of the back rules, so that by imitation and very frequent repetition they may be thoroughly impressed upon the mind. The pupil thus gradually learns the niceties of the language, whilst one object is steadily kept in view, that of making the general construction of sentences of more importance than the mere government of cases.

A GREEK and ENGLISH LEXICON for the POEMS of HOMER, and the HOMERIDE; illustrating the Domestic, Religious, Political, and Military Condition of the Heroic Age. With an explanation of the most difficult passages. Translated from the German of Crusius. Second Edition, 12mo. 9s. 6d.

A Prospectus may be had of the Publishers.

Rivingtons, London, Oxford, and Cambridge.

A COPIOUS PHRASEOLOGICAL ENGLISH-GREEK LEXICON, founded on a work prepared by J. W. FRAEDERSDORFF, Ph.D. of the Taylor Institution, Oxford. Revised, enlarged, and improved by the Rev. T. K. ARNOLD, M.A., and the Rev. HENRY BROWNE, M.A. Third Edition, thoroughly revised, 8vo. 51s.

A Prospectus may be had of the Publishers.

A HANDBOOK of GREEK SYNONYMES. From the French of A. PILLON, Librarian of the Bibliothèque Royale, Paris. 12mo. 6s. 6d.

A HANDBOOK of GRECIAN ANTIQUITIES. By Professor BOJENSEN. Translated from the German Version of Dr. Hoffa, by the Ven. Archdeacon PAUL. With Notes and Questions. Second Edition, 2s. 6d.

THE ATHENIAN STAGE: a Handbook for Students; from the German of Witschob, by the Ven. Archdeacon PAUL. With a Plan of a Greek Theatre. 4s. Rivingtons, London, Oxford and Cambridge.

POETRY FOR SCHOOLS.

FOR JUNIOR PUPILS.

The Poets' Hour:

Poetry selected and arranged for Children. By FRANCES MARTIN, Superintendent of the Bedford College School. Fcap. 8vo. 3s. 6d. cloth.

"The principle of selection here is not one chiefly of personal taste, but experience. She has formed it on the strength of a careful induction of children's taste; not, indeed, left to themselves, but guided 'by a light hand, that directs rather than controls'; in other words, of children's tastes under the influence of her personal preferences. Anyhow, it is a very good and wholesome taste, refined, but not too refined, for ordinary children."

"The present collection is intended for boys and girls between the ages of eight and twelve, and offers considerable variety, in the hope of meeting the tastes of children of various ages."

Educational Times.

FOR OLDER PUPILS

Spring-Time with the Poets.

Poetry selected and arranged by FRANCES MARTIN, Superintendent of the Bedford College School. Printed on toned paper. Fcap. 8vo. 4s. 6d. cloth.

"Miss Martin may be congratulated upon the production of a volume which not only shows an intimate acquaintance with our past and present poetry, but also a nice adaptation to the most wholesome tastes of young readers. Besides excellence in the choice of examples, the book before us affords a large variety of them. Here are ancient and modern poets. We need not further illustrate the diversity of specimens which Miss Martin's collection presents, or the unity of ideas which harmonizes them all."

Athenæum.

"The selection is a very full one, and represents our national poetic literature in its whole range. It is especially rich in specimens of our best living poets, to a degree, indeed, which would not have been possible without the most willing and liberal co-operation of authors, publishers, and other owners of copyright. We have no hesitation in saying that, for the purposes which the author has set forth, this is by far the best selection of poetry in the language."

"Spring-time with the Poets" is a more than usually good selection of poetry."—*Illustrated News*.

"The compiler may be congratulated on the taste and discrimination she has shown. The selection she has made cannot fail to have an influence for good in forming the tastes of those for whom it is expressly made."—*Victoria Magazine*.

DR. W. SMITH'S SMALLER SCHOOL BOOKS,

Fcap. 8vo. cloth, red edges, 3s. 6d. each.

SMALLER HISTORY OF ENGLAND. 68 Illustrations, 3s. 6d.

SMALLER HISTORY OF ROME. 79 Illustrations, 3s. 6d.

SMALLER HISTORY OF GREECE. 74 Illustrations, 3s. 6d.

SMALLER CLASSICAL MYTHOLOGY. Many Illustrations, 3s. 6d. [Nearly ready.]

"This little volume (History of England) is so pregnant with valuable information that it will enable any one who reads it attentively to answer such questions as are set forth in the English History Papers in the Indian Civil Service Examinations."

Reader.

DICTIONARY OF GREEK AND ROMAN GEOGRAPHY. By various Writers. 3 vols. 8vo. 4l.

SMITH'S HISTORY OF THE WORLD.

Complete in 3 vols. 8vo. with Maps and Plans, 2l. 2s.

An Ancient History,

from the EARLIEST TIMES to the FALL of the WESTERN EMPIRE; forming the First Period of the History of the World. By PHILIP SMITH, B.A., one of the Principal Contributors to Dr. Smith's Classical Dictionaries.

"His points of transition are well chosen, and his wide and various panorama of principalities, powers, and dominions clearly arranged. He has availed himself liberally of the new lights thrown by recent discovery and philology upon the annals of the East, and in all that relates to the Oriental empires and African kingdoms or republics (if indeed that term can be applied to the timocratic, or perhaps plutocratic, Carthage) his work is far in advance of any Ancient History in our language."

Saturday Review.

"The style of the volumes is sustained with the equal tone of a single, able, unimpassioned and dignified historian throughout."

Athenæum.

"The style is admirable, clear, expressive, animated, and often singularly forcible and happy. In his description of 'decisive battles' Mr. Smith shows the same talent for military engineering which is so conspicuous in the pages of Dr. Arnold, and the human interest as well as the ethical value of the work are sustained throughout by its just and noble sympathies."

Evangelical Christendom.

LONDON POEMS.

By ROBERT BUCHANAN, Author of 'Idylls and Legends of Inverburn,' &c.

Small 8vo. 6s.

"These 'London Poems' make good the promise of 'Underburn.' They are true and genuine work, the result of real observation and personal emotion. Nothing is here derived from the moral consciousness—no make-believes, no dramas, no compensations. These verses have been lived before they were written down." *Athenæum.*

"Mr. Buchanan takes as his motto Goethe's fine lines—
Greift nur hinein in's volle Menschenleben!
Ein jeder lebt's, nicht sehen ist's bezaubert,
Und wo ihr's packt, da ist's interessant;
and nobly, on the whole, does he work out the idea so often reiterated in our generation, so seldom successfully applied—at least in poetry. No volume has appeared for many years in London which so certainly announces a true poetic fame." *Spectator.*

Translated by AUGUSTA PLESNER and SUSAN BUCKLEY POWERS.

Post 8vo. 10s. 6d.

"We know of nothing more beautiful than some of these stories. What originality, purity, and simplicity—what poetry! His heroes are peasants, his heroines peasant girls; but how happy we feel in their society—how deeply interested in what they say and do. The characters described are so true to nature, so real, that you seem to feel their presence, and fancy them old acquaintances after a few strokes of the pen. With M. Björnson a new era begins in Scandinavian literature." *Athenæum.*

"'Arne' is one of Herr Björnson's late compositions and a sweet, simple idyll it is—a strain of rustic music from beginning to end. The most delightful sketches of Norwegian life and character." *London Review.*

COSAS DE ESPAÑA :

Illustrative of Spain and the Spaniards as they are.

By Mrs. WILLIAM PITT BYRNE, Author of 'Flemish Interiors,' &c.

With Illustrations. 2 vols. 21s.

"We strongly commend to all who wish for accurate and full information respecting the public and private life of Spain this book of Mrs. Byrne's. Nothing escapes her keen scrutiny. She gives such glimpses of the domestic life of Spaniards as only a woman could give, and such as are hardly equalled by her own 'Flemish Interiors.'" *Daily News.*

"Mrs. Byrne's two volumes are readable, useful, and nicely illustrated. There are in them a fullness and minuteness of detail which are wanting in other works on the same subject, and which will therefore be all the more appreciated." *Illustrated London News.*

LITERATURE

Invitations to Nottingham. (Private Manuscript.)

WHEN Herr Nemnich was in course of those travels through England, an account of which he published at Tübingen, in 1799, he arrived in sight of the Queen of the Midland district, beautiful Nottingham. Having looked at it for a while, he remarked, "That seems to me the most ancient city that I have yet seen in all England." There were people well enough up in popular history to tell the traveller that the town was built by that restless, hard-fighting and town-building son of Alfred, King Edward. Such an assertion would not at all suit the antiquarian eye of Nemnich. Nottingham built 924 years after Christ! "Nay," said the traveller, "it was a town a thousand years before Christ. It is a fact, and John Rowse has recorded it."

School chronological histories, however, continue to make King Edward the founder of that important city, if we may so call it, where, next week, the philosophers of the Isles, and of continents beyond, will be assembled. The Saxon chroniclers, however, afford no authority as to the foundation of such an alleged fact. No doubt, in 924, the King and a certain number of clerical and scientific men were abroad in the Nottingham meadows, making plans and giving directions. They were about—not to found a new town, but to add a new half to an old one. On the north side of the river there had been a town, perhaps before Menestheus reigned in Athens, long previous to the first Olympiad, or the birth of Romulus! John Rowse at least thinks so; but speculation is useless on the matter. If there be truth in the legend, one would like to know something of the manners and customs of the old and young people; how they lived, how they made love, how they did not dress, how they cooked their ips and haws, and what good liquor they wallowed with that primitive diet. Meanwhile, any way of confirmation of the fact of an ancient British city here, its name has come down to us in its British form of "Tiggocobauc." Its equivalent is "House of Caves"; and how well it describes the spot on which the old town and castle stood, will not only be seen by the philosophers who inspect "Mortimer's Hole," and hear the silly story repeated, that through that House of Caves he found his way to the stately bower of the stern Isabella, but also by those who visit the Church Cemetery, contracted out of the old caves, still popularly called "the Druids," a city of the dead, its little burgesses in the rock, stone-girt as at extra.

When the conquering son of Alfred subdued a revolted city on one side of a river, he created another on the opposite side,—an opposition city, partly military, partly commercial, to awe and to stimulate. This he did at Nottingham. He united the two towns by bridge, making of them one. He settled as many Danes in them as Saxons. Enemies then came friends; we cannot doubt that the old people entered into many a partnership, and a young people followed the example of their rents. The shy Olga learned to raise her soft eyes in trusting love upon the straight-ribbed Saxon, Edwy; and on the broad chest the Danish Scield lay the fair head of his young wife, Ethelfreda, "like Hebe in Heracles' arms." Of such ancestry (with a cross wholesome Pagan blood) comes the present

Nottinghamshire race. The Norman and other admixtures could add nothing to its nobility.

This town will be, for a week, in the hands of the philosophers. It could not be better possessed, for was not the father of the founder of half of it one of the fathers, also, of British philosophy? Did he not originate our naval power, devise a body of laws, restore learning by restoring Oxford, and make a survey of England which very much helped the authors of Domesday Book?

From the first Pagan chief who looked abroad from his earthworks on the Castle rock, down to the reforming era of thirty-four years ago, when the Nottingham rioters burned down the modern edifice, there has been more of bloodshed and sad memories about the old place than of peaceful festival and joyous hopes. King John had a tough fight for it, just before he was king. In 1323, indeed, Edward the Second held a magnificent Christmas feast there with the nobles of the kingdom, "cum regni proceribus," and there was not wanting any onward sign or sound of utmost jollity. The former could be seen in the flaunting banners, the latter heard in the shouts of the revellers, by the quieter townsfolk below. But the shadow of death was over the master of the feast, and while he flung himself back in unreserved laughter, there were men there who stimulated his mirth, but by whose hands he was to die so terribly, some few years after, in Berkeley Castle.

Even when the Nottingham citizens saw a parliament, such as parliaments then were, assemble up at the Castle, and hoped to increase their stock of nobles by the knights and other dignified people who resorted to, lodged in, or passed through the town, there was more grief than gladness came of it. Whatever brilliant but brief flash of commercial prosperity passed over them, gloom and shadow succeeded. Such parliaments seldom broke up without fleecing the people; and when the traders counted their gains, they had to remember the last act passed up at the Castle, by virtue of which every fifteenth penny was taken from the *plebs*, and every tenth from all who ranked as citizens in the municipal towns of England.

There was, indeed, once a very joyous-looking assembly beneath the roof of the old castle, namely, when Richard the Second invited his most intimate friends around him, and the town was made glad by the attendant outlay, the feasting, and the riding to and fro. The royal party broke up, and no man heard the slightest insinuation that a new tax had been levied on the people. Merry, however, as they had been up at the Castle, business of a very serious nature had been transacted there. The King there arranged the seizure and the murder of his uncle, Thomas Plantagenet, Duke of Gloucester; that cruel murder, for which Kent, Rutland, Huntingdon, and Somerset won their steps in the peerage, and for superintending which the Earl who took his territorial title from Nottingham, Thomas Mowbray, was raised to the rank of Duke of Norfolk. This was in the year 1397, and the Duke died, two years afterwards, at Venice, of grief, but not for having murdered the prince. The heralds, however, have never lost sight of the descendants of that prince slain by the last Mowbray whose title came from the county of Nottingham. Philosophers themselves may smile sadly at the reflection that these heralds found the representative of Thomas Plantagenet, Duke of Gloucester, in Stephen Penny, the sexton of St. George's burial-ground, Bayswater. Of all genealogical freaks, this, perhaps, is the most curious; the descendant of Edward the Third

and Philippa of Hainault digging graves for a livelihood!

And this reminds us that when that Edward the Third was old, a year or two only before his death, when Alice Ferrers was as saucy and imperious as ever the Du Barry was with Louis the Fifteenth and his people, there was carried through Nottingham, up to the Castle, a prisoner, at whom the citizens stared in respectful wonder; but they felt much indignation at the woman who was the cause of his captivity. For a stern word uttered to this Alice, Petrus de la Mare, Speaker of the House of Commons, or holding office equivalent to that called so now, was thrown into the keep of Nottingham Castle, where he lingered a couple of years. The castle, indeed, was seldom without a noble prisoner. Many a stout-hearted abbot who refused to yield the charters of his monastery to the king has pined through long, dreary months in the castle that once dominated the town. Across the meadows, or down upon the busy town itself, the glance of these religious captives was directed, but they seldom saw relief in the distance. Liberty was only to be bought by submission, and that duly observed, the poor man, like the Abbot of Bury, might wend homeward again, over the meadows or through the town, even as it pleased him.

The importance of knowing local history and of being acquainted with the whereabouts of one's dwelling was never better illustrated than when Queen Isabel and Mortimer Earl of March—the alleged wickedness of both of whom must not be accepted without reserve—occupied the castle. They lay close within, and a number of their enemies lay as close without, anxious to get at them. Queen Isabel ridiculed their efforts, and slept soundly. She had no lack of friends in whom she could trust, but she made assurance doubly sure; and she not only saw, as the chronicler quoted by Dering informs us, that "the yats of the castel were loken with lokys," but she sent every night for the "kayes," which turned the bars in the locks of those gates, and "layde them under the chemeel of her beddis hede unto the morrow." In the meantime, young King Edward and Queen Philippa were below, near the market-place; and the members of the parliament he had assembled in the town had nothing better to do than look up at the castle and wonder how they might get at the contumacious people who were therein. Isabel every morning took the keys from under her pillow, rattled them gaily, and as she gave them into the hands of her constable, Sir William Eland, she laughed to scorn all her enemies gathered together in and about Nottingham market-place.

Isabel and Mortimer might have been safe if it had not been for the villany of Eland. The constable was gained by the King's agent, Sir William Montacute. There was no chance, he said, of drawing the keys from beneath Isabel's head, "but yet I knowe," said he, "another weye, by an aleye that stretchith oute of the warde under the earthe into the castell, that goeth into the waste." This was the passage through the caves in the rock which now goes by the name of *Mortimer's Hole*, with the absurd tradition adopted by Mrs. Colonel Hutchinson attached to it, that it was the way by which the gallant (!) Mortimer reached the bower of the light lady Isabel. Of this passage of caves, however, Eland said to Montacute that "neither Queen Isabel, ne none of her meayne, ne the Mortimer ne none of his company knoweth it not." Upwards, through these caves, the party went who surprised the Earl and the lady. Shortly after, they were carried down the same passage.

to the gallows awaiting him in London. Isabel was conveyed away by the road which ultimately brought her to a prison-home in Castle Rising. Edward and his train rode away to Leicester, Nottingham was once more left in quiet, and the citizens explored the passage through the rocks, and merrily laughed as they tried to pronounce the rough old British name of Tiggecobauca.

There were two especial occasions when the streets of the old town were crowded by men who had assembled for sterner purposes than settling questions of philosophy. The first of these occasions was in August, 1485. Nottingham was all alive, trembling or rejoicing at the presence of some few thousands of men whom Richard the Third had assembled there at his head-quarters. The Silver Boars that bristled on his flags became the "Blue Pigs" of the taverns, a sign that has not yet become quite extinct. Richard and his men were about to go forth to fight that decisive battle, for which the field was ultimately found within a week, at Bosworth, where neither the better cause nor the better man triumphed, if the merits of both are to be judged by the standard of men and morals of the time. On the 16th of August, of the above-named year, there was no man in Nottingham who was not up and doing, or up and looking at the doings of the more active. Richard's own armourer must have had a difficult task to accomplish, if it be true that his master insisted on wearing the armour he had worn at Tewkesbury. The battle of Tewkesbury was fought fourteen years before that of Bosworth. The young Duke of Gloucester, of the former fight, was nineteen years of age; Richard the Third, arming at Nottingham, was three and thirty. A doublet of the first period might have been easily accommodated to Richard's person by a Nottingham tailor; but an armourer, suddenly called to suit the harness of a boy to the bulk and thews and sinews of a full-grown man, must have had a tougher job of it. But, whatever the suit, Richard rode through the town to the open country, clad like a king and a warrior. The Silver Boar sparkled on his banners. The gazers at his passage through the streets flung up their caps, or held their voices mute, according as their judgments, caprices or impulses prompted them. They were, altogether, glad to see him gone.

It may be mentioned, by the way, that by the death in the Tower (if he died in the Tower) of the little Duke of York, the town lost its Earl, a title which the boy acquired when he was betrothed to the child Anne Mowbray. Once only besides has the earldom of Nottingham belonged to the son of a king, and then the earl was illegitimate. It was among the titles which Henry the Eighth conferred on his much-loved son (Henry Fitzroy, Duke of Richmond) by Mistress Blount, who was afterwards Lady Taillebois and then Countess of Lincoln. The title was more worthily bestowed on the Armada Admiral, Charles Howard of Effingham. It was borne by three Charles Howards before it passed to the Finches, in the second of whom the earldom of Nottingham became united with the earldom of Winchelsea.

Richard chose Nottingham for his head-quarters because it so pleased him; but when Charles the First set up his standard at Nottingham, in 1642, it was because the selfish royalists of Yorkshire respectfully urged him to be gone, as they did not relish the idea of their county being made the seat of war. How calamitous was the royal progress to Nottingham, Clarendon has told as graphically as the matter can be narrated. On the 25th day of August, two hundred and twenty-four

years will have elapsed since the King and his friends declared war against the Parliament, on the spot where philosophers and their friends will be promoting ends very different from those contemplated by war. "Upon the 25th day of August," says Clarendon, "the standard was erected, about six of the clock in the evening of a very stormy and tempestuous day. The King himself, with a small train, rode to the top of the Castle hill. Varney, the knight-marshal, who was standard-bearer, carrying the standard, which was then erected in that place, with little other ceremony than the sound of drums and trumpets; melancholy men observed many ill presages about that time. There was not one regiment of foot yet levied and brought thither, so that the trained bands which the sheriff had drawn together was all the strength the King had for his person and the guard of the standard. There appeared no conflux of men in obedience to the proclamation; the arms and ammunition were not yet come from York; and a general sadness covered the whole town, and the King himself appeared more melancholic than he used to be. The standard itself was blown down the same night it had been set up, by a very strong and unruly wind, and could not be fixed again in a day or two till the tempest was allayed. This was the melancholy state of the King's affairs, when the standard was set up."

If we turn now from incidents of war and rebellion to those of peace and order, we may, therewith, remark that philosophy, which looks with a curious eye at the condition of those who live by agricultural labour, will perhaps be surprised to learn in what relation the Nottinghamshire tenants were towards their lords in the reign, for example, of Henry the Fourth. It was the custom and service of that time that tenants, bond and free, holding a bovat of land, ought to plough and harrow one day in the year for their lord, receiving for their pains threepennyworth of wheat bread and pease. We must convert the pence into shillings to get at the value of such wage in modern coin. At other times of the year, sowing and weeding were to be done for the lord for similar guerdon; and the tenants made and carried the lord's hay, and reaped and stacked his corn, for which they had, with other good things, fourpence to drink and a pair of white pigeons! But there was something even more of Arcadia (shall we say of Cockayne?) in old Nottinghamshire than this, at the time above indicated. There were thirteen acres in the lord's meadows at Northyng, which were annually mown for him by four-and-twenty tenants. At the end of each day the mowers repaired to the prebendal house to refresh the inward man. The bill of fare, a sort of tenant-labourers' charter, comprised bread, beer, potage, beef, pork, and lamb, for the first course; for the second, broth, pigs, ducks, and either roast lamb or veal. After dinner they sat and drank, with liberty to leave the hall three times, and return as often to drink as much more as they could carry under their girdles. As if this were not enough, a bucket, containing eight flagons and a half of beer, was then borne in joyous procession from the prebendal house, through the town, to the meadows, where various plays were then carried on. At the termination of all, the lord presented each of the tenants with a pair of white gloves; not such flimsy things as form part of modern "dress," but gauntlets of stout leather, not one stitch of which would go in a year's dancing with the most romping of Cicelys, nor, indeed, in a year's labour between the handles of a plough, or with bill-hook at hedging, or heavy spade-work in the most clayey of soils. If any doubt this halcyon

condition of tenant-labourers, they are referred to a copy of the document, where the customs are narrated, at great length, in Dickinson's 'Antiquities' (1804). There are certainly no modern instances of such rural good-living, unless, indeed, it be in the neighbourhood of Neuchâtel, where Swiss peasants now earn a pound sterling per week, and drink their two bottles of wine daily!

Hundreds of persons who will next week be enjoying the abundant hospitality of their Nottingham hosts will not be surprised to hear that the old magnates of the town had always a fine appreciation of the wants of hungry men and the method of satisfying them. At the opening of King James's reign, when Nottingham got a new Recorder, Sir Henry Pierrepont, the municipality invited him to the Hall to receive a testimonial in public from their hands. When Sir Henry put forward his own to receive it, the officers of the Council set before him, not a service of plate, but a loaf of sugar worth 9s., twenty-pennyworth of lemons, a gallon of white and a gallon of claret wine, at little more than half-a-crown the gallon, with a pottle of muscadine and sack,—the whole together being of the value of 20s. 8d.! Thus, at the beginning of his office, the Recorder was not presented with a congratulatory silver pitcher, whence to quaff his Rhenish and Malvoisy at home; but there was placed before him a significant hint that among the duties of office that of good drinking with the corporation was not to be omitted. Not that they despised the more substantial pleasures of the table, as they delicately suggested in 1604 to the Earl of Shrewsbury, son of him who had had Mary Stuart in his keeping. After thinking what would be the most suitable present for an Earl who had an appetite and loved to satisfy it, the Nottingham Council, solemnly assembled, presented him, as the record says, with "a veal, a mutton, a lamb, a dozen of chickens, two dozen of rabbits, two dozen of pigeons, and four capons." If the Earl carried away his gift with him, he must have looked like a chapman about to open stall in the market-place; but the probability is that at full noontide he and the donors sat down and consumed the good things together, while Nottingham bells rang merry peals, to quicken their blood, stimulate appetite, and help digestion.

It is one of the most remarkable facts in corporation annals that this Nottingham municipality, so liberal in feeding others, half starved itself. For instance, on Michaelmas Day, when the old mayor transferred his power to his successor, there was more of formality than of feasting. The mace lay on a black cloth under a heap of bay-sprigs and rosemary. This was called the *burying of the mace*. When the new mayor had been duly elected, his predecessor took the old symbol from its fragrant grave, kissed it tenderly, as an abdicating sovereign might do the sceptre which he was loth to resign, and handed it over to the new municipal monarch. After some other ceremonies came the banquet, which was Spartan in its nature. There were numerous guests, but the fare was frugal. Bread and cheese satisfied the appetite. Pipes and tobacco were added as hospitable luxuries. Not a word is said of liquid appliances. "Fruit in season" moderately adorned the board; but of "jolly good ale and old," of Rhenish or Malvoisy, even of punch, to which the chaplain himself could not have objected, there is no mention. And yet it is not to be supposed that the "flowing bowl," the "mantling cup," the "regal purple stream," goblets, bumpers, and all the rest of the properties of jollity celebrated in song, were wanting. The Nottingham aldermen surely did

not take the pipes from their mouths merely to put Ribston pippins into them!

These men and their fellow townsmen, whatever they may or may not have drunk, were celebrated for their industry. Nottingham has been, in all times, noted for its steady, persevering and successful workers. Labour and the fruits of labour seem to flourish among them spontaneously, like the crocuses that yearly gladden the Nottingham meadows. In spring time, such of these meadows as have not been invaded by contractors and builders are converted into a seeming lake of violet crocuses. Over the green of the fields, Flora throws a mantle of the freshest and most delicious hue. The consequent delight influences more senses than one. There is a charm for the eye, and a charm for the ear in the songs of the birds that hang enchanted above the magic carpet; and there is another charm besides, for at every foot-step made among the flowers a sweet incense arises from the crushed petals, sweet as the air wafted from the Spice Islands over the sea. Nottingham thus becomes truly Flower Town, the English Florence, for young and old go forth to collect and carry away the precious treasure of the fields—a treasure which springs spontaneously nowhere else save on the spreading Inches of Perth. With the young, it is a period of high festival. They plunge through the sea of petals, gathering heaps of odorous beauty as they pass. *She* is queen who finds a white crocus among her violet-hued sisters; but all return laden with sweets to the town, joyous beneath their double burthen, and rich in the two-fold fragrance of youth and of flowers.

Let us add of the Park here that, in the proper sense of the word, that of Nottingham, so called, has had no existence for many centuries. Even in Charles the First's time, when the castle itself was nothing more than a prison in ruins, and the older castle of Isabel and Mortimer was crumbling in more ancient ruin above it, there was neither deer nor tree in Nottingham Park. There were one or two half-withered trees, indeed, and one of these was planted, so ran the story, by Richard before he marched out of Nottingham, on his way to Leicester. When the Commonwealth soldiers occupied the castle ruins, they looked curiously at this tree, which, from root to top, was twisted violently awry, and had not a straight twig or branch in it. "Aye, aye!" said the parliament troopers, "it's as crooked as he who planted it," and King Richard's tree was speedily felled to feed the castle fires.

But, to return to the history of Nottingham, we have to observe, that the useful had precedence of the ornamental. Nottingham made stockings before it made lace; but it was a gentleman who invented the stocking-frame, and an ordinary Nottingham stocking-weaver who first made bobbin-net by so adapting his frame as to make it produce the imitation of lace after it had woven the reality of stockings. Soon after the Rev. William Lea invented the stocking-frame, at the end of the sixteenth century, the old trunk hose slipped away from the limbs of our ancestors. Nearly two hundred years later, that is to say, in 1770, Hammond, a weaver, was sitting at one of Lea's old-fashioned frames, and as he plied his task his thoughts dwelt on the expensive pillow-lace made of flax thread, by aid of fingers and bobbins; and he thought of the old Italian lace made by the needle, of the costly productions of Brussels, Alençon and Valenciennes; of Honiton lace made like the Italian, and of Buckingham lace, which more nearly resembled the commoner point d'Alençon. The result of Hammond's thought was the far-famed bobbin-net. The Nottingham weaver, it would be more

correct to say, rather made the first attempt than fully succeeded in the manufacture. The final success was achieved when Mr. Heathcote invented the bobbin-frame, whence machine-made lace obtained the name of *bobbin-net* and made Nottingham famous even in the bazaars of Eastern Ind. It is still the centre of the cotton hosiery and bobbin-net trade.

Those trades have, like all others, been subject to great fluctuations. Out of the misery and consequent calamities wrought by those who could not bear it, Nottingham and the shire generally issued just half a century ago (1816), after a struggle of five years. It began in 1811, by an outbreak of the hungry frame-work knitters, who could not exist on the small wages to which they were reduced. Under an imaginary General Ludd they issued by night, their faces variously disguised, and appearing where they were least expected, would smash into fragments five or six dozen of a manufacturer's valuable frames before dawn. The ruin wrought, they scattered, were not to be tracked, met again at night, armed with swords and muskets, and in detached bodies carried on their work of destruction in several directions, but never where the weary military and the vexed magistracy were waiting for them. Factories were regularly stormed and defended, blood flowed profusely, life was sacrificed, soldiers and weavers came into collision, and prisoners were made of the latter, but no severity of punishment could deter those who were free from carrying on the work of devastation. They not only destroyed frames, but burned the stacks of those farmers who served in the yeomanry against them; and they broke into the farm-houses and carried off money and provisions. The ruin was widespread, and at one time nearly half the then population of Nottingham was receiving parish relief. The work of destruction did not cease even when parliament decreed death as the penalty of breaking a lace- or stocking-frame. The destroyers only withheld their hands when they discovered that by chopping up and burning frames they were destroying the means by which they might live; and that, as the damage had to be made good out of a county-rate, the manufacturers would go comparatively uninjured, while the poor-rate was likely to be all the less when the county-rate was abnormally increased. At the end of the five years' fray they had cause to remember that the Wise Men of Gotham were natives of Nottinghamshire, in which that place, renowned for the peculiarity of its philosophy, is to be found. The rioters, in short, resembled their Irish prototypes, who, made angry by the failure of a local bank, avenged themselves by burning piles of its notes in front of the door from which those promises to pay had once been issued!

There is something, however, to be said for those ruthless Luddites. They were not only ill-fed but worse taught. Then, and long after then, Richard Carlile and his partner in iniquity, the Rev. Robert Taylor, made a little British Association of their own, with its head-quarters in Nottingham. The philosophy they pretended to teach was atheism, without disguise. Carlile was the devil's servant, and was not at all ashamed of his master; but the Rev. Robert Taylor, who was in the same service, wore openly the livery of Christ! One of their most active and efficient opponents was the late Rev. Joseph Gilbert, then an Independent Minister in Nottingham. How well qualified that Christian gentleman and scholar was to overthrow such adversaries may be seen in his remarkable work on the Christian Atonement. If any visitor at the coming meeting of the British Association should find a copy left

in Nottingham (it is a scarce book), he will do well to avail himself of the opportunity thereby offered.

The Castle of to-day is only the relic of the mansion built on a small portion of the site of the old edifice by the first Duke of Newcastle, in Charles the Second's time. He gave a six weeks' housewarming, and never opened his house again. This building was destroyed by fire in the election riots of 1832, which deed was denounced by "Anne Taylor, of Ongar," as she will be affectionately remembered, in stinging verse. The Robin Hood Rifles occupy a nook of the old place; and this they owe to the patriotism of the Nottingham ladies, who successfully exerted themselves to obtain the castle kitchen, and convert it into a drill-room. In the caves beneath, from which the British town was named, visitors may search for, and we very much hope may find, the story of Christ and his twelve apostles, scratched on the walls by the nails of a captive northern king named David. However this may be, there is one spectacle of delight which they may enjoy whenever philosophy and hospitality leave them a little leisure. The Trent still describes its gentle curve towards Wilford. It is still a breadth of silver on its gleaming passage to Clifton and its groves. There are still the rich valley and picturesque woodland drawing the eye towards distant Derbyshire; and as Thornton quaintly and truthfully adds, "a vast space is seen between Buddington Hills and Colwick, in which Belvoir Castle appears majestic." The town itself yielded Kirke White from a butcher's shop to earnest poetry, and thence Bailey flashed his promise of a poet, and William Howitt there belonged to literature while he was yet a chemist and druggist. Nottingham had the last of the English minstrels who made and sang his own songs, in David Love, and the last of town fools in the person of "General Ben." But as we are dealing with philosophy, and not with folly, let us conclude by noting that Nottingham has given Dr. J. H. Gilbert to Agricultural Chemistry,—boasts of Mr. Josiah Gilbert and Mr. Churchill as the discoverers of the Dolomite mountains, for the benefit of English travellers,—and confers, with reasonable pride, the brightest crown that mine can furnish on the brow of the great metallurgist, Dr. Percy. And, *à propos* to crowns, let us conclude with a reference to skulls. The skull which Byron preserved, in shape and use as a cup, at Newstead, in the neighbourhood of Nottingham, has been buried by its present scrupulous owner! Philosophy may no longer speculate on the wisdom, nor jollity calculate on the measure of wine that was once held within that old mansion of the brain. But they will find other matter for speculation in the Sections, and other subject for discussion in the hospitable homes of ancient Tiggo-cobauc.

From Calcutta to the Snowy Range; being the Narrative of a Trip through the Upper Provinces of India to the Himalayas, containing an Account of Monghyr, Benares, Allahabad, Cawnpore, Lucknow, Agra, Delhi, and Simla. By an Old Indian. With Eight Coloured Illustrations. (Calcutta, Wyman & Co.; London, Tinsley Brothers.)

This book carries the reader from Calcutta, through Monghyr, Benares, Allahabad, Cawnpore, Lucknow, Agra and Delhi, to Simla, whence the Snowy Range, still sixty miles distant, seems but ten. All the places mentioned by our "Old Indian" have been again and again described by older Indians; nevertheless his volume is chatty and amusing, and we are

very glad to refurbish with it our recollections of places too interesting to be ever forgotten. It must be remembered, too, that the Mutinies, and the deeds of Havelock, Outram, Clyde, and Wilson, have invested the greater part of the route traversed by the author with fresh interest; and many in whose minds Delhi and Lucknow formerly awakened no sensation, are stirred by the mention of them now, since England shed her best blood to win them back. Steam, too, has wrought its wonders in India, and one is curious to compare railroad with palanquin, station with bungalow, express dāk with telegraph. Let us see what the Old Indian says of the new régime. Railway travelling in India, he tells us, though "by no means so luxurious as at home and on the Continent," possesses two advantages,—your fellow-passengers are few, and in long distances you may go to bed, though you must provide your own pillow, quilt, and blanket. Note well that the last-named article is by no means to be disregarded even in India, as "the temperature after sundown is totally out of comparison with what one might suppose it would be, judging from that of the day." The rate of travelling in India, chiefly owing to halting at innumerable petty places, seldom exceeds twenty miles an hour. Slow, however, in this case, is not altogether sure. The Old Indian learned this to his cost, having met with three serious accidents on his way up; two of which cost the company 20,000*l.*, and one the lives of several unlucky wights. On the subjects of cost and refreshment, we read as follows:—

"Most unfairly, I think, the cost of first class travelling in India is precisely double that of the second, whilst the charge in the third class is disproportionately small—on a par, nevertheless, with the accommodation afforded. The rate of the former is thus prohibitory to many, but the distances to be traversed are so long, and the fatigue in a tropical climate so considerable, that one cannot afford to dispense with the extra comfort secured by the better-provided carriages of the 1st class; not to mention the fact that in the 2nd class you are quite liable to have as a travelling companion some half-clothed native, redolent of unsavoury odours,—respectable though he may be. I have travelled much on railways in England and France, but have never experienced anything approaching the dust and glare of an Indian line. I was fortunately careful to provide myself with 'eye-protectors'—either these or a veil being highly necessary. There is another little precaution which well repays the trouble of carriage,—a small bag containing towel, soap, and sponge, with brush and comb. The luxury of an occasional ablution, although taken *al fresco* at the carriage-door, is not to be over-estimated. At almost every station water can be got—to wash with, not to drink; although the *bheestie* may generally be seen running up and down the station platform with a greasy *mussuck* (water-skin) on his back, employed in filling the glasses of such thirsty passengers as are foolish enough to partake of this 'cholera mixture,' and who may have thoughtlessly neglected to provide themselves at starting with that most necessary appendage—a wicker-work water-bottle of *aqua vite* and *aqua pura* mildly combined, or with the latter only, as taste dictates. For anything like a long distance, the experienced traveller, in lieu of depending on the railway refreshment-rooms, provides himself with a small box containing such eatables, drinkables, and necessary accompaniments as are likely to be needed on the road. One is thus able to take such refreshment as is required, when one requires it, and in comparative ease and comfort. The pretence of a meal at the refreshment-room, in the limited and uncertain time allowed you for it, only results in spoiling your digestion, souring your temper, and diminishing unnecessarily the contents of your purse. And if the traveller happens to arrive at night, the prospect becomes still more dismal and uncomfortable. Ye Indians who remember the brilliantly-lighted refreshment-

saloon of Wolverhampton, or of any large station at home, with its smiling attendant handmaids, its scalding-hot coffee, and its seductively-arranged patties; with its counter covered with delicacies—the genial sight of all which makes you regret the return to your now cheerless-looking carriage—forget all this when you travel on Indian lines, and picture to yourself instead, what you will assuredly witness:—a large, comfortless-looking room, found with difficulty; an apology for a carpet on the floor, in shape of a dirty piece of stripe-coloured canvas; a broken-down plated candlestick (or perhaps two) on the table, the glass shade covering which is as innocent of having undergone the cleansing process as is the linen of the half-awake attendant *Khitmutgar*, who rouses himself reluctantly from a snooze on the floor, just as you, in despair, have decided to return supperless to your carriage. And then, if tempted by the greasy curry and half-cold chops, the leathery steak or hashed unmentionable in the dish with the cracked cover, the tough old bantam or unsavoury-looking stew in ditto of another pattern, you do venture to appease your hunger, be sure that before you have had time thoroughly to discover all the drawbacks of such a repast, the bell for starting will ring, and you will hurry off, hardly waiting for your change, fearful lest you be left behind at the station, where desolation reigns supreme, discomfort everywhere, and at which, most probably, passenger-trains upwards stop but once a day."

Of the cities described in this volume, Delhi and Lucknow are the most changed. From these the pageantry of Mohammedan rule has wholly passed away. In Lucknow there is most to be remarked in the way of improvement. "The vast reforms" which have taken place "already indicate that it will not be many years before Lucknow can truly boast of being the model city of the East." This is saying much; but it must be remembered that the town was full of beautiful buildings under the native rulers, and the English have added "a state of cleanliness and order quite marvellous to behold." There is a municipal commission, which receives the rents of various confiscated buildings, and expends them in improvements. The description, indeed, of Lucknow is the most interesting part of the Old Indian's volume, and of all the places he describes not one is so noteworthy as the Residency. We read,—

"The world-renowned Residency. — This is approached through the well-remembered 'Bailey Guard' Gate, which stands now in its solemn ruin, a monument alike of the bravery and devotion of that handful of heroes who held it for five months successfully against overwhelming numbers, and of the self-denying heroism of the women and children who died uncomplainingly in its cellars. Little now remains of the buildings which, in 1857, formed the Residency and its defences. The position of the beleaguered garrison must have been very much more extended than is generally supposed. The Residency building itself only afforded accommodation to about one fifth of the besieged. Many other large buildings, including the residences of the different Commissioners, the post-office, and the jail, were within what are rather mis-named the entrenchments. Thus 'the Residency' must have been quite a quarter of a mile in diameter in places. Such of the walls and rooms as are standing bear the impress everywhere of shot and shell, constant streams of which compelled the removal of the ladies and children to the *Tyehkhanah* or underground apartments. So exposed, indeed, was the position on all sides held by the defenders, that it was only necessary for one of the garrison to be seen, to ensure a shower of bullets from the adjoining houses. Major Banks, upon whom the chief control devolved on the death of Sir Henry Lawrence, was killed thus, while incautiously raising his body above the parapet of an outhouse to view the enemy. A crowd of buildings of all kinds surrounded the Residency position, and on one occasion the enemy were within twelve feet of the houses in the Residency compound.

One who had served in the garrison told me that, on a mine being sprung, the outer wall of one of the houses occupied by the garrison fell down, and the defenders found themselves within jumping distance of the sepoys in an adjoining house, who, however, lacked the courage to rush forward: had they done so, this line of defence must have been taken. Protected even as were the underground apartments, on one occasion a shell found its way through the wall, killing and maiming the defenceless inhabitants. Sir Henry Lawrence, who occupied a room on the first story of the north-east of the building, a position greatly exposed to the enemy's fire, had, it appears, been previously entreated to remove to some safer quarters, but had refused; notwithstanding, also, that on the 1st of July a shell had entered the room and burst in it. On the following day, the natives having by this time made sure their aim, another shell entered but with more deadly results, shattering Sir Henry Lawrence's leg, and causing his lamented death on the fourth of the same month. At the time of my visit the foundation was preparing for a memorial monument adjoining, which has probably by this time been completed, and it is hoped that the Government will not stop here, but increase the ruins themselves, sufficiently restoring them to prevent total destruction, and inclosing and guarding them as a memorial and warning of the terrible past. A little in advance of the Residency, to the west and north-west of the building, where Lawrence was killed, is the church yard, where many a gallant soldier and helpless victim lie sleeping. The chapel attached was destroyed during the mutiny, but the grave-yard has been restored, and is now kept in elegant order. Here is the tomb of Sir Henry Lawrence, with the simple inscription—'*Here lies Henry Lawrence, who tried to do his duty.*'"

We cannot close this notice without expressing a regret that the author did not submit the sheets to some one acquainted with the languages, who would have cleared them of several unsightly blunders. Who would think of writing *Das ashwa-medh*, "Ten horse-sacrifices," thus, *Das-as-Wamedh*? One would think that the Old Indian had a notion that the chief mosque at Delhi is called from the river *Jainuna*, or *Jumna* as he writes it, for he invariably writes *Jumna Musjid* instead of *Jum'ah Masjid*. He ought, too, to have known that the marble pulpit is not for calling the faithful to prayer, but for preaching.

Texts from the Holy Bible explained by the Help of the Ancient Monuments, with a few Plans and Views. By Samuel Sharpe. Containing 160 Drawings on Wood, chiefly by Joseph Bonomi. (Day & Son, Limited.)

Illustrations of the Bible from ancient customs and manners, as well as from antiquities, monuments, sculptures, coins, &c. have not been productive of the utility which was reasonably expected. Beyond a doubt, the accumulation of books on the subject has not produced a corresponding increase of knowledge. The reader has been often mocked with the semblance of instruction, and with an array of figures, pictures, ornaments, and such like, which please the eye without informing the mind. This observation applies to such books as Kitto's 'Pictorial Bible,' a work well executed in many respects and useful in its day, but overloaded with superfluous illustrations; and to Roberts's 'Oriental Illustrations,' in which, with a very few pictures, a heap of miscellaneous remarks is collected, often irrelevant. The department has certainly been overdone, so that when the actual gain to our better acquaintance with the Bible comes to be computed, it seems very small. Such books as Layard's and Lepsius's are welcome, standing out as they do from the common mass, and proceeding from men of ability. Mr. Sharpe informs us in his Preface

that the illustrations in this volume are argumentative and explanatory, rather than ornamental. The earlier are chiefly taken from Egyptian and Assyrian sculptures; the later include several coins. A few maps and plans are given. Those acquainted with the author's writings will be prepared to find distinctive views, not an iteration of common opinions; and a prevailing desire to confine himself to such illustrations as explain an obscure passage, or prove the truth of the historian's statement. Mr. Sharpe investigates, inquires, and thinks for himself, leaving his individual mark on all he writes. The present book is in harmony with his former works.

The perusal of the volume, with its 160 illustrations, has yielded us instruction and pleasure. It does throw light on various passages of Scripture, sometimes as novel as it is unexpected. The first thought arising from the reading of it is one of regret that it is too short. Could not the varied knowledge and ingenuity of the author have supplied more such observations? An example or two will show the nature of the work.

1 Kings xiv, 26. "And he (Shishak) took away the treasures of the house of the Lord, and the treasures of the king's house."

After the figure is given, we have this:—

"Among a number of figures of captives sculptured by Shishak on the walls of the great temple of Karnak, in Thebes, is the above. Every figure has his arms tied behind, and is in part covered with a shield, on which is written, in hieroglyphics, his name, or rather the name of his country. These figures thus recount the conquests of King Shishak over his neighbouring enemies, and on this shield is written, 'JUDAH-MELEK-LAND,' or the Kingdom of Judah. In this way Shishak recorded his conquest of Rehoboam; and this is the earliest Egyptian record that has yet been found mentioning any event in Jewish history. Before this time Egyptian history and the Bible run parallel; the Egyptian monuments throw much light on the Jewish laws and customs; they help us to understand the Bible history; but they do not, before this, record any event mentioned in the Bible. After this time the histories of the two nations are more closely united."

Acts xliii, 8. "For the Sadducees say that there is no resurrection, neither angel nor spirit; but the Pharisees confess both."

"From the Egyptian paintings on their mummy-cases we learn that in that country these two opinions about the resurrection had been both entertained. This picture relates to the resurrection of the body by the spirit returning to it. The other opinion of the resurrection by means of an angelic body, without the help of our earthly body, is shown in the note on 1 Cor. xv, 44. Here the dead man is lying upon a lion-shaped couch, bandaged as a mummy, ornamented with paintings. The god Anubis, known by his dog's head, is advancing to unwrap the bandages, and thus to allow the body to move when life shall return to it. Above is the man's soul, in the form of a bird, with human head and hands. It is bringing in one hand the character for Life, and in the other the character for Breath. This latter is the sail of a ship, thus figurative of Wind. These the soul places in the mouth of the mummy at the time of his resurrection."

Various opinions advanced by the author will be objected to by scholars; neither do we accord with some of them. Thus, he confounds Sephar, in Genesis x, 30, with Shapher, in Numbers xxxiii, 23; and identifies both with Mount Serbal. The two places, though alike in English, have a different orthography in Hebrew, and are quite distinct. They are also at a great distance from Mount Serbal, and near the west coast of the Gulf of Akabah. The former is somewhat difficult to define; the latter is probably the same as Burckhardt's Jebel Sheráfah. Neither of them means written

mountain, as Mr. Sharpe affirms; not even that mentioned in Genesis x, 30.

It is also stated that the Septuagint translators changed the words of Isaiah xix, 18, from the city of destruction into the city of righteousness, wishing thereby to screen their city, On, or Heliopolis, from the reproach of the prophets. It is not easy to say what the original reading of the Septuagint was in this verse. But the writers did not change the original, because what is sometimes translated city of destruction does not exhibit the true text. No historical city is meant by the prophet; the sense of the phrase being city of protection, or protected city.

We are unable to see the reasoning by which Mr. Sharpe supposes Isaiah xi, 15, to show that the passage of the Red Sea took place at a spot now dry,—between the sea and the Bitter Lake,—but then covered with water, which joined the two. The passage is Messianic and ideal, pointing to the future, and throwing no light on the historical past.

Notwithstanding these and other things in the volume which require correction, it is a welcome contribution to the elucidation of the sacred volume. Mr. Sharpe, who has worthily devoted many of his best years to the study of that book, has been ably seconded by Mr. Bonomi's skill in preparing the woodcuts. To both we tender our thanks for the pleasing and instructive book before us.

The Viceregal Speeches and Addresses, Lectures and Poems, of the late Earl of Carlisle, K.G. Collected and Edited by J. J. Gaskin. (Dublin, M'Glashan & Gill; London, Routledge & Sons.)

Two things combine to recommend this book—the character of its subject and that of its author. We would not willingly say a word in disparage of the late Lord Carlisle. A kinder man never existed. No man was ever more alive to the duties entailed on him by his position and opportunities; no man was more aware of the necessity of giving an account of his talents, and making them useful in the station to which he had been called. As a great English landlord, as Viceroy of Ireland, he followed the principles laid down in his lectures and speeches, and showed that he could practise the generosity, the justice, the noble toleration, which he had so often inculcated. Modest in his own claims, he was proud of the genius of others. Patron as he was, he did not boast of the name, but rejoiced in the opportunity. The deadly weapon which represents the majesty of the law became in his hands a means not of terror, but of conciliation. He did not wish to impress offenders with awe, but to improve them by the gentle influences of education and example. And thus the sword of state was unsheathed only for pacific purposes—not to smite the wicked, but to knight the deserving.

The gentleman who has collected Lord Carlisle's speeches and poems has also some claims on our regard. When quite young he attracted Lord Carlisle's notice by his method of teaching, and, at the instigation of Lord Carlisle and Archbishop Whately, he was appointed to teach geography and history by a method which he calls inductive interrogation. Afterwards he was sent by the same patron to study music under Hullah, in order to qualify himself for introducing a popular system of vocal culture in Ireland. The testimonials he has received are ample proofs that he has worked hard and done well. His gratitude to Lord Carlisle is most conspicuous. And yet, with all our regard for Lord Carlisle, with all our sense of Mr. Gaskin's deserts, we must say that this book

is the most unfortunate compilation that ever came before us, and is calculated to do serious injury to Lord Carlisle's reputation.

We have no wish to wound Mr. Gaskin's feelings, and we are convinced that he will not accept this verdict. It is plain that he cannot distinguish what does a man credit and what is merely accepted as the necessity of his position. Lord Carlisle is Mr. Gaskin's hero, and everything he says, or does, or writes, is equally valuable to Mr. Gaskin. This is, no doubt, the true biographical spirit which is so fatal to biography. But it is equally fatal to every kind of memorial, because good, bad, and indifferent are jumbled together; and it seldom happens that, even with the truly great, the good things predominate. The only men who leave "no line that dying they could wish to blot" are those who have blotted conscientiously while living. The only men whose every line is perfect in itself are those who have written few lines, and those few lines with labour. The same rule prevails with regard to speeches. If the greatest orator was called upon to speak daily, almost always on the same subjects, and always at great length,—if these speeches were reported word for word, and preserved with great care, he would not leave the same reputation as he would have earned by a tithe of the same number of speeches, half of which had perished. A judicious selection of his best speeches would enhance his fame: it would be stifled under the mass if all were published.

When we read the judgment of some contemporary on works that have not been handed down to us, we naturally form a very high idea of them. But how often does it happen that on turning to the works themselves we are led to distrust that judgment. In one of Lander's Imaginary Conversations it is said by Southey that the lost classics are most regretted by those who would not read them if they were recovered. It is always convenient to fix some standard which you have no means of defining. There are some men who lend themselves most gracefully to reference, and who are great while they are unknown. If they are wise they are content to remain in that illustrious obscurity, and do not challenge criticism, as they have gained already all that the most favourable criticism could give them. This is the sort of fame we should have recommended Mr. Gaskin to claim for Lord Carlisle. We have it on the authority of one of the greatest living orators, and a political opponent of Lord Carlisle's, that his Lordship was second to none in the House of Commons. "I sat," said Mr. Disraeli, "in this House for ten years with Lord Carlisle, and let me remind the House that those were not ordinary times. This House then reckoned amongst its members probably a greater number of celebrated men than it ever contained at any other time. At other times, indeed, there may have been individual examples of higher intellectual powers; but a greater number of great men never flourished than during those ten years. Lord Morpeth met them on equal terms; he took a great part in the greatest debates; and he was a man remarkable for his knowledge, his accomplishments, and his eloquence." If this panegyric is not enough to establish his Lordship's fame as an orator, it would be hard to find anything more effectual. But it is robbed of all its value when it stands as a motto to a book containing twenty-six speeches in answer to the toast, "The health of Lord Carlisle and prosperity to Ireland," and countless addresses on the subject of education, or at the cattle-show banquets of agricultural societies.

It would be unjust to pass any sentence on the literary or the oratorical value of these speeches. Even if a famous orator is called upon

to return thanks for the Ladies, or the House of Commons, or the prize pigs, at some country gathering, we cannot expect him to give us anything worthy of being ranked with the orations of Demosthenes or Mr. Mason Jones. Take the speech at p. 172 of this volume:—

"I beg to return the Commissioners of the Town and Harbour of Dundalk my cordial thanks for their assurances of attached loyalty to the Throne of these realms, as well as of considerate courtesy which they have been pleased to use towards myself. I entirely partake in the feeling of satisfaction which you have gracefully expressed that my first visit to this ancient and historic town, and this fair and thriving district, should have occurred on an occasion which has brought together, on the adjoining sward, so splendid an exhibition of the material progress of Ireland, and so harmonious a fusion of class, occupation, creed, and race, to witness and appreciate her still expanding resources, her matured, but not stagnant, energies. It is my sincere hope that the town and neighbourhood of Dundalk may amply share in the bounties and blessings which I trust that a merciful Providence has in store for the entire country."

—This may have been worth speaking, but it is not worth printing. It is just what regal or viceregal speeches ought to be, very gracious and very empty; and no doubt it answered its object at the time by making the good people of Dundalk proud of their loyalty and complacent at their own courtesy. Perhaps it might furnish Mr. Disraeli with another argument against abolishing the vicerealty. And as Lord Carlisle's popularity in that office is the great argument for its retention, it may be well that its advocates should have the means of knowing exactly how he discharged every detail of his duties.

But we have the further ground of complaint against Mr. Gaskin that even Lord Carlisle's virtues are made ridiculous. We are presented with an introductory sketch of his vicerealty. Again we have the opinion of others as to his great efficiency. The tributes from all the newspapers, from Mr. Lever, from Sir Robert Peel, testify to the approval of England and the gratitude of Ireland. Occasional passages in Lord Carlisle's own speeches show his sense of his duties, and that he acted up to it is evident to us from our knowledge of his character. But if we ask Mr. Gaskin how these duties were performed, the answer, as we have said, is ludicrous. A great deal is said about Lord Carlisle's zeal for education. Medical education, we are told, attracted his peculiar attention. Of the medical profession in Ireland he entertained a very exalted opinion. The most distinguished members of the faculty were noticed by him with honour. Looking for an instance, we find that he called one physician "a living light of the profession."

Under the heading of "Lord Carlisle's desire to confer honour on distinguished Irishmen," we read that his Lordship was most active in raising memorials to genius and valour. But he "displayed the same ardour and zeal in conferring honour on the *living* sons of Ireland who had earned a hard-won reputation on the deadly but glorious battle-field, in defence of the Empire; or devoted themselves to the nobler career of discovery in science, or to the welfare, happiness, and prosperity of their fellow-countrymen." This time, too, the rule is followed by an example. Lord Carlisle gave a banquet at Dublin Castle when Lord Gough was installed as Knight of St. Patrick, and he presented the address of the Royal Dublin Society to Sir Leopold M'Clinck. Not the less conspicuous was Lord Carlisle's recognition of the Lord Mayor of Dublin whose year of office was marked by the visit of the Prince of Wales as well as by that of his royal mother.

Mr. Gaskin speaks as if the visit of the Prince of Wales was chiefly memorable because it occurred during this gentleman's second mayoralty; and he gives us at full length the Viceroy's allusion to the Lord Mayor's manufactory of Irish poplins and tabbinets:—

"Let us, then, drink, with the cordiality the toast deserves, 'The Health of the present Chief Magistrate of the City of Dublin'; and I feel sure that he will not resent the allusion, when I say that from my heart I cordially wish that the texture of his remaining days may be as soft, as rich, and as bright as that beautiful fabric with which he has done so much to enrich the manufactures of his native land."

Lord Gough and Sir L. M'Clinck are known to fame, and no doubt the Mayor of Dublin has his circle of admirers; but what are we to say to Mr. Gaskin's collection of the letters he received from Lord Carlisle, the longest of which extends to seven lines, while three of them are only one line each? "Dear Gaskin, I accept the dedication with very great pleasure,"—"Dear Mr. Gaskin, I am extremely obliged by your timely and friendly vindication,"—"Dear Mr. Gaskin, I shall feel much gratified by the dedication,"—are thought worthy of print and paper. And though we do not gather that any of his Lordship's letters are not communicated to us, we are told that "Lord Carlisle continued to hold a familiar and friendly correspondence with the author on the various questions of interest relating to the welfare of Ireland." With the same grand simplicity, Mr. Gaskin comments on the literary works of his hero. When the Earl writes a poem addressed to a sea-gull, Mr. Gaskin remarks, that "the free and unrestrained flight of a sea-gull . . . seems to have inspired, and in part suggested, the following impromptu verses." Lord Carlisle's general merits as an author are summed up in this passage:—

"Literature elevates and humanizes the mind, and is the soul of a people. Nations always take rank in the great commonwealth of civilization in proportion to the literary eminence and attainments of their public men. Lord Carlisle had a pure taste and a keen appreciation for the beauties of literature; his patronage was ever extended to the encouragement of rising genius and literary merit. His own works, generally the production of his leisure hours, leave us to regret that his duties did not permit him more steadily to apply his vigorous mental powers to literary pursuits. However we may regret this, we must admire the merits and excellence of the beautiful productions which he has left us. Throughout his works we may observe a pure atmosphere of religious principle—a style solemn in tone, and irradiated with the warmth of devotional feeling. The acquirements of his well-stored mind, his copious information, and the retentive powers of his memory, were wonderful."

Whatever we may have to say of Lord Carlisle as a writer or a speaker, will probably be exactly opposed to these sentiments of Mr. Gaskin's. Lord Carlisle had not made the proper start for doing anything in literature. "Vigorous" is, we think, the last word that should be applied to his mental powers. Had they deserved that name, the extreme culture bestowed upon them must have raised them to undoubted eminence. But one of the surest tests of originality is how far it can survive culture; whether it will be crushed by it, or will raise it to its own level. We therefore notice that some minds which are conscious of their weakness are afraid of any culture that would make that weakness more prominent. Some men preserve their originality by a resolute abstention from reading. But Lord Carlisle found no temptation in originality, and great temptations in literature. He did not want to work his own mine so much as to gain the practice which would enable him

to explore the mines of others. His lectures on Pope and Gray are at hand in this volume to illustrate our meaning. There are scarcely to be found two other pieces of criticism aiming so purely at exhausting the merits of the poets with so little original remark. A running commentary on a string of extracts is the character of each lecture; and however much the extracts may have impressed the mechanics' institutes where the lectures were delivered,—however profound may have been the noble Lord's study of the poets whom he was dissecting,—there is no attempt at analysis or proportion; to say nothing of the want of that deeper insight by which some can convey an involved character in a single sentence. Yet Lord Carlisle has read all the works and all that has been written upon them. He sees when Dr. Johnson is in error,—he sees that others who were less prejudiced have not quite hit the mark; but he does not know what that mark is, and he is quite content to leave off without having taken aim at it.

With an unconscious prediction of his own fate at the hands of his biographer, Lord Carlisle is always ready to give his hearers the testimonies of other men to the excellence of those he is illustrating. This is sometimes done by an anecdote; and a favourable instance is the allusion to the parting tribute paid to Gray by General Wolfe and Daniel Webster:—

"We are always glad to have our own judgments assisted by the thoughts and doings of eminent men; and these acquire a more impressive and thrilling interest if they have been expressed shortly before the close of their lives. Let me present you with two tributes paid to the Elegy of Gray at the end of two very varied historical careers, with just more than a century intervening between them. We are informed, upon what appears to be sufficient authority, that on the night before the capture of Quebec—which of all the single passages in the long catalogue of British glories was perhaps the most romantic in its incidents, and the most decisive in its consequences—General Wolfe, with his small band of soldiers, was being rowed up past the hostile ramparts, and between the steep cliffs which line the St. Lawrence, and there and then, in the stillness of that dark summer night, and on the eve of his glorious victory and immortal death, he repeated to those around him some of the stanzas of the Elegy, and then said, 'Well, gentlemen, I had rather be the author of that poem than take Quebec.' I pass on to my more recent instance. About two months ago the great American statesman, Mr. Webster, was lying upon his death-bed. * * Even in the intervals of severe pain, even in the languor of decaying nature, even amidst the appropriate and exalted topics of Christian penitence and hope, there was a further craving of the dying man yet unsatisfied. We are told that he was heard to repeat somewhat indistinctly the words, 'Poet, poetry—Gray, Gray.' His son repeated the first line of the Elegy—

The curfew tolls the knell of parting day.

'That's it, that's it!' exclaimed Mr. Webster. The book was brought, and some stanzas were read, which seemed to give him pleasure. Surely it is not a slight thing to have satisfied, so far as the world they were about to leave was concerned, the latest aspirations of such a hero as Wolfe and such a statesman as Webster!"

A less favourable instance is afforded on a former page, where Lord Carlisle shakes his head playfully at Dr. Johnson, exclaiming, "Oh Doctor, Doctor!" and then goes on with the excuse, "as the Doctor has drawn me into levity," to repeat some pointless Eton tradition. Yet we have no doubt this "levity" was quite acceptable to his audience. Profound thought or novelty would only have gone down for the sake of the lecturer.

Still we imagine that Lord Carlisle's poems were addressed to men of cultivation, and not solely to babes in the word; and, if so, we

must say that his lectures are more thoughtful and show more trace of his culture than such lines as the following, which betray the strangest misapprehension of Napoleon's feelings:—

On seeing a Tree in the Isola Bella, upon which Buonaparte had Carved some Letters Two Days before the Battle of Marengo.

Perchance as here, beside the crystal flood,
In pleased repose the hero-despot stood,
Where art and nature emulously smile
With all their charms on each enchanted tale,
The scene's own soft contagion gently stole
O'er each stern purpose of his toll-worn soul:
Pursuance e'en here he grieved awhile to mar
Such climes of beauty with the waste of war;
Wish'd that the tumult of his days might cease
In some bright vale, in some blest home of peace;
Sigh'd for the joys he ne'er was doom'd to gain;
Then rush'd to conquer on Marengo's plain.

—The word Napoleon carved on the tree was "Battaglia."

Our readers will think that we have forgotten our opening words, or that we have failed to keep the promise which was conveyed in them. It is true that we have not been able to praise Mr. Gaskin's book, or to speak highly of Lord Carlisle as an author; but when Lord Carlisle wrote down any of his thoughts, and even when he printed his writings, he did not put them forth to challenge criticism. When he wrote and delivered lectures he did not send round the syllabus with card of terms to the secretaries of Mechanics' Institutes; and therefore in the one case we do not judge him as an author, nor in the other case as a lecturer. We have judged him here solely by what he professed to give us, and we have praised him, not for the intrinsic merits of any of his works, but for the spirit in which he undertook them,—not for the oratorical excellence of his speeches, but for their scope and tendency. He did not write in order to put his own thoughts before the world, but to assist the world in understanding the thoughts of others. He did not speak in order to convince or silence, but to counsel and to aid. His literary taste led some to look upon him as an author, and to praise him for those merits which he was teaching them to appreciate. We cannot suffer them to place him on a pedestal to which he is not entitled; but unjust praise of him must not blind us to his real excellence: and if we remove him from the pedestal of the author or the orator, we must be careful to give him his stand on the broader base which belongs to him, which is less envied, but not less enviable, and the great glory of which is, that it may be shared by all who seek the good of their fellow creatures, though they have neither the wealth, the culture, nor the high station of the Earl of Carlisle.

Charles Lamb: a Memoir. By Barry Cornwall. (Moxon & Co.)

IN this book, full of grace and sweet thought, and grave, glad memories, and deep earnestness, a book, however, not without errors of omission and commission, the author, under weight of years exercising youthful power, tells his readers that Charles Lamb had little influence on his own times. We are not disposed to agree altogether with this judgment; but, however it may be, no one can dispute that Lamb, in the story of his life, will exercise considerable influence on after-times. The oftener his story is told, the more true and tender and heroic does he appear. The effect of the telling of it should and doubtless will be, that men will cease to complain of the small evils of life, and if calamity come upon them, they will bear it uncomplainingly, almost cheerfully, as Lamb bore his.

And his was enough to overweight any human being,—yet he never even staggered beneath the burden. The consciousness of

madness in the blood would be an intolerable oppression to most sensitive beings; but Lamb, the most sensitive of beings, had not only the proof that in his own veins the blood, paternally inherited, flowed unhealthily, but that the current was still more disordered in the veins of his sister. When the domestic calamity culminated, by that generally shy and gentle sister slaying her mother, in a sudden access of fury, in Lamb's presence, the course of his life was decided. The victim was reverently consigned to the grave, and Lamb took the poor sister to the shelter of his heart and home for ever.

Few men have ever borne, so long and so unweariedly, a burden so terrible. There were seasons of calm sunshine, but no one could tell when the gloom would descend or the storm sweep over them. When the latter was imminent the scene in the little household was affecting. Charles and Mary Lamb walked forth, arm in arm, to Hoxton Asylum, and one of the two carried a strait waistcoat in a silk handkerchief! With recovery, a sort of sunshine again broke over the household.

But there was a disappointed life there, too, though there was no outward interpretation of such disappointment. Indeed, real sunshine never fell upon it except what came from Lamb himself. From 1775, when he was born in a dull corner of the almost sunless Temple, to 1834, when he fell in a dull walk in dull Edmonton, and died of it, Lamb lived more in the shade than in the light of life; and yet he had, as he said, "an intolerable disinclination to dying," particularly when old friends were thereby taken out of his circle. Some of these, as if attracted by affinity of disordered wits rather than by sympathies of finer humours, were at least "perplexed in mind," "eccentric characters," peculiar. Lamb could hail them as being twice his brothers. His regard for Cowper was based, perhaps, not so much on the strength of Cowper's poetry as the weakness of Cowper's mind.

His own life, Lamb used to say, could be told in an epigram. It certainly had a sting in it; disappointment was in and about it. His defect of speech effectually stopped the way which lay between Christ's Hospital and College. He had "a foolish passion," the journal of which he destroyed, not because it was foolish, but because, the matter being hopeless, the record of it was not worth preserving. Later, when this clerk in the India House could only have asked a bride to a home with an occasionally insane though clever sister, Lamb fell in love with Hester Savory, a beautiful Quakeress. He never spoke to her in his life, but for some of the heavy sadness of that life there was a little compensation in paying the silent homage of the heart to its unconscious mistress. It was not every comer he took to that heart, even as friend. Those he adopted were his own for ever; but as Barry Cornwall remarks, Lamb's "affections were not widened (weakened) by too general a philanthropy."

Of himself, Lamb said, "I am made up of queer points. My theory is to enjoy life, my practice is against it." For thirty years he sat at a desk,—in the South Sea House for awhile, in the India House for most of the time. The places were even duller than the Temple, with its terrace, dial and gentlest of fountains; duller than the cloisters of Christ's Hospital, where Lamb looked on and played not. He had to make entries in an indigo ledger when his thoughts were on other books, whose authors had been immortal for centuries. He longed to break his chain, cast off his oar and escape from the galley where he had been so long a slave. When the day of his freedom came, and

he "went home—for ever!" liberally pensioned, Lamb's joy was boundless. Joy! it was a frantic enthusiasm, with odd illustrations of feeling, as when the old bachelor exclaimed, "If I had a little boy, I would call him *Nothing-to-do!*" But the long-coveted freedom from labour soon became a heavier oppression than the toil from which he had panted to escape. His liberty came when he had fewer friends wherewith to enjoy it, and less mental power to turn it to account.

There has always been, we think, a wrong estimate made of Lamb's clerkship employments in the India House. There were days, no doubt, when the ledger was a hateful book to open, but it was not opened every day, and then only for a brief period. From ten to four were Lamb's office hours, and during them he wrote all, or nearly all, his letters, and probably most of his essays and other works. The India House was as much the author's study as the clerk's place for work. At home were his books and his friends for enjoyment, and his sister for his anxious but loving care. 'Elia,' a name which attached that of Lamb to English literature for ever, was partly written at the India House. The tone of the place, nay, the place itself, is in those essays. The very pseudonym under which they were given to the world was the veritable family name of one of Lamb's (deceased) fellow-clerks. His salary reached the respectable figure of 600*l.* a year; his retiring pension to two-thirds of that sum; but he and his sister were never so happy as when they had a guinea or so a week, and Lamb could not buy a desired old book without the rare joy of feeling that he had made a sacrifice to obtain it.

The full portrait of Lamb has probably never been so elaborately and successfully done as in this volume, by one of Lamb's most valued friends, but not the sole survivor of the friendly brotherhood, as the author seems to think. We see Lamb in his beauty and his strength, in his natural defects and his weaknesses; in his oddities and quaintnesses, in his wit, his wisdom, his childish simplicity, and his clever follies. In short, it is a book worthy of Lamb, and worthy of one among whose inheritance is the boast of being the friend of Lamb.

Nevertheless, as we have remarked, the volume is not faultless. There is at least one passage in it that will give undeserved pain to a most worthy gentleman. We think, too, that the list of what Lamb wrote for the *Reflector* is not quite correct; and there are some inaccuracies, some of which we notice (indeed we notice these matters of drawback generally) that they may be corrected in the second edition of Barry Cornwall's work. There are few of us who have not read that exquisite sketch in the second series of the 'Elia' essays, called 'Barbara S——.' It is the story of a little girl, an actress, to whom the treasurer of the Bath Theatre one day, in a fit of absence, paid a guinea, instead of the weekly half-guinea that was due. The struggle of the girl as she descended the stairs, the thought of what the guinea would achieve at home, and the triumph over the thought, and in the struggle, are depicted in Lamb's most striking and effective manner. Barry Cornwall tells us that by Barbara S—— Lamb meant Miss Kelly, one of the ablest actresses of Lamb's time, and now surviving in honoured old age. This is a singular mistake on the part of the author, since Lamb assigns Barbara S——'s birth to the year 1733, and describes her, truly, as the daughter of a poor Bath apothecary. In short, Barbara S—— was Miss Barbara Street, subsequently the wife of Mr. Dancer, of the great Spranger Barry, and finally of Mr. Crawford, all actors in various ways. Moreover, Lamb him-

self, in his essay, identifies its heroine. Here are his words: "This anecdote of herself I had in the year 1800, from the mouth of the late Mrs. Crawford, then sixty-seven years of age (she died soon after); and to her struggles upon this childish occasion I have sometimes ventured to think her indebted for that power of reading the heart in the representation of conflicting emotions, for which, in after years, she was considered little inferior (if at all so in the part of *Lady Randolph*) even to Mrs. Siddons."

We are at a loss to conjecture how the author of the Memoir has fallen into so singular a mistake as that we have attempted to rectify. We will not, however, close his volume without offering him our congratulations on his having completed his task (save the exceptional cases indicated) in a way worthy of his theme and of the interest which the public take in the subject.

Sketches of Russian Life, before and after the Emancipation of the Serfs. Edited by Henry Morley. (Chapman & Hall.)

Russia has had an important part to perform in the history of Europe, and she has performed it well. She has done on the east what the Greek Empire, and afterwards Austria, did on the south-east, what the Normans did in Sicily, and what the hammer-strokes of Charles Martel effected on the sunny plains of Touraine. We mean that she has saved Europe from Oriental domination, and has assured the freedom and supremacy of the Christian branches of the human family. Incontestably the growth of the civilized and ruling minority of mankind, now known as "Europeans," was, during some centuries, in imminent peril from the then superior civilization of the Mohammedan powers. Now, however, the tables are turned. Prohibited always from reaching the central heart of Europe, and now long since driven from Spain and Sicily, the followers of Omar are fain to be content with a mere corner of south-eastern Europe, which they have only held for a few centuries, and only hold now by the common consent of Christian countries. In the mean time, we, the descendants of northern barbarians, have advanced to a civilization which even the polished Moors of Spain never exceeded, and which, when added to our superior physical force, makes the poor Moslem, once so proud and chivalrous, a mere plaything in our hands. It might have been far otherwise (in spite of the prowess of the western chivalry) if certain brave Scandinavians and Slavonians had not guarded the eastern frontier of Europe, if Rurik the Norman had not founded an enduring dynasty, and the three Polanian brethren, Kii, Chitchek, and Khorif, with their sister Libedia, had not hunted in the forests by the Dnieper, and laid the first stone of the ancient city of Kiev. It might have been far otherwise if, in later generations, the rival principalities of Kiev and Novgorod had not become amalgamated and acquired sufficient force to repel those mighty Tartar invasions which for ages threatened the nascent Empire of Russia with extinction. Alas for human ingratitude! We of Western Europe repaid the Muscovite with neglect, and scarcely looked upon him as a rational fellow-creature, while the gallant but misguided Poles, who are now looked upon simply as the victims of Russian aggression, figured in past ages as haughty oppressors in the capital of those who were afterwards to be stigmatized as their ruthless taskmasters. No nation in the world has struggled more manfully for existence than Russia, and few nations, if any, have met with less general sympathy. With the Mussulman on one side, and the Christian of the Roman faith on the other, she

stood alone and unaided; for the faded Eastern Empire, whose religion she had espoused, was utterly powerless to help her, and the nations of Western Europe were full of their own quarrels, and all unconscious of the battle that was being fought for them on the debatable ground between Europe and Asia. But the instinct of self-preservation carried Russia safely through the struggle, and now the Emperor Alexander the Second gives the law to a third part of the Old World, and issues his edicts to people who speak forty different languages.

There is quite enough in the merest sketch of the rise of Russia to account for its being a country presenting great anomalies, and including extraordinary varieties of character, manners, and national and local peculiarities. But there is also this consideration, showing that a description of Russia must be accepted in a different sense from that of any other European country. Under the single name of Russians, we are accustomed to include all the variety of fixed and nomad tribes that own the sway of the Emperor Alexander. Probably Queen Victoria rules over as many races or more; but as these are scattered widely over the face of the globe, and many of them are not in the least assimilated with the parent state, we call them colonies and foreign possessions, and never think of treating them as part of England. In writing and speaking of Russia the case is far different. With the exception of a few of the more modern acquisitions (as Finland, for instance), we speak of the whole as Russia, and treat of all the heterogeneous inhabitants as Russians. When we remember, in addition to this, that the country is of vast extent, and that the means of communication are as yet very imperfect, it must be obvious that there can be little common nationality, and that, for many years to come, every pen-and-ink sketch of the country or people dashed off by an observant writer must present new objects of interest and wonder.

The book before us comes out under good auspices. Prof. Morley, by whom the sketches contained in it have been selected and revised, expresses his conviction of the *bona fides* of the author, who has resided in Russia fifteen years and has been brought in contact with people of all classes. Those who think that a true book cannot be an amusing book will here be agreeably surprised. The natural "cuteness" of the Russians forms a strong contrast to the simplicity of ignorance which a half-civilized nation must often display. Peter the Great was wont to say that he excluded the Jews from the empire out of pure benevolence, as the poor innocents would be sure to get fleeced by his clever countrymen. This character of superlative sharpness is still maintained by the tradespeople of the towns, and, to a great extent, even by the serfs on the estates. The author wanted to buy a pair of fur boots and a portmanteau at Tula, a town of some 40,000 inhabitants, in the very heart of Russia. The grey-bearded and highly respectable tradesman to whom he had recourse presented him with several pairs of boots in succession, all of which "were of the best quality to be found in Moscow—Yea Boch! (God's truth)." Yet on examining these pretty closely, the author found the soles to consist principally of pasteboard, and the upper-leathers of horse-hide with cat's hair glued on to it. He insisted on rejecting these choice specimens, although the venerable man protested that "they would wear all his life, Yea Boch!" At last a better pair was produced, in which, at least, glue did not do service for needle and thread; and then came the tug of war. The merchant asked 40 roubles for boots and portmanteau, and vowed, Yea Boch,

that he was giving them away at that sum! But the traveller knew his man, and boldly offered 16 roubles, which sum, after about an hour's chaffering, was finally accepted with perfect good-humour. "How shameful of you," cried the author, "to ask three times more than you take, and to tell so many lies!"—"O!" said the phoenix of shopkeepers, "words do not rob your pocket. I am no thief. It is all fair bargaining."

The great railway from St. Petersburg to Moscow is one of the best managed and most commodious, if not quite the most rapid, in Europe. The guards (as in America and Switzerland) can walk from one end of a train to the other without risking their necks on the tops of the carriages, or holding on to the side like cats, as they do in Belgium. The stoppages for refreshment are sufficiently long to be beneficial both to the travellers and to those who furnish the provisions. How any English refreshment-room can pay, with its "gutta-percha pork pies, mahogany cakes, and sawdust sandwiches," it is very difficult to understand. In highly civilized England we stop ten minutes to scald ourselves with bad coffee or worse broth; in primitive Russia they dine at leisure, for the small sum of three shillings, on joints, vegetables, fowls, game, fish, entrées, and dessert. At Bullagonie, the middle station, at which the trains meet, between the old and new capitals, a simple old gentleman, with a patriarchal beard, descended to partake of the luxuries of the season. He was on his way from Moscow to St. Petersburg, and he was overjoyed, on stepping out, to greet on the platform an ancient friend, who, it appeared, was travelling in the opposite direction. Much had our good old friend been talking of the wonders of steam, for he had never been in a train before. His *naïve* observations amused the other passengers, who respected his snowy locks, and politely responded to all his questions. After dinner the same gentleman renewed his remarks, sitting comfortably in the same carriage with the old friend he had met. "How different," said he, "is this from the old way of travelling; it used to take seven days and a hundred horses."—"True," said his friend, "and see how fast it goes. I cannot understand how the steam can make it go."—"It is wonderful," rejoined the patriarch; "but the most strange thing of all is, that here I am going to Petersburg and you to Moscow in the same carriage! Railways are wonderful things. I cannot understand it!"

The venality of the officials has always been a fruitful theme of English and French writers on Russia. Our author quite confirms the general view with regard to the lower class. The higher officials he does not seem to have had much to do with. At Moscow the author was bargaining for a couple of tarantasses, or travelling carriages, when his follower Harry, a kind of Mark Tapley with a dash of Sam Weller's pugnacity, made a violent onslaught on some fifty drivers, under the impression that they were illtreating his patron. The British fist usually produces a wholesome dread when judiciously used, and our friends would have retired triumphant had they not unluckily been caught by some armed police. Having a lurking idea that money can generally get one out of police difficulties abroad, the author placed a rouble in the palm of each policeman, and quietly awaited his fate. He was promptly led before a kind of magistrate, who listened patiently to the evidence of the assault, which was strongly corroborated by the bruised faces and bleeding heads of the drivers. These unfortunate men seem to have made just one mistake, that of taking a broken wheel, which

arry had picked up at random, for an iron bar. Thereupon the policemen at once saw their way to earning the roubles, and they said, "There was no iron bar, your honour, and we won't fight," all which was literally true. They then added that the Englishmen could speak no Russian, and that they had only taken them in charge to save them from the infuriated drivers. An interpreter was then sent for, and the author told him that he would prefer not to be locked up, and that "if ten roubles would be of any use —" "Just the thing," said the interpreter; so the ten roubles were handed over to the magistrate, who presented four of them to the "pigs" of drivers, and, it is presumed, found an equally good use for the other six.

The author gives us in these sketches a view of Russian life before the promulgation of the new code, and some rather striking scenes pertaining to the present state of transition. Notwithstanding Prof. Morley's firm belief in his correspondent, we cannot help imagining that some of these scenes are a little worked up, or, at any rate, that the author sometimes indulges in exaggeration of expression. It is not quite easy to believe that a Russian peasant can mend pens and pencils "with the same piousness" as with which he can "hew down trees" and "cleave his enemy's head from the neck to the throat." It would be satisfactory to know positively whether the personal anecdotes are to be taken as literal records, or merely as fiction founded on fact.

The Lincolnshire Tragedy.—Passages in the Life of the Faïre Gospeller, Mistress Anne Askew. Recounted by y^e Unworthy Pen of Nicholas Moldwarp, B.A. And now first set forth by the Author of 'Mary Powell' (Bentley.)

The language which the complaisant reader is required to accept as an accurate reproduction of the English prose written by authors of Henry the Eighth's day, the lady to whom we are indebted for 'Mary Powell,' and many other more or less commendable tales, has tried her hand at a romantic memoir of Anne Askew, with success that is by no means perfect. Nicholas Moldwarp, the character credited with the original composition of the narrative, is an old scholar and domestic tutor of Ascham's habit of thought and manner, who resembles Ascham, moreover, in reluctance to see the birchen rod with which he is authorized to discipline little Anne Askew and the other pupils committed to his charge. A wider and more exact acquaintance with the literature of the sixteenth century would have enabled the real writer to render greater justice to her imaginary scribe, whose English, both as regards structure of sentences and orthography, no more resembles English of the period in which he is supposed to have lived than it resembles English of the present date. In his old age, under Queen Elizabeth, or during an early year of James the First's reign, this bookish chaplain and graduate of Cambridge is made to say of his volume 'On the Adornment of Gardens,' "I conceived you referred to that — 'tis the only thing of mine that will live — A few brochures that made a noise, Sir, at the time, have all dropt out of sight." The author of 'Mary Powell' might, with equal propriety, represent Erasmus as gossiping about his *feuillets* and "leaders." With similar ignorance of the change which time has wrought in the discipline of schools, as well as in the usages of men of letters, she makes a young Templar of Henry the Eighth's day talk about "eating his inners," as though the educational discipline

of the law colleges was merely formal in the sixteenth century, as it became, or rather began to be, after the restoration of Charles the Second. Edmund Britain and Nanny Askew speak to each other thus:—

"Well, I will not: only I suppose you'll have a wife, some day.—" "Yes, I suppose I shall, and then you shall come and visit us. Then you shall see all the sights in London town. But meanwhile I must read hard for a Lawyer, and keep my Terms, and eat many dinners . . ." "That will not be hard, if only once a day."—"No, only it will keep me on the spot, you see; and that's why I must eat them." "Twas worth a world to hear their pretty talk, only I was glad the Boy plighted not himself to have her for his Wife, but only for his Visitor, to see the sights of London town. Boy-like, he may be hoped to do much better for himself than that, without considering that Sir William would look a good deal higher than the Law-courts for his daughter."

All this is very laughable to readers who have given thought to the life of the Law University as it was in its palmiest days of vigorous discipline and high renown, learned readers and laborious students, mootings and exercises after the two pompous daily meals in each college-hall, when the troops of patrician lawyers by their courtly pursuits and pastimes gave the law colleges their distinctive name, *Inns of Court*,—a term which in its origin made no reference to courts of law, but was an allusion, as Fortescue's 'De Laudibus' testifies, to the courts of kings. On other points the author betrays her ignorance of the economy of an Inn of Court in Henry the Eighth's reign. Thus when she writes, "Master Britain's clerk, in the outer chamber, whom I know pretty well by this time," she speaks as a lady of this century might speak of a young barrister's quarters in the Temple, not as a visitor to the Temple would have spoken at a period when the word "chamber" meant "a set of rooms," and when no Templar, unless a Master of the Bench, was permitted to hold a whole chamber to his own separate use. These errors—though antiquaries will deem them of importance—will seem trivial slips to the children and unlearned ladies for whom such books as 'Mary Powell' and 'The Faïre Gospeller' are written, and who will derive considerable pleasure from Master Moldwarp's unworthy version of Anne Askew's tragic story. "Sir," runs the narrative after the woman's heroic soul has passed from the flaming faggots up to Heaven, "they say there was a Thunder storm burst over us at the time, but I was too absorbed to note it. To me, the whole world had, for the nonce, become a blank. That night, strange to say, I slept heavilie. During the evening, I and Lettice, and Mistress Berry and Christopher, had gathered together and communed on all that lay in our Hearts. We were sensible of an inexpressible Load taken off us; the worst had been done. It could never be done agayn: she was beyond and above their reach now. We wept, and talked of her pretty ways, and how we had feared once and agayn her courage might fayl at the End. But it never did." The effect of the story is not enhanced by the clumsy suggestion that it was sent to Stratford-upon-Avon for Shakespeare's perusal.

The Military Writers of France.—[Les Écrivains Militaires de la France, par Théodore Karcher.] (Trübner & Co.)

This work undoubtedly supplies a want in military literature, and can scarcely fail to be considered as essential to every military library, however small. Unfortunately, the principal idea by which the author was induced to undertake this task has been extended, we think

disadvantageously. By adding to the "biographies of the most eminent military writers since the days of the French Revolution" extracts from their works, he has increased both bulk and price to an extent which will, we fear, militate against the popularity of what otherwise would have been regarded as an indispensable handbook to military literature. M. Karcher's hope is that, by inserting the extracts above mentioned, he has rendered the work before us useful, not only as a guide to French military literature, but also as a reading-book for those students of French who are about to enter the army. The two portions of his plan seem to have little connexion with, and indeed will, we apprehend, act injuriously on, each other.

The first part of the book gives a list and brief review of French military writers, from Geoffrey de Villehardouin, who was born about the middle of the twelfth century, down to Théophile Gautier fils, the well-known living author. To the military student this portion of the work, though somewhat dry, is invaluable; to the general reader it possesses little attraction. The second part consists of brief sketches of the principal French military authors, accompanied by a specimen of the style of each. As might be expected from the nature of the subject, this portion of the work is extremely interesting, though it must be allowed it contains little fresh matter. The most striking feature in this book is the union of intense patriotism with the most rigid impartiality. In the latter quality, indeed, M. Karcher stands unrivalled amongst his countrymen, whose anxiety to soften down and account for the disasters which no nation can better afford to acknowledge than France, generally renders them untrustworthy historians. M. Karcher's literary honesty is particularly remarkable in his sketch of Marshal Soult. Speaking of the battle of Toulouse, he says, "The English and the French equally claim the victory; the former, it is true, experienced considerable losses, but in the end they were able to enter the town which their antagonists evacuated. It must be concluded from this that Wellington attained the object which he had proposed to himself. Let us add, that ultimately Soult himself did not pretend to have gained the day, although he was able to retire in good order. In France his partisans used to speak of victory, his adversaries of defeat. As Madame Emile de Girardin, with the witty malice which was peculiar to her, has said, "When Marshal Soult was in the Ministry, he had lost the battle of Toulouse; when he was in the opposition, he had gained it."

During the Battle of Marengo Soult was lying wounded, and a prisoner, in the neighbouring town of Alessandria. It may easily be imagined with what anxiety the helpless warrior marked the fluctuations of victory, as shown by the ebb and flow of the fire which showed now the Austrians, now the French, to be advancing; how anxiously he listened to the reports brought in from time to time by his staff. The account given by himself of the manner in which he spent this eventful day will well repay perusal, and is, perhaps, the most interesting of all the selections with which M. Karcher has illustrated his book.

Scarcely less attractive as regards dramatic interest, and withal excessively instructive to the military reader, is an episode of the brief campaign of 1815, related by Marshal Bugeaud himself, the chief actor in the brilliant feat of arms described. With only 1,700 infantry and 40 cavalry, Col. Bugeaud during ten hours withstood all attempts on the part of 6,000 Austrian infantry, supported by 500

dragons, to force his position. In this affair, which was only terminated by superior orders, given because the fate of France had been decided at Waterloo, the Austrians suffered a loss of nearly 3,000 men in killed, wounded and prisoners.

One of the most eloquent and impartial of French military writers was the late Col. Charras, who, even as a boy of twenty, displayed the fiery courage and natural aptitude for war which, but for political reasons, would have raised him to the highest rank in that profession which his literary acquirements have so highly benefited. His military career may be said to have commenced during the famous three days of July, 1830, in which he exhibited the same uncompromising firmness which subsequently led to that noble preference of honour to fame, which drove him into exile and deprived France of one of her most accomplished soldiers. In the early part of 1830 Charras was expelled from the École Polytechnique for having, at a banquet of the pupils, proposed the health of Lafayette, and sung the 'Marseillaise.' Three months later the revolution broke out, and Charras, plunging into it with all the energy of his disposition, played no mean part as a leader of the populace.

Before closing our notice of this useful work, we must draw attention to an inaccuracy scarcely pardonable in an author who is also a professor at an English military college. In the sketch of General Foy, M. Karcher gives the reader to understand that, in a charge on a French square at Salamanca, "General Cotton was killed." Now there were no squares in that action; and it was General le Marchant, not General Cotton, who was killed in the charge of the "Dragons Rouges." General Cotton, afterwards the celebrated Lord Combermere, was, it is true, wounded on that day; but it was by the bullet of a Portuguese sentry, who, in the dusk of the evening, mistook him for an enemy, and fired without challenging.

OUR LIBRARY TABLE.

The Beggar's Benison; or, a Hero without a Name, but with an Aim: a Clydesdale Story. Illustrated by upwards of 300 Amateur Pen-and-Ink Sketches. 2 vols. (Cassell, Petter & Galpin.)

A more distasteful story than this Clydesdale one does not occur to our memory. Its writer may have read Galt's clever Scotch novels, to-day too much forgotten. He has tried his puny best, moreover, to reproduce those effects and sensations of which Mr. Dickens is the master; but the fruits of his labour amount to nothing more or less than an improbable apotheosis of vulgarity, selfishness, and ingratitude. A "getter-on" is always, more or less, a questionable character. "Honesty is the best policy," said a dying man to his son; "I have tried both." Here is a getter-on, born in the Glasgow gutter, who began life as a thief,—who was helped and rescued, and dragged out of the mire,—and whose callous selfishness to those of his family who never wronged him is confessed with a cynicism which is not well to read, not well to think of, not well to be expressed in the pages of Fiction, and not well to have been illustrated by the prolific amateur, more well-meaning than successful, who contributes his three hundred sketches to the distasteful story. Let any one who doubts our word compare this tale with Galt's 'Sir Andrew Wylie,' by no means his best novel, not equalling his 'Ayrshire Legatees,' his 'Annals of the Parish,' his 'Entail' (with that desperate litigious "rudas" *Leddy Grippy*). Galt's hero got on, but gave out in proportion as he got in. The egotist to whose deeds this novel is devoted, a scion of the Chuzzlewit family, had no notion of cordiality, kindness, or natural affection. He abandoned his family, including a poor struggling mother and a patient sister (who is reclaimed in the grandest theatrical style by the aid of an Australian fortune in the last chapter), and rejected his

father very nearly as insolently as did the hero of 'Le Prophète' his mother; he married a nobleman's daughter (himself a Glaswegian Baillie), and made, and kept, great wealth. Such feats as this have been,—such may be again; but the story of fortunes and adventures such as his, made by creatures of the mud and mire, who remain muddy and miry to the last, if told at all, should be better told than is the case here.

Artemus Ward among the Fenians. With the Showman's Observations upon Life in Washington and Military Ardour in Baldinsville. (Hotten.)

OUR old friend exerts himself with but moderate success to be funny amongst his new acquaintances, and no wonder. To be mirthful among Fenians would be a hard task to accomplish. There is no fun in men who would give their peace and their liberty to Ireland by murdering the aristocracy and plundering the merchants. The best thing in the book is in the preface, where, in reference to funny writers, it is said, "Perhaps it would be as well if they remembered the joke of poor Thomas Hood, who said that he could write as well as Shakespeare if he had the mind to, but the trouble was—he had not got the mind."

The Legend of the Mount; or, the Days of Chivalry.

By Alfred Elwes. (Effingham Wilson.)

OF affections who shall see the end! Here is a tale in steady-going verse, Printed as though the same were so much prose. He who translated from the French so well The legend old, with Dor's drawings dight,—'Jaufray the Knight and the Fair Brunissende,'—Had little need, when telling his own tale, To use the poor devices of conceit, Fitting resource of far inferior men. Albeit, his 'Legend of the Mount' is wild, Made up of love and dreams and sorceries; Also, adventures of a gallant knight, Bright as the morn, and modest as a maid. The verse in which 'tis told is rather mild. Nor will the reader weep or be afraid. In truth, the story by its form is spoilt!—A twilight tale neither in shine nor shade.

A Seaside Sensation. By Charles H. Ross. (Routledge & Co.)

As this is "written and illustrated" expressly for the waste-paper basket, it would be unfair to delay it a moment on its passage. More insufferable snobs than the characters here described we never met with; and, in the interests of society, we are grateful that they are as stupid as their portraits are vulgar.

Our Postal and Revenue Establishments, considered with a View to Utilizing the former for the Receipt and Payment of Revenue Money, the Granting of Licences and Sale of Stamps in all Provincial Towns, and to a thorough Amalgamation and Consolidation of the Surveying Branches of these Departments. By a Civil Servant. (Pitman.)

THE long title of this book sufficiently states its scope and object. No one who is acquainted with the interior of a merchant's counting-house and has also attended in any government office, can have failed to be struck with the difference between the two. In the former, every one is busy; in the latter, one or two clerks do the business of the office, while many others are engaged only in waiting for four o'clock. There can be little doubt that any establishment which had not the patient and highly solvent John Bull to draw upon would, if managed on Government principles, soon be in the *Gazette*. The author's argument is that a well conducted post-office affords all the machinery necessary for the receipt and payment of revenue monies and for the sale of stamps and the granting of licences, and that all these duties could be performed with facility by the Post-Office clerks, whereby a large number of officials throughout the country, who now daily wait for four o'clock at the public expense, would be discharged from their dreary duties, to the great relief of John Bull's purse. The suggestions in these pages are chiefly founded on the evidence given before the Horsfall Committee in 1862 and 1863, and, as the minutes of that evidence are now out of print, extracts of those minutes are added in an appendix, and form more than four-fifths of the present volume.

LIST OF NEW BOOKS.

Benson's Divine Rule of Prayer, 12mo. 2/6 cl.
Bourdillon's Short Sermons for Family Reading, 2nd Ser. 2/6 cl.
Ewens's Pica for a New Translation of the Scriptures, 8vo. 2/6 cl.
Everett's Universal Proposition Table, 21 cl.
Ferguson's America during and after the War, cr. 8vo. 6/6 cl.
Keller's Lake Dwellings of Switzerland, &c., roy. 8vo. 31/6 cl.
Man's Educator's Guide, 12mo. 1/6 swd.
Michelet's The Churches of Asia, 8vo. 5/6 cl.
Pinchock's Laws of Rubrics, 8vo. 3/6 swd.
Power's Fagot of Stories for Little Folk, 12mo. 1/6 cl.
Proctor's Handbook of the Stars, 12mo. 5/6 cl.
Race (The) for Wealth, a Novel, by Mrs. Riddell, 3 vols. 21/6 cl.
Reid's Guerrilla Chief, 12mo. 3/6 cl.
Rock (The), and other Poems, 8vo. 4/6 cl.
Ross's Merry Conceits and Whimsical Rhymes, large sq. 2/6 cl.
Spencer's Travels in France and Germany, 2 vols. post 8vo. 21 cl.
Trust, by the Author of 'The Beginnings of Evil,' 12mo. 2/6 cl.
Walcutt's Memorials of Lincoln, 8vo. 2/6 swd.
Winter (A) in the East, Letters to Children, by F. M., 2/6 cl.

NATIONAL PORTRAIT EXHIBITION.

ONE of the finest, one of the most characteristic portraits here by Vandyke, also one of the most famous, is that which represents *Thomas Carew and Sir W. Killigrew* (No. 754). Carew is reading to his brother bard. A portrait with a subject that is better expressed than common with Vandyke; a picture singularly rich in colour, wealthy in tone, solid and broad; the composition is a little awkward.—Mirevelt's capital portrait of *William Harvey* (756), discoverer of the circulation of the blood, successfully represents the French manner of that time at its best: an icy but very soundly wrought picture.—*Algernon Percy* (760), Vandyke, was the tenth Earl of Northumberland, a sea-captain of his day, who drew back his hand when King Charles's person had to be decided about. Another of the master's heavy portraits, the foot on an anchor, the stock of which is curiously out of drawing: a very spirited work.—Nos. 761 and 762, *Lady and Sir George Chute*, two capital portraits, but certainly not the work of Jansen, as stated here; they suggest the work of Cleynre; their condition indicates the need of a little care.—In No. 765 we have *Dobson and his Wife*, as painted by the former. We share the doubts of Stanley when he wondered why King Charles called Dobson "the English Tintoret"; it could not have been because the "martyr" fancied any resemblance between the style of the great Venetian and that of the very able Englishman. He was a fine painter, as this Exhibition has sufficed to show beyond even our expectations, great as they were. His reputation has been vastly extended of late. For a man who died at thirty-six, he did much and well. We hoped for that portrait of Francis Carter, from Blenheim, which pleased Vertue so much, and the large picture of the Earl of Peterborough; above all, the noble picture from Northumberland House of Sir Charles Cotterel, Dobson and Sir Balthazar Gerbier.

One of the most interesting triple works here gives portraits of the *Tradescant Family* (983), a very curious group, noteworthy on account of the manner in which it is treated in composition and colour; rich in character.—*Dr. John Owen*, the able and learned Nonconformist writer, is well represented by No. 768, the property of the Baptist College at Bristol. How few of us know that this worthy man was Vice-Chancellor of Oxford for five years and Dean of Christ Church, the Protector being Chancellor! He died at Ealing, and was buried in Bunhill Fields; his grave there is not quite out of peril, we believe,—may yet be let as "eligible building land."—The portrait of *Sir Philip Monckton* (770), without a name here, is probably by Dobson, and has certainly been repainted.—The capital but rather heavy picture of *Sir P. Basset* (778) is very far removed from being a work of Vandyke.—*Philip Sidney Lord Lisle, Algernon and Robert Sidney* (780), three boys, if it ever had a touch of Vandyke's hand, has long ago lost it under a deluge of paint; it is noteworthy what a sneaking looking fellow is Algernon.—There is an odd story about the very curious but well-painted portrait of *Sir Henry Mildmay* (779), laid out for dead, the black pall cut to show the feet and hands, the face bare. There was a superstition zealously fomented by one party at least that alleged the impossibility of any one of the regicides having the privilege of dying in his bed. Poor Sir Henry had many a narrow chance of keeping up the superstition in his own person, for he was condemned to be drawn

a Tyburn every year with a rope about his neck: a perilous journey under the circumstances. He did, however, die in his bed, and a loving friend dressed the old man's withered and white body to be painted as here. The Royalists said that he escaped the common doom of regicides because he did not actually sign the warrant for the execution of their master.

Mrs. Jane Lane (781), attributed, doubtless with truth, to Mary Beale, is a very bad portrait, badly repainted.—In No. 789 we have that very handsome and refined gentleman *Lord Deputy Verdon*, by Robert Walker, a singularly beautiful head, full of tenderness and valour, but over-delicate in health. His death, of the plague, before Americk, refutes the superstition referred to above.—The portrait of *Andrew Marvell* (795) is a signed Hanneman, much in Walker's manner. Compare it with that caricature styled *Marvell* (804), by Jaspas Smitz. This is the single example of the work of this painter here,—so says the Catalogue, erroneously we think. It is noteworthy on that account, however, because, according to Vertue and Graham, he taught "one Gandy of Exeter"; if this was meant for the father of the man whose pictures so influenced Reynolds, it was probably a mistake to attribute his teaching to Smitz, when not only the evidence of his style, which is distinctly influenced by Vandyke, but the tradition of the same effect, as mentioned by Northcote, affirm otherwise. The only circumstance which countenances the assertion of Graham, is the statement that Gandy the elder went into Ireland with the "Old Duke of Ormonde," where *was* Smitz also, according to Graham, who says he died in that country "miserably poor." Pilkington states that Gandy the elder died in 1689, a year which is, curiously enough, also given as that of the death of Smitz. Again, Graham (Vertue) says the latter died in 1707. We hope the recurrence of this gathering will bring some of those pictures by the elder Gandy of which Pilkington spoke so highly, likewise those of Gandy the younger. Many of the former are in Ireland; of the latter, still more are in Devonshire and Cornwall.

The portrait of *John Bunyan* (796) is well known, full of character: a good, manly picture, though not a little bricky in colour. See the signature, which looks rather modern, but is not necessarily so.—Robert Walker's portrait of himself (797), from Hampton Court, should attract all eyes; it is so well done, of so handsome a man.—Here are several portraits of *The Protector*, of diverse orders in merit: No. 798, attributed to Lely, which should be compared with No. 790, by Walker; and No. 799, also attributed to Walker. With better reason, we say, No. 803, the Sidney Sussex College possession, by S. Cooper, is by far the most valuable of these pictures.—*General Lambert* (800), by Walker, is a capital sketch, full of character as regards the painter and the sitter.—The portrait of the *Earl of Falconberg* (801), by Van der Helst (?), represents the man—a very honest-looking gentleman—who married Oliver's daughter, who is buried in Chiswick Church, close to the lady here numbered by her picture, 842, *The Duchess of Cleveland*. The tenant of another neighbouring grave is unaccountably not represented here; this was that great traveller—great in this way while it was worth while to be a traveller, a man who had seen the "Sophy" while he was worth looking at, probably the last of the real "old travellers,"—we mean Sir John Chardin himself, who, with the luxurious woman, exemplified the uses of the grave, wherein "the wicked cease from troubling, and the weary are at rest." Near this strange pair lies Hogarth.

The Countess of Falconberg does not appear here; but we have her sister *Mrs. Claypole's* singularly pleasant face (821), the work of some very clever miniaturist, not Walker. The features have a great deal of what is lovable about them, withal a certain shallow expression of self-will: see the likeness between this face and that of her sister Bridget, *Mrs. Irton* (785). That other sister is not here to whom *Jeremiah White* (814) is said to have made such violent love, Frances Cromwell, on whose behalf, according to the 'Personal History of Charles the Second,' her father refused

for a husband the "debauched young man," "who afterwards proposed to marry *Hortensia Mancini*, niece to Cardinal Mazarin (840), and the most beautiful young woman in the world, but met with a similar refusal." The tables were turned, however, with regard to the king and the duchess, ere Pierre Mignard so cleverly depicted the then rather mature charms of the lady as we see them here. Those who are interested in Commonwealth history, and in the Cromwell family, will not forget the charming letter by Mary of that name to Henry her brother (787 and 817) about the wedding Frances desired with Mr. Rich (relative of No. 574).

Admiral Robert Blake (816) is, doubtless, a picture by Hanneman; a very good portrait of a prompt, determined man, but strangely unlike the portraits of *Blake* (816 and 825), one of which is copied from the other. Compare the so-called *Lely of Mrs. Claypole* (824) with No. 821, the same.—Here are the Countess Delawarr's and Mr. E. F. Moore's portraits of *Milton* (819 and 820); see also 727 and 808. Let the reader make up his mind as to which is the least satisfactory likeness of one of the greatest rulers of England.—In No. 826, *Sir Thomas Vyner*, we have a portrait of that jovial Lord Mayor who, when he entertained Charles the Second in Guildhall, was so much delighted with his company that, when the monarch thought fit to go, insisted on his stopping "to take t'other bottle" (see Grammont's 'Memoirs').—No. 828, *Moll Davis*, was the lady who brought about the "cutting of Coventry's nose," that Coventry being the son of the *Lord Keeper Coventry* (599), before referred to here.—The portrait of *Nell Gwyn* (841), by Lely, looks very like Lady Byron; the subject seems to be tying up a garland of rue: a capital portrait in a very bad condition. As to the likeness, compare it with Nos. 833 and 880, the last, like the first, an excellent picture in its order.—See No. 839, the so-called *Lucy Walters*, or *Barlow*, holding a portrait of her son, the Duke of Monmouth, in her hand, as much probably to show how like he was to herself as how little he resembled his royal reputed father: see Evelyn's reference to this matter. Compare the mole on the upper lip of the portrait No. 836 with the reference there given. We do not believe this picture is correctly named.

In No. 837, *Catherine of Braganza*, by Huysman, a clever reproduction of Domenichino's manner, we have a singular picture of that "greasy-looking Portuguese woman" who, when she stood up, "looked as if she had no legs," or, as Grammont put it, "as if she was always on her knees." This most flippant of courtiers, who was, perhaps, not so bad as he painted himself, was often hard upon Queen Catherine. He said, with reference to another unlucky wife whose picture is here, Nos. 902 and 1001, *Mary Fairfax, Duchess of Buckingham*, daughter of the *Third Lord Fairfax* (706), and wife of the *Second Duke of Buckingham* (904), that she was a "little, round, crumpled woman, a short, fat woman, like Her Majesty." Of No. 834, the same Queen, it may be worth while to say that Walpole had a portrait, said to have been that which Charles saw when he decided to marry the original, the description of which, to a certain extent, agrees with the appearance of this work. That lurid beauty, that outrageously extravagant woman, whose tawdry charms Lely painted with such gusto in No. 866, was King Charles's "seventeenth mistress abroad." If that is true, as Pepys tells us, no wonder Oliver would not marry his fair and honest daughter to so "debauched" a youth. *Elizabeth Hamilton, Comtesse de Grammont*, (844) has a name familiar in her brother's memoir; her face is fairer than most of those of her class here, by Lely, an inferior work; such, in truth, is the condition of most of the so-called "Hampton Court Beauties." The picture of the tawdry *Duchess of Portsmouth* (845), by Gascar, was a very bright work of old, and is interesting now. Another portrait of this woman appears in the singularly characteristic miniature by Lely, *Louise Renée de Kerhouel, Duchess of Portsmouth*, (884) taken later in life than the last-mentioned. It shows how she fattened in her splendid sty. In this wonderful collection of all sorts, one has not far to go for an antithesis to anything; here, for example, in Nos.

948 and 996, is that terrible *Dr. Busby*, who flogged Sir Roger de Coverley's grandfather, and many other grandfathers. In No. 851, *The Duchess of Cleveland*, by Lely, we have the dishevelled harlot playing at grief. In *Sir John Granville* (986) we have the messenger to Monk from Charles the Second, an instrument of the Restoration.

Catherine of Braganza was the butt of almost all her husband's courtiers, and in dying regent of her father's kingdom she was less unfortunate than her successor and sister-in-law, poor *Mary of Modena* (1021, 1027), who stood in the cold rain on that windy night when her husband fled, while she waited for friends, her infant, the Pretender, at her breast, under the porch of Lambeth Church. The last-named picture, 1027, is a capital specimen of Kneller's manner.—The portrait of Queen Mary's husband, *James the Second*, No. 1019, by Kneller, is stated, and with every appearance of truth, to have been that for which the king was sitting when the news of the landing of William the Third was brought to him, and he said, with characteristic coolness, which had no shade of dullness in it,—for James was no dullard in any sense,—"I have promised Mr. Pepys my picture, and I will finish the sitting."—One of the most beautifully drawn and sound portraits here is that which is attributed to R. Walker, *The Duke of Albemarle (Monk)* (858). This is wrought like a piece of sculpture, shows a singularly reticent-looking man, fair and fat.—No. 860 gives us, with intense expression, the whimsical *Duchess of Newcastle*, by Lely, and exemplifies one of the many phases of his practice by its cold whiteness; like many other pictures which exhibit this defect, this appears to have been "restored" without regard to the glazing.—Here is *Mrs. Aphra Behn* (864), with the face of a satyress. *Sir George Carteret* (862) is a very fine Lely.—No. 866, *Lady Byron*, by the same, is one of what Pepys might have called his "cattle pictures."

Greenhill's *Sir Henry Lyttelton* (872) is a noteworthy portrait; so are others here by this same little-known painter. There is an immense deal of mischievous humour in the picture of *John Wilmot, Earl of Rochester*, (888) crowning his monkey with a wreath of laurel, while the beast tears a book: not a good picture.—The portrait of *Mary Fairfax, Duchess of Buckingham*, (902) is certainly by Lely.—*George Villiers, Duke of Buckingham*, (904) by Michael Wright, is a capital specimen of that very able artist's work.—Nos. 908 and 914, *The Earl of Shaftesbury*, both by Greenhill, curiously display, by comparison with the features of the subject's descendant, how a likeness goes through families, from generation to generation; both works are first-rate in their way. Of the series of Cabal pictures which are hung here, we wrote inadvertently that Shaftesbury had the black patch across his nose; we referred to *Bennet, Earl of Arlington*, (903) where it may be seen.—In No. 912 appears *Jacob Hall*, the rope-dancer, and particular friend of the Duchess of Cleveland. He has a comb in his right hand, a profusion of black locks on his shoulders, and what looks like a roll of *cire de moustache* on the table before him.—In 966 we have *The Countess of Chesterfield*, by Lely, whose green stockings caused such a commotion; she died at twenty-five years of age.

ON SOME MEDIEVAL MAPS OF AFRICA BY ARABIAN GEOGRAPHERS.

Norton House, Stockton-on-Tees, Aug. 18, 1896.

HAVING read parts of the notice in the last number of the *Quarterly Review*, of Mr. Baker's 'Albert Nyanza,' or the 'Little Luta Nziye' of Speke, and as the following passage is not correct, I trust you will allow me to add what I have previously written on some Arabian maps of Africa, executed during the Middle Ages, as they indisputably prove that the Arab merchants were early acquainted with the great equatorial lakes from which the Nile derives its principal waters, though not its sources. "We stated," says the writer (page 168, No. for July, 1866), "in a former paper on this subject (*Quarterly Review* for July, 1863), that an Arabian map, of about the year 800, had been recently brought to light from Lelewel's 'Géographie du Moyen Age,' representing the source of the Nile as being in a lake."

In correction of the statement as made in that number (227, page 278), I wrote in the autumn of 1863, as follows: "The statement respecting *Ben Musa's* Arabian map, being taken from the July number (1863) of the *Quarterly Review*, must be corrected, for I find that the date of it is A.D. 833, and not '883.' And 'the Nile is placed on it, as flowing out of a large reservoir-lake, but not 'rising in it,' on the Equator, named 'Kura-Kavar,' and the sources or feeders of that lake are represented by six rivers, which run into it from the south.—See Plate I., 'Tabula Almamuniana,' in Lelewel's atlas, 'Géographie du Moyen Age.' This is considered the first Arabic map, and to have been constructed in the time of Almamoun (or *El Ma'mun*), about A.D. 830."

Again, the reviewer continues (page 168, *Quarterly Review*, No. 239), "A still later map, by an Arabian geographer, Edrisi (A.D. 1154), has recently been published in a German work ('*Geschichte der Erdkunde*,' von Oscar Peschel, Münch, 1865), in which three great lakes are represented as connected with each other, and the Nile as issuing from the most northerly. This indicates the three great lakes, the Victoria Nyanza, the Tanganyika, and the Albert Nyanza."

This same Arabian map I described in 1863 thus: "Two other important maps are given at No. X. in Lelewel's Atlas, the larger one being entitled, 'Tabula Itineraria Edrisiana,' and the second, 'Tabula Rotunda Rogeriana,' of the date A.D. 1154. In this last we see two lakes at the Equator, from the north-western of which the river *Kanga* (or *Kanga=Congo?*) takes its origin, and flows to the west. This lake, from its position, probably indicates the little Luta Nzige. The second, or larger lake, on the Equator, may be the Nyanza; the west lake, in about 8° of south latitude is, perhaps, the Tanganyika; and the east lake, that called Baringo, which has not yet been investigated, although it is evidently placed too far south. The head rivers of the two southern lakes proceed from the 'Mons Komr,' and the 'Fons Nili'; but the range, being situated in lat. 12° S., is most likely given from Ptolemy. Lelewel calls the 'Tabula Rogeriana' the 'Mappemonde' of the geographers of Sicily. It was preserved and described by Edrisi, and was the result of researches made and related by an African Mussulman at the Court of Roger, King of Sicily, who reigned from A.D. 1130 to 1154."

In addition to the descriptions of those maps, I have also given accounts of several other mediæval maps of Equatorial Africa, as may be seen by those scientific persons who wish to know what geographers of their own country have long ago written and published. My Memoir, from which these extracts are taken, was published in the *Transactions of the Royal Society of Literature*, vol. viii. Part I, in September, 1864, and consequently the year before Peschel's work, now brought forward by the reviewer, but which new book I have not yet seen.

JOHN HOGG.

THE MOSQUE OF OMER.

August 13, 1866.

DURING a recent visit to Jerusalem I read Mr. Fergusson's two books on the ancient topography of that city and on the Mosque of Omer; and I find the following objections to Mr. Fergusson's theory that that mosque was built by Constantine.—

The door on the Kiblah or south side is not an invincible objection to the building being a mosque; besides, it is not certain that it has always existed. One of the attendants of the mosque told me that it had been opened on account of the darkness of the building. If the door always existed, it may also always have had, as at present, a wall with a *mihrab*, screening the door and the worshippers within from passers by outside. Mr. Fergusson does not seem to have noticed this, which does away with his great objection to a door on the Kiblah side.

The arches of the inner circle immediately surrounding the rock are pointed, which Mr. Fergusson admits to be contrary to his theory, p. 112, and they are made of alternate black and white marble, an essentially Arabian style of decoration. The arches of the outer circle have lately

been found to be of alternate red bricks and white stones.

The entablature which joins the columns and supports the arches of the second row of columns or screen of the Dome of the Rock is only a development and improvement of the single beam that unites the columns in the Mosque of El Aksa.

The dome, which contains in its gallery pointed windows, was restored and re-gilt in 718 A.H. according to the inscription, by Al Mansur Ibn Kalaun, one of the Memluk Turkish Sultans of Egypt (the same who was in correspondence with James the Second of Aragon about pilgrimage to the Holy Places).

The capitals of the Mosque of the Rock did not appear to me by any means identical. Mr. Fergusson seems to be wrong in calling the basket-work capitals of the Aksa, of which he has given a drawing, p. 109, Arab work, since one such is in the Church of the Holy Sepulchre, on the north side of the choir, or principal Greek chapel; and there are others in the underground chapel of St. Helena.

The plan called a "vile figuration" of Adamnanus (left out of Mr. Fergusson's second work) tells against him, since the octagon building would not have been constructed by Constantine as it now stands, if it had had doors only on the north-east and south-east, and there are still entrances on the north-east and south-east to the dome of the Holy Sepulchre, as in Adamnanus's plan.

The Mosque of the Rock, having corners, might possibly have been called square; but at any rate it certainly could hold 3,000 people: the attendants say many more.

Mr. Fergusson has lost sight of the passage of Eusebius to the effect that the propylea of Constantine's basilica touched the street of the bazaar on the eastern side (quoted by Dr. Robinson, vol. iii. page 263), which is confirmed by the remains of granite columns still near the bazaar, as mentioned by Dr. Robinson, vol. iii. page 168; this passage is inapplicable to the strip of graveyard between the Haram and the valley of Jehoshaphat.

The Turrus Antonia, according to Josephus, stood on a high rock; there is none such, except under the Turkish barrack at the north-west end of the Haram.

The rock of the mosque is only a short pistol-shot from the wall of the Haram platform, or Temple or city wall according to Mr. Fergusson, which is too near for a garden and a tomb. Mr. Fergusson calls the rock of the mosque Mount Zion; if the Holy Sepulchre had been there, it is impossible that that circumstance should not have been alluded to by the Apostles or the Fathers.

Mr. Fergusson has omitted to account for the very massive northern wall of the Haram (commonly called that of the Pool of Bethesda), which has no reason for its existence according to his theory, but which is easily explained as that of the fosse separating Antonia from Bezetha.

The short distance from Mr. Fergusson's Antonia to his Golgotha (a slant across the Haram) is inconsistent with the Gospel narrative, and the number of incidents represented in the *Stations*. The stress laid by Mejd eddin (not Mejr eddin, as this name is mis-spelt by both Dr. Robinson and Mr. Fergusson), and the other Arab historians, and the sayings of the Prophet quoted by Dr. Robinson, vol. i. p. 300, make it highly improbable that this rock, which the Arabs so esteemed, should have been hidden away underground in the Aksa, as Mr. Fergusson supposes; and the circumstance of the rock is sufficiently exceptional to account for the form of the Mosque of Omer, or of Al-Mamun, and to set aside Mr. Fergusson's conclusions as to the impossibility of its being a mosque.

A PILGRIM.

MONSIEUR JOSEPH ADDISON.

Paris, August, 1866.

Addison is not dead—not a *mauvais petit mort*—like Shakspeare, the twin-spirit of Alexandre Dumas. The *Spectator* is to be supplemented by a French volume or two. The spirit of the great man has arisen, according to *L'Événement*, in order to have the honour of addressing some "New Letters" to M. de Villemessant. "J. Addison"

is to survey the Boulevards, comment on the social anomalies, vices, and immoralities of the hour, and, in short, to amuse M. de Villemessant's subscribers. But before making his observations on French men and things, Addison treats M. de Villemessant's readers to a little autobiography. He betrays a laudable desire to make a clean breast of it. He says he died of droopy.—

"To have drunk so much whisky, strong beer, gin, usquebaugh, and dozens of Bordeaux—to have emptied so many generous pints to the eternal health of old England, and to have burst like a skin overfilled with Thames water—was not this a piteous ending! I confess that it is not without a certain posthumous shame, which my countrymen will understand, that I venture to recall the aquatic termination of an existence that was watered with so many generous liquids. But fie on these recollections! After a century and a half of sleep, I find myself alive and as well again as if I were still carousing at the Brothers' Club, with Pope, and Congreve, Samuel Johnson, and, above all, with thee, O my dear Dean of St. Patrick!"

"I am Joseph Addison, the poet, the journalist, the Whig, the boon companion; with my tender moments and my sarcastic moments. I need not say how I have returned from those shores which are usually seen only once. I will only say that I have not been spirited back by an American or French medium. I decline to be used by any of the thaumaturgists who make exhibitions in your public rooms. I have nothing to do with your Mr. Home, or Davenport, or Dellsage. I come of my own accord, sir, to pass the holiday which has been graciously given me by the director of the great theatre beyond the tomb."

It must be surely conceded that the spirit of Addison, translated to Paris, does not attack the new condition of things *de main morte*. Addison comes prepared to glance at contemporary society in Paris, and to study the manners, literature, and politics of the Third Empire. He promises the naked truth, as befits his independence. He recognizes in M. de Villemessant a journalist "to the tips of his fingers." He rapidly recounts to him his travels in Europe, and how he entered upon letters under the wings of Lords Somers and Halifax. He hopes that great personages still deign to patronize poets, and enable them to travel as pensioners. He relates how, on his return to England, he found his former friends in disgrace. He could hardly pay his score at the chocolate houses or at the Kit-Cat Club; but presently the battle of Blenheim was fought, and he made his bargain with Lord Godolphin, obtained his appointment, and presently 'The Campaign' was written. It would seem that he was purveyor of incense to the great, and kept very nice scales indeed; and never gave a peppercorn in. "I have said nothing to you about my home," says Addison to Villemessant. "It was the refuge neither of love nor of gaiety. I had enjoyed the dismal vanity of marrying a woman of rank superior to my own. Haughty, sour, rigid and sad, the Dowager Countess of Warwick always treated me less as a husband than as a serf. She never consented to look upon me as her equal. In vain did I fill England with my name. In vain was I regarded as one of the men of genius of my century. In vain did I win fortune and power. She never ceased to see anything more in me than a proud *parvenu*." But the poet took his revenge. He says, "I consoled myself by assiduously cultivating the acquaintance of the great spirits of my time. Oh, those delightful gossips, with our elbows upon the table, in clouds of smoke and amid the clatter of pots! How the Calf's Head Club, the Authors' Club, resounded with our Shakspearean laughter! What spirit, what sarcasm, what jollity there was in those haunts where the most illustrious writers of our free England did not disdain to get royally drunk! With what delight we breathed together the acrid but fresh perfumes of the humour—that wild flower of the national spirit! O the glorious times! and how sorry I am to be dead, if London have kept up our traditions!"

M. Addison adds, that his dearest remembrance is that of having been the chief contributor to the *Spectator*. He refers to his glorious companion in

"about and patriotic debauchery," Richard Steele, as the real creator of the English Press. He explains how the work was written: "Without asperity, but without weakness, we made war against the absurdities, the contradictions and the vices of our time. Did we correct the public morals? I doubt it; but we suppressed many abuses, and at any rate we solved the difficult problem of amusing honest folk. Were we free from the vices with which we reproached others? Alas! not always. More than once it was at our Bacchanalian meetings,—at the Trumpet, for instance,—while the ale flowed about us, upon us, in us,—that we wrote, our eyes heavy with the vapours of the beer, thundering invectives against drunkards and drunks. It is true, that in my time no thorough Englishman disdained the pleasures of Silenus and the excesses of Falstaff. I believe this is no longer the case. But in my time it went to this extent, that lords and ladies of the Court rivalled one another in intemperance, without arousing the indignation of anybody."

With this introduction, Addison promises a new *Spectator*, to be composed, he says, "alas! without the help of that good and spiritual Richard Steele." He declares war against the "grotesques and the *malfaisans* who at the present time abound in French society and in French literature." He has taken to himself as a secretary and help through this crusade, a well-tongued, honest, learned young man, called Bienvenu. "He has been warmly recommended to me," says Addison, "as a poor devil who, in spite of his merit, is unable to get a living." The good Addison is surprised that a young fellow who includes so many precious qualities should not be able to get a position worthy of them. He is answered in the slang of the hour, that Bienvenu wants *toupet* and has no *chien*. The innocent Joseph, not knowing that *toupet* means actually "cheek," and that *chien* is equivalent for "go," replied in his simplicity that if all Bienvenu required were a *toupee* and a dog, he would provide him with them. Then Addison and Bienvenu opened their pilgrimage by entering a public reading-room. Addison was astounded at the number and various forms of the periodicals; but on a close examination of them he found that they nearly all contained the same dishes—re-hashed. He asked Bienvenu how it was that so many papers, in so many respects alike, appeared. Bienvenu made answer and said, "How is it that there are so many bakers in Paris, where all the bread is made with the same flour?" Next, the difference between great journalism and little journalism is explained to the wondering author of the old *Spectator*. How, for instance, the *Grand Journal*, which will cover a dining-table, belongs to the Little Press. Addison spends half a day in the midst of the Paris papers; whereupon some reflections. Satire should be put aside, because now it can be expended only on generalities. In the last two centuries the writer, when condemning hypocrisy, might unmask the hypocrite. Now all kinds of precaution and reserve are necessary. Voltaire could no longer write direct at his enemies; and for himself and Steele, if they were to write now as they did in their lifetime, they would have more than enough duelling on hand. Even literary criticism has degenerated. In the good old time, the author saw in the criticism which condemned him only the free judgment of a sincere mind. But now every writer who is condemned attributes his condemnation to the jealousy, or envy, or personal animosity of his critic. Every writer who is not proclaimed a man of genius, becomes the enemy of his critic.

Again, Addison falls foul of the French publishers, who issue new books with long unblushing puff of them, written in their shops. I think most people would agree with Monsieur Addison that this custom is one persevered in to the shame both of publisher and author. The author of the *Spectator* has not quite got rid of his old habit of confounding hypocrisy by unmasking the hypocrite. He puts his finger on an instance. M. Dentu has just published a new story, by Emmanuel Gonzales, entitled '*Amours du Vert Galant*.' The publisher is not at all inclined to wait for the critics. He puffs his own merchandise. It is remarkable, he says, for its dramatic interest, as well as for its comic force. It is brilliant and full

of energy. "Now let us be precise," says Addison; "this is perfectly ridiculous." According to the publisher, it is just a *chef-d'œuvre*; neither more nor less. From this little lesson Addison turns to a deplorable incident which has just happened in the French literary world. A young soldier in the literary camp has been borne to the earth under the crushing fardel of his distresses. He died of want, and he is buried. "Surely there is a question that has not been buried in the grave of poor Malbousquet,—a question quite as important as that of discovering whether Paul Blaquière is the veritable father, or only the godfather, of '*La Femme à Barbe*.' Malbousquet died in harness. He worked under galling privations, with *Nulla dies sine lineâ* over his humble desk, till the pen fell from the spent fingers, and the wrist was nerveless and the brain was dim. He lies in a village churchyard, and he has had his five lines in the necrology of the daily papers. And is all said! Monsieur Addison remarks, "I ask for literary men neither pensions, nor sinecures, nor alms of any description; but I desire that they should learn to protect themselves. What! the compositors have known how to create societies through which they are cared for in illness, and provided for when work fails them; and what they do—they who live by our brains—we cannot do for our own fraternity! We cannot be united and strong! Ah! how sad a family are we! I turned to Bienvenu and said, 'There are still men of letters in France, then, who die of hunger?' Bienvenu shrugged his shoulders, and replied, 'You see, they are just the Irishmen of France.'"

It would seem that Joseph Addison has come to life again, at the bidding of M. de Villemessant, with all that was English in him wrung out of him. He is Monsieur Addison, possibly Monsieur Addison de Miston. Should he remain long in Paris he will be Monsieur de Miston—*tout court*; and we shall see his shadow moving along the Boulevard des Italiens about sundown, daintily nibbling the point of a toothpick! He has already cast critical eyes on the buttonholes of the literary men whom he has elbowed. He must have been astonished at the number of the ribands. He has been bold enough to publish his speculations on the value of them to men of genius; saying that the consciousness of talent is the reward of talent. But he discovers, I think, a sneaking partiality for a red rosette; and while he is pleasant and playful on the crowd of literary candidates who crave the Cross of the Legion, he has become, I suspect, already Frenchman enough to think that the upper left-hand buttonhole looks more finished with an honour blushing in it than without one. Be this as it may, however, he has picked up a fair anecdote.—

A feeble, dandified little writer of stories said the other day, "Monselet is too fond of suppers and orgies. I shall be decorated before him. His books recommend him, but his life is against him, while there is nothing against me."—"Except the contrary," replied a very dear friend. B. J.

OUR WEEKLY GOSSIP.

THE Queen has made Mr. Baker a Knight, and Capt. Grant a Companion of the Bath, in acknowledgment of their having discovered the lake-feeders, though not the river-sources, of the Nile.

It is with great satisfaction that we announce the appointment of Mr. Thomas Watts to the Keepership of the Printed Book Department of the British Museum. One of the most eminent philologists of our day, Mr. Watts has served the Museum in the various capacities of Assistant, Assistant-Keeper and Superintendent of the Reading-Room respectively, since the year 1838, and the vast range of his linguistic acquirements has enabled him during that period to furnish our national establishment not only with all those important works in the classical and more familiar modern languages which have raised it to the position of one of the most magnificent libraries in the world; but also with all the most useful, elegant and curious literature of such out-of-the-way idioms as Icelandic, Bohemian, Chinese, &c. He has thus, under Mr. Panizzi's and Mr. Jones's immediate directions, accomplished the almost incredible

task of creating within the precincts of the Museum, the best English library in England or the world, the best Russian library out of Russia, the best German out of Germany, the best Spanish out of Spain, and so on for every language, from Italian to Icelandic, from Polish to Portuguese, Russian, Hungarian, Danish, Swedish, and other rare literatures, have, through his exertions, found a home in England; and the time has already come when the denizens of far-away countries flock to Great Russell Street to find the works of their native tongues in fuller array there than in their own principal libraries. Nothing short of the most energetic and untiring efforts, coupled with ripe judgment and large experience, could, of course, produce such a result; and we may mention as an instance that Mr. Watts cannot have examined less than about 600,000 titles in the endless array of catalogues, reviews, and bibliographical works of all countries, and that he has classed and arranged about 400,000 volumes himself.

Every one will be glad to hear that Mr. Dickens intends to give another series of readings, to commence immediately after Christmas.

"Her Majesty's Opposition" is not an idle word. The Queen, in accepting the bust of the late Joseph Hume, offered by his widow, to be placed in the House of Commons, told the House, in a message addressed to it last week, that the late Member was one "who, for nearly forty years, ably, laboriously, and disinterestedly served his country in the House of Commons." During the whole of that time Mr. Hume was an opponent of every Government whenever there was money to be voted. A grant was scarcely ever asked for, which he did not endeavour to make less, and he was one of the staunchest (and successful) opposers of the annuity to Prince Albert as originally proposed by the Ministry. Hume was plentifully abused by writers like Hook; but the Queen's praise will outlive all party censure.

Mr. Swinburne's '*Poems and Ballads*' have been withdrawn from circulation. Whether this course has been taken by the author or adopted by the firm of Moxon & Co. is not a matter which concerns us. It is, at all events, the result of unequivocally expressed disgust, by the press generally. Mr. Swinburne has it in his power, by pure and noble work, to induce the public to forget the insult flung at them through his book. He, too, "may win the wise who frowned before to smile at last."

Our readers will be gratified to learn that the Paston Letters have been sold by Messrs. Sotheby, Wilkinson & Hodge to the British Museum, the proper resting-place for such literary treasures.

On the last day's sale of the pictures, drawings, &c., belonging to the late Hon. and Rev. Dr. Wellesley, a very small pen-and-ink sketch by Raphael was purchased, for the British Museum, for 600*l*. The history of some of the other lots will form a singular chapter in the annals of auctions.

Mr. G. R. Emerson forwards the following remarks on a literary coincidence:—

"8, Shortlands Villas, Bromley, Kent, Aug. 14, 1866.
"By a singular coincidence Tennyson's pathetic poem is almost identical in story with a poem by the late Miss Adelaide Anne Procter, '*Homeward Bound*,' in the volume '*Legends and Lyrics*,' published by Messrs. Bell and Daldy in 1858, five or six years before the appearance of the Laureate's poem. The remarkable similarity of the incidents have been pointed out to me by a friend. I beg to call your attention to it as a singular instance of the varied manner in which the same set of facts may be illustrated by two persons differing in mental peculiarities. Indeed, it is somewhat noteworthy that Tennyson, supposing him never to have read Miss Procter's poem, should have adopted the same story as the subject of a poem. In Miss Procter's story the narrator tells us—

I was wrecked off red Algiers,
Six-and-thirty years ago.

He was held in slavery for ten years.

How I cursed the land—my prison!
How I cursed the serpent sea!

Dreams of home and all I left there
 Floated sorrowfully by.
 A fair face, but pale with sorrow,
 With blue eyes, brimful of tears,
 And the little red mouth, quivering
 With a smile to hide its fears;
 Holding out her baby towards me,
 From the sky she looked on me:
 So it was that I last saw her,
 As the ship put out to sea....
 Then I saw, as night grew darker,
 How she taught my child to pray,
 Holding its small hands together,
 For its father, far away.

He regains his freedom, and reaches home, thinking
 of his wife and child—

I would picture my dear cottage,
 See the crackling wood-fire burn,
 And she, too, beside it seated,
 Watching, waiting, my return.

He reaches the cottage, and hears her voice within,
 "low, soft, murmuring words she said"; and,
 looking in at the door, sees what Tennyson's
 Enoch Arden saw when he returned after long
 absence. The situation, as dramatists name it, is
 precisely the same in each poem:—

She was seated by the fire,
 In her arms she held a child,
 Whispering baby words caressing,
 And then, looking up, she smiled—
 Smiled on him who stood beside her—

and who "had been an ancient comrade."
 At this point Tennyson departs from the story;
 and, as we all know, makes Enoch depart broken-
 hearted to die, without revealing his secret—an
 ending of the story worthy of his fine genius.
 Miss Procter makes the three recognize each
 other, and the narrator of the story, having heard
 that his child is dead, blesses his wife, and departs
 to roam for many years "over the great, restless
 ocean." That Tennyson's conclusion is much the
 finer none can doubt; but the similarity of the
 general outlines of the poems has struck me, and
 may interest other lovers of poetry.—I am &c.,
 "G. R. EMERSON."

There are eminent men who lack neither graceful
 clearness of style nor all-sufficient knowledge of the
 subject on which they write, but who, for want of
 a little care, become obscure and sometimes mis-
 leading. Thus, at the annual meeting, held last
 week, of the Devon Association for the advance-
 ment of Science, Literature and Art, Earl Russell
 said: "Of living historians, although Macaulay
 and Prescott have passed away, we still have
 Carlyle and Froude." Here our italics will do duty
 for comment. As an example of the want of care
 which may mislead the hearer or reader, we will
 only cite a passage from Dean Stanley's lecture on
 Westminster Abbey:—"Garrick lies—where else
 could he lie?—at the feet of Shakspeare; Charles
 Kemble took his place among the statesmen: I
 trust that I shall be considered to have exercised
 a not unwise discretion in having moved him to
 the chapel of St. Andrew, by the side of his sister,
 Mrs. Siddons." Of course, Dr. Stanley knows as
 well as any of us, that Shakspeare lies at Stratford,
 and that the body of Mrs. Siddons is buried in
 Paddington Churchyard. As the words of the
 lecture stand, however, they would seem to refer
 to the mortal remains, and not to the effigies of
 the poet and the actress, as being at Westminster.

Dr. Gray has issued a fourth edition of his *Illustrated Catalogue of Postage-Stampes*, for the use of
 collectors. This indicates the interest which con-
 tinues to be taken in stamp-collecting, which, as
 the Doctor observes, has a literature of its own.
 The "epigraph" on the back of the title-page serves
 to indicate the antiquity of posts:—"And he wrote
 in the King Ahasuerus's name, and sealed it with
 the king's ring, and sent letters by posts on horse-
 back, and riders on mules, camels, and young
 dromedaries." The quotation is from Esther. To
 Cyrus is ascribed the first establishment of couriers
 and post-houses in Persia. In England, Edward
 the Fourth has the credit of establishing them, not
 for the public good, but his own advantage. He
 placed horsemen at a distance of twenty miles, who
 carried one to the other news, for the king, of the
 progress of the war with the Scots.

They who are curious in the matter of peers of
 the realm who are also tradesmen may add to their
 list the name of Earl Vane, who, a week or two

ago, was defendant in an action brought against
 him as a dealer in iron, or ironmaster. The new
 peer, Lord Penrhyn, is a thriving owner of slate-
 quarries.

By a return recently made and published by
 order of the Metropolitan Board of Works, it
 appears that 46,878 houses in London have been
 renumbered, 2,110 names of streets, &c. abolished,
 and 824 new names approved. The confusion of
 London street-nomenclature has been thus far
 abated, and more than 1,200 repetitions of names
 have vanished for ever, we trust. These include
 Victoria, Albert, Royal, Crown, King, George,
 Mary, Park, Prospect, and other fancy titles, in a
 proportion that is gratifying to notice. These are
 the chief absurdities of the matter.

The French tribunal has annulled that part of
 the will of the late Duc de Grammont Caderousse
 by which he left the bulk of his fortune to his
 physician, Dr. Déclat. This is in accordance with
 the Code Napoléon, wherein such bequests, made
 by patients to their medical advisers, are pronounced
 illegal. Other legacies, including one of 50,000
 francs to Mlle. Schneider, the "belle Hélène" of
 the Variétés, are confirmed. The Grammonts in
 the male line are now extinct. The historical
 house has not gone out nobly. Three years ago the
 Mayor of Luxeuil horsewhipped the Marquis de
 Grammont for threatening to kick the Mayor if he
 refused to take off his hat when the Marquis passed
 him.

Father Secchi, Director of the Observatory at
 the Collegio Romano, has invented a new stellar
 spectroscope. The spectra produced are remark-
 able for the brilliancy of their tints and the clear
 definition of their bands.

Col. Shaffner has presented a Report to the
 United States Government on the relative strength
 of nitro-leum compared with gunpowder, to which,
 he states, it is superior for blasting purposes.

Considering the political and social convulsions
 that Sicily has of late experienced, it is particularly
 encouraging to know that her scientific men have
 been able to carry on their researches and publish
 the results. The Consiglio di Perfezionamento,
 which is an annex of the Royal Technical Institute
 of Palermo, have just brought out the second half
 of their 'Giornale di Scienze Naturali ed Econo-
 miche,' in a royal quarto form, with well-executed
 engravings. It contains papers on mathematical,
 botanical, geological, physical, and physiological
 subjects; among which are, one on the newly-dis-
 covered grotto of Carburanceli, containing bones,
 old flint weapons, and other relics, by Prof. Gem-
 mellaro; another, by Prof. Sequenza, on the geology
 of Mount Rometta, with especial reference to the
 origin of its potable waters. One, 'Rigelazione,'
 is a translation of Prof. Tyndall's well-known paper
 'On Regelation.' For meteorologists there is a
 review of the weather of the third and fourth quar-
 ters of the year 1865, by Prof. Cacciatore.

Mr. Wilkinson, English Consul at Saloniki
 (Thessalonica), has sent to the Rev. D. Morton, of
 Harleston Rectory, Northampton, a photograph of
 an ancient Greek inscription which remains in that
 city, on the inside of a marble arch. From the form
 of the letters there is reason to believe that it is
 nearly coeval with the time of St. Paul. The ear-
 liest copies of it, published by Dr. R. Pococke and
 by Muratori, were strangely incorrect. It is humili-
 ating, as Mr. Morton remarks, to "observe how
 human eyes and human hands have been at fault
 in this matter. The copies which were in existence
 during the last century were so palpably erroneous
 that a distinguished German scholar of our own
 day, who had not seen others, boldly ventured to
 alter the documents before him. . . . In 1823, I
 think, Boeckh published the inscription, with his
 emendations, in the first volume of his 'Corpus
 Inscriptionum.' It is No. 1,967. Unhappily, Cony-
 beare and Howson, in their 'Life and Epistles of
 St. Paul,' and, after them, Alford, in his Greek
 Testament, adopted the erroneous version. . . . Some
 years later Boeckh . . . withdrew his emendations;
 but . . . the faulty version was not altered in the
 edition of the 'Life and Epistles of St. Paul' issued
 in 1858, and it remains in the edition of the Greek
 Testament issued by Alford in 1861. . . . In the

17th chapter of the Acts of the Apostles, in the
 6th and 8th verses, mention is made of the 'rulers
 of the city,' that is, of Thessalonica. The Greek
 word used by St. Luke is, when put into English
 form, *Politarchs* (not *Poliarchs*, be it observed),
 the meaning of which is, strictly speaking, 'rulers
 of the citizens.' It is a simple and a very natural
 title for the magistrates of any Greek city; but,
 as far as is known from the classical Greek authors
 whose writings have come down to us, the magis-
 trates of no other city, except that of Thessalonica,
 were ever called *Politarchs*. . . . The inscription
 . . . informs us that whilst certain persons, whose
 names are given, were the *Politarchs*, something
 or other was done which is not recorded. Most
 probably the authorities only intended, in this
 way, to announce the time of the erection of the
 marble arch, on which the words appear."

In a communication to the American Philoso-
 phical Society at Philadelphia, Mr. J. P. Lesley
 states that from facts collected in eastern Kentucky
 he is further confirmed in opinion that the coal-
 measures are the source of the springs and wells
 of petroleum which have there been recently
 opened. The plants of the Great Conglomerate, he
 remarks, have been converted into thick oil, which
 reaches the surface by horizontal drainage over
 the water-bearing shales of the false or lower coal-
 measures. There is still another "horizon," or
 deposit of oil, but that is far down in the Devonian
 series. Mr. Lesley mentions further that he has
 seen "petroleum trickling from Upper Silurian
 limestones at Cape Gaspé, Canada East, the sur-
 faces of the limestone-bed being almost covered
 with the vestiges of cocktail fucoids, coralloids,
 bivalves and trilobites."

We notice with pleasure that the beginning,
 made quite recently by Nova Scotia, to think about
 other things than cod-fish, lumber, and speculative
 gold-mines, has been followed up,—that the Nova-
 Scotian Institute of Natural Science continues to
 exist, and apparently in a flourishing condition. The
 third part of the second volume of its *Proceedings
 and Transactions* has been published,—a respect-
 able octavo, which contains brief reports of what
 takes place at the meetings of the Institute, and
 full particulars of the papers read. Some of the
 details are highly interesting: a specimen of a very
 rare bat (*Vespertilio pruinatus*) had been found in
 the sail of a ship arrived at Halifax from the West
 Indies; Kjoekemoeddings had been discovered at
 various places along the coast, which show that
 the people by whom they were heaped up must
 have been almost identical in their mode of life
 with those of Denmark and other parts of the coast
 of Europe, for similar materials are found in both,
 with the exception that the rude pottery of Nova
 Scotia is different in colour from the European.
 Fresh discoveries of manganese had been made,
 some hundreds of tons of which have been exported
 to Liverpool, and a quantity to Boston (U. S.),
 and one of the members declared himself "firmly
 persuaded that the best manganese the world could
 produce was to be found in Nova Scotia." Attempts
 are to be made to preserve the Fauna of the coun-
 try from the utter extinction now threatened by
 wanton destruction and the absence of precautionary
 measures, especially as regards the river fisheries.
 The introduction of foreign species is to be encour-
 aged, particularly of "the feathered tribe, which
 would enliven our forests and farm-yards with
 their presence and melody." The subjects of the
 papers printed in the present part are, the 'Mam-
 mals of Nova Scotia,' 'Provincial Acclimatization,'
 'Occurrence of Heather in Cape Breton,' 'Land-
 Birds of Nova Scotia,' 'Additions to the Game of
 Nova Scotia,' 'Production of Lakes by Ice Action,'
 'On Brine Springs,' 'Antiquity of Man,' 'On Me-
 teorology,' 'The Gaspereaux (a native fish),' and
 the 'Reptilia of Nova Scotia.' A very commend-
 able bill of fare.

Mr. and Mrs. GERMAN REED, with Mr. JOHN PARRY, in
 A YACHTING CRUISE, by J. C. Burnard, Esq. Edited by
 Messrs. T. and W. Grieve; with THE WEDDING BREAKFAST
 at Mrs. ROSELEAF'S, by Mr. John Parry. Every Evening (except
 Saturday), at Eight; Thursday and Saturday Mornings, at Three.
 —Royal Gallery of Illustration, 14, Regent Street.—Admission,
 1s., 2s., 3s. and 5s. LAST WEEK, ending August 26.

MR. MORBY'S COLLECTION OF MODERN HIGH-CLASS PICTURES IS ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Hobman Hunt—J. Phillip, R.A.—T. Faed, R.A.—J. Lewis, R.A.—Eggs, R.A.—Frith, R.A.—Bosch—Goodall, R.A.—Cooke, R.A.—Crawford, R.A.—Pickersill, R.A.—Calderon, A.R.A.—Sant A.R.A.—Le Jeune, A.R.A.—Andell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—P. Nasmyth—Linnell, sen.—Dobson, A.R.A.—Cooper, A.R.A.—Gale—Marks—F. Hardy—John Faed—Frère—Ruilperes—Brillouin—Lidderdale—Geo. Smith—Duverger, A.D.—Admission on presentation of address card.

ROYAL POLYTECHNIC.—The Prussian Needle Gun and other breech-loading rifles in Professor Pepper's Lecture, at Two, Saturdays at One—Henry Drayton's Musical Entertainments—The Kaleidoscope—The Cherubs floating in the Air—The Modern Delphic Oracle—and Shakespeare and his Creations, with Recitals by F. Damer Cape, Esq.—Dugwar's Indian Feats—Lectures—and numerous other Entertainments.—Admission to the whole, 1s. Open from 12 till 5, and 7 till 10.

SCIENCE

British Bees: an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Islands. By W. E. Shuckard. (Reeve.)

THERE are few tasks more difficult than that of writing an introductory work, on any science, which shall be at once scientifically correct and popularly interesting; and, although the natural history sciences offer the most obvious facilities for such elementary instruction, how few, comparatively, are the successful attempts which have been made to effect this object even in this branch of knowledge, the most fascinating to young minds, and that which offers the greatest abundance of interesting illustration. If, too, we select that division which is, perhaps, more generally followed than any other, and which most completely fulfils the necessary requirements of amusement, accessibility and aptness for scientific definition, Entomology, how often does it happen that writers who profess to teach its elementary principles err either, on the one hand, by dwelling too much on dry technicalities, or, on the other, by filling their books with mere anecdotes or biographies, often borrowed or pirated, without much examination as to their correctness, and almost to the exclusion of the scientific basis on which all such attempts ought to be founded.

The work now before us is one of a proposed "series of natural history for beginners," undertaken by a publishing house long known for the numerous high-class works which they have issued, in almost every department of natural history. We have already noticed favourably one of the series, Mr. Rye's work on British Beetles. There is an obvious advantage in illustrating introductory works on natural history issued in this country, by examples taken from the native Fauna; and it fortunately happens that there are comparatively few classes of animals which cannot be sufficiently illustrated for preliminary study, by species indigenous to our own islands. The veteran entomologist, whose earliest work dates as far back as thirty years, and who has done so much, and done it so well, towards promoting a knowledge of his favourite subject, has here produced a book which combines in a remarkable degree all the requisites of a popular elementary work which we have above insisted on. Having selected the most interesting family of the whole class of insects, as presenting, in the habits of its various members, the greatest variety, the most striking examples of a high order of instinct, and as remarkable and irrefragable proofs of a divine intelligence in the correlation of structure with function as are to be found in the whole range of the animal world, he has brought to the treatment of the subject, in addition to a thorough knowledge of its scientific phase, an amount of historical information and literary skill, which render it as pleasant and instructive to the general reader as it is useful as an introductory scientific treatise. The historical account of the common

hive-bee, *Apis mellifica*, is very interesting, and we give a few passages from this portion of the work in proof of the correctness of our favourable opinion:—

"That bees were cultivated by man in the earliest conditions of his existence, possibly whilst his yet limited family was occupying the primitive cradle of the race at Hindoo Koosh, or on the fertile slopes of the Himalayas, or upon the more distant table-land or plateau of Thibet, or in the delicious vales of Cashmere, or wherever it might have been, somewhere widely away to the east of the Caspian sea,—is a very probable supposition. Accident, furthered by curiosity, would have early led to the discovery of the stores of honey which the assiduity of bees had hoarded; its agreeable savour would have induced further search, which would have . . . led in due course to the fixing them in his immediate vicinity. . . Claiming, then, this very high antiquity for man's nutritive 'bee,' which was of far earlier utility to him than the silkworm, whose labours demanded a very advanced condition of skill and civilization to be made available; it is perfectly consistent, and indeed needful, to claim the simultaneous existence of all the bee's allies. The earliest Shemitic and Aryan records, the Book of Job, the Vedas, Egyptian sculptures and papyri, as well as the poems of Homer, confirm the early cultivation of bees by man for domestic uses; and their early representation in Egyptian hieroglyphics, wherein the bee occurs as the symbol of royalty, clearly shows that their economy, with a monarch at its head, was known; a hive, too, being figured, as Sir Gardner Wilkinson tells us, upon a very ancient tomb at Thebes, is early evidence of its domestication there, and how early, even historically, it was brought under the special dominion of mankind."

That our hive-bee, or some of its nearest relations, has been utilized by man from the remotest historical period, is thus sufficiently shown; and this domestication led to a certain amount of knowledge of their habits; but it is not generally known that the very means by which in modern times we have obtained as perfect a knowledge of their economy as we possess of almost any object which has been subjected to our investigation—the transparent hive—was employed in a rude form in the time of the Romans, and is particularly mentioned by Pliny. The translucent medium was, doubtless, either talc or mica, called by Pliny *lapis specularis*. The passage occurs in the twelfth book of the 'Historia Naturalis,' cap. xiv, and is as follows: "Alvearia optima è cortice, secunda facula, tertia vimine: multi ea et speculari lapide fecere, ut operantes intus spectarent." It is remarkable that no writer on bees whom we have met with, from old Fitzherbert or Barnaby Googe, down to Mr. Shuckard, has ever noticed this early allusion to "observatory hives."

We would willingly offer further extracts in proof of the justice of our approval of this excellent little work; but we have, perhaps, said enough to recommend it to all our readers who wish to be introduced in a most agreeable manner to a very interesting study. We may particularly refer to the chapter on the geographical distribution of the different genera and species of the family, to the accounts of the various bee-parasites, and of the economy of the leaf-cutting, the mason-bees, the upholsterer-bees, and others, which the general reader will find sufficiently interesting, we hope, to follow up the study into its scientific arcana. The illustrations are by Mr. Robinson, and are perfect. They consist of coloured figures of all the principal forms. There are also many woodcuts of the anatomy of those parts on which the generic distinctions depend. On the whole, we have rarely seen an introductory book on any science so entirely suited to its object as this.

FINE ARTS

Architecture of Ahmedabad. Photographed by Col. Briggs. Text by T. C. Hope and J. Fergusson. (Murray.)

THIS is one of those volumes on Indian architecture, the approaching publication of which was stated in the *Athenæum* many months ago. It is a magnificent book, superbly and profusely illustrated with photographs, woodcuts and maps. Of the first there are 120, of the second 21. The cost of publishing so large a work would have been necessarily so heavy that, even if sold at prime cost, the price must have put it beyond the reach of most persons; "certain native gentlemen, therefore, volunteered, for the honour of their country and the greater diffusion of an acquaintance with it, each to take a volume" of a series intended to illustrate the architectural antiquities of Western India. Mr. Premchand Raichund, a Jain and native of Goozerat, has, with almost princely magnificence, taken under his patronage two volumes, of which that before us is one. A third volume, treating of architecture at Bejapoor, an old Mohammedan capital in the Deccan, is under the patronage of Mr. Kursondas Madhowdas.

The student of architecture in general will accept with ample thanks the munificent act of Mr. Premchand Raichund; the student of Indian antiquities will not be less grateful for the opportunity which is thus afforded him to become acquainted with one of the least-known yet most beautiful phases of design. Goozerat occupies, on the south of the Gulf of Kutch, that broad peninsula which may be styled square also, and the land which faces it on the east side of the Gulf of Cambay, rather further south than the river Taptee,—a stream which is famous as having on its southern side those vast and numerous rock-cut temples, the caves of Ajunta, an unparalleled series of caverns that have been wrought in the unstratified trap-rock of which the country is formed, into the faultless solidity of which the ancient architects hewed without hesitation or fear of flaws. Two years since we reviewed a work comprising photographs of these marvellous caverns, with a text by Mr. J. Fergusson. That now before us is a much larger and more valuable work, not less astonishing, however, in its riches, and infinitely more worthy of study on account of the beauty of the architecture it illustrates. In what way the subject has historical claims, let Mr. Hope speak. Goozerat is about equal to Great Britain in extent. The south-western peninsula, which includes Somnath, famous for its gates,

"is, for the most part, gracefully undulating, with a fringe of hills along the coast, and abounds in good water and pasturage. Here and there lofty peaks tower suddenly out of the plain as if in rivalry of Aboo and Champaner, the great bastions of the north-eastern range,—all alike remarkable in that religion has for ages hovered around their summits, while dynasties arose and passed away at their feet,—Châmârde, beside which a capital of Goozerat was overwhelmed in sudden and mysterious ruin; Shore, whose battered towers still guard the City of the Lion; Shutroonje, sacred from all time, restored after barbarian ravages whilst our Saxon forefathers were landing on the British coast, and covered with many hundred well-served fanes; Geernâr, the six-peaked mount of Jain and Hindoo faith and protector of the Lunar race; Champaner, whose red-eyed goddess dealt ruin upon those who loved her well; Aboo, most favoured by the nymphs of lake and grove, out of whose fire-fountain at the saintly Vashishta's prayer arose the great progenitors of the Rajpoot race and went forth to subdue the world to purity and faith and love."

Here was the greater portion of the India of the antique world. Here are Surat and Cambay, places of old English commerce, whence, as every old traveller told us, came much of the product of India generally, besides that of Goozerat itself. There are three races inherent here—the Bheels, or aborigines, and Koolies, Scythian Káthi, and Rajpoot, the last the ruling class. Race after race occupied the territory,—Yádoos, Bactrians, with Greek names, remnants of old power, Menander and Demetrius, dating from 200 years before Christ, and dominant nearly 300 years. Then came Parthians, who worshipped the sun. Guprás reigned a short time, after whom the native line cropped up again, and lasted about 600 years. Of their magnificence Chinese travellers and ruined cities attest the greatness. The Kings were Brahmins, afterwards converted to the belief of the Jains, who were analogous to the Buddhists. These maintained their ground in Goozerat, if nowhere else in India, against the supporters of the religion of the Vedas, and, with the inhabitants of Mysore, still flourish and hold much of the wealth of India—much of its intelligence. These were great temple-builders. Another change brought ruin again: long struggles reinstated the old blood, and led to the foundation of a new capital, Unhilwára, that endured for 600 years—a splendid city. A change of dynasty in A.D. 942 brought a Rajpoot, Mool Raj, to rule, another temple-builder, and extended the nation's boundaries in every direction. The first quarter of the eleventh century brought the Mohammedans to ravage the land of Goozerat, under the rule of that redoubtable, indomitable Mahmood of Ghuznee, a terrible iconoclast, who, when the priests of Sonneshwur offered a monstrous sum as ransom for their statues, replied that he was there to break idols, not to sell them. He defeated the king, returned to Ghuznee, and for more than a century and a half the faith of Goozerat was undisturbed. One of the Jain kings undertook a siege, that lasted twelve years, of the capital of Malwa. In the fourteenth century, the Mohammedan conquest was completed; this was effected by a converted Rajpoot, Moozuffur Khan, whose grandson, Ahmed Shah, founded Ahmedabad about the middle of the fifteenth century. Three hundred years later brought the Mah-rattas, who, in 1755, supplanted the Mohammedans in Goozerat. They were rather plunderers *en permanence* than rulers, and properly leviators of taxes. They damaged the architectural monuments, and did endless ill to Ahmedabad, the beautiful city, desolating its suburbs, and ruining whole quarters within the walls. From a small beginning in 1662 the British rule increased until, in 1819, Goozerat became theirs in trust and in paramount power. Now peace reigns there; but,

“on the other hand, whoever visits Goozerat may behold the subterranean temple of the persecuted Hindoo, and the tall minaret of the Moslem in his day of power and intolerance, and may compare the state of affairs which these recall with things that are. The falling mosque strews the earth with its ruins, while beside it, emerging from their dark hiding-places, the images of Shiva and Párusnáth are installed in newly-erected temples, and the descendants of the swaggering Patháns and Moguls inlay the marble floors of the Hindoo shrines, or, for a pitiful hire, wave the torch and beat the drum in those idolatrous processions which move along to re-establish in state the mute gods which their forefathers fancied they had destroyed.”

This is, according to the author, the “moral” of our rule. Whether or not we are better as tax-collectors than the Moslems is not hard to say; we care less about idolatry it would appear. Commercially speaking, Goozerat flourishes

in our hands. Thus far the history of the district.

As to the architecture, the reader will look at it with astonishment. The pointed arch, but slightly inclined to the ogee form, retaining therefore nearly all its grace,—the lofty minaret, the semi-classical cornice, the bands of sculptured ornaments, rich as in Norman work of western lands, the brackets, the rosettes in the spandrels, the moulded voussoirs, the pinnacles and the battlemented lines of many walls, recall at once the characteristics of Gothic design, and unite in some examples to decorate mosques that were half fortresses, palaces that seem to have been half tombs. Hindoo pillars recall Assyrian works, and are essentially classic in their arrangement and ornaments; trabeal forms prevail. Tall, moulded columns support architraves, and fill wider spaces than would otherwise be practicable by widely spreading brackets, which, being four fold, form capitals to masses of rich moulding.

Apart from its details, the porch from Hybut Khan's Mosque, at Ahmedabad, would not shame an Ionian builder. Seyd Alum's Mosque is beautiful in every way; deep porches, inclosing pillars, that catch bright light at their feet, while all above is gloom, are recessed there. Most gracefully proportioned is the Jumma Mosque,—a triple gateway with inner arches, a cloister-like arcade in front piercing great reposing spaces of broad white wall, battlemented, corniced and, above all, carved where carving is most apt. Within, slender pillars, banded, capitalised, enriched with fret-work balconies upon very elegant entablature, finely designed bases, all reeded and moulded in diverse ways; none inelegant. This work contains “three hundred and thirty pillars arranged in magnificent aisles, and supporting at proper distances domes of converging stones, the interiors and pendants of which are adorned with the most delicate fret-work,” the points for prayer (Kiblas) are inlaid with coloured marbles, disposed in rich harmonies of form and colour. This is one of the vastest of the Mohammedan buildings in India, dates from about 1433, is 382 feet by 238, and 40 feet high. Niches, or, as we should describe them, canopied spaces richly carved, comprise foliage of marvellously fine carving and varied design, and stand upon a band of annulets diversely filled with ornaments.

The Queen's Mosque in Mirzapoor is more elaborately decorated, but hardly so fine in the photographs that illustrate it as that last-mentioned building. Nothing has surpassed the delicacy, the astounding subtlety of carving which, as in the form of a conventionalized tree, fills a window of the Mosque of Seedee Syed. The founder, a slave of Ahmed Shah, who built within the royal precincts a mosque which, says Mr. Fergusson, has been ravaged like our own Chapter House at Westminster, but retains two windows, or rather lunettes, filled with tracery which, for delicacy of stone-working, is incomparable. They are ten feet wide, by seven feet high; the whole opening filled with perforated stone, in boughs, twigs, exquisitely delicate leaflets and leaves, springing from a central trunk that ends in a palm-like summit. The windows differ in detail, but not in merit or in character; one is rather finer than the other in its elaboration, and comprises seven trees, with foliage that is somewhat more naturalistic in treatment than that of its neighbours, but rather less bold. The boughs form scroll-like involutions, variously disposed, but lovely in design, and perfect in execution, as fine and as well combined in their way as the most elaborate and delicate piece of Chinese ivory carving on a fan or globe.

The tomb of Ahmed Shah is really a monument: a roof supported by coupled pillars that are very classical in their forms, having the spaces between the grouped columns filled with pierced work in panels; of severer character than that of Seedee Syed. The tombs of the queens of Ahmed Shah form a singularly picturesque group; within a sort of cloister are charming altar-tombs, the work of the admirable Moslem architects, those Gothic workers of Asia. Beautiful is the pavilion of stone of Sirkhej, most elegant its proportions, and varied in enrichment. The Harem of the Palace at this place shows the ruins of a superb double range of columns rising from a lordly flight of steps, and placed one above the other, which must have been most effective, if less noble than some other examples that are illustrated here; still there are exquisite parts here. Superb the architecture that surmounted the exit for waste water from the palace-tank. This tank, which was more than a mile round, is entirely surrounded by many tiers of cut stone steps, with six sloping approaches, flanked by cupolas. The supply-slucice—a great water-gate, with three huge circular openings, flanked by dwarf towers—is not only exquisitely carved, but admirably designed.

We should not do justice to the variety and riches of this splendid volume, unless we took a space as large as its own pages. Suffice it that we trust the patriotic effort of the donor will serve to attract attention, which must bring honour and admiration to the surpassing art of the wonderful people whose works are before us. Mr. Hope's essay, which introduces the illustrations, is readable, succinct, and sufficient for the general reader. Mr. Fergusson knows more about the subject he has chosen for his theme here than any one else in this country. His essay will remove many lingering absurdities from the British mind about India and Indian Art.

FINE-ART GOSSIP.

THE new home for the Royal Academy is definitively settled. Burlington House will be the nucleus of the new building; the vestibule, in fact, to the picture-gallery to be erected on a portion of the gardens behind the mansion. In this vestibule will be the offices, students' room, library, and permanent galleries of Art, always open to the public. The Academy will enjoy twice the superficial space they had in Trafalgar Square, and it is only to be hoped that the 40,000*l.* or so they may have to spend in constructions may not be thrown away on incompetent builders. Other portions of the ground, including the wings of the building, will be occupied by the University of London, and by scientific Societies.

The August number of Mr. Walford's ‘Photographic Portraits of Men of Eminence’ (A. W. Bennett) contains the *cartes-de-visite* of Messrs. W. Hepworth Dixon, A. de Candolle, and W. H. Ainsworth, with memoirs of those gentlemen. Of the resemblance borne by the portrait of the first this is not the place to speak. M. de Candolle is, at any rate, fairly represented by the *carte-de-visite* before us. The likeness of Mr. W. H. Ainsworth is highly characteristic; the memoir appended to it does not, however, contain a complete list of the author's works.

A very spirited photograph, from as spirited a painting by Capt. Anderson, of the Great Eastern paying out the Atlantic Cable, has been published by Messrs. Demezy & Hemery, the photographers. The Great Eastern walks the waves like a giant monarch, and the triad of attendant vessels are like subject liege-folk, ready to fulfil the monarch's behests.

The National Gallery has just acquired a superb Rembrandt, ‘Christ Blessing Little Children,’ a work of considerable size, about five and a half

feet upright. The price was 7,000*l*. The picture is not yet hung.

The grave of Lord Palmerston in Westminster Abbey has recently been marked by placing over it a large slab of reddish-grey granite, the surface of which is highly polished and incised with a floriated cross, inclosed by a border of double lines; between the last is an inscription in Gothic characters, giving the title and name of the deceased, and the date of his death: this writing fills one side only of the slab. The grave is exactly in front of the monument of the three sea-captains, Lord Robert Manners, W. Bayne, and W. Blair, by Nolckens, erected in 1793. This stands under the second arch from the north end of the western aisle, in the north transept. In Henry the Seventh's Chapel, south aisle, the pavement has, under the direction of Mr. Poole, the Abbey-mason, been repaired, and inscriptions placed to indicate the interments of King William the Third, Queen Mary the Second, Charles the Second, Anne, and her consort George of Denmark. The grave-slab of Lord Clyde has been placed on the south side of the nave of the Abbey. It is of polished granite, with an incised inscription of the simplest character, not a work of Art.

The stone facing to the west side of the Speaker's Tower, Westminster, is now complete; thus that portion of the Parliament House may be described as finished. The panelling of the upper portion of the tower has been by this process carried to the ground, in place of the blind brick wall that was originally left, in order to the junction of that side of the tower with the once-contemplated wing to face Westminster Hall. The open space looks rather bare. It is a pity that Mr. E. M. Barry's proposed arcade for the reception of statuary, and its substructure, has not been adopted. The difference of level between the surfaces of Palace Yard and Bridge Street would thus be made advantageous to the architectural effect of the locality, instead of remaining painfully discordant, as is now the case. Something may be done when the railway-station is built at the foot of the bridge.

In one of the upper galleries of the South Kensington Museum may be seen a complete collection of works by the late Mr. Godfrey Sykes, a draughtsman and designer, well known in connexion with the Department of Science and Art, and at the Sheffield School of Art: the first work of this gentleman, which was the engraving of a manufacturer's show-card, early designs for teapots and table plate, sketches in oil-colours of the interiors of factories at Sheffield, some of which display considerable ability in a course of art not proper to the painter's education, and some sketches from Nature in the fields, which are much less fortunate. Besides these is the design for a pair of bronze doors, works of architectural detail, designs for mosaic and the like, all of which deserve to be studied with respect for the very able designer and executant.

As an example of good architectural design, applied to the construction of offices in the metropolis, we commend to students the most satisfactory building lately erected opposite the Cannon Street railway station. This is the work of Mr. F. Jameson, and is noteworthy, not only for the agreeable disposition of its masses, but for the well-designed arrangement of its decorations, which are placed where they are most apt to their purpose, and, especially, for the style of the capitals, which is developed from the Norman; richly varied, and well suited to the exigencies of London. The front is of Portland stone, with red and yellow Mansfield and Forest of Dean stones—the latter in the arches. In the third floor are columns of Belgian marble; those of the second floor are green and red marble from Galway; on the ground floor granite is employed in the like form.

The opening to the public of the covered passage between the Palazzo Vecchio and the Pitti Palace in Florence has been carried into effect. The passage is now filled with a variety of Art-treasures, comprising paintings, tapestries, and a most important collection of drawings by the old masters, belonging to the Uffizi, but which, from want of space, have never before been exhibited.

MUSIC AND THE DRAMA

Transactions of the Tonic Sol-Fa School. Fifth Session, 1865-6. (The Tonic Sol-Fa Agency.)

A more comical shilling's worth than this is not in our musical experience. The above coin at any given Casino enables the payer thereof to hear "The great Vance," or "The Cure," or some rather tiresome version of Herr Offenbach's newest Grecian, or Roman, or Romantic absurdity; but it will be as well invested by any musician who loves nonsense in the 'Transactions of the Tonic Sol-Fa School.'

There has never been any want of empiricism in the teaching of Music. But since the century came in the same has become rampant. To give two instances: Logier with his "Cheiroplast" (adopted by Kalkbrenner), so hardly hit by Lady Morgan in her Crawley dinner ("Florence MacCarthy"),—Colonel Hawker, the intrepid duck-shooter, with his "Hand Moulds," conceived they had smoothed the way to "a short and easy" mastery over the keys of the piano-forte. "Where is either implement now?" The Studies of Cramer and Moscheles endure, whereas the machines for subjugating Nature have passed into the limbo of obsolete tortures. No one sits in stocks (it is to be hoped) at the time present with a view of his toes being turned out in the canonical positions of dancing.

Those, however, who overlook the "Tonic Sol-Fa School" have faith in their own Galimatias, and expect the staff and staves of musicians to study a new nomenclature, from which they will have to proceed to the old one. Here, to exemplify, is a scrap from the cover of this comical book:—

1. Major Chords.

| | | | | |
|----|-----|-----|-----|---|
| 1. | Da. | Fa. | Sa. | $\left\{ \begin{array}{l} 8 \\ 5 \text{ or } 5 \text{ or } 3 \end{array} \right.$ |
| 2. | Dó. | Fb. | Só. | $\left\{ \begin{array}{l} 6 \\ 3 \text{ or } 6 \end{array} \right.$ |
| 3. | Dc. | Fc. | Sc. | $\left\{ \begin{array}{l} 6 \\ 4 \text{ or } 4 \end{array} \right.$ |

The alphabet of music was arranged and has been completed many a year ago, and is not now to be revolutionized by enthusiasts, who recall by their airs and grimaces the transactions of the folk who attempted to establish the *Phonetic Nuz*, and who threw away money, time, talent (a grain of genius, too, perhaps), on an attempt to show that two spelling-alphabets are easier to learn than one. But not merely is the musical notation dislocated; we have to learn a new polyglott jargon. Such descriptions as Tonic Sol-faists, "Postal classes," "Mr. Longbottom's Choral-voice-training class," require a glossary for those who have not the "shibboleth." But the writers of these Transactions are, musically and orthographically, a peculiar people. Says Mr. Proudman, in his paper on 'The Common Marks of Expression,' "There is something deeper and higher which vocalists and orators must possess to make themselves felt as well as admired. While cultivating this soul-thrilling power," &c. The scholars are desired to take care "not to accent loudly the second pulse in the measure, as, for instance, the 'Lah' on the word good, Ex. 31, page 28, Standard Course." Then Mr. Proudman descants "on organ tones, or tones all of one thickness," on "staccatoed tones" on "laughing tones"; and thus closes his evidence:—

"If in drawing attention to these common things in musical expression, our execution becomes more correct and scholarly, we shall be the better fitted to illumine our performances with thoughts that

burn, and with flashes of feeling, fire, and fun, which shall stamp us as worthy students of a noble art."

Mr. Gardner's paper 'On the Relation of the Tonic Sol-fa Method to the Old Notation' is not less clear and comical than the above; and mark the deduction from all his entangled paragraphs:—

"In the discussion which followed, Miss Kenway said, that as a teacher she could not get on for one day without the old notation. For instrumental music it was at present indispensable. Mr. Dobson instanced a case in which by teaching the old notation he gradually succeeded in making his pupils see the superior advantages of the Tonic Sol-fa Notation. He thought we might often help Sol-fa by teaching the old notation."

Even Mr. Longbottom, who figures substantially in these 'Transactions,' declared that "in Scotland, he could teach in no normal school unless he taught the old notation." Mr. Griffiths, on the other hand, said that "in Lancashire, the mill-hands left the singing-classes so soon as the old notation was introduced; the music was too costly and troublesome." Mr. Dobson is weighty on the subject of instruction, and really holds that teachers who profess to teach ought to understand teaching. Pupils, which is more, are admonished that learners ought to learn. "Mr. Root, in the preface to his admirable 'Musical Curriculum,' says: 'May I be pardoned for hinting at the importance of learning music rather for the benefit and pleasure it may be to others than to feed and gratify vanity and self-love, since right views and corresponding motives will go far towards keeping the pupil in the right course, and practising in the right way.'" This is the very greenery of grass! But, later, Mr. Dobson throws some spirit and animosity into the relations of teacher and pupil, by declaring that "no teacher has any right to give his pupils that class of music which they cannot thoroughly appreciate and enjoy!" We had innocently fancied that the earliest steps in the art, such as scale-practice for voice and fingers, however salutary, were not peculiarly enjoyable. Then Mr. Dobson recalls with pride an un-instructed minister in Melbourne, as under: "Although he was no musician practically, yet he stood up for Sol-fa wherever opportunity offered, and has been of good service to the cause in the Antipodes." Into the overcoming analysis of harmony, tendered by Mr. J. K. Starling, A.C. (which means Advanced Certificate), we will not presume to venture, having no clear idea of what is meant by "part-pulse dissonances," "horizontal forestroke," "waving tones," "the ray in the tenor," and other definitions. Mr. Proudman turns up a second time, with receipts showing how to make "a successful programme." He thinks (to give an example of his taste in arrangement) that "'Home, sweet home,' which appeals to sentiments at once pleasurable and sad, should be succeeded by a piece like the 'Moonlight Song of the Fairies,' rather than by the 'Tickling Trio.' The interposing 'Song of the Fairies' would prepare for laughter without pain, and prevent the hurrying away of emotions and sentiments which refresh and exalt the mind." We plead guilty to having heard some music; and therefore respectfully inquire, What is the 'Tickling Trio'? Neither are we acquainted with 'The Showman's Courtship,' by Artemus Ward. The Sol-faists poke about apparently in strange nooks and corners. The Rev. Mr. Curwen, who is the director of this Association, next testifies about stringed instruments. We submit the following specimen of his evidence to "counsel learned in the law." The curious experiments in acoustics of Prof. Helmholtz have set his wits "a-gadding." At least, every one

would be glad to know what is meant by the passage we cite:—

"To deprive a tone of its harmonic octave would be a great impoverishment, but what if, by similar means (by hitting in the right place), you could deprive it of the sharp dissonant 'wiry' harmonics, *ta' d' r' m'*, which lie so close together by the third octave! Then surely you would have enough of fullness and all the richness without the hardness. That 'right place' for hitting on the modes of the dissonant harmonics is, according to the Professor's principles, the very same which the practical men have found out by accident."

Next testifies Mr. Bourke on 'Figured Basses,'—and so darkly mysterious is his evidence that we will not here attempt to get behind the "seven veils." To this succeed Mr. Longbottom's paper 'On the Use of Writing in Elementary Classes,' and "the discussion, by request of several influential teachers, on the question of Mr. Curwen's claims as regards his copyright in the tonic sol-fa notation." Where were the representatives of M. Émile Chévé, of Paris, who was to be heard of some twenty-five years ago, and who entered the lists of teaching class-singing by logarithmic notation, against Wilhem, who, on his side, had only adopted and adapted the method of Nægeli, of Zurich—even as Mr. Hullah adapted and adopted Wilhem's method for England? Mr. Kennedy's paper, 'On the Extension of Instrumental Music among Tonic Sol-Fa-ists,' is in the right key of a collection such as this. Mr. Proudman turns up, for a third time, as an exponent of 'Music and Morality,' and is fierce and sanctimonious, and, if sincere, very absurd. Mr. Evans speaks to "the training of boys' voices." Seeing that boys' voices change inevitably, it might be suggested, that whereas the musical training of boys could be made too complete, their vocal exercises might wait till such time as the settled organ for song presented itself. One would be glad to have the name of a single "marvellous boy" who has shot up into a great singer—Braham being the exception that proves the rule. Mr. Thomas Ryder (A.C.) is dismally stupid in his communication on the subject of Psalmody, and apparently disapproves of organs; on both subjects rebuked by Mr. Curwen. Next comes the rebuker's essay 'On the Stops of the Harmonium,' that cheap and shabby substitute for the glorious old organ. Stops more, or stops less, the "Harmonium" is only, at best, an economical makeshift for the great instrument, having generic peculiarities of tone which become to some ears intolerable. Mrs. A. T. Stapleton, another A.C., prefaces a long and amusing article 'On Voice-Training by the Italian System,' by declaring that "writing a paper is a task for which she is totally unfitted, having had a private education!" We shall merely give one or two valuable paragraphs:—

"Miss Glover—when I went on my visit of inquiry to Norwich, as to the comparative merits of the two systems (which I had Mr. Curwen's full approbation for doing)—urged me to use a Sol-fa Harmonicon in my classes, in order to cultivate purity of intonation, and softness of delivery of tone. She used one herself, and drilled her pupils to sing with it two years on twelve short canons. Thus she formed *their* voices, and very musical and soft they certainly became. In accordance with her advice, I purchased one, before I left Norwich, of Mr. R. Warne, who manufactured Miss Glover's, and commenced using it as soon as I returned home. But both my scholars and myself soon tired of it; for besides the annoyance of being treated as a dangerous fellow-traveller in every omnibus that I entered, with my suspicious brown-papered-baby-coffin shaped parcel, the children lost all interest in it, and as I could not force them to submit to such *irkome* drill,—like Miss Glover, who was almost the sole support of many of her pupils' education and future hopes in life,—I should soon

have lost them from the class. The glasses also occasionally got broke, and we had to wait till the maker could find time and opportunity to send us new ones from Norwich, so that I was obliged to give up voice-training by Sol-fa *Harmonicon*."

The "Italian system" includes, according to Mrs. Stapleton, devices as suspicious as "the brown-papered-baby-coffin." Some professors make their pupils practise with half-a-crown in their mouths. Mrs. Stapleton "thinks a florin, or, if that is too large, a shilling, might be advantageously held between the teeth when a looking-glass cannot be used." Practising with a looking-glass in the mouth must be a "parlous" sport. We believe wedges have been used to give the mouth a good *set*; and have even heard that the broad, ample smile of Pasta, which no one can have forgotten that ever saw her receive the homage of her subjects, owed some of its charm to mechanical appliances.

Enough of this shilling's worth of empirical conceit. We may be thought to have devoted more time and attention to the matter than its folly merits; but we have too much respect for the noble art of Music, to see it debased by the intrusion of quackery, without now and then offering our "screed of doctrine."

MUSICAL EDUCATION.

IN lieu of commenting in detail on the evidence given before the Musical Education Committee of the Society of Arts, we present the Minute passed by that body on the 1st inst., which has been forwarded to us.—

"1. It appears from the evidence that the Royal Academies of Music of Paris, Brussels, and Naples furnish instances of highly-successful institutions, on an extensive scale, and present especially useful suggestions for the re-organization of the Royal Academy of Music. At Paris above 600 out-door students, selected from all parts of France, are educated; and at Naples between 200 and 300 students are trained. In both cases the education is gratuitous to the students, the expenses being paid by the state. At Brussels there are above 500 students, whose expenses are defrayed partly by the state and partly by the municipalities.

"2. The Committee are of opinion that a National Academy for the United Kingdom, its colonies and dependencies, should provide for the instruction of a certain number of students supported by public funds, and a certain other number paying adequate fees. They consider that at present about 200 students might be fixed as a proper number to receive gratuitous training; and that of this number 100, selected by public competition, should be supported by public funds disbursed under ministerial responsibility; the remainder, if possible, by colonial, municipal, or other corporate funds and by private endowments and subscriptions. Arrangements should then be made to allow about 100 private students in addition to enter and pay adequate fees for their instruction; but this number ought not to be allowed to outgrow the number of students in training without very careful consideration of the responsible managers.

"3. The Committee are of opinion that, as our colonies and India send many young persons to this country for general education, it might reasonably be expected that they would be induced to send persons having musical gifts for musical education if the training were as efficient as it might be.

"4. So far as the Committee are enabled to judge from the evidence, they consider that the cost of properly training 200 free students would be about 15,000*l.* sterling a year, being at an average rate of 75*l.* a year for each student. Out of this sum grants for maintenance, at varying rates, might be allowed to the students, in accordance with the system which is found to work so successfully in the Art-Training Schools at South Kensington. Some students might hold scholarships without receiving any maintenance allow-

ance; and the Committee have reason to hope that private individuals will come forward and endow scholarships."

The above, it will be owned, is, in every sense, vague enough,—a result which might have been arrived at without the expenditure of a twelvemonth in the collection of testimony. We are assured, however, that the recommendations embodied in it have the concurrence of "the Directors of the Royal Academy of Music." This statement, we conceive, will have small allurements for the public, unaccompanied as it is by the slightest hint of reform or remedy contemplated. Some comprehensive scheme for the reconstruction of an establishment proved by universal testimony to have been so utterly inefficient, because managed on principles radically vicious, should have been propounded, we submit, ere any attempt to raise money was proposed. As matters stand, there is no guarantee that the code of management and of discipline will be revised; none that the list of Professors will be weeded. This measure of selection, however inevitable, must be so distasteful to many that, in its distastefulness, lies one among the many arguments in favour of complete destruction, as more practicable and efficient, and less offensive, than reconstruction. Having been the first, years ago, to point out the uselessness of the Royal Academy, and to advocate the justice of Government liberality as applied to Music, we strongly press on all who take interest in the question to observe that the Committee's recorded opinion leaves the matter where it was. If plan there be in the background, which we imagine may be the case, such should be stated openly, and openly canvassed, as a matter of first importance. It has seemed significant to many that Directors of the existing institution, which has been taken in hand with a view to its improvement, should have formed part of the Committee,—that Committeemen were allowed to testify,—and that no musician was invited to join it. That an attempt to force a case in favour of the Royal Academy has been made was evident to all under examination. It becomes yet more clear to any impartial reader of the Report. Observe, for instance, the appendical list, F, of country professors solemnly furnished in its defence—by a Director of the Academy, a Committeeman, and a witness. Only two out of the fifty-four enumerated hold a first-class position in the provincial towns they inhabit, as reference to the *Musical Directory* will sufficiently prove! Observe, on the other hand, that the specification of our London orchestral-players furnished to this journal (No. 1998, p. 212)—incontrovertible as disproof of the assertion that our orchestras are largely composed of pupils of the Royal Academy, frequently put forward in mitigation of censure, and which may be pointed to as one of the most valuable pieces of testimony tendered on the question,—has not been here reprinted. It will further be seen that a scheme uppermost in the mind of the Committee has been to locate the Academy, patched or unpatched, at South Kensington. All these things denote a foregone conclusion; the attempt to work out which claims the most wary watching on the part of those who do not desire to see public money and private munificence placed at the disposal of a coterie, made up of those inexperienced in the special subject and of those who are naturally enough not disinclined, for self-importance sake, to perpetuate existing abuses, or, at best, to have recourse to feeble half-measures, which will satisfy no one. It is impossible to speak out too explicitly at the time present,—too emphatically to declare that the Minute above cited, as it stands, has small substantial weight or value.

ASTLEY'S.—This theatre opened on Saturday for a brief season, during which it is underlet to Miss Sophie Young, who has provided herself with a new version of Miss Braddon's novel, under the title of 'The Mysteries of Audley Court.' The adapter is Mr. John Brougham, who has attempted from the materials to construct a regular five-act drama, making the heroine the central figure throughout. We cannot congratulate the playwright on his success. The first three acts are

tedious. In the fourth act the mystery is partly cleared up, and some interest is created. The fifth is languid in its movement, and the catastrophe is unprepared for by the development of circumstances, and as a surprise is singularly deficient in startling effect. Miss Young had serious difficulties to contend with in this state of matters, and in the course of the action suffered seriously from the intractability of the business she had to transact. Such a part as Lady Audley is too strong, either for her *morale* or her *physique*; nevertheless, her intelligence is considerable, and her knowledge of the histrionic art has evidently been well cultivated. We believe that she is a pupil of Mr. Ryder, who introduced Stella Colas to the English boards, on whose style Miss Young has formed herself. We even find the foreign accent! Her action is extravagant and incessant, and it provoked criticism to the extent of rousing a demonstration of the pit, in the fourth act, which we thought would have ruined the play. The actress here summoned all her energy, and showed that she was in earnest; her false art gave way in the presence of danger. She became for a short time natural, and redeemed the situation,—helped, doubtless, by the fact that the drama at this point rises in interest. In the fifth act, the declaration of her madness failed to excite sympathy. The characters were strongly cast, but so drawn as to be generally unthankful; the curtain, nevertheless, fell to applause, and the actors were recalled. The scenery, which is excellent throughout, is by Mr. Brew; the Lime-tree Walk, in particular, is admirably painted and set.

MUSICAL AND DRAMATIC GOSSIP.

THAT English interest in church-music is on the increase there can be no doubt. Choral and parochial meetings are to be heard of on every side, in every shire; and among other moves in the right direction is the Bill which (to quote from the *Orchestra*) "has been brought into Parliament to empower the Commissioners to raise the salaries of the minor canons, the vicars choral, singing men, the singing schoolmasters, and all persons engaged in the performance of divine worship in Cathedrals. This power has been inserted in the Bill by our Prime Minister, who insisted that the surplus income derived from cathedrals should first be appropriated to securing adequate and proper income to those persons who really did the work in cathedral celebrations."—Simultaneously with the above comes the Report of those who have the charge of the school of military music at Kneller Hall. This is satisfactory, in every point of view save one. By way of comment, we cannot do better than transcribe our contemporary's words: "It only remains to be hoped that the time may come when the officers of the army shall be relieved from the tax now imposed upon them, of maintaining regimental bands at their own expense,—and when, as in all other states, the military music of the country shall be admitted as a charge on the national revenue, quite as legitimate as the cost of providing the arms and equipments of the soldier."

The last Ballad Concert but one at the *Crystal Palace* was attended by 15,000 persons. There was another this week.

Mr. Mellon has already given a Mendelssohn night, a Gounod night, and one mainly devoted to the over-rated old music to 'Macbeth.'

Mr. Tom Høhler appeared the other evening, with Mdlle. Tietjens, in the garden-act of 'Faust.'—A Mdlle. Wiziak sang the part of *Zerlina* in the act of 'Don Giovanni' which was given on the last night of Mr. Mapleson's season.

Among other touring parties in our provinces during the autumn will be one headed by Madame Lemmens-Sherington.

"A sincere lover of music, living in the country," wishes for some information concerning a company of Italian singers "who have been amazing the rural audiences of South Wales," and who seem to him to be "fit for any stage." The names of Signor Tencajuoli, Signori Gambetti, Viganotti, and Fiorini, are new to us. They are accompanied by Signor Paggi, whose instrument is the flute. If these artists are really of the calibre which our

Correspondent supposes, their presence in these parts is a puzzle.

The modest gentleman who goes the round of our musical world under the style and title of "Paganini *redivivus*," has had a piece written for him to personate the sublime and eccentric Genoese violinist, which has been played in the west of England.

Méhul's 'Joseph' is under revival at the Opéra Comique.—The 'Mignon' of M. Ambroise Thomas is to be the first novelty there.—The first novelty to be given at the Théâtre Lyrique is the 'Sardanapalus' of M. Victorin de Joncières—an amateur, we believe, whose music illustrative of 'Hamlet' was performed in Paris a year or two since.—M. Offenbach is preparing music for a grand fairy spectacle to be given at the Théâtre du Châtelet during the Exhibition of 1867. "There is a question," says the *Gazette Musicale*, quoting another journal, "of a grand choral meeting, to which the singers of all nations are welcome, to be held at the opening of the Exhibition. Every choral society or body of Orphéonistes, whatever be its number, nature, or place of residence, may take part, and sing what best pleases it. The first prize is one of 10,000 francs." What a task for the arbiters!—MM. Fournier and Wekerlin were the artist and author selected by the manager of the Grand Opéra to compose the *Cantata* performed there on the Emperor's fete-day.—M. Devoyod, one of the successful pupils of the *Conservatoire*, has been engaged at the same theatre.

The *Gazette Musicale* announces the discovery of a composition by Mozart at the age of ten years, produced for the installation of the Stadtholder, William of Orange the Fifth. It is in ten movements, and is written for harpsichord, stringed quartet, two hautboys, two horns, and a bassoon, and is described as very remarkable, the youth of its writer considered.

Three hundred unpublished letters of Beethoven, we are told, are in the hands of Mr. Thayer, and will be given to the public with the Biography, now in the press.

Musical festivals are to be organized in Belgium, after the fashion of those in England and Germany.

M. Georges Kastner, who has published one or two books of some curiosity and research on subjects connected with music,—among others, 'The Cries of Paris,'—has just brought out one with a not very comprehensible title, 'The Pæremiology of Music,'—a collection of the proverbs, sayings and allusions to which the art has given occasion.

It is said that Herr Wagner is at work on an opera, the subject of which is 'Frederic Barbarossa.'—A new 'Lorelei' (it is said the fifth opera on the legend) is in hand at Dresden. The composer is Herr Fischer, an organist.

It is understood that Mr. Harrison intends to enter on a new career—as an actor.

The Theatre in Holborn is to be opened with a new piece by Mr. Boucicault.—Miss Herbert will begin her season at St. James's with another new drama from the same source.—A third, as we have said, will be produced at the Lyceum Theatre on its re-opening; in this the author and his wife will appear.

Mr. Sothorn, it is said, intends to play the part of *Claude Melnotte* during the round of his country engagements.—The original *Pauline* of 'The Lady of Lyons,' Miss Helen Faucit, is advertised as having accepted an engagement at Drury Lane.

MISCELLANEA

The Roman Mint of London.—At the Archaeological Institute Mr. J. F. W. De Salis read a paper 'On the Coins issued by the Roman Mint of London from A.D. 287 to A.D. 330.' He commenced with a description of the early coins of Carausius, which are of inferior workmanship and without mint-marks. These were succeeded during the later part of his reign and that of Allectus, by coins of better fabric, bearing the mint-marks of London and Camulodunum, copper only being found of the latter. The coins of Carausius and

Allectus were struck between 287 and 296, and all the remaining coins with the mint-marks L, LN or LON belong to the reign of Constantine. After the restoration in 296, we have, instead of the copper denarius issued by the two usurpers, a larger coin called the *folles*, which gradually decreases in size from, say a penny, to a farthing. No gold was issued in London during this period, but there are billon coins with the exergal mark, PLN, of Constantine and his sons. Having described the coins in issue from 296 to 333, Mr. De Salis remarked that the suppression of the mint of London was one of the many administrative changes which attended the transfer to the east of the imperial residence. It had become an establishment of little importance, not having coined anything but copper and billon since the downfall of Allectus. A temporary revival of this mint took place under Magnus Maximus, who rebelled in Britain in 383. There are very rare gold solidi with the mint-mark AVGB, which are much more likely to belong to Londinium Augusta than to Augusta Trevirorum, of which we have similar coins of the same usurper, marked TROB and SMTR. No coins with the mint-mark AVGB have been found of the successors of Magnus Maximus, and it is probable that the mint of London, which he was obliged to revive after his successful rebellion, was again closed when he found himself in possession of the western empire after the overthrow of Gratian.

Crabbe and Great Yarmouth.—Mr. J. G. Nall writes with reference to the review on his 'Great Yarmouth and Lowestoft':—"I am charged with attempting to claim Crabbe as a Yarmouth worthy, and with suggesting that Yarmouth was 'the borough' of the poet's verse. In reply, permit me to quote the passage inculcated. 'He (Crabbe) was a frequent visitor to Yarmouth. His son relates that he carried there the MS. of 'The Borough' for completion, and for the inspection of his judicious friend, the Rev. Richard Turner, without whose counsel he decided on nothing, and adds, "Can it be questioned that he trod that beach again, to which he had so often returned after some pleasing event, with somewhat more of honest satisfaction, on account of the distinguished success of his late poems!" His description of the amusements of a bathing-place was assuredly drawn from the sands and quay-side of Yarmouth.' I submit that in no case can the paragraph be fairly made to carry the construction the reviewer has placed on it.—The word 'border,' noticed as omitted, will be found in my Glossary, under its usual Suffolk pronunciation of 'bawda,' with the strong senses attached which it is usually employed to convey in East Anglia."

Shakespeare Readings.—Mr. J. Nichols says of the passage,

This drachm of eale
Doth all the noble substance of a doubt
To his own scandal,—

and of the emendations proposed in our last number, "Why alter it at all? The passage as it stands contains within it its own explanation. The word 'doth' is the third person singular, present tense, of the verb *to do*, which means, according to Johnson, 'to make anything what it is not, and he gives Shakespeare as his authority,

Off with the crown, and with the crown his head,
And, whilst we breath, take time to do him dead.

The word *of* is the sign of the ablative, and is used indifferently by Shakespeare with *by*. These being admitted, the passage is clear enough. Hamlet is lamenting to his friend the drunken habits of his countrymen, and says, 'Their virtues else, be they as pure as grace, as infinite as man can undergo, shall in the general censure take corruption from this particular fault. This drachm of ill (i.e. this drunkenness, this fault) doth (i.e. converts, changes) all the noble substance, of a doubt, (i.e. by a doubt, by bringing its sincerity in question) to his own scandal.'—On this and other passages H. D. writes,—"1. Act i, sc. 4—

The dram of eale
Doth all the noble substance of a doubt
To his own scandal.

Mr. Dyce and Dr. Elze read 'dram of evil' for 'eale'; Mr. C. Knight reads 'ill,' as being the more correct quantity. Mr. Dyce reads 'aft

debate,' Dr. Elze 'often doubt,' and Mr. Knight 'often doubt' for 'of a doubt.' None of these readings appear to me to carry out the drift of the context wherein Hamlet so emphatically insists that one little drop of evil *always* corrupts the whole mass, that he would not, I think, wind up by saying it *often* does so. I would, therefore, read as more probable

The dram of ill
Doth all the noble substance overdo
To his own scandal.

2. Act iii, sc. 4—

For use almost can change the stamp of nature
And master the devil, or throw him out
With wondrous potency.

For 'master the devil' three proposed readings are mentioned, viz., *either master the devil, either curb the devil, and either usher the devil.* Why import the 'either'?—why not read

To master the Devil and throw him out.

First overcome the Devil, being enabled to do so by exercising a given tone of thought and feeling, and then cast him out. "Of habits, Devil" (instead of *evil*) should stand to preserve the contrast in the text

Of habits, Devil—is Angel yet in this.

3. Act iv, sc. 5—"They aim at it" is surely the correct reading; to 'gape at it,' as proposed, would entirely change the sense. To 'aim' at Ophelia's meaning is to try to find it out, to *hit it*, instead of to listlessly 'gape' at her. Without pursuing the matter further, I wish to protest against alterations of, and additions to, a text without something like a certainty that they are *restorations*.

Sales of MSS. and Coins.—The collection of manuscripts formed by the late Rev. Dr. Wellesley, of New Inn Hall, Oxford, has been sold by Messrs. Sotheby, Wilkinson & Hodge. Among others of interest, we notice the following: Album Amicorum Jacobi Lauri, enriched with miniatures and coats of arms, 7l. 7s.—Allestree, *Calendarium Oxoniense*, 5l.—Brunozzi, *Arme Pistolee*, 8l. 8s.—Cascia dela Marcha, *Incomencia Lordene della Vita Christiana*, 39l.—Ceremonies de l'Eglise Romaine, sec. xvi., 6l. 10s.—Vanderdort's Catalogue of the Collection of Pictures, Medals, &c., of King Charles the First, removed from St. James's to Whitehall, a fair copy made for the King's own use, 20l.—Cronica di Venezia, with shields of arms, 10l. 10s.—Docti de Daulis, dell' Edificazione di Patalomia al Monte Rosso, 12l.—Commission from Andrea Gritti, Doge of Venice, 4l.—Another from Francesco Donato, 3l. 15s.—Federici, *Scrutinio della Nobilita Ligustica*, 7l.—Arms of the Knights of the Garter, 5l. 2s. 6d.—A volume of Heraldic Papers of the sixteenth and seventeenth centuries, 8l. 8s.—Arms of the Gentry of Herefordshire, 4l. 4s.—Arms of Italian Families, 29l. 2s. 6d.—A Curious Collection of Novelle, 10l. 10s.—Ordinary of Crests, 5l. 7s. 6d.—Armorial Bearings of the Colleges of Oxford, 6l. 10s.—Segaloni, *Priorista Fiorentino*, 29l. 10s.—Alphabet of Arms of the Gentry of Salop, 7l. 7s.—The Libro d'Oro of the Sanuto Family, 14l.—Account of the principal Venetian Families in 1631, 5l.—Arms of the Nobility and Gentry of Wales, 7l. 2s. 6d.—A Wappen-Buch, with Coats of Arms, emblazoned, 4l. 15s.—Sketch-Books by J. Malchair, of Oxford, 27l. 10s.—The Cabinet of Coins of the late Mr. Gott, of Leeds, has recently been sold by the same auctioneers, from which we extract the following: Half Noble of Richard the Second, 6l. 6s.—Angel of Richard the Third, 7l. 15s.—Sovereign of Henry the Seventh, 39l.—Another specimen, slightly differing, 15l.—Sovereign of Henry the Eighth, 15l.—Sovereign of Edward the Sixth, of his sixth year, 12l.—Angelet of Mary, 11l. 5s.—Sovereign of the same, 8l. 2s. 6d.—Sovereign of Elizabeth, 5l. 10s.—Thirty-shilling Piece of James the First, 7l.—Sovereign of Charles the First, 7l. 10s.—Trebble Unite of the same, 7l. 2s. 6d.—Broad of Cromwell, 6l.—Half Broad of the same, 12l. 5s.—Penny of Egfrith, King of Northumberland, 23l.—The Oxford Pound Piece of Charles the First, 19l.

TO CORRESPONDENTS.—H. J.—R. S.—D.—H. O.—J. C.—A. S.—A. Z.—received.
'Dramatic Studies' is by Miss Webster.

SAMPSON LOW & CO.'S

LIST OF NEW BOOKS.

AFTER the WAR. A Southern Tour, extending from May, 1865, to May, 1866. By WHITLAW REID, Librarian to the House of Representatives. Post 8vo. Illustrated. [Next week.]

THIRTY YEARS of ARMY LIFE on the BORDER. Comprising Descriptions of the Indian Nomads of the Plains; Explorations of New Territory; A Trip across the Rocky Mountains in the Winter; Descriptions of the Habits of different Animals found in the West, and the Methods of Hunting them; with Incidents in the Life of Different Frontier Men, &c. By Colonel R. B. MARCY, U.S.A., Author of 'The Prairie Traveller.' With numerous Illustrations. 8vo. price 12s. [This day.]

FAMILIAR WORDS: an Index Ver- borum, or Quotation Handbook. Affording an immediate Reference to Phrases and Sentences that have become embedded in the English Language. Crown 8vo. printed in Elzevir on toned paper, handsomely bound. Second and Enlarged Edition, greatly improved, with Copious Index, price 6s.

THE PRISON LIFE of JEFFERSON DAVIS; embracing Details and Incidents in his Captivity, together with Conversations on Topics of great Public Interest. By JOHN J. CRAVEN, M.D., Physician of the Prisoner during his Confinement. 1 vol. post 8vo. price 6s.

THE PROFITS of PANICS: and other Revelations of a City Man. A New Book for the Million. By the Author of 'Bubbles of Finance.' In popular form, price 1s.

A HISTORY of SAVINGS' BANKS; with an Account of the Origin and Progress of the Government Financial Measures for Post-office Banks, Annuities, and Life Insurance. By WILLIAM LEWINS, Author of 'Her Majesty's Mail.' 8vo. 16s.

THE LIFE and CORRESPONDENCE of BENJAMIN SILLIMAN, M.D. LL.D., late Professor of Chemistry, Mineralogy, and Geology in Yale College, U.S.A. Chiefly from his own MSS. and Diary. By GEORGE FISHER. 2 vols. post 8vo. with Portrait, price 24s.

The LIFE of the late Dr. MOUN- TAIN, Bishop of Quebec. 8vo. cloth, price 10s. 6d.

SOUTH AUSTRALIA: its Progress and Prospects. By A. FOSTER, Esq., late Member of the Legislative Council of Adelaide. Demy 8vo. with Map, cloth, 12s.

TRAVELLING in SPAIN in the PRESENT DAY; being an Account of the Journey of a Party of Ladies and Gentlemen who lately visited its principal cities. By HENRY BLACKBURN. With numerous Illustrations, from Photographs and Drawings from Life, by John Phillip, R.A., E. Lundgren, Walter Severn, and the Author. Also, an Appendix of Routes, Fares, &c., the Expenses of the Journey, and a New Map of Spain. Price 12s.

A THOUSAND MILES in the ROB ROY CANOE on the DANUBE, MOSELLE, RHINE, REUSS, AAR, MAINE, THAMES, MAYNE, and the LAKES of CONSTANCE and LUCERNE, &c. By J. MACGREGOR, Trin. Coll. Cambridge, Barrister-at-Law. With Illustrations. Small post 8vo. with a Map, price 5s. [Sixth Thousand now ready.]

LETTERS on ENGLAND. By Louis BLANC. Translated under the Author's Revision. 2 vols. post 8vo. price 16s.

NEW NOVELS. Now ready.

The JOURNAL of a WAITING GENTLE- WOMAN. Edited by BEATRICE A. JOURDAN. Post 8vo. price 8s. [This day.]

TOILERS of the SEA. By Victor Hugo. Third Edition. 3 vols. post 8vo. price 24s.

"A fisherman encounters all the fury, and caprice, and treachery of outer nature in order to win a woman whom, on his return, he finds to have unconsciously, but irrevocably, lost her heart to another. But this plainest of stories is worked into genuine tragedy by an exercise of poetic power which, at least in some portions of its display, has very rarely been surpassed in literature." [Saturday Review.]

"As an idyl of homely love and simple heroism, we know nothing save parts of 'Enoch Arden' that can compare with the touching sweetness of the closing scenes of the book." [Athenæum.]

"It is impossible for us not to feel chained to the book by the spell and sway of a master hand. The fight of man with sea and storm is rendered as it never has been rendered before, and probably will never be rendered again, by human pen."—Spectator.

THE STORY of KENNETT. By Bayard TAYLOR. 2 vols. 16s.

A CASUAL ACQUAINTANCE. By Mrs. DUFFUS HARDY. 2 vols. 16s.

MATTINS and MUTTON'S. By Cuthbert BEDE. 2 vols. 16s.

THE WHITE FAVOUR. By Henry Hall. 2 vols. 16s.

London: SAMPSON LOW, SON & MARSTON, Milton House, Ludgate-hill.

NEW WORKS for AUGUST.

The REGENCY of ANNE of AUSTRIA, Queen of France, Mother of Louis XIV. From Published and Unpublished Sources. With Portrait. By Miss FREER. 2 vols. [Ready.]

Also, just published, by the same Author, **The MARRIED LIFE of ANNE of AUSTRIA.** 2 vols. with Portrait.

The RACE for WEALTH. By Mrs. J. H. RIDDELL, Author of 'George Geith,' &c. In 3 vols. Reprinted from *Once a Week*. [This day.]

BY THE AUTHOR OF 'EAST LYNNE,' &c.
ELSTER'S FOLLY. By Mrs. Henry WOOD, Author of 'St. Martin's Eve.' In 3 vols. [Ready this day.]

DOCTOR BRADY: a Novel. By W. H. RUSSELL. In 3 vols. [Shortly.]

The SECOND Mrs. TILLOTSON, by PERCY FITZGERALD, is ready this day at every Library in the Kingdom, in 3 vols. [This day.]
Reprinted from *All the Year Round*.

The THREE LOUISAS: a Novel. By SUTHERLAND EDWARDS. In 3 vols. [Friday next.]

FROM CALOUTTA to the SNOWY RANGE. With numerous Coloured Illustrations, in 1 vol. By an OLD INDIAN. [Ready this day.]

KISSING the ROD: a Novel. By EDMUND YATES, Author of 'Broken to Harness,' &c. 3 vols. [Ready this day.]

The MAN of MARK: a Novel. In 3 vols. By the Author of 'Richard Langdon.' [Ready this day.]

The CO-HEIRESS. By the Author of 'Charley Nugent,' 'St. Aubyns of St. Aubyn,' &c. 3 vols. [Shortly.]

NEW WORK SUITABLE FOR STUDENTS AND SCHOOLS.

A COURSE of ENGLISH LITERA- TURE. By JAMES HANNAY. In 1 vol. [Ready this day.]

Also, just published, uniform with the above, **MODERN CHARACTERISTICS: a Series of Essays** from the *Saturday Review*.

SUNNYSIDE PAPERS. By Andrew Halliday, Author of 'Everyday Papers.'

The EASTERN HUNTERS. With numerous Illustrations. By CAPTAIN JAMES NEWALL. 1 vol. 8vo. [Ready this day.]

BIOGRAPHIES and PORTRAITS of SOME CELEBRATED PEOPLE. By ALPHONSE DE LAMARTINE. 2 vols. [Ready this day.]

Cheap Editions of Popular Works.

Also, just published, uniform with the above—

MAXWELL DREWITT. By the Author of 'George Geith.' 6s.

MISS FORRESTER. By the Author of 'The Morals of Mar-fair,' 'Arlie Lovel,' &c. 6s.

RUNNING the GAUNTLET. By EDMUND YATES, Author of 'Kissing the Rod,' 'Broken to Harness,' &c. 6s.

MILDRED ARKELL. By Mrs. HENRY WOOD, Author of 'East Lynne,' &c. 6s.

EVERY-DAY PAPERS. By ANDREW HALLIDAY. 6s.

GEORGE GEITH. By the Author of 'Maxwell Drewitt.' 6s.

TOO MUCH ALONE. By the Author of 'City and Suburb.' 6s.

THE WORLD in the CHURCH. Author of 'George Geith.' 6s.

TREVELYN HOLD. By the Author of 'East Lynne,' &c. 6s.

DENIS DONNE. By the Author of 'Theo Leigh.' 6s.

MAURICE DERING. By the Author of 'Guy Livingstone.' 6s.

BORDER and BASTILLE. Author of 'Maurice Dering.' 6s.

SWORD and GOWN. By the Author of 'Guy Livingstone.' 6s.

SEVEN SONS of MAMMON. By GEORGE AUGUSTUS SALA. 6s.

London: TINSLEY BROTHERS, 18, Catherine-street, Strand

EAGLE INSURANCE COMPANY, LONDON.

*REPORT of the Directors for the Year ending 30th June, 1866, read at the Annual General Meeting,
10th August, 1866.*

CHARLES CHATFIELD, Esq., in the Chair.

The Directors have the satisfaction of reporting to the Proprietors that, in pursuance of the resolutions unanimously passed at the Special General Meeting held in April last, the amalgamation of the National Mercantile Assurance Society with the Eagle has been carried into effect, and two of the Directors of that Society—Mr. Wilcoxon (heretofore the Chairman) and Mr. William Frederick De La Rue—now occupy seats at the Eagle Board.

The following account exhibits the increased income and outgoing of the year arising from the junction, which, it may be remembered, takes effect retrospectively, and the Balance Sheet shows the Assets as they existed on the 30th of June last, augmented by those just transferred.

By the Surplus Fund Account it will be seen that the total income from premiums and interest is 483,376l. 0s. 11d., and the total outgoing, 414,790l. 13s. 6d. The difference, 68,585l. 7s. 5d., and the Surplus Fund contributed by the amalgamated society, viz., 151,545l. 8s. 6d., increase the Surplus Fund of the Company to 899,095l. 8s.

The premiums on new assurances are considerably less than those of the foregoing year; but, at the same time, a much smaller portion of them has been devoted to re-assurance.

The change in the financial position of the Company precludes an exact comparison with former years. The expenses of management of the Eagle for the year are almost identical in amount with those of the last. The expenses of the National Mercantile Society will, of course, henceforth cease.

Deducting the several items payable on demand, or at an early maturity, the realized Assets, as set forth in the Balance Sheet, amount to 2,559,135l. 4s. 8d. Of this sum 173,340l. belongs exclusively to the Proprietors, 1,481,099l. 16s. 8d.† exclusively to the Policy Holders, and 899,095l. 8s. partly to the one and partly to the other. The last two items subject, of course, to exact adjustment at each quinquennial investigation.

It remains only for the Directors to mention that, since the last Annual Meeting, the Company has lost, by the decease of Sir William Gore Ouseley, and by the retirement of Mr. Gould, the services of two of the members of the Board. Both gentlemen were much respected, and it is with great regret that the Directors have to make this announcement.

† 5,880,163l. 14s. 4d., less 4,398,463l. 17s. 8d.

THE ENGLISH AND THEIR ORIGIN:

A Prologue to Authentic English History.

By LUKE OWEN PIKE, M.A.,

Of Lincoln's Inn, Barrister-at-Law.

"A service to English history for which all Englishmen should be grateful." *London Review.*

"His own most original argument—for the reference to emotions as race-marks is too often omitted." *Spectator.*

"It must be admitted that our author has offered a fresh and valuable contribution to a very difficult subject, and that he has made out a strong case for the non-Teutonic origin of the English." *Reader.*

"Mr. Pike has written a book of no small ingenuity and research. . . . As Mr. Pike puts it, it sounds very like gibberish. . . . The book is a clever one." *Saturday Review.*

"Mr. Pike's work is one of great originality, and the manner in which the historical and philological evidence is made to bear upon that deduced from the physical characteristics of Englishmen exhibits both learning and ingenuity." *Notes and Queries.*

"The book is interesting, and will well repay perusal." *Court Journal.*

"Though lively and charming in style, is remarkable for its truly scientific method." *Press.*

"Mr. Pike goes farther than any other writer in setting up those claims which are now winning attention for more consideration of the Celtic element." *Examiner.*

MISS BRADDON'S FIRST NOVEL.

This day, at all Libraries, in 1 vol. price 6s., thoroughly revised and in parts re-written, with Frontispiece and Vignette Title-page, worked in Tint on toned paper, crown 8vo. cloth gilt, lettered, THE

TRAIL OF THE SERPENT

"Poor race of Men!" said the pitying Spirit,
"Dearly ye pay for your primal Fall,—
Some flowerets of Eden ye still inherit,
But the TRAIL OF THE SERPENT is over them all!"—MOORE.

CHEAP EDITION OF 'JOHN MARCHMONT'S LEGACY.'

In a few days, price 2s. complete, uniform with the Cheap Edition of 'Lady Audley's Secret,' 'Aurora Floyd,' 'Eleanor's Victory,' and 'Henry Dunbar.'

JOHN MARCHMONT'S LEGACY

Opinion of The Times on 'JOHN MARCHMONT'S LEGACY.'

"Miss Braddon writes frankly for amusement; and in each succeeding novel she rises above herself. 'Lady Audley's Secret' was good, 'Aurora Floyd' better, 'Eleanor's Victory' still better, and now 'John Marchmont's Legacy' may be pronounced the best of all."—See the Times, Jan. 2, 1864.

LIBRARY EDITION OF MISS BRADDON'S NOVELS.

Just ready, with Frontispieces and Vignette Title-pages, cloth gilt, price 6s. each,

SIR JASPER'S TENANT

LADY AUDLEY'S SECRET.
AURORA FLOYD.
ELEANOR'S VICTORY.
ONLY A CLOD.

HENRY DUNBAR.
THE DOCTOR'S WIFE.
JOHN MARCHMONT'S LEGACY.
THE TRAIL OF THE SERPENT.

N.B.—Miss Braddon's other Works will appear in due succession.

London: WARD, LOCK & TYLER, Publishers, Warwick House, Paternoster-row.

Just published, crown 8vo. 6s.

THE HOME LIFE
IN THE
LIGHT OF ITS DIVINE IDEA.

BY THE

REV. J. BALDWIN BROWN, B.A.
AUTHOR OF 'THE SOUL'S EXODUS AND PILGRIMAGE,' &c.

SPECTATOR.

"This is a remarkable volume. A volume of sermons, it is true, but such that are almost models of what sermons should be, and of what, if they were, men would go to hear them as readily as to the gallery of the House of Commons on the night of a great debate.... Breathing the purest spirituality, they are also full of practical wisdom...." The restraint that is learnt in freedom, the author writes, 'is the only restraint that has any living force in it.' He works out this idea through all the relations of home and social life, and all who find a difficulty in 'making the best of both worlds' will find help and comfort in his book."

BRITISH QUARTERLY REVIEW.

"The book abounds in many precious passages, wise discernments, loving sympathies, and felicitous counsels, which will appeal very powerfully and touchingly to both parents and children."

GLOBE.

"The singular absence of theological phraseology, the illustrations drawn from the life of the day, the appreciation of modern culture, the subordination of our purely English ideas about wealth and success to the higher laws, are features which make these sermons singularly valuable."

NONCONFORMIST.

"No analysis of ours could avail to give any just idea of the maturity of thought, tenderness of feeling, and beauty of illustration which characterize the discourses entitled respectively 'Education,' 'The Nurture of the Lord,' 'Recreation,' and 'Getting out into the World.'..... There is a ripe beauty about the greater part of this volume which reminds us of Richter's 'Levana.'"

SMITH, ELDER & CO. 65, Cornhill.

Now ready, demy 8vo. sewed, price 2s.

ADOPTION VERSUS ANNEXATION.

By VISHWANATH NARAYAN MAUDLIK,
Pleader in H.M. High Court, Bombay.
Smith, Elder & Co. 65, Cornhill.

HISTORY OF CORNWALL.

"BURROW'S LANDSCAPE and SEA

GLASSES are remarkable for their TRANSPARENT CLEARNESS and POWER of DEFINING REMOTE OBJECTS."—*Shipping Gazette*. £3 12s. 6d., 2s. 6s. &c.

Special Mounts for India. Catalogues gratis. Address—W. & J. BURROW, MALVERN. London: Arnold, 73, Baker-street; Wiles & Co. 22, Ludgate-hill.

SALOM'S NEW OPERA and FIELD GLASS,

AND THE RECONNOITERER GLASS, price 10s. 10d., sent free.—This Tourist's Favourite, through extraordinary divisions of labour, distinctly shows small windows 10 miles off, landscape at 30 miles, Jupiter's moons, &c.—The MARQUIS of CARMARTHEN: "The Reconnoiterer is very good."—*Earl of BRACKLASH*: "I find it all you say, and wonderfully powerful for so very small a glass."—*Earl of CATHERNES*: "It is a beautiful glass."—*Rev. Lord SCARSDALE*: "I suppose of it."—*Lord Giffords*: "Most useful."—*Lord Garsington*: "Remarkably good."—*Sir David Colville*: "It gives me complete satisfaction, and is wonderfully good."—*Capt. Serdy*, Royal Small Arms Factory, Enfield: "I have found it effective at the 1,000-yards range."—*F. H. Hawkes*, of Farnley, Essex: "I never before met an article that so completely answered the recommendation of its maker, nor, although I have tried many, a Glass combining so much power for its size with so much clearness."—*The Field*: "We have carefully tried it at an 800-yard rifle range against all the Glasses possessed by members of the Corps, and found it fully equal to any of them; present, although they had cost more than four times its price."—*Notes and Queries*: "What intending tourist will now start without such an indispensable companion to a pleasure trip?" The celebrated "HYTHE GLASS" shows bullet-marks at 1300 yards, and men at 24 miles, price 31s. 6d. All the above Glasses, respectively bearing the registered trade-marks, "Salom," "Reconnoiterer," and "Hythe," are only to be had direct from SALOM & CO. 98, Princes-street, EDINBURGH, and 17, Regent-street, LONDON. No Agents of any kind anywhere.

E. MOSES & SON'S ESTABLISHMENTS are CLOSED EVERY FRIDAY EVENING at Sunset till SATURDAY EVENING at Sunset, when business is resumed till Eleven o'clock.

All articles are marked the lowest prices in plain figures, from which no abatement can be made. Any article not approved of will be exchanged, or the money will be returned. List of Prices with Rules for Self-measurement and Fashion Card, with Patterns, gratis and post free.

SILVER FIR FURNITURE, by HOWARD & SONS. The Nobility and Gentry are respectfully invited to inspect the Furniture made by HOWARD & SONS of this elegant wood, being manufactured by steam-power, although of the best possible quality, the price is moderate.—26 and 27, Berners-street, Oxford-street.

THE CULTIVATION OF TEA in the East Indies is an important feature, and the EAST INDIA TEA COMPANY have, on account of its great strength and exquisite flavor, promoted its sale by every means. The Company are now shipping Assam, Cachar, Darjeeling, &c., at the reduced duty, viz. from 2s. 6d. to 3s. 6d. per lb., and China Teas as usual at 1s. 4d. per lb. and upwards.—Warehouses, No. 9, GREAT ST. HELEN'S, HURCHYARD, Bishopgate.

BREAKFAST.—EPPS'S COCOA (more commonly called Epps's Homoeopathic Cocoa, as being prepared and introduced by James Epps, the Homoeopathic Chemist first established in England). The very agreeable character of this preparation has rendered it a general favourite. For breakfast no other beverage is equally invigorating and sustaining. This Cocoa is used by thousands who never used Cocoa before. "Cocoa stands far higher than tea or coffee," Dr. Hassall says.—Sold in 1 lb., ½ lb., and 1 lb. packets.

WILLIAM SMEE & SONS respectfully caution intending Purchasers of the "SMEE'S SPRING MATTRESS, TUCKER'S PATENT," or "SOMMER TUCKER," against various imitations and infringements, preserving the appearance of the Original, but wanting all its essential advantages.

Each genuine Mattress bears the Label "TUCKER'S PATENT," and a Number. The "Smee's Spring Mattress, Tucker's Patent" received the only PRIZE MEDAL, or Honourable Mention, given to Bedding of any description, at the International Exhibition, 1862, and may be obtained (from 2s.) of most respectable Bedding Warehousemen and Upholsterers, and Wholesale of the Manufacturers, WILLIAM SMEE & SONS, Finabury, Moorgate railway Terminus, London, E.C.

PRIZE MEDAL AWARDED.

ALLEN'S PATENT PORTMANTEAUS and TRAVELLING BAGS, with SQUARE OPENINGS; all Leather Trunks, Dressing Bags, with Silver Fittings; Leather Boxes, Writing and Drawing Cases, and 500 other articles for Home or Continental Travelling.—ILLUSTRATED CATALOGUE, post free.—J. W. ALLEN, Manufacturer and Patentee, 37, WEST STRAND, London, W.C.

Also, Allen's Barrack Furniture. Catalogue of Officers' Bedsteads, Washstand Stands, Canteens, &c. post free.

SAUCE.—LEA & PERRINS' WORCESTERSHIRE SAUCE.

This delicious condiment, pronounced by Connoisseurs

"THE ONLY GOOD SAUCE."

Is prepared solely by LEA & PERRINS.

The Public are respectfully cautioned against worthless imitations, and should see that Lea & Perrins' Names are on Wrapper, Label, Bottle and Stopper.

ASK FOR "LEA & PERRINS' SAUCE."

* Sold Wholesale and for Export, by the Proprietors, Worcester; Messrs. CROSS & BLACKWELL, Messrs. BARCLAY & SONS, London, &c.; and by Grocers and Oilmen universally.

THE SMOKER'S BONBON immediately and effectually removes the Taste and Smell of Tobacco from the Mouth and Breath, and renders Smoking agreeable and safe. It is very pleasant and wholesome. Prepared by a patent process, from the recipe of an Eminent Physician, by SCHOOLING & Co., Wholesale and Export Confectioners, Bethnal-green, London.—The Shilling per Box; post free, 14 stamps.—Sold by Chemists, Confectioners, &c.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without pins, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and still support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth stopped and rendered sound and useful in mastication.—52, Fleet-street.

MAPPIN, WEBB & CO.'S PLATE and CUTLERY.—SPOONS and FORKS of the best quality, Prices as at the Manufactory, Royal Cutlery Works, Sheffield:

PIANOFORTES AND HARMONIUMS.

PRIZE MEDALS were awarded to CHAPPELL & CO. for Pianofortes and Harmoniums at the International Exhibitions of 1862 (London) and 1865 (Dublin), and to ALEXANDRE & CO. for their Harmoniums at all the Exhibitions for the last twenty years. The Medal in 1865 was given to ALEXANDRE & CO., with the following Commendation, which ranks them above all others:—

"Nobility of construction of Harmoniums, cheapness, combined with excellence of manufacture, and fine quality of tone."—Award of the Jury.

Testimonials to their superiority over all others have also been given by Professors Sir Frederick Gore Ouseley and Sterndale Bennett, Dr. Rimbault, Herr Engel, Messrs. Goss, Tuck Wallace, Macfarren, Lindsay Sloper, &c.

An immense Stock of every possible Description of Pianofortes and Harmoniums may be seen at 50, New Bond-street, either for Sale or Hire, and arrangements can be made for the Hire or Purchase of any Instrument by Instalments in advance, if desired, or a liberal allowance be made on Purchases for Cash.

TUTOR.—A New Edition of this justly celebrated work is now published, containing the favourite Airs from 'Faust,' including the Soldiers' Chorus, Valse, &c.; 'The Guards' Waltz,' and numerous other Airs, arranged as progressive Exercises, thus rendering it the cheapest and best Tutor extant. Post free, 4s.

ALEXANDRE'S BOUDOIR HARMONIUM

(THE QUEEN'S MODEL).

As Manufactured expressly for Her Majesty's use.

In Rosewood Case, with Ten Stops and Percussion Action—viz. Percussion or Flute Clarinet, Forte, Tremolo, Percussion or Cor Anglais, Bourdon, Forte, Bourdine, Grand Jeu, and Expression. Price Thirty-five Guineas.

Also, with Fourteen Stops and Percussion Action—viz. Percussion or Flute Clarinet, Forte, Tremolo, Percussion or Cor Anglais, Bourdon, Clarion, Basson, Forte, Bourdine, Grand Jeu, and Expression. Size, 3 ft. 6 in. by 1 ft. 8 in.; height, 3 ft. Price Fifty-five Guineas.

These Instruments are eminently adapted for Boudoirs and Drawing-rooms; the tone being more pure and sweet than that of the ordinary kinds, and greater care is taken in the workmanship.

CHAPPELL & CO.'S EDITION of POPULAR OPERAS, arranged for the PIANOFORTE.

Great care has been taken in this Edition to render the Works complete in every respect. Each Opera is bound in cloth, and preceded by an analysis of the Plot, together with a full description of the Music, by G. A. MACFARREN.

J. G. GREENWOOD, Principal.
JOHN P. ASTON, Secretary to the Trustees.

METROPOLITAN BOARD OF WORKS.

The Carriage and Deposit of Dangerous Goods Act (1868) and the Petroleum Act (1869).

WHEREAS by the Carriage and Deposit of Dangerous Goods Act (1868), it is provided, that the goods or articles commonly known as Nitro-Glycerine, or Glonoline Oil, shall be deemed to be specially dangerous, and that its storage in any quantity shall be regulated by licence under the Petroleum Act (1869); and whereas the Metropolitan Board of Works is the Local Authority for the Metropolis (exclusive of the City of London and certain Dock and Harbour Authorities), and authorised by the said Petroleum Act to grant licences for the storage of dangerous goods, therefore the said Board do hereby give Notice, that applications must be made to the Board for licences to receive or store specially dangerous goods, or any quantity thereof, subject to the requirements of and according to the said Statutes.

By order,
(Signed) JOHN HILLARD, Clerk of the Board.
Spring Gardens, August 10, 1886.

ROYAL SCHOOL OF MINES.

Director,
SIR RODERICK IMPEY MURCHISON, Bart., K.C.B.

1. Chemistry. By E. Frankland, F.R.S. &c.
2. Metallurgy. By John Percy, M.D. F.R.S.
3. Natural History. By T. H. Huxley, F.R.S.
4. Mineralogy. By Warrington W. Smyth, M.A. F.R.S.
5. Mining. By A. C. Ramsay, F.R.S.
6. Geology. By A. C. Ramsay, F.R.S.
7. Applied Mechanics. By Robert Willis, M.A. F.R.S.
8. Physics. By John Tyndall, F.R.S.

Instruction in Mechanical Drawing, by the Rev. J. Haythorne Edgar, M.A.

The Fee for Students desirous of becoming Associates is 30s. in one sum, on entrance, or two annual payments of 50s., exclusive of the Laboratory.

Pupils are received in the Royal College of Chemistry (the Laboratory of the School), under the direction of Dr. Frankland, and in the Metallurgical Laboratory, under the direction of Dr. Percy.

Tickets to separate Courses of Lectures are issued at 2s. and 4s. each. Officers in the Queen's Service, Her Majesty's Consuls, acting Mining Agents and Managers, may obtain Tickets at reduced prices.

Certificated Schoolmasters, Pupil-Teachers, and others engaged in Education, are also admitted to the Lectures at reduced fees. His Royal Highness the Prince of Wales has granted Two Scholarships, and several others have also been established by Government.

For a Prospectus and information apply to the Registrar, Royal School of Mines, Jermyn-street, London, S.W.
TRENHAM REEKS, Registrar.

THE ASYLUM for FATHERLESS CHILDREN, REEDHAM, near Croydon (late at Stamford-hill).

Under the patronage of Her Majesty the QUEEN.

HELP for those made FATHERLESS by CHOLERA.

In the belief that many will be ready to present thankofferings for their escape from this dreadful calamity, and to show sympathy with the sufferers, the Board of Management of the above Asylum invite all such to AID them by LIBERAL DONATIONS in alleviating the misery and want thus suddenly thrown upon many Widows and Orphans.

FIVE CHILDREN, whose fathers have died of Cholera, will be ELECTED in JANUARY NEXT in addition to the Twenty usually elected. Children are eligible from all parts of the United Kingdom.

Donations and subscriptions thankfully received at the Office, No. 10, Poultry, E.C., where forms of petition and all information can be obtained between the hours of 10 and 4.

THOS. W. AVELING, Hon. Sec.

NOTICE.—Applicants replying to the Advertisement (initials M.A.) inserted in the *Athenæum* of August 18, are respectfully informed that the Carter-de-Ville and other enclosures will be returned to their respective owners on September 10, by which time the Applications will have been considered, and the selection made.—C. MITCHELL & Co., 13 and 15, Red Lion-court, Fleet-street, E.C.—August 24, 1886.

Tuition Fee: Twelve, Nine, or Six Guineas per Annum.
Board and Tuition: 48s. or 42s.
Pupils of this School took Honours at the last Oxford Local Examination.
Term begins September 19.—Prospectuses on application.

SOMERSETSHIRE COLLEGE,
BATH.

Head-Master—The Rev. HAY S. ESCOTT, M.A.,
Balliol College, Oxford.
Secretary—P. C. SHEPPARD, Esq., Bathampton, Bath.

This College was founded in 1853, with the view of providing a course of education similar to that of our best public schools, with more attention to individual boys than the large forms of these schools render possible.
The effective character of the education actually given is sufficiently attested, both by the Reports of the Examiners, the Rev. J. Percival, late Fellow of Queen's College, Oxford, now Head-Master of Clifton College; the Rev. J. R. Mearns, Fellow, Dean, and Tutor of New College, Oxford; and also by the fact, that out of eleven pupils who have, up to this time, proceeded direct from the College to the University, commencing with October, 1861, six have gained open Scholarships, and subsequent honours in the schools; two have gained further Scholarships since residence; and one, who did not stand for a scholarship, has obtained honours in both the Public Examinations. Thus, in less than five years, out of eleven pupils, only eight of whom have as yet been in the Public Examinations, this College has obtained seventeen University distinctions.

QUEENWOOD COLLEGE,
near STOCKBRIDGE, HANTS.

The Course of Study embraces the ordinary English branches, Drawing, Land-Surveying, the Classical and Modern Languages, The Natural Sciences and Practical Chemistry form a prominent feature, and instruction in them is very efficiently provided for.
For terms and further particulars, apply to
CHARLES WILLMORE, Principal.

EDUCATION.—OAKLEY HOUSE, WELLINGTON-PLACE, READING.
The next Session will commence on Thursday, September 20th. Mr. WATSON will be happy to forward references, &c. on application.

UNIVERSITY OF LONDON.—Mr. WILLIAM WATSON, B.A., formerly of Oakley-square, London, will be able to RECEIVE, on or after September 20th, TWO additional PUPILS, to prepare for Matriculation or for Degrees in Arts. GUILDFORD, SURREY.—SCHOOL for a LIMITED NUMBER of YOUNG LADIES, in this healthy locality. A thorough French and German, as well as English Education given. Excellent references.—Address Miss POOLE, Portland House, Guildford.

DR. DRESSER can now receive into his Studio, as ARTICLED PUPILS, One or Two respectable Youths, who may desire to follow the Profession of Consulting Ornamentist and Practical Designer.—North End, Fulham, S.W., London.

MATRICULATION, Jan., 1867.—The SPECIAL CLASS, conducted by Cambridge Graduates (Wranglers, First-class Classics, and Natural Sciences Honour man), will RE-COMMENCE on September 3rd. Demonstrations in a Laboratory.—CANTAB, 4, Verulam-buildings, Gray's Inn.

BLYTHSWOOD HOUSE, BELSIZE PARK, London, N.W.
MISS BLYTH receives a limited number of young Ladies, the daughters of Gentlemen, as Members of her Family, whose studies, pursued under eminent masters, are carefully superintended by Miss Blyth, assisted by talented English and Foreign Governesses.
Great attention being paid to Foreign Languages, the advantages of a Continental Education are combined with the moral training and domestic comfort of an English School.
Prospectuses and references forwarded on application.

BEDFORD COLLEGE (for LADIES), 48 and 49, Bedford-square, London.—THE CLASSES will BEGIN for the SESSION 1866-67 on THURSDAY, October 11th. The SCHOOL will RE-OPEN on THURSDAY, September 27th. Two Arnot Scholarships, giving free admission for two years to five Classes, including Natural Philosophy and Mathematics, will be open for Competition by Examination at the beginning of Next October. Candidates are requested to send in their Names before September 1st.
Prospectuses may be had at the College.
JANE MARTINEAU, Hon. Sec.

The Hospital contains 350 beds: 247 Medical and for the Diseases of Women; 32 Surgical and for Diseases of the Eye; and 81 for Syphilitic Cases. The number of patients exceeds 120,000 annually.
COLLEGIATE ESTABLISHMENT.—Students can reside within the Hospital walls, subject to the Collegiate regulations.
Some of the Teachers connected with the Hospital also receive Students to reside with them.
Seven Scholarships, varying in value from 20s. to 50s., are awarded annually.
The Clinical Clerks, the Midwifery Assistant, and the Clerks to the Assistant-Physicians are appointed from the most diligent Students.
In accordance with the regulations of the College of Surgeons, Students have charge of patients under the supervision of the Assistant-Surgeons.
All Students preparing for their examinations are specially examined by the Teachers of Anatomy or by the Tutors.
Further information may be obtained from Dr. Andrew, Mr. T. Smith, or Mr. Callender, at the Hospital.

THE ROCKY MOUNTAINS.—This Grand Picture, which has created such unparalleled interest in London, must be withdrawn from Exhibition THIS DAY.—T. McLEAN, 7, Haymarket.

TO COIN DEALERS, SPECULATORS, and Others.—ON SALE, to highest bidder, a large quantity of SILVER and COPPER COINS, in excellent preservation.—Address G. H. TOMKES, 45, Lime street, Liverpool.

THE TOPOGRAPHICAL and GENEALOGICAL LIBRARY of the late Rev. JOHN M. GRESLEY, M.A., sometime Rector of Seile Leicestershire, and late Master of Etrah Hospital, Derbyshire. A Choice Selection of this Library is now ON VIEW at Mr. QUARITCH'S, No. 15, Piccadilly, including a set of the
Anastatic Drawing Society's Publications, 6 vols. 1855—62, very rare.
Baker's Northamptonshire, 3 vols. folio, large paper, 1825—61.
Book of St. Albans, folio, 1570, very rare.
Gentleman's Magazine, 1745—1860.
Stemmata Shirleyana, or Annals of the Shirley Family, &c. privately printed and very rare.
Nichols's History of Leicestershire, 4 vols. in 8, folio, 1827, very desirable, and exceedingly rare in this state.
Mr. GRESLEY'S valuable MANUSCRIPT NOTES, above-mentioned, and carefully-written pages, uniform in size with the History of the County, containing a mass of most valuable information as regards Family and County History. Drawings of Seals, Coats of Arms, &c., additional Pedigrees, the result of many years' labour and research, evidently intended for publication.
Thoroton's Nottinghamshire, folio, 1677; or 3 vols. 4to. 1777.
Shaw's Staffordshire, 3 vols. folio, uncured.
BRASSARD QUARITCH, 15, Piccadilly, W.
*A Catalogue of Mr. Quaritch's extensive Stock of Topographical Genealogical and Antiquarian Works is in preparation.

MR. MAYALL'S PHOTOGRAPHS.—
CARTE-DE-VISITE, full-length, half-length, or vignette. TAKEN DAILY.

Set of Twelve..... £1 1 0
Set of Sixty..... 2 3 0
Set of Fifty..... 3 2 0
Several positions taken, and proofs submitted; it being in the choice of the sitter to have all from one, or some from each, as may be preferred. Immediate sittings with or without appointments.—254, and 256, ROBERTS-VAULT, corner of Argyll-place; and 90 and 91, King's-road, Brighton.

DISDERI, PHOTOGRAPHER, INVENTOR of the CARTE-DE-VISITE, Patent the 27th of November, 1854; 70, 71 and 72, BROOK-STREET, Hanover-square, and for Equestrian Portraits at Hereford Lodge, Gloucester-road, Old Brompton-road, and 8, Boulevard des Italiens, Paris. Mr. Disderi has on Sale 65,000 Copies of the day, or Panoramic Views.—ESTABLISHMENTS in LONDON, PARIS, MADRID, and TOULON, for enlargements up to life size.

DISDERI, PHOTOGRAPHIC ARTIST to H. I. Majesty the Emperor Napoleon III. and the Imperial Family—to H.I. Majesty the Emperor of all the Russias—also to H.I. Majesty the Queen of Spain and the Royal Family—to His Majesty the King of Italy—to His Majesty the King of Holland—to His Majesty the King of Portugal—to the Imperial Gallery of Museums—Photographer of the Palace of the Universal Exhibition of 1855, &c.

DISDERI, PHOTO PAINTING.—In oil on canvas.

DISDERI, PHOTOGRAPHIE on SILK.—His own new process.

DISDERI, PHOTOGRAPHIE ÉMAIL.—New process.

DISDERI, NATURAL PHOTOGRAPHY, without retouching. Reproductions and Enlargements of every kind.

DISDERI.—The Excellent Situation of Mr. DISDERI'S Studios enables him to OPERATE REGARDLESS of the WEATHER.

DISDERI.—NOTICE.—By a NEW PROCESS of Mr. DISDERI'S the "PORTRAITS CARTE-DE-VISITE" are Enlarged on Canvas to any size. The Public can thus obtain a Photographic Drawing, by means of which skilful artists attached to the house can, on simple indications—such as the colour of the complexion, the eyes, and the hair—obtain a splendid and truthful oil painting.

Mr. Disderi's New Process is valuable in this respect, that it avoids the tediousness of long sittings, and also adds to the charms of oil painting the great advantages of the truthfulness and accuracy of Photography.
Salons and Studios, 70, 71, 72, Brook-street, Hanover-square; and for Equestrian Portraits at Hereford Lodge, Gloucester-road, Old Brompton-road.

THE PHYSICAL GEOGRAPHY and GEOLOGY of the COUNTY of LEICESTER. Illustrated by a Coloured Map and Sections. By D. T. ANSTED, M.A. F.R.S., formerly Professor of Geology in King's College, London.

The subjects treated possess much more than a merely local interest. The plates and porphyries of Charwood Forest, the coal-measures of Moulra and Colceston; the connection between the coals of the Northern district and those of Derbyshire, and of the Southern district with those of Warwickshire; the extension of these coals under the New Red Sandstone; and the limits of the great Faults, are all matters so important that they assume a national character.

Westminster: Nichols & Sons, 25, Parliament-street.

SIR RODERICK MURCHISON'S GEOLOGICAL MAP, from the Useful Knowledge Society's Series.

THE AUTHOR'S EDITIONS.

OLLENDORFF'S METHOD of LEARNING to READ, WRITE, and SPEAK a LANGUAGE in Six Months.

1. ADAPTED to the GERMAN. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. In Two Parts. Part I. New Edition, price 1s. 6d. cloth. Part II. Fourth Edition, price 12s. 6d. cloth. The Parts sold separately.

* Introductory Book to Dr. Olendorff's method adapted to the German, containing a new system of facilitating the study of the German Declensions, and rules on the gender of substantives. New Edition, 12mo. cloth, 3s. 6d.

2. ADAPTED to the FRENCH. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. New Edition, containing a Treatise on the Gender of French Substantives, and an additional Treatise on the French Verbals. Price 12s. cloth. A SCHOOL EDITION, just published, 12mo. price 6s. 6d. cloth.

3. ADAPTED to the ITALIAN. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. Fourth Edition, price 12s. cloth.

4. ADAPTED to the SPANISH. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. price 12s. cloth.

KEYS to the SPANISH, ITALIAN, FRENCH, and GERMAN SYSTEMS, prepared by the Author. Price 7s. 6d. cloth.

It is necessary for those who desire to avail themselves of the present method to notice, that these are the only English editions sanctioned by Dr. Olendorff, and he deems any other totally inadequate for the purpose of English instruction, and for the elucidation of the method so strongly recommended by Captain Basil Hall, and other eminent writers. They should be ordered with the publisher's name, and to prevent errors, every copy has its number and the author's signature.

The above Works are Copyright.

London: Whittaker & Co., and Dulau & Co.; and to be had of any Bookseller.

CHARLES LAMB: a Memoir.

By BARRY CORNWALL.

"Finely does Mr. Procter draw the moral of the tale he has written; would we could anticipate other such Lives of the Poets and Men of Letters of our century."—*Edinburgh*, July, 1866.

Full of grace and sweet thought, and grave, glad memories, and deep earnestness.—"Athenæum."

"Very full, very clear, and very free from all the defects of modern biographies."—*Spectator*.

"Strength of simplicity, with fine perception of the truths of life, and delicate skill in expression, give a rare charm to this Memoir of Charles Lamb."—*Examiner*.

"It is tenderly and delicately written, enriched with excellent criticism."—*London Review*.

"As a memoir, as well as in its typographical excellencies, the book is perfect."—*Reader*.

London: Edward Moxon & Co. Dover street, W.

"Could a tour-book be written into the map of the localities it would be perfection, and the nearer it approaches to that the greater its value."—*Asiatic Traveller*.

GREEK GRAMMAR RULES drawn up for the use of Harrow School. By the Rev. F. W. FARRAR, M.A. F.R.S., late Fellow of Trinity College, Cambridge.

"Mr. Farrar has hit upon an exceedingly happy idea in this little book, and has carried it out with great skill.... Mr. Farrar's work is the model of the kind of book which should be thoroughly mastered. Nothing essential is omitted. The work bears traces, as might be expected, of a thorough knowledge of Comparative Philology, and Mr. Farrar employs his rare knowledge of English literature to throw light on the Greek idioms. The book deserves a hearty welcome from teachers and scholars."—*Review*.

London: Longmans, Green, and Co. Paternoster-row.

In folio, pp. 8 (of cardboard), price 12s. 6d.

UNIVERSAL PROPORTION TABLE, enabling the Operator to perform by inspection, with greater accuracy than is generally required for commercial purposes, any Example of Multiplication, Division, Proportion, or Extraction of Square Root, either of Whole Numbers or Decimals. RICHARD BENTLEY, New Burlington-street.

At all Libraries, and at every Bookseller's in Town and Country,

A SECOND EDITION OF UP THE COUNTRY.

By the Hon. EMILY EDEN,
 Author of
 'The Semi-Attached Couple' and 'The Semi-Detached House.'

OPINIONS OF THE PRESS.

From the Times.—"In cabinet pictures of domestic life in India Miss Eden's book is scarcely equalled. To those who have never seen the country it will be full of interest and amusement as to the old Indian, for of all the letters here reprinted there is not one which is not full of life and humour. They contain by far the most picturesque and vivid descriptions of life in India which have been laid before the public for many years, and are as fresh and vivacious as if they had only come by the last overland mail."

From the Saturday Review.—"Miss Eden has performed the astonishing feat of writing two volumes about life in India which are thoroughly amusing and readable, from the first page to the last. She never seems to go anywhere without bringing back some comical trait of character or life, which is described in the happiest style; and there is scarcely a page which is not enlivened by some touch of humour."

From the Athenæum.—"A brighter book of travel we have not seen for many a day. In ease and grace of style Miss Eden reminds us of Lady Duff Gordon; in wit, in satire, in suggestion, of Lady Morgan."

From the Spectator.—"Anything more refreshing, genial and laughter-provoking than these letters, it would be difficult to find."

From the Press and St. James's Chronicle.—"Everywhere throughout these volumes the same spirit prevails;—a spirit congenial to that which charms us in Cooper's most cheerful, and in Charles Lamb's drollest letters. The book is unique."

From the Reader.—"One of the most seducing books one can get hold of."

From the Pall Mall Gazette.—"A capital book for the alone of the London season. Miss Eden has a delicate feeling of fun,—and her touch is very light. She never takes the bloom off her jokes by much handling."

From the Morning Post.—"It is difficult to part with these charming volumes without noticing the piquancy of style and unaffectedness of language which prevail throughout their pages. The every-day nothings are elevated by this magic touch into real and tangible sources of amusement."

From the Globe.—"We can promise our readers that they will find 'no end' of amusing reading in these volumes."

RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

THE POPULAR NOVELS, At all Libraries and Booksellers'.

New Story by Captain Mayne Reid.

The BANDOLERO. By Captain MAYNE REID. In 1 vol. post 8vo. with 10 Illustrations, price 6s. [On Monday next.]

WHICH SHALL IT BE? In 3 vols.

The FAIRE GOSPELLER, Passages in the Life of MISS ANNE ASKEW. By the Author of 'Mary Powell.' 2 vols. crown 8vo. 10s. 6d.

THRICE. 2 vols. post 8vo.

RICHARD BENTLEY, Burlington-street.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

TRAVELS in FRANCE and GER-

MANY in 1865 and 1866; including a Steam Voyage down the Danube, and a Ride across the Mountains of European Turkey, from Belgrade to Montenegro. By Capt. SPENCER, Author of 'Travels in Circassia,' &c. 2 vols. 12s.

"This is a valuable publication, and well deserving of attention. Captain Spencer's volumes are devoted to something more than a mere narrative of travel, as they contain a variety of notes and observations on the social, moral, and political condition of the countries which the author visited. The present condition of Germany and France is very ably discussed by Captain Spencer, and his voyage down the Danube and ride across the mountains of European Turkey will be found very interesting to the reader." Observer.

FIELD-MARSHAL VISCOUNT COMBERMERÉ'S MEMOIRS and CORRESPONDENCE.

From his Family Papers. By the RIGHT HON. MARY VISCOUNTESS COMBERMERÉ, and Capt. W. W. KNOLLYS. 2 vols. 8vo. with Portraits, &c. 30s. bound.

"A welcome and gracefully-written memorial of one of the greatest of England's soldiers and worthiest of her sons."—Post.
 "Apart from the biographical and professional details, the volumes are full of sketches of persons of importance or interest who came into connexion with Lord Combermeré."—Athenæum.

The SPORTSMAN and NATURAL-

IST IN CANADA; or, Notes on the Natural History of the Game, Game-Birds, and Fish of the Country. By MAJOR ROSS KING, F.R.G.S., F.S.A.M. Royal 8vo. Illustrated with beautiful Coloured Plates and Woodcuts. 30s. bound.

"Truthful, simple, and extremely observant, Major King has been able to throw much light upon the habits as well as the zoological relations of the animals with which he came in collision; and his descriptions of the country, as well as of the creatures inhabiting it, are as bright and graphic as they are evidently correct."—Athenæum.

PRISON CHARACTERS DRAWN

from LIFE. By a PRISON MATRON, Author of 'Female Life in Prison.' 2 vols. 12s.

The BEAUTIFUL in NATURE and ART. By Mrs. ELLIS, Author of 'The Women of England.' &c. 1 vol. with Portrait, 10s. 6d. bound.

THE NEW NOVELS.

LORDS and LADIES. By the Author

of 'MARGARET and HER BRIDESMAIDS,' &c. 3 vols.
 "A most amusing novel. The plot is thoroughly original, and it is worked out with much humour and skill. The characters are capably drawn. The book is an admirable one for holiday time." Star.

The WILD FLOWER of RAVENS-

WORTH. By the AUTHOR of 'JOHN and I,' 'DE JACOB,' &c. 3 vols.

"A charming story, of great originality, full of pathos and grand nobility of thought and action."—Observer.

"A novel of unusual excellence. It is a story of deep interest. The characters are superbly drawn."—Star.

The MOTHER'S FAVOURITE. By

S. RUSSELL WHITNEY. 3 vols.

The WIFE'S ERROR. By Lady

BLAKE. 3 vols.

"Lady Blake is a polished and elegant writer. 'The Wife's Error' is an interesting story."—Post.

"A capital novel. By far the best book Lady Blake has written."—John Bull.

A NOBLE LIFE. By the Author of

'JOHN HALIFAX,' 'CHRISTIAN'S MISTAKE,' &c.

RACHEL'S SECRET. By the Author

of 'The Master of Marton.' 3 vols. [Just ready.]

BOOKS FOR THE COUNTRY.

Each Work complete in 1 vol. price 5s. (any of which can be had separately), elegantly printed and bound, and illustrated by MILLAIS, HOLMAN HUNT, LEECH, BIRKET FOSTER, JOHN GILBERT, TENNIEL, &c.

THE LIFE AND DEATH OF JEANNE D'ARC,

Called "The Maid."

By HARRIET PARR,

Author of 'In the Silver Age,' &c.

SPECTATOR.

"Who amongst us has not at one time or another heard an oft-told tale, with the repetition of which our very ear wearied, narrated with a freshness and, by force of some subtle sympathy in the mind of the narrator, with a vividness which invested the stale facts with a wholly new interest? We think Miss Parr has accomplished just this in the story before us.... We venture to assert that no one will read these volumes through without a conviction that his trouble is repaid, that the picture he has so often studied is somehow hung in a new light."

ATHENÆUM.

"The stirring tale has, perhaps, never been more creditably narrated than in this instance."

MORNING POST.

"Miss Parr has executed her task admirably; she has kept a stern watch over the temptation of her own enthusiasm; she has even refrained in instances where the coldest might find an excuse for fervour from exalting her subject beyond the limits of the most carefully-weighed evidence, and the strictest accuracy of statement. A preliminary chapter, in which she sketches the condition of France during the childhood of the Maid, is an admirable specimen of her power of condensation, her clearness of expression, and her picturesqueness of style, even when brevity and terseness are essential to her purpose."

READER.

"There is much to charm the reader in this work; the feeling is refined; and the whole tone is mingled with that sadness which touches the hearts of all, and that abhorrence of ignoble actions which stirs the spirit with a like sympathy of indignation."

EXAMINER.

"A charming idyll is the story of Joan of Arc as it is told by Miss Parr."

PRESS.

"Miss Parr has written in an agreeable style a life of Jeanne d'Arc, which undoubtedly will take a prominent place in our biographical literature. She is well acquainted with the history of the times in which her heroine lived; and her work is trustworthy, as it is based on the collection of authentic documents concerning the Maid of Orleans, published by the Society of the History of France."

MANCHESTER GUARDIAN.

"In two volumes, which read more like a beautiful romance than sober fact or serious history, Miss Parr has inscribed a monograph which will be perused with intense interest by a very wide circle of readers. In no other English work is the narrative of Joan's extraordinary career so faithfully or thoroughly written. Very admirably has the authoress condensed and used her materials, weaving them into a story as thrillingly tender, as touchingly real, as ever we read."

SMITH, ELDER & Co. 65, Cornhill.

LONDON, SATURDAY, AUGUST 25, 1866.

LITERATURE

Memoirs of Charlotte Corday, founded on authentic and unpublished Documents—[Mémoires sur Charlotte Corday, &c., par M. Adolphe Huard]. (Paris, Rondiez; London, Hachette & Co.)

THE London papers of the 23rd of July, 1793, contained a report of the debates in the French Convention on the 9th of the same month, and also, rare sample of "latest intelligence," a paragraph to the effect that, on the 14th of the same July, the notorious Marat had been killed by a blow from a dagger delivered by a young woman who encountered him on his way to or from the bath. Two or three days later the public were informed that the young person's name was Corde, or Cordé, that she acknowledged and justified the act, and that she had died like a heroine. Thus much being said, the English public heard no more of the matter. Scraps of foreign intelligence were flung to them from Mentz, Valenciennes, and more distant places, while home news was confined to records of the gay doings of our then young princes, of the whereabouts of great actors, and of the outpourings of Charlotte Smith and her equals in minstrelsy of the mildest quality.

Princes, players, warriors, poetasters, statesmen, quacks,—of all these but two or three remain on the surface to challenge public notice. Among those whose names still live there is not one that excites our interest and sympathy in an equal degree with Marie Anne Charlotte de Corday d'Armont. She was not a peasant girl in a *Cauchoise* cap, as fanciful artists have depicted her, but a noble daughter of one of the most ancient and noble families in Normandy. She was noble by blood and by intellect. Among her ancestry were a treasurer of France and the youngest sister of Corneille.

Up in grave Normandy her father, a decayed Norman noble, lived in a poor house with a wife, two sons and three daughters. His actual revenue was but 1,500 livres a year—60*l.*! Some addition to this he made, but by what means is not now known. This gentleman was named François de Corday d'Armont. The first name was that of his father; the second was a little territorial addition, *à la façon de Normandie*. With all his poverty he displayed a shield of arms, *sable*, three chevrons, disjointed, or; the legend "Corde et ore." He was a grave and gentle being, making (with his wife) great sacrifices for his eldest son, and teaching his other children to aid in the aggrandizement of the heir of the family. "It was his custom to place his money in a drawer open to all his children. He told them the amount, to what use he intended to apply it, and by such means he fully accomplished his ends. He rendered them acquainted with the modesty of his resources, and with the necessity for the strictest economy, that those resources might suffice for the wants of the household." In this household, Marie Anne Charlotte de Corday d'Armont was born in 1768, the second daughter. She was descended from the youngest sister of Corneille. This, however, obtained less consideration, probably, for her, in the convent where she was educated, at least brought up, than the fact that her father was a gentleman. Her convent life at l'Abbaye aux Dames was not a strict, secluded one. There was a liberal lady abbess, who allowed her pupils to read Rousseau, Raynal, and similar expressers of free thought. When the most beautiful of the daughters of M. de

Corday d'Armont came from the convent (on the suppression of religious houses in 1790) into the world, and began to see its vices and its miseries, she failed to share in her sire's royalist sentiments, was not sure that it was right to drink the health of a weak king, and she set no more value on the dear distinctive *de* before Corday, than she set on anything which had not some definite value through profitable use.

She appeared in the world with great personal beauty, playfulness of manner, and irresistible grace, for her endowment. She had a convent character for absolute unselfishness, for being "dure à elle-même," for uncomplainingness. She was as well read in the history of the saints as in that of classical heroes, wrote with so few faults of orthography that we wonder her biographer apologizes for them, and could compose a domestic business letter with such lucid brevity as to show that, as a wife and mother at the head of a household, she would have been a sensible matron, of few words and much promptitude of action.

There was a ready homage for her youth and beauty, and other maidenly qualities, when she came home to her father's humble château farm at Argentan; but she did not regard it. Young poets dedicated verses to her, and young idle gentlemen said pretty idle things to her; but these touched her not. France was then all on fire with revolution, and she had neither eye nor heart but for her country. Her father's sentiments in favour of reform and a limited monarchy fell far short of her own aspirations for a pure, free, and happy republic. We are not quite sure that she was not, at that moment, something of a strong-minded and self-willed young lady; but it is only out of strength of mind and independence of others' will that heroes are made, and fulfil their missions. The old Norman noble, still clinging to monarchy while he supported constitutional changes, had only angry controversies with a daughter who had learnt to think that monarchy was worn out in France, and that Louis the Sixteenth was, at all events, unfit to be at the head of it. These too-warmly sustained political encounters, joined with the father's diminishing resources, led to the withdrawal of Charlotte Corday from the thatched paternal château to the house of an aunt in the city of Caen. This separation occurred in 1792. The constitutional royalist did not spare his republican daughter. "I do not deserve the harsh words of my father," she writes to a friend. "It is not out of a spirit of contradiction that I do not share the opinions of my friends and relations. I see differently from what they see, because my conscience dictates to me the contrary of what they think." In the same letter she says of the King, "I have no feeling of hatred against him; quite the contrary, because he is full of good intentions; but, as you yourself have told me, Hell is full of good intentions, and is none the less Hell. His weakness is a misfortune to himself and to us." As the perils of France increased, Charlotte Corday recognized the prudence, but not the patriotism, of men who emigrated, and who, like her brother, went and waited at Coblenz. At the execution of the King she "shuddered" (as she wrote to Mdlle. Rose du Fayot) "with horror and indignation," and almost despaired of the commonwealth, the leading men of which sought by such means to establish their power. Her frankness startled some of her more discreet friends, to the monition of one of whom she answered, "One can die but once! but what fortifies me in our present perils is that no one will lose by losing me. Besides,

I have never valued life but by the good use that might be made of it." The idea of sacrificing herself in accomplishing some act by which her country might be saved seems to have taken possession of her mind at an early period. Her heart was altogether with the Girondins, and she did not affect to conceal her detestation of the Mountain and of Marat. To a young friend who once found her in tears and asked her why she wept, Charlotte Corday replied, "I weep over the misfortunes of my country, of my relations and of my friends. . . . As long as Marat lives there will be no security for the friends of law and humanity."

When the Mountain declared war against the Girondins, and eighteen members of that more moderate republican party took refuge in Caen from the death that menaced them in Paris, the feelings of the young enthusiast became more excited than ever; but she kept them more under control. When one of the refugee Girondins jokingly called her "the fair aristocrat," she answered, "You judge me to-day, Citizen Pôthion, without knowing me. The time will come when you will know me better." As no one dreamed of the deed, neither Pôthion nor any one else thought her capable of committing it. Even when it was consummated, "People here in Paris"—she wrote from her prison to Barbaroux—"are unable to conceive how a useless woman, whose long life would be good for nothing, can unreluctantly sacrifice herself to save her country."

Charlotte Corday's resolution to make this sacrifice was finally embraced when the volunteers of her district were about to march to Paris in support of the Girondin party. She reflected that in such a matter many valuable lives would be certainly lost, and she thought that the Mountain would be overthrown if Marat were destroyed. That destruction she took upon herself. Serenely, but with intent unalterably fixed, she made her little preparations. She left a letter for her father, asking his pardon for an act of disobedience in departing without the sanction of parental authority. With full sense of the almost certain death that awaited her, she had contemplated the bare possibility of escape, and had resolved, should the opportunity present itself, to take refuge in England. At another moment she thought that she might save her name if, after destroying Marat, she were herself to perish at the hands of those who might hasten to avenge him. Ultimately, however, while concealing her intentions, she took a passport and engaged a seat in the Paris diligence in her own name. To one young acquaintance only she used the words at parting, "Do not forget me, little friend; you will never see me again!" When bidding farewell to Madame Malblâtre, she took that lady's youthful son in her arms, kissed him tenderly, and bade him love well his mother and his country! The youth grew to be an old man, dying in 1851. He was, we are told, "the envy and admiration of his neighbours." Charlotte Corday's last kiss rested on his brow, and people learned to look upon him "as if that brow had been marked by the finger of an angel."

On the 9th of July, 1793, the young Norman maiden left Caen, in the public stage, with various other passengers, all Montagnards, among whom she found herself a stranger sunk in reverie. "I seemed to awake," as she afterwards wrote, just previous to her trial, "only as we drew near Paris. One of my fellow-travellers," she adds, "mistook me for the daughter of one of his old friends, attributed to me a fortune which I never possessed, addressed me by a name . . . I never heard,

and at last offered me his own fortune and his hand!" Charlotte Corday's mind was not attuned to such low comedy as this, and she dismissed the gallant Montagnard and his suit. "At night," she further wrote, "he sang plaintive songs, provocative of sleep. We parted, at last, in Paris; I, refusing to give him my own address or that of my father (of whom he professed to wish to ask my hand), and he in sullen humour!"

We need not follow Charlotte Corday to her modest "Hôtel de la Providence," in the "Rue des Vieux Augustins," where the room which she occupied for two or three days may still be seen. We may observe, however, as a singular coincidence, that on the day of her arrival in the capital (11th July, 1793) the *Chronique de Paris* contained a reference to the indisposition of Marat. "If he happens to die," says the journalist, "some secret motive would be assigned, for every one knows that the death of great men has always something extraordinary in it." A young girl hanging up her pink slip and other little effects in the closet of a third-rate hotel; occupying herself with rendering a good office in behalf of a poor lady, her friend, in Normandy; calmly buying a kitchen knife in a sheath, at the Palais Royal, for a couple of francs; and then sitting down to compose a long address to the French people, to be read after the deed and her own death, was the malady of which Marat was unconsciously dying. In that address she justifies the act then resolved on, and exclaims, "Oh, my country! thy miseries tear my heart. I can offer to thee nothing but my life, and I render thanks to heaven for the liberty I enjoy of disposing of it. . . . Let not my relatives and friends be molested; no human being knew of my design. I add the certificate of my baptism to this address, to show what may be effected by the feeblest hand joined with the most complete devotion. If I fail in my undertaking, Frenchmen, I have shown you the way. You know your enemies. Arise, march, and strike!"

Many a foreign explorer of Paris has traversed the distance between the Rue des Vieux Augustins and the Rue des Cordeliers (now the Rue de l'École de Médecine), which Charlotte Corday traversed on the 13th of July for the last time, after her repeated attempts to obtain admission to Marat. Alone, unsupported, with her resolve in her heart, the knife in her bosom, and her address of justification at its side, she almost forced her way into the room of the demagogue, where he lay in his bath, resigned, if not willing, to hear the important political intelligence she professed to bring with her. She seems to have anticipated Lamartine's objection to her being considered a spotless heroine on the ground of her obtaining admission under a false pretence. She herself, in a letter written after her arrest, described the pretence as "*perfidie*"; but she quoted Raynal, who authorized craft, duplicity, falsehood, anything in fact, whereby to circumvent a tyrant. Moreover, she was anxious to despatch the great scourge of France before the 14th, which was the festival of Liberty. As the two remained face to face, Marat seated in his bath, with writing-desk and materials laid across it, Charlotte Corday standing near, it was not till he had repeated more than once his design to send various persons in Caen under the knife of the guillotine that all her energies were braced, and with one blow she drove the knife through the "*clavicule*" into one of Marat's lungs. There are various reports as to the cries he uttered and the last words he expressed; but Charlotte Corday seems to have stricken him instantly speechless (save one shriek for help), if not instantly dead. Her own account, calmly rendered, was

that he spoke no word after she had stabbed him; none, at least, that she remarked. The great avenger, as she was called by some, was sufficiently calm to have remarked any incident of speech or action, and was calmly moving from the room when her passage was opposed by various individuals, by whom she was treated with a barbarity which she neither avoided nor complained of. That quiet passiveness and that gentle character never quitted her. Neither when conveyed through crowds eager to slay her nor when before the Courts of preliminary examination or final trial did she for a moment lose the support of that courage which was founded on her conviction of having fulfilled a perilous duty. She assented to most of the depositions of witnesses as being true, and when these documents were read over to her, she pointed out, with singular clearness of memory, where they differed, even in very minor expressions, from the testimony actually rendered.

Although the Mountain asserted the atrocity of the crime, the criminal was not treated with any great measure of rigour before her death. She underwent worse treatment at the hands of the ballad-singers. While those who had seen her were wondering at the great consummation effected by so fair a creature, the street-corners were re-echoing a new song hastily made on the subject, to the air of '*Cœurs sensibles*,' from '*Figaro*,' in which was this verse:—

Ce coup qui perce notre âme,
A jamais, d'un vif regret,
Part de la main d'une femme
Abandonnée au forfait.
Escan crâ cette infâme,
On y voit en chaque trait
Du tentateur le portrait. (*Bis.*)

But while the populace was disparaging her beauty, and likening her only to her father the Devil, Charlotte Corday, previous to her trial, was engaged only in justifying her motives and absolving all suspected persons from the charge of complicity. "I never hated but one human being," she writes in one of her letters, "and I have shown the intensity of that hatred; but there are a thousand whom I love far more intensely than I hated him." In another, written the day before her trial, which was on the 17th, she says—"I have no need to affect insensibility in my present condition, for up to this instant I have not felt the slightest fear of death." And she knew how near that death was, for she says: "To-morrow (the 17th), at eight o'clock, I am to be tried; by midday, probably, I shall have lived, to use the old Roman phrase." Lamartine has given one of the letters she wrote to her father. In another she trusts he will not be molested on her account, and in a message to her friends she says, "I only ask of them prompt oblivion. To sorrow for me would be to dishonour my memory." And she reiterates her fearless readiness to die, "not that to die is everything; it behoves us also to die becomingly." Then occurred that touch of human nature which betrays the desire not to be shrouded in oblivion. She addressed a note to the Committee of Public Safety, in which she asked permission to have her portrait taken. "I would fain leave that mark of my remembrance to my friends;" and she adds, with a touch of woman's argument that she thought might help to win the consent which without it might be refused, "Moreover, as the effigies of good citizens are cherished, curiosity sometimes seeks out those of great criminals, which serve to perpetuate the horror caused by their crimes." She does not say to which class she belonged; but when M. Hauer stood sketching her portrait during her trial (to which process Charlotte Corday readily lent herself) he was not audaciously risking his head, as some have

thought; he was preparing his picture of '*The Death of Marat*' by order. The portrait of Charlotte Corday, which he commenced in Court, he continued (but did not finish) in her cell, till the work was interrupted by the arrival of the executioner and his assistants. The least-agitated person was the one condemned to death. With the artist she spoke unreservedly of the deed she had done as one strictly lawful; and then turned to Samson to undergo that "toilet" of the condemned, which has been illustrated by Mr. E. M. Ward in one of his happiest pictures. M. Hauer's unfinished portrait, to which he added something after his sitter's death, is now at Versailles, with a guarantee of its authenticity.

There was but one moment before death when Charlotte Corday lost her self-possession. It occurred when it was insinuated that a woman so young and inexperienced must have been the tool of others. To be that would have sunk her to the level of an assassin, and she repelled the idea with equal energy and horror. Her bearing on the way to execution has often been described. It was that of a heroine whose calm conviction of having fulfilled her mission gave her adequate support. She neither feared nor scorned the multitude that assailed her with outrages during her passage of two hours. The little white cap she had made in prison covered the top of her short-cut chestnut hair, and her white frock, partially covered by the red mantle or robe, indicating a parricide, were often spoken of, in after times, by those who witnessed with wonder the supernatural tranquillity of the wearer. Robespierre, Danton, and Camille Desmoulins saw her pass, from the same window; the persons, if not the locality from which they witnessed the passage of Charlotte Corday to death, have been preserved in Mr. Ward's picture on the subject. They looked on her without triumph; they had heard, perhaps, that she called the day of the deed for which she was about to suffer "the first of the new era of peace," and they may have had forebodings of that course of things which did not leave the longest survivor of them alive in the July of the following year. Samson himself, the then hereditary chief executioner of Paris, was subdued by the gentleness of his "patient." When she expressed a wish to wear her gloves, he consented, but added, "It is not necessary; I will tie your wrists without hurting you in the slightest degree." He taught her how to sustain herself in the cart so as to avoid the shocks of that springless vehicle; and when, on reaching the Place de la Révolution, she turned her head to look at the guillotine, he hurriedly placed himself between her and the hideous object; but she said, in her sweet, low, steady voice, "Let me look on it; my curiosity is natural; I never saw one before."

All accounts agree in the unaffected courage with which she submitted to the terrible death which she accepted beforehand as the result of her act in behalf of her country. "She is the Judith of France!" exclaimed her uncle, the Abbé de Corday, when he heard of her deed. "She merits a statue," said Adam Lux, the Conventionalist, "on which should be inscribed, 'To one greater than Brutus,'—a sentiment for uttering which the member for Mayence perished on the same scaffold. "She has ruined us," said Vergniaud, "but she has taught us how to die!" To these comments added that of Madame de Lamoignon, an old Royalist, as Lord Byron called her in the *André*, "the old lady who had seen the guillotine in the old days."

of one of the executioner's assistants having, as he held up the head of Charlotte Corday, smote it with his hand on the cheek, and of that cheek having blushed with indignation, a theory has been advanced that sensibility does not immediately die with the body, when violent death kills the latter by decapitation. The German anatomist, Sömmerring, appealed to the above incident as a "well-known fact," witnessed by many people, in proof of the theory of sensation after death by beheading. Dr. Sue indorsed the theory, the more readily, as he says, the cheek of an ordinary corpse will not redden by being struck, and that, when the head of Charlotte Corday was held up, it was only smitten on one cheek, but that both cheeks blushed with shame, a perfect proof, says Dr. Sue, that "after decollation there is undoubtedly in the brain some remains of judgment, and in the nerves remains of sensibility." An equally illustrious man, Cabanis, declared that he did not believe a word of the theory of his celebrated colleagues. Cabanis, in a learned dissertation on the subject, further stated, that a medical man of ability, a friend of his, followed Charlotte Corday from the prison to the scaffold; that he never lost sight of her for a moment; that she turned slightly pale on ascending, but that her face soon shone more beautiful than ever; and that as for the reputed blush mantling her dead cheeks when the hangman struck them, he saw nothing whatever of the sort. Dr. Leveillé also discredits the story; but he is not prepared, he says, to assert that the recently dead cheek, still warm, might not have reddened when struck. A blow, he thinks, might arrest the downward flow of remains of blood in the small vessels, and thus produce a momentary redness; but as for judgment or sensibility being there, or both cheeks blushing when only one is struck, he wisely rejects all such conclusions as sheer nonsense. Between these statements it is easy to choose, and they form a curious portion of M. Huard's book.

The author does not notice the assertion of M. Thiers, that at the time of Marat's death his colleagues were utterly weary of him. They certainly evinced great regard for the good fame of his destroyer when they allowed the medical report to be published which silenced those who had assailed the reputation of Charlotte Corday. That reputation is not at all helped by M. Huard's hyper-laudation. "La vierge de Normandie," and "L'ange de l'assassination," are tunes which need not be struck at every turn of the lyre. As for the author's assertion that the "heroine of Calvados" was an orthodox Catholic, it is refuted by her own remark at her trial. When asked if she used to confess to a priest of the old régime or to a "constitutional," her reply was, "To neither the one nor the other." She had her own ideas of a pure church, as she had of a pure republic.

The universal human heart has absolved the individual human hand; but humanity does not dream of raising a statue in honour of her who was "greater than Brutus." Malignant imbecility might mistake the memorial of an exceptional justifiable murder for a reminder that murder itself was justifiable. In the sense of public testimony, the Parisians went far enough when Fréron's "guilt" youth" tore down and smashed the statue of Marat in the theatres and other public places. Since then the painter, the poet, the historian, the dramatist, the English actor, and the French novelist have illustrated the sad fate of Charlotte Corday. The English actor, who played her part in "The Heroine of Calvados," the Duke of Angoulême, in 1793; and the French novelist, who wrote "Charlotte Corday," the Théâtre-Français, and began

1834. Our Government prohibited the first, and the French public were not much attracted by the second. Of the fate of Charlotte Corday's family, M. Huard tells us nothing. We can only add, of our own knowledge, that a cousin, some years younger than Charlotte, died, in 1864, at the age of 89, in her Château de Rénouard, near Vimoutiers (Orne). This "Douairière De Corday" remembered Charlotte as one who was grave or gay, reserved or loquacious, serious or laughing, as the time warranted; but ever with a love for children and their companionship; and with (as she was wont to say) "the manners of a well-bred young lady, according to the usages and traditions of the De Corday family."

South Australia: its Progress and Prosperity. By Anthony Forster. With a Map. (Low & Co.)

Mr. Forster has produced a comprehensive and elaborate statement of the history, resources, and social condition of the colony of South Australia. "The population of Adelaide," he observes, "is at present about 22,000, and of the country districts 133,000. It is a pleasing indication of progress in a right direction that the rural population has largely increased, while the population of the city, from 1855 to 1861, had absolutely decreased from 21'44 per cent. of the whole people to 14'43 per cent." In the chapter entitled "Exploration" the author, without evincing any wish to disparage the achievements of the late Governor of Jamaica, gives a brief account of Mr. Eyre's disastrous and profitless journey from Fowler's Bay to Thistle Cove, which differs materially from those romantic versions of the affair which have taken possession of the popular imagination. In 1840 the colonists of South Australia resolved to send out an exploring expedition, for the purpose of opening up a communication between the southern and western colonies; and in due course they committed the control of the expedition to Mr. John Edward Eyre, a gentleman who "had been engaged for several years in conducting expeditions, in charge of stock, from one colony to another; and had acquired, from his experience in the bush and general intelligence, prudence and enterprise, an eminent fitness for the service now contemplated." Towards the expenses of the undertaking the local Government subscribed 100*l.*, and the colonists, 582*l.*, whilst Mr. Eyre, from his own pocket, contributed 680*l.*, and three horses valued at 200*l.* more. By Mr. Eyre's representations the promoters of the exploration were induced to relinquish their wish for an expedition towards the west, and to accede to his proposal for a northward route. On June 18, 1840, the explorers started from Adelaide, and, after some eight months of toil and disappointment, there was no doubt as to the unsoundness of the considerations and counsel which substituted a northward for a westward exploration. Feeling that he had misled his constituents, Mr. Eyre resolved to make an attempt to discover a more fertile route in the direction originally adopted by a majority of the contributors to the Exploration Fund. With this purpose he started for King George's Sound, and on February 18, 1841, his party, consisting of himself, a seer named Baxter, and six natives, were provided with provisions, a Timor boat, and six sheep, and set out on the following month. The great distress and want of food which they had become acquainted with, and the opposition to their property

attempting to go on. But the case was desperate. In their then exhausted condition there was as little chance of getting back to Fowler's Bay as there was of getting forward to the Sound. Mr. Eyre determined to push for the latter, believing it to be, under the circumstances, the wisest course to pursue." The romantic narratives of this journey represent that at this juncture Mr. Eyre might, with comparative ease and security, have retraced his steps to Fowler's Bay, and that had he been an ordinary mortal he would have done so; but that, since his object was to clear his honour rather than to save his life, he persisted in an onward course, although he felt that each step was in all probability leading him nearer to his grave. Mr. Eyre, be it observed, never gave this melo-dramatic colouring to his own conduct. On the morning of the 28th he was convinced that he had advanced so far that to return was impossible. His only chance of escape from his terrible position lay in an onward march; and with certain death in his rear he fixed his eyes on the faint possibility of escape through perseverance in an onward course. In the night following that day's anxious progress, the overseer, Baxter, was murdered by two of the blacks, and Mr. Eyre found himself left alone with the third native, a man belonging to King George's Sound. The two murderers took a backward route in the direction of Fowler's Bay; the third black, whose fidelity was doubtless in some measure due to his preference for the onward route towards his home, remained true to the European explorer. Here again the romantic versions pause to extol Mr. Eyre's heroism in still resolutely marching onwards with the one black boy, when a man of less determination would have faced about and made all possible haste to Fowler's Bay; but it is needless to observe that the course which would have been suicidal before Baxter's murder had not been rendered less dangerous by that event. Every consideration which pointed out the onward journey as the preferable course for five men, had gathered force from the hideous occurrence which reduced the party from five to two. Mr. Eyre persevered in the one course that offered a chance of escape, and on June 2 he reached Thistle Cove, where he was received on board the French whaler, *Mississippi*, commanded by Capt. Rossiter, an Englishman. Recruited by a fortnight's rest on board the *Mississippi*, Mr. Eyre and the black made the remainder of their journey to Albany, King George's Sound, with comparative ease; and having stayed a few days at the Sound the English explorer returned by ship to Adelaide. "Of his courage and indomitable perseverance as an explorer," says Mr. Forster, "no doubt whatever can be entertained, although his enterprise accomplished little beyond proving that the region bounding the sea-coast along the great Australian bight is of a very arid and desolate description. In some parts of his route, if he had succeeded in penetrating further inland, he would have discovered country of which he might have had a more cheering tale to tell. The distance between Spencer's Gulf and Streaky Bay is now covered with sheep-stations. And recently, at Fowler's Bay, the point at which Mr. Eyre was entreated to return by his Adelaide friends, many thousands of square miles have been taken up from the Government for depasturing purposes; water suitable for stock has already been found there by discovery, and should it thus be found extensively, it would be at a finer pastoral district than any in the colony. And without the necessity of disparaging efforts, the Government regarded with admiration

venture to say that an overland journey between Adelaide and King George's Sound could now be accomplished without any of those disasters to which Mr. Eyre, as a pioneer, was unhappily exposed." That Mr. Eyre, five and twenty years since, possessed the kind of courage and the kind of perseverance requisite in colonial explorers is unquestionable.

A Plea for a New Translation of the Scriptures, with a Translation of St. Paul's Epistle to the Romans. By the Rev. A. Dewes, M.A. (Longmans & Co.)

THE number of those who plead the necessity of a new translation of the Bible rapidly increases; and as long as there are careful readers of the Hebrew Bible and Greek Testament, the advocates of such a work will become more emphatic in their demands. If the dignitaries of the Church of England do not entertain the proposal, those called the inferior clergy and intelligent laymen will be stirred up to bring the matter to a practical issue by organizing an association of scholars and all others who are in earnest about it. There is little chance of the legislature initiating the project, so as to procure an "authorized version." Let a better one be produced by private enterprise, and it will commend itself gradually and surely to general acceptance. It may not be read in churches or chapels, but it will be perused in the family, consulted by scholars, and valued for its fidelity as well as for the light thrown on many obscure passages.

Mr. Dewes has given a plea for a new translation in the volume before us, followed by a new version of the Epistle to the Romans. The plea is wholly confined to the New Testament, though the Old Testament is worse translated. We presume that the author does not understand Hebrew.

With many of his remarks about a new version we cordially agree. The case is earnestly put. The writer shows that the necessity exists, and should be speedily met. His remarks are generally judicious, sensible and appropriate. He sees clearly the principles lying at the foundation of a correct version, and enunciates them well. But his translation of the Epistle to the Romans hardly realizes the true standard. It gives the correct sense of the original oftener and better than the authorized English, but the language is inferior. Mr. Dewes innovates too much, departing from the venerable translation of King James unnecessarily. This is a great error. But he is more paraphrastic than literal, so as to bring out the meaning better, though his paraphrase is often insipid, compared with the noble simplicity of the received version. For example:—

"For I am not ashamed of the glad tidings, seeing that every one who has faith, a Jew especially, a Gentile also, finds in them a Divine Power, which brings him to salvation. For in them there is being unveiled a divine righteousness, which springs from faith, and tends to increase faith; as it is written:—*But he whose righteousness springs from faith shall live.*"—Romans i. 16, 17."

This version is inaccurate in various respects. "The righteousness which springs from faith, and tends to increase faith," is apart from the true sense; and so is the quotation, which is properly rendered in King James's version, but wrongly here, "Let every one set himself in his place under the authorities that are over him," (Romans viii. 1.) is inferior to the common version.

On the whole, Mr. Dewes has not been very successful in the capacity of translator. He hardly possesses the requisite scholarship or knowledge for it. Thus he offers the English

version of St. Matthew xx. 23, and of Acts xvii. 22, wrongly. A better knowledge of Greek would have led him to see that in both cases our translators have given the true sense. His language also respecting the venerable version of 1611 is exaggerated and inaccurate:—"The authorized version of Scripture is always inaccurate; it is very often obscure; it abounds in mistakes, many of them of an important nature; it introduces ideas of which there is no trace in the original, and such ideas as have taken a strong hold of the nation." He combats successfully the injudicious laudation of our noble version by Bishop Ellicott, points out not a few incorrectnesses of Dean Alford, and presents some good criticisms of passages, as in pages 9, 10, in Romans v. 15—19; but more caution should have been employed in censuring and rectifying the same version. We are glad to welcome any contribution towards a revision of the authorized translation, and give all credit to our author for his praiseworthy attempt. Yet it must be said that he has worked out his ideas very imperfectly, and that his knowledge, both of what has been done already, and what still waits to be accomplished, is very limited. "His own translation," he tells us, "is not a specimen of what a translation of St. Paul's Epistles ought to be." Of what use is it then? His answer to our question is, to show that it is possible for a translation to be readable, yet trustworthy—intelligible, yet faithful. This is feebly shown.

NEW NOVELS.

Aunt Margaret's Troubles. By "a New Writer." (Chapman & Hall.)

WHILE perusing the opening pages of this novelette we were moved to suspect that it would be insufferably level and monotonous. We persevered, however, and found that the author, besides having a pure and correct style, has some qualities which may enable her to write a much more attractive story than that which is now under consideration. She is unfortunate in having chosen rather a hackneyed theme, that of an amiable but commonplace girl supplanted at every step in life by a less conscientious but more striking and resolute sister. This common idea—(common we mean in fiction; is it really common in actual life? let our fair readers answer the question)—might have been invested with a species of artificial novelty by the accessories of incident and scenery. As it is, there is nothing done to give it a fresh aspect, and we are obliged to seek our author's merits in the details rather than in the general effect of her work. Two great merits, however, certainly exist, and cannot be ignored by those who read the book through, though people who only skim it might fail to discover them. The first is, that the characters are well drawn, and contrasted with satisfactory distinctness, so that the thread of the story might be taken up, and the same personages might be carried through a longer career and more varied adventures, without any risk of our mistaking or confusing them. The other is, that the author never anticipates her catastrophes, but works up to a crisis with a cautious and self-denying reticence which leaves the thunder-clap to burst with full and overwhelming force. We may add, that she writes with that genuine feeling which is necessary to enlist the sympathies of the reader; and that she has the art of making revelations by a delicate touch, so as to avoid interrupting her narrative by mechanical explanations. For a "new writer" these are by no means small qualifications; and if the author can put more life into her next book, we have little doubt that

she will be rewarded by a very satisfactory success.

Thrice His: a Tale. 2 vols. (Bentley.)

IT is not till after two volumes-full of weary puzzlement that we have succeeded in grasping any definite idea either of the purpose of this book or the meaning of its title. On this latter point, indeed, so great is the mystification, that till the last chapter we have remained perfectly unconscious who it is that is thrice whose, and how and why he or she is so even then. A "great, clever, strong-minded, sceptical woman," aged twenty-one, and married in the bargain,—afflicted with the painful monomania of allowing her "slender fingers" to stray lightly over one gentleman's "magnificent brown beard, thrilling him with an almost painful sensation,"—stretching up her arms to a second, and allowing him to hold her "for an instant to his breast," and press his lips on "her soft silk hair,"—and hiding her blushing face (but this before marriage, and on the eve of accepting another with whom she is desperately in love) on the breast of a third, "in a wild transport of thrilling caresses":—such a character is sufficient excuse for inability to decide exactly who the blessed being was in whom this triple property was vested. But all this signifies comparatively little. The author has a perfect right to call his "tale" what he likes; and it may even be that in the happy euphemism of 'Thrice His,' he has avoided the alternative of a far less pleasant title for his plot. His object in compiling it at all is much more puzzling. *Prima facie*, we suppose, novels may be regarded as written to amuse the reader, and by so doing to pay the writer; but the author of 'Thrice His,' slight as his knowledge is of human nature, can hardly be assumed, without insulting either him or the novel-reading world, to have had such ends as these in view. A tale whose two component parts are grotesque and vulgar caricatures of London society, and such a picture of garrison life in India as might well make a woman blush to have experienced it, can only be classed among tales which are not only unamusing, but, except for their ludicrous unreality, would be cruelly mischievous. Happily for both London society and garrison life in India, the author of 'Thrice His' knows nothing of the one, and has seen only the exceptionally worst side of the other. The ladies and gentlemen who frequent Hyde Park will fail to recognize themselves in any of the elaborate portraits over which he has wasted pen and ink, no less than his Cheltenham neighbours will with righteous indignation repudiate the theory (which, if he means anything, he means to suggest) that officers' wives who have been in India and escaped ruin have reason for supernatural thankfulness!

We have no wish to say more about this silly production; for luckily it is too silly to be anything worse. The first chapter kills off the only pleasing character in the book; and, judging from analogy, all his charms are owing to the fact that the author has not tried to portray them. The last chapter provides a welcome quietus for a heroine who is too pitiable to blame, and too blamable to pity. The two or three hundred intervening pages are filled with impotent endeavours to depict real life, only worthy of being associated with such remarks, made in all seriousness, as this,—that "Conscience makes cowards of us all,"—a by no means hackneyed quotation from some rather clever writer."

Shot! or, the Ghost's Seat at Drury-st. By Frederick Sheridan. 2 vols. (Newby.)

This novel resembles nothing so much as one

of those patchwork quilts which used to be the glory of good housewives, and a standing piece of needlework for the women in the family. There is a centre-piece—a murder. Two men love the same woman, and one of them is found shot dead in a lonely place called "The Ghost's Seat." Round this centre there is a border of episodes concerning different people, without much connexion with each other, except the author, who narrates the story with much sentimental emphasis and circumlocution. 'Shot!' will hardly repay the time spent on its perusal, but it has no worse fault than that of being utter nonsense.

History of a Poor Musician—[*Histoire d'un Pauvre Musicien* (1770—1793), par X. Marmier]. (Hachette & Co.)

THIS is one of the innocent French novels which are welcome as a change from the tales of guilt and sensual excitement with which the press of Paris has too long teemed (not without their baleful effect on our own novelists). But, as we have more than once had occasion to remark, when our neighbours aim at "peace and decency," they have a tiresome tendency to become mawkish. Betwixt the devilled bone, spiced with extra doses of cayenne, to stimulate the faded palate of the drunkard, and the chicken-broth or apple-tea which the feeblest convalescent rejects as too sickly by half, there is a wide range of wholesome and toothsome food. The tale before us is too near the insipid extremity of the scale. Yet it is not without some favour and prettiness; telling, as it does, how an orphan boy, belonging to Freiburg in the Breisgau, became, after much unkindness and suffering, a small musician, married a good and pure and pretty girl, and lived for a while happily. The main interest of their lives was a remembrance. On her entrance into France, the ill-starred Marie Antoinette noticed Franz Wagner; this was never to be forgotten, and the two, years afterwards, made a long pilgrimage to the Trianon to present to the Queen their simple offerings of grateful recollection, and to have their loyalty kindled anew by her gracious reception. Later, when the sky darkened and the storm burst on France, these devoted and humble friends of the Queen had a sad share in the trials of the tempest. The tale ends, as it began, in a melancholy strain. If not vigorous, it is one which can be given to and read by the young in perfect security, and which may be further recommended as being written in reasonably elegant French.

The Life of the Marchesa Giulia Falletti, di Barolo: Reformer of the Turin Prisons. By Silvio Pellico. From the Original by Lady Georgiana Fullerton. (Bentley.)

THIS zealous woman—by birth descended from Colbert, the famous French Minister, and married to a Piedmontese nobleman—deserves a place in the Golden Book of Female Beneficence. The pages of the volume before us contain many a trace of zeal without judgment, of super-titition as distinct from living, reverential faith; but these must be compared with those of more amusing and showy tomes, in which the loves and the hates, the sentimentalities and the witticisms of the De Tencins, Du Deffands, and a bevy of brilliant Frenchwomen are chronicled—if we would fairly estimate the comparative values of their subjects. Like her amiable yet feeble memorialist, Silvio Pellico, La Marchesa Falletti was under an influence not to be contemplated without mistrust—that of the Jesuit party in the Romish Church; and the style of the author of 'Le Mie Prigioni' when he treats of her has a honeyed

and adulatory tone,—no doubt explicable by his gratitude to one who was a protectress and friend to him on his returning home after the dreary years of his Spielberg captivity,—no doubt in some degree national, but also sectarian. The deeds, however, of the Marchesa speak for themselves. If vainglory was, in her, veiled by implicit submission to those who held the keys to her heart and conscience,—if, like our own Elizabeth Fry, she may have sought to be a power and a personage among the great ones of the earth,—she devoted time and energy (the last including pecuniary bounty) to one of those tasks through which nothing but a high, sustaining sense of duty can carry a refined woman, rich (as we are assured) in intelligence, in taste, in everything that makes life easy and bright. The poor creatures whose condition, physical, moral and spiritual, she set herself to improve were probably no more manageable than those sketched by our own "Prison Matron" in her painful book; but she seems never to have wearied in trying to do them good; and, by her general patience, firmness, beneficence, and sweetness, to have gained a real ascendancy over them. Sometimes, indeed, she had recourse to expedients (by herself afterwards humbly denounced as mistakes) which were more effective than sound in point of principle, as the following entry from her journal will prove:—

"There was in the prison a woman who was subject to frightful paroxysms of rage. I have improved her a little, and acted one day in a manner which, by God's blessing, succeeded; however, when I afterwards reflected upon it, I came to the conclusion that I had been imprudent. It happened that a poor creature, mother of a large family, told me one day that she was a laundress, but that during a long illness she had been forced to part with all the implements of her business. I bought her some new ones, and, as it happened just then that the prisoners were in need of a washerwoman, I mentioned to them this poor woman, and proposed that they should give her their things to wash. I said that as she had not been able to attend to her business for some time, the work would not, perhaps, be very well done the first time, adding that it would be a great charity to put up with this for once, and fair that those who had greatly to depend on the charity of others should be willing to exercise it with regard to those who needed it also. They all without exception agreed to the proposal, and gave their washing to the poor woman. It happened as I had foreseen. The things, when returned, were not well got up. They grumbled a little, but when I begged them to give one more trial to the poor laundress, all consented except the passionate woman I mentioned. She swore she would never employ her again, and broke out into a torrent of curses and imprecations. I took no notice of her then, but the next day, hoping to find her pacified, I asked if she would not make a little sacrifice for that poor family. 'No,' she rudely answered. 'Very well,' I replied, 'nobody wishes to force you to do an act of charity. You are free to do as you like.' Then, turning to the others, I said, 'As I recommended to you this poor laundress I will pay your washing this week, and as you kindly consented to give her another trial, that of next week also. With you,' I said, turning to the passionate woman, 'I have nothing to do. You refuse to help a poor family, I am not obliged to assist you.' Upon this she began to swear and to accuse me of injustice. I went into the adjoining room and commenced the catechetical instruction. It was in winter. My angry friend had a *cassella*, which she was in the habit of lending me, and I used to requite the obligation by providing her with hot cinders for the rest of the day. In spite of her anger, she bethought herself of sending me the *cassella*. I declined to accept it, saying that I had rather not receive a service from one who only cared for her own interest. Then she became furious, and screamed like a mad woman. I went to her, and suffered no one to accompany me. Her

rage only increased; we were alone together in a little room, and she told me to go away or that she would strike me. She was tall and strong, and the threat was a serious one. There was a tub full of water and a jug near me. I filled it, and said very quietly, 'My child, I have heard that cold water is an excellent remedy for the sort of attack you labour under.' She exclaimed that if I threw the water upon her I should repent of it. I did so at once. It took her so much by surprise that she did not step back, but still went on howling. I told her to be quiet, and, as she did not comply, I again threw a jug full of water in her face. This time she was completely subdued, and left off screaming. I took her by the hand, and said, 'Come now, let me help you to undress and get into bed.' She let me lead her away like a little child. I sent her a basin of hot broth, and made her drink it. She became quite gentle, begged my pardon for her violence, and entreated me to let her give her washing to the poor laundress. I granted the request, but did not offer to pay for it as I had done for the others. I made use, however, of her *cassella* when she sent it to me, and from that time forward there was an end of those frantic fits of anger."

If freaks like the above were frequent, or, supposing them few, if they transpired to an outer world year by year increasingly adverse to the body of religionists to which the Marchesa Falletti belonged, the fact may explain the attacks made against her,—proceedings here, of course, stigmatized by her friends as the cruel calumnies of latitudinarian sceptics,—which ended in her being prohibited by Government from taking further part in the works of mercy she had originated and helped forward. But she appears to have shown neither rancour nor resentment. When one avenue of good works was closed to her, she made another for herself. During political convulsions, which must have been to one of her opinions abominable, she was resigned, courageous, and helpful. During the visitation of the cholera (then more dreaded, and even less understood, than it is at the time present) she was an active and fearless nurse of the sick. To the last, her interest in what she held to be the duties of life never failed her. She died—an aged woman, after long years of widowhood—peacefully: she was followed to her grave by many regrets.

The translation of this book and the collection of the matter supplementary to Silvio Pellico's fragment have been accomplished with correctness, grace, and good taste by Lady Georgiana Fullerton.

The Company and the Crown. By the Hon. T. J. Howell-Thurlow. (Blackwood & Sons.)

IT appears from the Preface of this book that Lord Dalhousie, Lord Canning, and Lord Elgin were college friends, and that the author was private secretary to Lord Elgin. We have thus a clue to the purpose and name of the work, both which would be otherwise incomprehensible. The unfortunate Company is dragged in to be sacrificed for the glorification of the Crown, *alias* the three viceregal friends, of whom the author was the *fidus Achates*. The Company, according to this authority, was a very grovelling animal, whose only ambition was "that her stocks should be quoted so superior to par as to enable bondholders to realize colossal fortunes." India under the Company "was an orchard of pagoda-trees for England's younger sons to shake." The peculiar disease of the vicious old Company was that well known to be common among certain other savages, viz., "earth-hunger." All the unrighteous annexations for the last century, including, we suppose, those perpetrated by Lord Dalhousie, were and are to be charged on the East India Company; and the Imperial Government, far from

abetting such evil deeds, would have prevented them had they happened within its beat. A private secretary must, of course, be better informed than other men; otherwise we should think the reverse of all this to be the truth. Our idea was that Governors-General made war and annexed territories, while the East India Company deprecated such proceedings. Not to go back to the old times,—which, however, afford equal support to the opinion just enunciated,—we would ask, whether it was not Lord Auckland and Sir J. Hobhouse who spent fourteen millions in trying to annex Afghanistan, and the Company that protested? Lord Ellenborough and Sir Charles Napier annexed Sind; while the Directors were recalcitrant. The famous proclamation of November, 1858, which Mr. Thurlow rightly calls the Magna Charta of India, is due to the Conservative party; but it was scarcely issued when it was falsified and violated by Lord Canning and Sir C. Wood in the annexation of Mysore. It is curious to see how this reprover of the Company's "earth-bunger" speaks of this last flagrant injustice:—

"In 1832 the British Government again stepped in to quell the civil strife engendered by the utter incapacity for ruling of which the Raja of its choice had afforded more than ample proof. Within a few years of his accession, this young prince had squandered upwards of two millions sterling of accumulations, while the revenue and public debt had both increased until all classes bordered on despair. The country then assumed by treaty has since been held and governed for that country's good, the Raja being treated with great financial liberality and the political consideration to which his rank entitled him. The executive, however, was taken from him, and intrusted to a mixed commission of soldiers and civilians; and the constant intrigues of more than twenty years to recover independence have hitherto been met by us with silence or refusal. Under English sway that promised land of India has attained a measure of prosperity unrivalled in the East. Her woody slopes, of many thousand feet in altitude, and many thousand miles in area, now produce coffee and cinchona; and while the tiger and the leopard of the jungles are rapidly receding before the constantly-advancing strides of European planters, the lofty plateaux have become the sites of peaceful cities, of which the climate is described as follows:—'At Bangalore, about three thousand feet above the sea, the thermometer has been found not to rise above 82° in the shade; and the annual average at noon is 76°. The nights are never hot; and while the evenings and mornings are at all times cool, there is an elasticity in the air at once invigorating and delightful.' Now it happened that the Hindoo Raja of this fruitful country, when bargaining for payment of his debts and some ready money, executed a testamentary instrument in favour of the Queen of England, failing lineal descendants of his own; but the childless ruler, now verging on extreme old age, has since that time so far modified his views as to request the sanction of the paramount power to an adoptive heir. The much-vexed question of adoption thus threatened to destroy the budding prosperity of Mysore; but, considering the extent to which European capital is invested there, and the daily increasing national value of the resources of the country, the Government of India, both in England and in India, steadily and very properly refused to release the Raja from his plighted word; and there is now no reasonable doubt that, whenever His Highness shall shake off this mortal coil, his territories will tranquilly become incorporated with our own."

If Mr. Thurlow had studied the subject at all, he would have found out that the two millions accumulated by Purneah were the great cause of the revenue collapsing when the young Raja was put on the throne. That large sum was raised by grinding exaction, and the impoverished ryots were then rendered unable to pay what would otherwise have been but a

reasonable land-tax. The assertion that the country was "assumed by treaty" is incorrect. We were only entitled to assume the administration if the sum covenanted to be paid to the British Government should be withheld, and we even then could not assume more than such part as would enable the debt to be discharged. We should like to see some evidence that the Raja "executed a testamentary instrument in favour of the Queen of England," and till that evidence is adduced, we shall take leave to utterly disbelieve the statement.

There are many other things said by Mr. Thurlow about the princes of India which will not stand the test of inquiry; but we shall content ourselves with citing only one more short passage:—

"However this may be, the accumulated experience of past ages shows that ancient public works in India, eloquent as they are as ever-living monuments of bygone dynasties and thrones, as surely paved the way to broadcast misery and want as our remunerative undertakings of to-day prove themselves unerring heralds of enhanced prosperity."

We are sorry that we cannot apply this "flattering unction" to our souls, knowing, as we do, that the gigantic works of irrigation in the Madras Presidency, the tanks and bands constructed long before the date of English rule in India, prove it to be false. A little before, Mr. Thurlow talks of rulers who, like Shahjehan, "exalted the use of taxation in the construction of buildings dedicated to their titular deities," whence we must infer that the author supposes the son of Selim was an idolater, instead of what we should have supposed all knew him to have been, an orthodox Muslim!

There are, then, many inaccurate statements in this book; but there is also an inaccuracy of style which is by no means agreeable. In the very first page, for instance, the soil of Hindustan is said to be "encircled by the British Crown," a strange expression truly. Just below we have "results . . . obscuring . . . general readers," and are told that "the opening for sensation writing," and we know not what besides, "have too frequently been used as frames for highly-coloured pictures," all which obliges us to look up Lindley Murray, and blush "of our ignorance," as in the next sentence we are told men do "on less important subjects." A few pages on we read that "the Viceroy of the hour" is "the axis on which revolve all the countless particles that meet together each day on the Maidan of Fort William." This does not mean, as some simple folk might imagine, that Sir John Lawrence, by exerting a centripetal force, attracts to himself all the dust round Calcutta, but is spoken of certain sorry particles of society, like the "royal brethren from Oude who pollute with their presence the fair retreat of Garden Reach," and who do but metaphorically revolve round the Viceroy, causing him, nevertheless, we opine, as much discomfort as the other more matter-of-fact particles which daily settle on his august visage when he goes forth into the Maidan, or Esplanade.

We cannot conclude this notice without one more extract, which illustrates very well the peculiarities of the author's style. He thus draws the portrait of Sindhya:—

"Slightly exceeding European middle-height, and fleshy enough to cause anxiety to himself, but not to his medical advisers, his square head is set upon a shapely neck resembling, in solidity, some Grecian column destined to support a mighty weight; his chest is adequately broad and deep, and somewhat overlapped by muscular advancing shoulders; his hands and feet are rather larger than the more effeminate extremities of the races of Bengal; while his features, originally small,

have, thanks to betel nut, long lost all delicacy of expression. The head, set upward, appears embarrassed by a downward cast of countenance, while the eyes, uncertain in their glance, are generally unable to regard with fixity the same object. When approached by foreigners of high rank, Scindia's haughty mien, perhaps, inspires a feeling of superiority both to himself and his attendants; yet, if contrasted with the more courteous bearing of some Eastern princes of equal rank and influence, it might be unfavourably read had we not some sterling proofs of loyal disposition to set against the prejudice of personal comparison."

Chewing betel-nut, or, as Mr. Thurlow elsewhere writes it, "betal" nut, imparts a red tint to the saliva, but we certainly were not aware that it deprived the eyes, or any other feature, of "all delicacy of expression." For the rest, we remain pondering over the strange figure of the Maratha Prince, with his square head set on a Corinthian or Attic pillar of a neck, and his body, fat enough to cause inward qualms, but not so obese as to deprive his medical advisers of their serenity; and we cannot but think that the picture of such a personage would be a valuable addition to the Historical Portrait Gallery!

The Regency of Anne of Austria, Queen Regent of France, Mother of Louis the Fourteenth. From numerous unpublished sources, including MSS. in the Bibliothèque Impériale and the Archives du Royaume de France, &c. By Martha Walker Freer. 2 vols. (Tinsley Brothers.)

IN this work Miss Freer pursues her studies of French history with much the same success and very much the same characteristics as marked her earlier volumes. The result is most creditable to her industry, and, at times, to her powers of narration. But the general character of the work is somewhat heavy. There is nothing to raise it above a level of silver mediocrity, nothing that explains very clearly why such a book was written. Considering that the years which were spanned by the regency of Anne of Austria contained such incidents as the rise of Mazarin to supreme power over the Queen and his exile, the victories of Condé and his imprisonment, the Fronde, the day of the barricades, the parliamentary troubles to which the example of England gave serious significance,—considering that such mighty men were at strife, while the future King was looking on and learning his own lessons, we might have expected a more animated narrative, and more attempts at historical portraiture.

Miss Freer's worst fault is, that parts of her book read as if they were in an imperfect state of translation. She gives us phrases so palpably un-English, even when she does not profess to quote, that either her reading has mastered her writing, or she incorporates her authorities in the body of her own reflections. It is easy to trace the original of such phrases as "the most frantic of expostulations," "dissidents," "opined to," "susceptible only under two base passions," "opined as he had been prompted." Such a sentence as "Altogether Mazarin departed little content with his visit" is a schoolboy translation of a French sentence, while we cannot make any sense of the words "a mob of demireps," and of "inspiring their jealous distrust of each other's designs." These little eccentricities break the smooth monotony of a style which presents no striking beauties, but which, except in these places, is fluent and even.

There is no lack of published matter bearing on the subject Miss Freer has chosen, but we

do not see that she has made much addition from sources previously unexplored. If it was only her wish to digest for English readers what has been written either by the contemporaries of Anne of Austria or by the French historians, she has done more than could be required of her. But her numerous unpublished sources throw little additional light on the times and on the characters. They may very often illustrate familiar statements, or correct errors that have crept into general acceptance; but they do not possess that paramount importance which attaches to some lately-discovered MSS., and which reconciles us to the destruction of old theories as we have new ones given us of a more startling character.

We will let Miss Freer speak about one of her chief unpublished contributions to the history of the time:—

"The emotions of Mazarin at this period are jotted down in his Diary. These precious documents, called 'Les Carnets de M. de Mazarin,' bear the impress of haste—they consist, in fact, of the brief entries which the Cardinal made in a note-book, which he habitually carried in his pocket. The notes are chiefly written in the Italian language; when Mazarin was more than commonly moved, he resorted to the stronger dialect of Spain: sometimes, his notes are a strange compound of both these languages—but he rarely uses the French tongue. Mazarin's *bête noire* was Madame de Chevreuse; and of Châteauneuf, and M. de Beaufort, he also demonstrated intense distrust. Of the *menées* of the former he was well acquainted; and dreaded the power of her eloquence, and the force of habit over the mind of Anne of Austria. 'Il Rosso (Condé) states his belief,' writes Mazarin, 'that as soon as Madame de Chevreuse arrives she will cause an accommodation between the two crowns (France and Spain), to the exclusion of any other power. If Her Majesty wishes to employ Châteauneuf to accomplish this, let her speedily inform me. I have no other desire but to live in amity with those whom she may prefer. All that cabal is in arms against me. Il Rosso tells all the adherents of M. de Beauvais, that he will weed out his opponents; at the same time he sends personages to me to ask my friendship, and to promise me marvels! I know, however, that he secretly instigates Beauvais to defame me; and also Brienne and his wife. The said Rosso has said, that it would be expedient to sow distrust between Her Majesty and myself; and to make her believe that I am devoted to Monsieur, and desire to make him co-regent! Il Rosso really hates Her Majesty, and dreams only how he can humiliate her; he, moreover, states that he has the means to do so at his own good time. I am worn out with cares, being mercilessly persecuted—in the first place by Il Rosso (Condé), and by others, who believe that they would make better bargains with Her Majesty, if she were not advised by a person so disinterested and firm as myself. There are certain matters that I dare not discuss, fearing that some evil person will insinuate to Her Majesty that I maintain the maxims of the late Cardinal. In affairs there are always two aspects: if Her Majesty esteems me, considers me able, worthy of belief, and thinks that I give her good counsel, let her acknowledge it; if not, let her make election of another minister, whom she can trust, which would be more to the purpose than to waver in adopting measures. When I have had the honour to offer Her Majesty my opinion, at least she ought to believe that I have given it cordially, and without interested motives."

It is something to be able to follow the guiding spirit of France at such a time through the perplexities of his own mind, to witness the confusion of tongues into which excitement casts him, and even to correct his mis-spelling. Thus, he always calls Madame de Hautefort "Ofort" in his *carnets*, which reminds us of many other stories about his French pronunciation. But it is from these manuscript confessions of his above all that we see the difficulty

and danger of his position. Between the wilfulness of the Queen and the encroachments of the Parliament, between the royal prerogative and the royal house, Mazarin had no easy time. In one of these entries he compares himself to Jonah, and says he would gladly throw himself into the sea of trouble if it would be calmed by his sacrifice.

It is natural that Mazarin should be the most prominent character in Miss Freer's pages, but she is apparently content with the new light thrown upon him by his own pen. She does not attempt any portraiture of him, and she is too much immersed in the relation of his deeds to enter into the secret springs of them. Other personages come out more clearly as they are more simple. A *carte de visite* does justice to the handsome empty faces for which photographers show a natural preference, while the greatest genius is needed to reproduce all the characteristics of the head of thought or action. We do not mean to convey any reflexion on Miss Freer, but she succeeds better with such portraits as Beaufort than with Retz or Mazarin:—

"Beaufort was the delight and *enfant chéri* of the Parisian heroines of les Halles. His handsome face, his vacant but good-natured blue eyes, his long fair hair, which streamed down his back, his jovial spirits, his aptitude in speaking the *argot* of the lowest of the populace, his gallant manner when addressing even the coarsest *poissarde*, and a certain dash and bluster in deportment, rendered M. de Beaufort incomparably the most influential personage in controlling the swarming populace of the Quartiers St.-Antoine and St.-Jacques. 'You can scarcely realize the weight of these qualities, and you cannot therefore imagine their power over the people. I wanted a phantom to hide behind; and it was lucky for me that I discovered this phantom in a grandson of Henri le Grand, who spoke the language of les Halles, which is not a common qualification in a son of Henri le Grand,' writes the Coadjutor."

The character of Beaufort would not, however, be complete without the following incident:—

"While the cavaliers were washing their hands, and sauntering on the terrace, and around the table, which was already spread with viands, they perceived M. de Beaufort strutting at the head of a party of cavaliers, and advancing towards them, his white *panache* floating jauntily in the evening breeze. The cavaliers waited until Beaufort and his troop had passed, before seating themselves at table. The duke in his flurry forgetting the prudent instructions of the Coadjutor, advanced, and slightly saluting the company, rudely said, 'Messieurs, you are supping early!' De Jars replied, that they were preparing to do so. 'With better appetite, I hope, than the square-caps (the Parliament) might graze, as M. de Jarzé threatened,' retorted Beaufort, hurriedly. Then seizing the corner of the table-cloth, he said, 'that there were people in the company who had insolently boasted that they had compelled him to turn, and go out of his way to avoid them; that such an assertion was false, and that to teach the company better manners he would send them to sup elsewhere!' So saying, the duke snatched the cloth from the table, overthrowing the wine, and all the viands prepared."

We have purposely chosen extracts which give a favourable impression of Miss Freer's volumes. We do not wish it to be understood that there are not other passages of equal dramatic merit, though, as a rule, many shallows must be waded through before the stream is broken into picturesque rapids, or flows at once deep and even. But this is the inevitable drawback of histories undertaken without historical gifts; for only those works escape which are based on inaccessible materials, or wrought with art as well as industry.

OUR LIBRARY TABLE.

Biographies and Portraits of some Celebrated People. By Alphonse de Lamartine. 2 vols. (Tinsley Brothers.)

THE celebrated people of whom M. de Lamartine has here offered studies are Lord Chatham, Pitt, Shakespeare, Charlotte Corday, Madame Roland, Mirabeau, Danton, and Vergniaud. If it was originally intended by M. de Lamartine that these monographs should be collected without further extension, we cannot but wonder at the incoherence of such a list. What has Shakespeare to do among English political leaders and French Girondists? It is melancholy to perceive that one who began the career of poetry and letters so honourably as M. de Lamartine should now write only to cover paper. Though he is not without a flow of language, and occasionally what may be called lyrical grace of expression, these *Biographies and Portraits* are feeble in outline and faded in colour. The discriminating touch of one who can paint human beings is missing. M. de Lamartine has not a grain of humour in his composition; and without humour there can be no real appreciation of either tragedy or comedy. Compare, for instance, his treatment of Mirabeau—one of the best among these papers—with Mr. Carlyle's; the former, how sentimentally operative! the latter, though crotchety in treatment, how rich in character! In the study of Charlotte Corday M. de Lamartine is more successful; but here there was not so much a life as an incident to depict. In his English biographies he has taken some generous pains to do justice to the high powers as a statesman of "the Pilot who weathered the storm," though his repeated references to the revelations of the hermit of Mar Elias—the half eccentric, half insane Lady Hester Stanhope—as sources of information to be relied on, make us doubt his discrimination. He is too fond of grouping, and of slashing definition withal—as when he tells us that only five orators can be compared with Lord Chatham, "Demosthenes, Cicero, Mirabeau, Vergniaud, and Bossuet." But the most curious pages of these flimsy yet bulky volumes are the 267 devoted to Shakespeare. In these the stories of some of the tragedies are narrated with a detail as minutely prolix as if the world had never heard of 'Macbeth,' 'Hamlet,' 'Romeo and Juliet,' 'Othello,' and 'The Tempest.' He favours us, too, with some 200 pages of literal quotation, adding here and there a remark of a pompous puerility pitifully laughable. For England, at least, such a piece of platitude as this might have been wisely omitted from the miscellany. The work is but carelessly translated. In what dictionary is the word "defial" to be found? and it may be submitted that "L'Escarot" might have been rendered by "the Scheldt." We have marked other signs of want of care and comprehension; but the above will suffice.

Routledge's Popular Guide to London and its Suburbs. By G. F. Pardon. (Routledge & Sons.)

LET us suppose that we live in chambers in Staple Inn, or somewhere thereabout. Closely addicted to serious and engrossing studies, we have not hitherto looked around us very much; but one morning we spring from our couch with a sudden and ardent desire to see London. First of all, however, breakfast must be had, so we look up the tea and chop houses in "Routledge's Guide," and sally forth to Button's in Chancery Lane. Alas! we find a soul above buttons, an ethereal gold and silver concern, a full-blown London Joint-stock Bank, on the spot where comfortable Mrs. Button used to nourish the body. We get a roll and a glass of water at the nearest baker's shop, and hurry off to Lincoln's Inn Hall, hard by, to see Hogarth's picture of 'St. Paul before Festus and Agrippa.' We find no such picture there:—but we may inform Mr. Pardon that there is a very fine fresco by Mr. Watts, which he does not seem to have heard of. We consult our "Guide" again, and are suddenly seized with a desire to be called to the Bar, being intensely relieved by Mr. Pardon's statement that "keeping commons is no longer compulsory." Hastening to the steward's office, under the Library staircase, we are courteously but very decidedly

nstructed by Mr. Doyle that the proverb "no song no supper" is reversed, and that unless we consent to dine we shall never be allowed to plead. Our spirits damped by so many disappointments, we determine to have a quiet day at the British Museum, for it is Tuesday, and Mr. Pardon tells us that the nation's splendid collection is open to the public every day except Saturday. What is our horror on stepping out of our Hansom and reading on a conspicuous board—Open on Monday, Wednesday, and Friday, throughout the year, and on Saturday in May, June, July, and August! Thus perpetually foiled in the heart of the capital, we rush to the Gower Street station of the Metropolitan Railway, resolved to seek consolation in the umbrageous recesses of Kensington Gardens. "Where to?" mutters the clerk, in the middle of a sandwich—"Right through," we reply somewhat snappishly, for our patience is nearly exhausted. We fling ourselves into the comfortable carriage, and forget our indignation in balmy slumbers. The genius of dreams presents to us a charming vision of a perfect guide, philosopher and friend, who puts everything in its right place and tells us the right time to see it; but we are roused from the soothing contemplation by shrill cries of "Ammeremith, Ammeremith, 'emith, 'emith, 'emith?" We shout out fiercely, "What, is this Hammersmith? Mr. Pardon's Guide says you only go to Kensington."—"Oo's Mr. Pardon?" cries the indignant official; "I've a 'eard tell of Bradshaw's Guide, but I never 'eard tell o' he." The fiery engine shrieks in derision, like a caustic demon, and we retire in dudgeon, fully resolved to write to the *Times*; but thinking better of it, after a little dinner at the "London" (which Mr. Pardon has forgotten to mention among City dining-houses), we take up the pen of sober criticism, and write in the *Athenæum* instead.

Merridew's Guide to Boulogne sur-Mer. Illustrated. Revised by R. B. Hinchliffe. (Boulogne-sur-Mer, Merridew; London, Simpkin, Marshall & Co.)

Everybody goes, has been, or will go, to Boulogne-upon-the-Sea, a town which, notwithstanding the popular French belief to the contrary, still belongs to the British, and illustrates in its pleasant, sunny, but sometimes unsavoury streets a sort of half-and-half state of things, pleasanter, but probably less comfortable than most English places of resort. A new edition of this handy guide-book is acceptable; the maps are useful and more correct than is customary with the class of works to which this one belongs. Some of these books are deplorably incorrect; of one of them we bought not long since the so-called fourteenth edition (1863), with a view to a Belgian trip, and found it to be disgracefully incorrect, meagre and antiquated as to Belgium, that fine subject, and in no respect comparable with Mr. Weale's admirable 'Belgium, Aix-la-Chapelle, and Cologne,' (Dawson). Thus guide-books differ. Mr. Hinchliffe's little work is of the superior class, which, whenever an opportunity occurs, we are bound to commend.

Le Turco. Par Edmond About. (Hachette & Co.)

'Le Turco' is the principal story of nine contained in a little volume of nearly three hundred pages. The collection resembles in some sort the rough sketch-book of a dashing and cynical artist, in which everything is clever, with some exaggeration of features, but with skill in every stroke. In 'Le Turco' there are some pretty accounts of skirmishes in Algeria, which are the best things in the book. There are other sketches, which men may glance at and pass on, perhaps look around lest youth and innocence should be looking at the pages as they are turned over. It is not that there is great offence in the book, though it is given by implication. In short, this is not altogether wholesome or profitable reading. The author only hurts his own high reputation by publishing such pictures of French domestic life as are to be found in these narratives.

We have on our Table New Editions of *Curiosities of Literature*, by I. D'Israeli (Routledge),—*The Trail of the Author*, by the Author of

'Lady Audley's Secret' (Ward, Lock & Tyler),—*Rachel Ray: a Novel*, by Anthony Trollope (Chapman & Hall),—*Lindisfarne Chase: a Novel*, by Thomas Adolphus Trollope (Chapman & Hall),—*Gilderoy: a Scottish Tradition*, by Robert S. Fittis (Routledge),—and *Miscellaneous: a Novel*, by Anna H. Drury (Chapman & Hall). We have also the following Pamphlets: *How to Treat Cholera: a Guide for Parish and Local Officers, Sanitary Committees, Clergymen, &c.*, on the Means to Avert Cholera, or to Alleviate its Severity when Present, with various Recent Instructions by Her Majesty's Most Honourable Privy Council, and best Authorities on its Treatment, by James John Scott (Knight & Co.),—*On the Application of Disinfectants in Arresting the Spread of the Cattle Plague: Report to Her Majesty's Commissioners*, by William Crookes (Hutton),—*The Class and the Desk: a Manual for Teachers*; being Notes of Preparation for the Sunday School (Sangster),—and *The One God and Father of All: a Sermon* preached before the Supporters of the British and Foreign Unitarian Association, at their Annual Meeting, in the Unitarian Church, Hackney, May 23, 1866, by Charles Wicksteed, B.A. (Whitfield, Green & Son).

LIST OF NEW BOOKS.

Atkins's *The Average Clause*, &c., &c., 8vo, 5 s. 6 d.
Bonar's *Guide for Travellers on the London and Mounting*, 12mo, 2 s. 6 d.
Brewer's *What I shall do with my Time*, &c., 12mo, 1 s. 6 d.
Crompton's *The Agency of the Church*, &c., 12mo, 4 s. 6 d.
Edinburgh University Examination Papers, 1865, 8vo, 1 s. 6 d.
Edwards's *The Three Lovers*, 4 vols., post 8vo, 3 s. 6 d.
Edwards's *Reminiscences of a General Officer*, &c., 8vo, 7 s. 6 d.
Essays and Lectures on Indian Historical Subjects, &c., 8vo, 6 s. 6 d.
Fanny Fables for Little Folks, by Edmund Wallcut, illust. 3 s. 6 d.
Hart's *Birds of Middlesex*, &c., 8vo, 7 s. 6 d.
Hodge's *Haiden*, &c., 8vo, 7 s. 6 d.
Kilvert's *Remains*, in Verse and Prose, 8vo, 12 s. 6 d.
Maclear's *Shilling Book of Old Test. History*, 12mo, 1 s. 6 d.
Maclear's *Lectures on Diseases of the Eye*, Part 1, 8vo, 1 s. 6 d.
Masterpieces of Foreign Literature, &c., 8vo, 5 s. 6 d.
Murray's *Handbook of Western and Southern India*, 12mo, 6 s. 6 d.
Murray's *Scott and Described*, a Series of Sketches, 12mo, 5 s. 6 d.
Seale's *Sequences*, Hymns, &c., 8vo, 2 s. 6 d.
Notes and Expositions by J. N. D., 12mo, 2 s. 6 d.
Public Schools Latin Primer, 12mo, 1 s. 6 d.
Railway Labels, &c., by L. M. Abbott, 12mo, 1 s. 6 d.
Record of Progress of Modern Engineering, &c., 8vo, 4 s. 6 d.
Reid's *After the War*, a Southern Tour, post 8vo, 1 s. 6 d.
Slater's *Religious Opportunities of the Heathen before Christ*, 2 s. 6 d.
Smith's *Principia Latina*, Part 5, 12mo, 3 s. 6 d.
Statist. Mater. Speciosa, trans. by Neale, &c., 1 s. 6 d.
Timmins's *Resources and Industrial Hist. of Birmingham*, 14 s. 6 d.
Tom Tracy, of Brier Hill, 12mo, 1 s. 6 d.
Tracts, by a Layman, 12mo, 2 s. 6 d.
Ward's *Philosophy of Human Operation*, 12mo, 1 s. 6 d.
Wealth and Warfare, by Gotthelf, 2 vols., 8vo, 21 s. 6 d.

BRITISH ASSOCIATION.

Nottingham, August 22, 1866.

FROM King's Cross to Hitchin the railway possesses the usual features of the roads leading northwards out of London; but as the traveller approaches, upon the Midland route, the flat green meadows of Bedford, with the silvery rivers winding through them, the scenery becomes very different from anything to be seen on either the North-Western or the Great Northern lines. After this the rich pastures of Leicestershire are traversed, and at last a looming grey haze notifies the approach to the great manufacturing town of lace and stockings. Ruddy and homely, with antique names of streets betokening the former extents of Castle and town walls, and of ancient churches and monasteries,—with innumerable short streets and long hills,—with new and extensive factories intermingled with quaint old houses,—with its large triangular market like the *place* in a French *ville*, contrasting with its fast improving thoroughfares,—Nottingham is one of the cleanest, best paved, comeliest of any of the busy towns the Association has of late years visited. The Theatre is a fine building, and presented a brilliant audience to listen to the President. Mr. Grove's address constituted a lucid, simple, and truly philosophical theme, worthy of the attention it received.

The General Committee Meeting was held at one o'clock, when everything passed off with even more than the usual unanimity. Prof. Phillips presided. The Report of the Council was first read (after the minutes of the previous meeting had been confirmed).

'Report of the Council.'

"The Council have the honour to report as follows:—The Council have received a Report from the Treasurer at each of their meetings, and a Report for the year will be presented to the General Committee this day. The Report of the Par-

liamentary Committee has been received for presentation to the General Committee. The Kew Committee have presented to the Council a Report for the year 1865-66, which will be laid before the General Committee this day. The Council have added to the list of Corresponding Members the names of the following men of science who attended the Birmingham meeting, viz.: Capt. Belavenetz, Geheimrath von Dechen, M. Gaudry, Prof. Grube, Prof. Kiepert, Prof. F. Römer, Chev. C. Negri, Prof. Steenstrup. The Council recommend that the names of Mr. J. Hind and Mr. T. Close be added to the list of Vice-Presidents of the Meeting. In consequence of the resignation of Mr. Hopkins as Joint General Secretary, announced last year, the Council appointed a Committee, consisting of the General Secretaries, and the gentlemen who had formerly filled that office, for the purpose of taking into consideration and reporting to the Council on the advisability of nominating a Joint General Secretary. The Council have received the following Report, viz.: 'That Thomas Archer Hirst, Esq., Ph.D., Professor of Mathematical Physics in University College, London, be recommended as highly qualified for election as Joint General Secretary of the Association.' The Council recommend that Mr. Hirst be elected Joint General Secretary. The Council have been informed that invitations for future meetings of the Association have been received from Dundee, Norwich, Plymouth, and Exeter."

The Treasurer's Report was next made.—

The General Treasurer's Account,
From September 6, 1865 (commencement of Birmingham Meeting), to August 22, 1866 (Nottingham).

| RECEIPTS. | |
|---|-------------|
| To balance brought from last Account | £750 2 6 |
| Life Compositions at Birmingham and since | 440 0 0 |
| Annual subscriptions ditto ditto | 671 0 0 |
| Associates' Tickets ditto ditto | 768 0 0 |
| Ladies' Tickets ditto ditto | 508 0 0 |
| Dividends on Stock, one year | 250 15 0 |
| Sale of Publications, viz.: | |

(Signed) W. SPOTTISWOODE.

Then followed the Report of the Kew Committee.—

Report of the Kew Committee for 1865-66.

The Committee of the Kew Observatory submit to the Council of the British Association the following statement of their proceedings during the past year:—

A unifilar and dip-circle for Capt. J. Belavenetz, of the Russian Navy, Director of the Compass Observatory at Cronstadt, have been verified at Kew Observatory and forwarded to Russia. Three unifilars and three dip-circles.

ordered by Col. Strange for the Indian Survey, have been verified. Dr. Kirk, who has gone out to Zanzibar on the African coast, has received instruction at Kew Observatory; and a dip-circle, a unifilar, and an azimuth compass have been verified for him, and await his directions. In consequence of a representation from Mr. C. Chambers, Acting Superintendent of the Observatory, Bombay, a correspondence has taken place between the Director of the India Store Department and the Chairman of the Kew Committee, the result of which is that the Committee have superintended the construction of an anemometer, a dip-circle, and a unifilar for the Bombay Observatory. These instruments have been verified, and are now in the hands of the India Board for transmission to their destination. The Admiralty have ordered a unifilar and a dip-circle for Capt. Mayne, of Her Majesty's ship Nassau, who is about to proceed to the Straits of Magellan; these instruments have been verified at Kew Observatory, where Capt. Mayne and several of his officers have likewise received instruction in magnetism.

Dr. Buys-Ballot has ordered a declination-magnetograph, which has been constructed by Mr. Adie, and forwarded to Utrecht, where it has safely arrived. A set of self-recording magnetographs and also a barograph have been ordered by the Stonyhurst Observatory; and the Rev. Walter Sidgreaves has been to the Observatory receiving instruction in magnetism. The self-recording magnetographs for Stonyhurst have been verified and despatched to their destination. The set of self-recording instruments ordered by Mr. Meldrum, of the Mauritius Observatory, are at present at Kew; Mr. Meldrum intends to visit the Kew Observatory for the purpose of making himself further acquainted with the process of observing and deducing results previous to his return to the Mauritius. Mr. Ellery, of Melbourne Observatory, has likewise ordered a set of self-recording magnetographs. These have been constructed by Mr. Adie, and will be taken to Kew for verification when the set for Mauritius has been removed. Prof. Snikrow from Kasan has received instruction in magnetism at the Observatory. The usual monthly absolute determinations of the magnetic elements continue to be made by Mr. Whipple, Magnetic Assistant, and the self-recording magnetographs are in constant operation as heretofore, also under Mr. Whipple, who has displayed his usual care and assiduity in the discharge of his duties. The photographic department connected with the self-recording instruments is under the charge of Mr. Page, who performs his duties very satisfactorily. A stoneware stove free from iron has been erected in the room containing the Kew magnetographs, and by its means this room has been heated through a range of 20° Fahr. in order to determine the temperature correction of the horizontal and vertical force magnetographs. The observations for this purpose are being reduced.

The meteorological work of the Observatory continues in charge of Mr. Baker, who executes his duties very satisfactorily. Since the Birmingham Meeting 126 barometers have been verified. 395 thermometers have likewise been verified, and 8 standard thermometers constructed at the Observatory. The self-recording barograph continues in constant operation, and traces in duplicate are obtained, one set of which is regularly forwarded to the meteorological department of the Board of Trade. An arrangement for a self-recording thermograph has been devised by the Superintendent and by Mr. Beckley, and, as a preliminary experiment gave a very satisfactory curve, the instrument is now being arranged in a suitable site. The instruments used by the late Mr. Appold for regulating the temperature and moisture of his apartments have been forwarded by the Royal Society to the Kew Observatory.

The Indian pendulum observations are in active progress. Both Col. Walker and Capt. Basevi are in correspondence with the Observatory in discussing questions relating to this work. The Superintendent has received 100l. from the Government Grant Committee of the Royal Society for preliminary observation with Capt. Kater's pendulum. These preliminary observations are in progress under the charge of Mr. Loewy as observer, and have the following points in view:—1. To see by the general agreement or non-agreement of the observations with each other whether Capt. Kater's pendulum is still in a state to justify its adoption as an instrument to give a correct determination of the length of the seconds pendulum. 2. To determine the true temperature correction of the pendulum. 3. To use Kater's pendulum, and also the Royal Society's invariable pendulum No. 8, for the purpose of determining a curve of correction for atmospheric pressure, from inch to inch, at low pressures.

The Superintendent has received 50l. from the Government Grant Fund of the Royal Society, to pursue the experiments on a rotating disk.

The Kew heliograph, in charge of Mr. De La Rue, continues to be worked in a very satisfactory manner. During the past year 222 negatives have been taken on 153 days, and the usual number of positives have been printed from them. Since the last Meeting of the Association, the first set of the results obtained by this instrument have been published at the expense of Mr. De La Rue, under the following title:—“Researches on Solar Physics, by Warren De La Rue, B. Stewart, and B. Loewy. First Series: On the Nature of Sun-spots.” The present progress of the work of reduction will best be seen from the following letter, written by Mr. De La Rue, in answer to a request made through the Astronomer Royal by Padre Secchi, to know what was doing in this country in the subject of heliography.

“110, Bunhill Row, August 8th, 1866.

“My dear Sir,—In reference to the extract from Padre Secchi's letter, I beg to supply the following information: The pictures taken by means of the Kew heliograph are all measured by means of my micrometer: the positions of the spots are then reduced to distances in terms fractional parts of the sun's radius, and the angles of position corrected for any error in the position of the wires. Pictures of the Pagoda are taken from time to time, and the

measurements of the various galleries of the Pagoda serve to determine the optical distortion of the sun's image and the corrections to be applied to the sun-pictures. The heliocentric latitudes and longitudes of the spots are then calculated. The areas of the spots and the penumbra are also measured, and the areas corrected for perspective are tabulated in terms fractional parts, of the area of the sun's disk. The areas of the spots, &c. on all of Carrington's original pictures have recently been measured, and an account of these measurements will be shortly published. Padre Secchi will be able to judge, from the foregoing statement, whether it will be worth while to undertake the work he proposes. The measurements obtainable from photographs are much more reliable than those from projected images.—I am, yours very truly,

(Signed) “WARREN DE LA RUE.”

“E. J. Stone, Esq.”

The Association will regret to learn the deaths of Dr. Sabler and M. Gussow, in consequence of which the Wilna heliograph is not at work.

M. Smysloff, of the Pulkowa Observatory, has been appointed Director of the Wilna Observatory, by the Imperial Academy of Sciences of St. Petersburg. M. O. Struve having asked for information respecting the working of the heliograph, it has been suggested to him by the Kew Committee that it would be advisable for M. Smysloff to visit the Kew Observatory to see the instrument in operation. The sun-spots continue to be observed after the method of Hofrath Schwabe, of Dessau, and the valuable collection of drawings lent by this eminent observer remains at the Observatory. These have been supplemented by the beautiful series of detailed drawings of spots made by the Rev. F. Howlett, which that gentleman has deposited at Kew.

The apparatus for verifying sextants alluded to in last Report has now been constructed by Mr. Cooke, and is being erected at the Observatory.

About three-fourths of the region of the solar spectrum between E and F has been mapped by the spectroscopes belonging to the Chairman. The spectroscopes is now in London, the work appertaining to the staff at the Observatory not permitting sufficient time for further observation with this instrument.

The instrument devised by Mr. Broun for the purpose of estimating the magnetic dip by means of soft iron remains at present at the Observatory, awaiting Mr. Broun's return to England.

The Superintendent has received grants from the Royal Society for special experiments; and when these are completed, an account will be rendered to that Society.

The Report of a Committee appointed to consider certain questions relating to the Meteorological Department of the Board of Trade, and presented to both Houses of Parliament by command of Her Majesty, has been communicated to the members of the Kew Committee, and has been otherwise widely circulated among the meteorologists of the British Association. The object of the Report is expressed in the following terms:—“Upon the death of the late Admiral FitzRoy, a correspondence took place between the Board of Trade and the Royal Society with respect to the Meteorological Department of the Board of Trade. The result of that correspondence was the appointment of a Committee, consisting of the following gentlemen, viz., Francis Galton, Esq., F.R.S., General Secretary of the British Association for the Advancement of Science, nominated by the President and Council of the Royal Society; Staff Commander Evans, R.N., F.R.S., Chief Naval Assistant to the Hydrographer of the Admiralty, by the Admiralty; T. H. Farrer, Esq., one of the Secretaries to the Board of Trade, by the Board of Trade,—to consider and report upon the following questions: 1. What are the data, especially as regards meteorological observations at sea, already collected by and now existing in the Meteorological Department of the Board of Trade? 2. Whether any and what steps should be taken for arranging, tabulating, publishing, or otherwise making use of such data. 3. Whether it is desirable to continue meteorological observations at sea, and if so, to what extent, and in what manner. 4. Assuming that the system of weather telegraphy is to be continued, can the mode of carrying it on and publishing the results be improved? 5. What staff will be necessary for the above purposes?”

The authors of the Report arrive at the following conclusions in respect to the ocean statistics, weather telegraphy, foretelling weather, and observations affecting weather in the British Isles:—“The collection of observations from the captains of ships is a function which can probably best be performed through the medium of such agencies as a Government Office can command, and which was, in fact, well performed by the Meteorological Department before its attention was devoted to the practice of foretelling weather. We assume, therefore, that this function will remain with the Board of Trade. The digesting and tabulating results of observations is, on the other hand, a function which requires a large knowledge of what the state of the science for the time being requires, as well as exact scientific method. This function is one that has not been satisfactorily performed by the Meteorological Department. And we believe that it would be much better as well as more economically performed under the direction of a scientific body—such as a Committee of the Royal Society, or of the British Association, if furnished with the requisite funds by the Government—than it will be if left to a Government department. The establishment already existing at Kew might probably be easily developed, so as to carry into effect such a purpose. It would, in that case, become a meteorological centre, to which all observations of value (by British observers), whether made on land or at sea, and whether within the British Isles or not, would be sent for discussion and reduction. We have, therefore, in the following estimates, assumed that all meteorological observations made on land, whether at the stations recommended by the Royal Society, or at the lighthouses or coast-guard stations, as well as all observations at sea, shall

be referred to and discussed under the direction of such a scientific body as we have mentioned; and we have also assumed that the aid afforded by Government would be in the shape of an annual vote, so made as to leave the Royal Society, or other scientific body charged with the duty, perfectly free in their method and in their choice of labour, but upon the condition that an account shall be rendered to Parliament of the money spent, and of the results effected in each year.”

The Kew Committee have examined this Report, and, speaking in general terms, they cordially acquiesce in the conclusions of its authors. They consider the proposed arrangement to fall within the competence of the Kew Observatory.

In the last Kew Report it was stated that many experiments and observations of a nature to advance science are made by the Committee under the sanction of the Association, the cost of each being defrayed by the promoters.

The Committee consider that the suggested observations contained in the Government Report which has been referred to would be merely an extension of the usual practice of the Observatory; but in consideration of the magnitude of the work proposed, they suggest that the Council should bring the subject before the General Committee, with the view of the Kew Committee being authorized to discuss and make the necessary arrangements with the Board of Trade, should any proposal be made.

The Committee are also desirous of bringing under the consideration of the Council the expediency of proceeding in the formation of a memoir on the periodic and non-periodic variations of the temperature at Kew, as a normal station of British meteorology. Similar works have for some years past occupied the attention of the most eminent amongst the continental meteorologists, as being, in fact, the foundation of all scientific knowledge of the climatology of their respective countries. A memoir on the periodic and non-periodic variations of the temperature at the magnetic and meteorological observatory at Toronto, in Canada, has been printed in the *Philosophical Transactions* for 1853; but no such work has yet been systematically undertaken at Kew, although it is quite in accordance with the objects for which the Observatory was instituted, in familiarizing British meteorologists with a system of tabulation they have hitherto unduly neglected. Daily photographs, taken from the thermograph constructed under Mr. Stewart's direction, will supply in the most unexceptionable manner the observational basis on which the memoir would be founded. To obtain such photographs would constitute a very small addition to the duties of the assistant, by whom the daily photographs of the magnetic instruments are taken. The tabulation from the daily photographs of the temperature would be the only increase of any moment to the ordinary present work of the Observatory, and would require, possibly, the part services of an additional young assistant. The tabulation would supply twenty-four equidistant entries in every solar-day. The tables containing these entries, together with the photographs, after careful inspection by a proper authority, would be preserved for subsequent use. Five, or at most six, years would constitute quite a sufficient basis for the determination of the periodic variations forming the first part of the proposed work, and would require about a couple of months of superintending care on the part of the person who might be director of the Observatory when the observations of the five or six years should have accumulated. Nothing more than ordinary clerk's work under such general superintendence would be required. Should the Board of Trade be disposed to avail itself of the suggestion which has been made to them in respect to the Kew Observatory, the publication which has been suggested would become one of its first important duties.

J. P. GASSIOT, Chairman.

Kew Observatory, August 17, 1866.

Accounts of the Kew Committee of the British Association from Sept. 6, 1865, to August 22, 1866.

RECEIPTS.

| | |
|--|-----------|
| Balance from last account | £26 14 8 |
| Received from the General Treasurer | 600 0 0 |
| For the Verification of Meteorological Instruments— | |
| From the Board of Trade | 12 15 0 |
| From the Admiralty | 14 15 0 |
| From opticians | 23 0 0 |
| For Barograph Curves sent to the Meteorological Office, London | 26 1 5 |
| For the Construction of Standard Thermometers | 1 10 0 |
| For the Verification of Portable Magnetometers | 15 0 0 |
| For the Verification of Self-recording Magnetographs | 30 0 0 |
| | £754 16 1 |

PAYMENTS.

| | |
|--|----------|
| Salaries, &c.:— | |
| To B. Stewart, four quarters, ending 1st October, 1866 | £200 0 0 |
| Ditto, allowed for petty travelling expenses | 10 0 0 |
| G. Whipple, four quarters, ending 18th September, 1866 | 100 0 0 |
| T. Baker, four quarters, ending 29th September, 1866 | 75 0 0 |
| R. Beckley, 50 weeks, ending 20th August, 1866, at 40s. per week | 100 0 0 |
| F. Page, 30 weeks, ending 2nd April, 1866, at 12s. per week | 18 0 0 |
| Ditto, two quarters, ending 2nd October, 1866, at 40s. per annum | 20 0 0 |
| Apparatus, materials, tools, &c. | 35 8 3 |
| Ironmonger, carpenter, and mason | 18 6 3 |
| Printing, stationery, books, and postage | 36 15 10 |
| Coals and gas | 49 11 6 |
| House expenses, chandlery, &c. | 30 5 3 |
| Porterage and petty expenses | 18 16 3 |
| Rent of land to 10th October, 1866 | 11 0 0 |
| Rent of pillars for sextants | 2 10 0 |

| | |
|-----------------------------|-----------|
| Brushwood for ditch | 6 13 0 |
| Balance | 22 9 9 |
| | <hr/> |
| | £754 16 1 |

I have examined the above account and compared it with the vouchers presented to me.

| | |
|---|----------|
| The balance from the last year | £26 14 8 |
| Received from the Treasurer of the British Association | 600 0 0 |
| From sundries, for the construction and verification of instruments | 128 1 5 |
| | <hr/> |
| | 754 16 1 |

The total expenditure for the year 732 6 4

Leaving a balance in hand amounting to £22 9 9
10th August, 1866. R. HUTTON.

The next was the Report of the Parliamentary Committee.—

Report of the Parliamentary Committee.

"The Parliamentary Committee have the honour to report as follows:—Your Committee have to express their regret that another session of Parliament has been allowed to pass away without any step having been taken by the legislature to promote the study of science in our great public schools. In the last session, however, an Act was passed to amend the Acts relating to the Imperial Standards of Weight, Measure, and Capacity. The Act was introduced chiefly for the purpose of carrying out the recommendations of a Treasury Committee, which reported in 1864, and it will effect some very useful reforms in the constitution of the office having the custody of the imperial standards, whereby the whole organization of the department will be placed on a more scientific basis. An officer is appointed to be called the Warden of the Standards; and due provision is made for the periodical comparison of the imperial and secondary standards, a matter which had hitherto been very much neglected. A provision is for the first time made for defining the amount of error to be tolerated in secondary standards; there is also a clause in which it is stated to be the duty of the warden 'to conduct all such comparisons, verifications, and other operations with reference to standards of length, weight, and capacity, in aid of scientific researches, or otherwise, as the Board of Trade from time to time authorize or direct.'

"Your Committee have also to express their regret, that no steps have as yet been taken to re-organize the Meteorological Department of the Board of Trade, and carry out the valuable suggestions of the Report of Mr. Francis Galton and his colleagues, presented to Parliament during the last session. Your Committee will not fail to advocate such measures as may be necessary for placing this department on a satisfactory footing. They will neither be unmindful of the part which they took in its original establishment, nor of the benefits which it has already conferred, and which, if successfully re-organized, it will continue to confer on meteorological science. In conclusion, we recommend that Sir Henry Rawlinson be elected a member of our Committee.

"WROTTESELEY, Chairman.

"August 15, 1866."

The Report of the Parliamentary Committee gave rise to some remarks from Mr. James Heyworth, invoking its assistance in respect to some modification of the present manner of conducting law cases relating to scientific subjects, it being desired by the speaker that a law should be passed to enable Judges to call in the assistance of a competent expert on such occasions. The motion was favourably supported by Sir John Bowring, Prof. Williamson, and others.—Lord Wrottesley, the chairman of the Committee, acknowledging his readiness to entertain the subject when brought before him in due official course.

The number of members enrolled up to the eve of the proceedings amounted to nearly two thousand. Before those proceedings commenced the Council of the Association received a renewed invitation from Dundee for the meeting of the Association in that city in 1867. Invitations were also received from Exeter, Norwich and Plymouth. At eight o'clock, Mr. Walter Montgomery's theatre, the internal aspect of which is so much more beautiful than that of the exterior, was crowded by a

brilliant assembly, all of whom were in full dress. Prof. Phillips having made the usual farewell observations in the character of retiring President, and introduced his successor, Mr. Grove, Q.C., the latter gentleman proceeded to deliver

The President's Address.

Gentlemen of the British Association.—If our rude predecessors, who at one time inhabited the caverns which surround this town, could rise from their graves and see it in its present state, it may be doubtful whether they would have sufficient knowledge to be surprised.

The machinery, almost resembling organic beings in delicacy of structure, by which you fabricate products of world-wide reputation, the powers of matter applied to give motion to that machinery, are so far removed from what must have been the conceptions of the semi-barbarians to whom I have alluded, that they could not look on them with intelligent wonder.

Yet this immense progress has all been effected step by step, now and then a little more sudden than at other times; but, viewing the whole course of improvement, it has been gradual, though moving in an accelerated ratio. But it is not merely in those branches of natural knowledge which tend to improvements in economical arts and manufactures, that science has made great progress. In the study of our own planet and the organic beings with which it is crowded, and in so much of the universe as vision, aided by the telescope, has brought within the scope of observation, the present century has surpassed any antecedent period of equal duration.

It would be difficult to trace out all the causes which have led to the increase of observational and experimental knowledge.

Among the more thinking portion of mankind the gratification felt by the discovery of new truths, the expansion of faculties, and extension of the boundaries of knowledge have been doubtless a sufficient inducement to the study of nature; while, to the more practical minds, the reality, the certainty, and the progressive character of the acquisitions of natural science, and the enormously increased means which its applications give, have impressed its importance as a minister to daily wants and a contributor to ever-increasing material comforts, luxury, and power.

Though by no means the only one, yet an important cause of the rapid advance of science is the growth of associations for promoting the progress either of physical knowledge generally or of special branches of it. Since the foundation of the Royal Society, now more than two centuries ago, a vast number of kindred societies have sprung up in this country and in Europe. The advantages conferred by these societies are manifold; they enable those who are devoted to scientific research to combine, compare, and check their observations, to assist, by the thoughts of several minds, the promotion of the inquiry undertaken; they contribute from a joint purse to such efforts as their members deem most worthy; they afford a means of submitting to a competent tribunal notices and memoirs, and of obtaining for their authors and others, by means of the discussions which ensue, information given by those best informed on the particular subject; they enable the author to judge whether it is worth his while to pursue the subjects he has brought forward, and they defray the expense of printing and publishing such researches as are thought deserving of it.

These advantages, and others might be named, pertain to the Association the thirty-sixth meeting of which we are this evening assembled to inaugurate; but it has, from its intermittent and peripatetic character, advantages which belong to none of the societies which are fixed as to their locality. Among these are the novelty and freshness of an annual meeting, which, while it brings together old Members of the Association, many of whom only meet on this occasion, always adds a quota of new Members, infusing new blood, and varying the social character of our meetings.

The visits of distinguished foreigners, whom we have previously known by reputation, is one of the most delightful and improving of the results. The wide field of inquiry, and the character of commu-

nications made to the Association, including all branches of natural knowledge, and varying from simple notices of an interesting observation or experiment to the most intricate and refined branches of scientific research, is another valuable characteristic.

Lastly, perhaps the greatest advantage resulting from the annual visits of this great parliament to new localities is that, while it imparts fresh local knowledge to the visitors, it leaves behind stimulating memories, which rouse into permanent activity dormant or timid minds—an effect which, so far from ceasing with the visit of the Association, frequently begins when that visit terminates.

Every votary of physical science must be anxious to see it recognized by those institutions of the country which can to the greatest degree promote its cultivation and reap from it the greatest benefit. You will probably agree with me that the principal educational establishments on the one hand, and on the other the Government, in many of its departments, are the institutions which may best fulfil these conditions. The more early the mind is trained to a pursuit of any kind, the deeper and more permanent are the impressions received, and the more service can be rendered by the students.

Quo semel est imbuta recens, servabit odorem Testa diu.

Little can be achieved in scientific research without an acquaintance with it in youth; you will rarely find an instance of a man who has attained any eminence in science who has not commenced its study at a very early period of life. Nothing, again, can tend more to the promotion of science than the exertions of those who have early acquired the *ῥῆθος* resulting from a scientific education. I desire to make no complaint of the tardiness with which science has been received at our public schools and, with some exceptions, at our universities. These great establishments have their roots in historical periods, and long time and patient endeavour are requisite before a new branch of thought can be grafted with success on a stem to which it is exotic. Nor should I ever wish to see the study of languages, of history, of all those refined associations which the past has transmitted to us, neglected; but there is room for both. It is sad to see the number of so-called educated men who, travelling by railway, voyaging by steamboat, consulting the almanac for the time of sunrise or full moon, have not the most elementary knowledge of a steam-engine, a barometer, or a quadrant; and who will listen with a half-confessed faith to the most idle predictions as to weather or cometic influences, while they are in a state of crass ignorance as to the cause of the trade-winds or the form of a comet's path. May we hope that the slight infiltration of scientific studies, now happily commenced, will extend till it occupies its fair space in the education of the young, and that those who may be able learnedly to discourse on the *Æolic digamma* will not be ashamed of knowing the principles of an air-pump, an electrical machine, or a telescope, and will not, as Bacon complained of his contemporaries, despise such knowledge as something mean and mechanical.

To assert that the great departments of Government should encourage physical science may appear a truism, and yet it is but of late that it has been seriously done; now, the habit of consulting men of science on important questions of national interest is becoming a recognized practice, and in a time, which may seem long to individuals, but is short in the history of a nation, a more definite sphere of usefulness for national purposes will, I have no doubt, be provided for those duly-qualified men who may be content to give up the more tempting study of abstract science for that of its practical applications. In this respect the Report of the Kew Committee for this year affords a subject of congratulation to those whom I have the honour to address. The Kew Observatory, the petted child of the British Association, may possibly become an important national establishment; and if so, while it will not, I trust, lose its character of a home for untrammelled physical research, it will have superadded the Meteorological Department of the Board of Trade with a staff of skilful and experienced observers.

This is one of the results which the general growth of science, and the labours of this Association in particular, have produced; but I do not propose on this occasion to recapitulate the special objects attained by the Association—this has been amply done by several of my predecessors; nor shall I confine my address to the progress made in physical science since the time when my most able and esteemed friend and predecessor addressed you at Birmingham. In the various reports and communications which will be read at your Sections, details of every step which has been made in science since our last meeting will be brought to your notice, and I have no doubt fully and freely discussed.

I purpose, with your kind permission, to submit to you certain views of what has within a comparatively recent period been accomplished by science, what have been the steps leading to the attained results, and what, as far as we may fairly form an opinion, is the general character pervading modern discovery.

It seems to me that the object we have in view would be more nearly approached, by each President, chosen as they are in succession as representing different branches of science, giving on these occasions either an account of the progress of the particular branch of science he has cultivated, when that is not of a very limited and special character, or enunciating his own view of the general progress of science; and though this will necessarily involve much that belongs to recent years, the confining a President to a mere *résumé* of what has taken place since our last meeting would, I venture with diffidence to think, limit his means of usefulness, and render his discourse rather an annual register than an instructive essay.

I need not dwell on the commonplace but yet important topics of the material advantages resulting from the application of science; I will address myself to what, in my humble judgment, are the lessons we have learnt and the probable prospects of improved natural knowledge.

One word will give you the key to what I am about to discourse on; that word is *continuity*,—no new word, and used in no new sense, but perhaps applied more generally than it has hitherto been. We shall see, unless I am much mistaken, that the development of observational, experimental, and even deductive knowledge is either attained by steps so extremely small as to form really a continuous ascent; or, when distinct results apparently separate from any co-ordinate phenomena have been attained, that then, by the subsequent progress of science, intermediate links have been discovered uniting the apparently segregated instances with other more familiar phenomena.

Thus the more we investigate, the more we find that in existing phenomena gradation from the like to the seemingly unlike prevails, and in the changes which take place in time, gradual progress is, and apparently must be, the course of nature.

Let me now endeavour to apply this view to the recent progress of some of the more prominent branches of science.

In Astronomy, from the time when the earth was considered a flat plain bounded by a flat ocean,—when the sun, moon, and stars were regarded as lanterns to illuminate this plain,—each successive discovery has brought with it similitudes and analogies between this earth and many of the objects of the universe with which our senses, aided by instruments, have made us acquainted. I pass, of course, over those discoveries which have established the Copernican system as applied to our sun, its attendant planets, and their satellites. The proofs, however, that gravitation is not confined to our solar system, but pervades the universe, have received many confirmations by the labours of members of this Association; I may name those who have held the office of President, Lord Rosse, Lord Wrottesley, and Sir J. Herschel, the two latter having devoted special attention to the orbits of double stars, the former to those probably more recent systems called nebulae. Double stars seem to be orbs analogous to our own sun and revolving round their common centre of gravity in a conic-section curve, as do the planets with which we are more intimately acquainted; but the nebulae pre-

sent more difficulty, and some doubt has been expressed whether gravitation, such as we consider it, acts with those bodies (at least those exhibiting a spiral form) as it does with us; possibly some other modifying influence may exist, our present ignorance of which gives rise to the apparent difficulty. There is, however, another class of observations quite recent in its importance, and which has formed a special subject of contribution to the Reports and Transactions of this Association; I allude to those on Meteorites, at which our lamented member, and to many of us our valued friend, Prof. Baden Powell, assiduously laboured, for investigations into which a Committee of this Association is formed, and a series of star-charts for enabling observers of shooting-stars to record their observations was laid before the last meeting of the Association by Mr. Glaisher.

It would occupy too much of your time to detail the efforts of Bessel, Schwabe, the late Sir J. Lubbock, and others, as applied to the formation of star-charts for aiding the observation of meteorites, which Mr. Alexander Herschel, Mr. Brayley, Mr. Sorby, and others, are now studying.

Dr. Olmsted explained the appearance of a point from which the lines of flight of meteors seem to radiate, as being the perspective vanishing-point of their parallel or nearly parallel courses appearing to an observer on the earth as it approaches them. The uniformity of position of these radiant points, the many corroborative observations on the direction, the distances, and the velocities of these bodies, the circumstance that their paths intersect the earth's orbit at certain definite periods, and the total failure of all other theories which have been advanced, while there is no substantial objection to this, afford evidence almost amounting to proof that these are cosmical bodies moving in the interplanetary space by gravitation round the sun, and some perhaps round planets. This view gives us a new element of continuity. The universe would thus appear not to have the extent of empty space formerly attributed to it, but to be studded between the larger and more visible masses with smaller planets, if the term be permitted to be applied to meteorites.

Observations are now made at the periods at which meteors appear in greatest numbers,—at Greenwich by Mr. Glaisher, at Cambridge by Prof. Adams, and at Hawkhurst by Mr. Alexander Herschel,—and every preparation is made to secure as much accuracy as can, in the present state of knowledge, be secured for such observations.

The number of known asteroids, or bodies of a smaller size than what are termed the ancient planets, has been so increased by numerous discoveries, that instead of seven we now count eighty-eight as the number of recognized planets—a field of discovery with which the name of Hind will be ever associated.

If we add these, the smallest of which is only three or four miles in diameter, indeed cannot be accurately measured, and if we were to apply the same scrutiny to other parts of the heavens as has been applied to the zone between Mars and Jupiter, it is no far-fetched speculation to suppose that between these asteroids and the meteorites bodies of intermediate size exist until the space occupied by our solar system becomes filled up with planetary bodies, varying in size from that of Jupiter (1,240 times larger in volume than the earth) to that of a cannon-ball or even a pistol-bullet.

The researches of Leverrier on the intra-mercurial planets come in aid of these views; and another half-century may, and not improbably will, enable us to ascertain that the now seemingly vacant interplanetary spaces are occupied by smaller bodies, which have hitherto escaped observation, just as the asteroids had until the time of Olbers and Piazzi. But the evidence of continuity as pervading the universe does not stop at telescopic observation; chemistry and physical optics bring us new proofs. Those meteoric bodies which have from time to time come so far within reach of the earth's attraction as to fall upon its surface, give on analysis metals and oxides similar to those which belong to the structure of the earth—they come as travellers bringing specimens of minerals from extra-terrestrial regions.

In a series of papers recently communicated to the French Academy, M. Daubrée has discussed the chemical and mineralogical character of meteorites as compared with the rocks of the earth. He finds that the similarity of terrestrial rocks to meteorites increases as we penetrate deeper into the earth's crust, and that some of the deep-seated minerals have a composition and characteristics almost identical with meteorites (olivine, hercynite and serpentine, for instance, closely resemble them); that as we approach the surface, rocks having similar components with meteorites are found, but in a state of oxidation, which necessarily much modifies their mineral character, and which, by involving secondary oxygenized compounds, must also change their chemical constitution. By experiments he has succeeded in forming from terrestrial rocks substances very much resembling meteorites. Thus close relationship, though by no means identity, is established between this earth and those wanderers from remote regions, some evidence, though at present incomplete, of a common origin.

Surprise has often been expressed that, while the mean specific gravity of this globe is from five to six times that of water, the mean specific gravity of its crust is barely half as great. It has long seemed to me that there is no ground for wonder here. The exterior of our planet is to a considerable depth oxidized; the interior is, in all probability, free from oxygen, and whatever bodies exist there are in a reduced or deoxidized state,—if so, their specific gravity must necessarily be higher than that of their oxides or chlorides, &c. We find, moreover, that some of the deep-seated minerals have a higher specific gravity than the average of those on the surface; olivine, for instance, has a specific gravity of 3.3. There is, therefore, no *a priori* improbability that the mean specific gravity of the earth should notably exceed that of its surface; and if we go further, and suppose the interior of the earth to be formed of the same ingredients as the exterior, minus oxygen, chlorine, bromine, &c., a specific gravity of 5 to 6 would not be an unlikely one. Many of the elementary bodies entering largely into the formation of the earth's crust are as light or lighter than water,—for instance, potassium, sodium, &c.; others, such as sulphur, silicon, aluminium, have from two to three times its specific gravity; others, again, as iron, copper, zinc, tin, seven to nine times; while others, lead, gold, platinum, &c., are much more dense,—but, speaking generally, the more dense are the least numerous. There seems no improbability in a mixture of such substances producing a mean specific gravity of from 5 to 6, although it by no means follows, indeed the probability is rather the other way, that the proportions of the substances in the interior of the earth are the same as on the exterior. It might be worth the labour to ascertain the mean specific gravity of all the known minerals on the earth's surface, averaging them in the ratios in which, as far as our knowledge goes, they quantitatively exist, and assuming them to exist without the oxygen, chlorine, &c. with which they are, with some rare exceptions, invariably combined on the surface of the earth. Great assistance to the knowledge of the probable constitution of the earth might be derived from such an investigation.

While chemistry, analytic and synthetic, thus aids us in ascertaining the relationship of our planet to meteorites, its relation in composition to other planets, to the sun, and to more distant suns and systems, is aided by another science, viz. optics.

That light passing from one transparent medium to another should carry with it evidence of the source from which it emanates, would, until lately, have seemed an extravagant supposition; but probably (could we read it) everything contains in itself a large portion of its own history.

I need not detail to you the discoveries of Kirchhoff, Bunsen, Miller, Huggins, and others; they have been dilated on by my predecessor. Assuming that spectrum analysis is a reliable indication of the presence of given substances by the position of transverse bright lines exhibited when they are burnt and of transverse dark lines when light is transmitted through their vapours, though Plücher

has shown that with some substances these lines vary with temperature, the point of importance in the view I am presenting to you is, that while what may be called comparatively neighbouring comical bodies exhibit lines identical with many of those shown by the components of this planet, as we proceed to the more distant appearances of the nebulae we get but one or two of such lines, and we get one or two new bands not yet identified with any known to be produced by substances on this globe.

Within the last year Mr. Huggins has added to his former researches observations on the spectrum of a comet (comet 1 of 1866), the nucleus of which shows but one bright line, while the spectrum formed by the light of the coma is continuous, seeming to show that the nucleus is gaseous while the coma would consist of matter in a state of minute division shining by reflected light: whether this be solid, liquid, or gaseous is doubtful, but the author thinks it is in a condition analogous to that of fog or cloud. The position in the spectrum of the bright line furnished by the nucleus is the same as that of nitrogen, which also is shown in some of the nebulae.

But the most remarkable achievement by spectrum analysis is the record of observations on a temporary star which has shone forth this year in the constellation of the northern crown, about a degree S.E. of the star ϵ . When it was first seen, May 12th, it was nearly equal in brilliancy to a star of the second magnitude; when observed by Mr. Huggins and Dr. Miller, May 16th, it was reduced to the third or fourth magnitude. Examined by these observers with the spectroscopic, it gave a spectrum, which they state was unlike that of any celestial body they had examined.

The light was compound, and had emanated from two different sources. One spectrum was analogous to that of the sun, viz., formed by the light of an incandescent solid or liquid photosphere which had suffered absorption by the vapours of an envelope cooler than itself. The second spectrum consisted of a few bright lines, which indicated that the light by which it was formed was emitted by matter in the state of luminous gas. They consider that, from the position of two of the bright lines, the gas must be probably hydrogen; and from their brilliancy compared with the light of the photosphere, the gas must have been at a very high temperature. They imagine the phenomena to result from the burning of hydrogen with some other element, and that from the resulting temperature the photosphere is heated to incandescence.

There is strong reason to believe that this star is one previously seen by Argelander and Sir J. Herschel, and that it is a variable star of long or irregular period. It is also notable that some of its spectrum lines correspond with those of several variable stars. The time of its appearance was too short for any attempt to ascertain its parallax. It would have been important if it could even have been established that it is not a near neighbour, as the magnitude of such a phenomenon must depend upon its distance. I forbear to add any speculations as to the cause of this most singular phenomenon. However imperfect the knowledge given us by these observations, it is a great triumph to have caught this fleeting object, and obtained permanent records for the use of future observers.

It would seem as if the phenomenon of gradual change obtained towards the remotest objects with which we are at present acquainted, and that the further we penetrate into space the more unlike to those we are acquainted with become the objects of our examination,—sun, planets, meteorites, earth similarly though not identically constituted, stars differing from each other and from our system, and nebulae more remote in space and differing more in their characters and constitution.

While we thus can to some extent investigate the physical constitution of the most remote visible substances, may we not hope that some further insight as to the constitution of the nearest, viz., our own satellite, may be given us by this class of researches? The question whether the moon possesses any atmosphere may still be regarded as unsolved. If there be any, it must be exceedingly

small in quantity and highly attenuated. Calculations, made from occultation of stars, on the apparent differences of the semidiameter of the bright and dark moon give an amount of difference which might indicate a minute atmosphere, but which Mr. Airy attributes to irradiation.

Supposing the moon to be constituted of similar materials to the earth, it must be, to say the least, doubtful whether there is oxygen enough to oxidate the metals of which she is composed; and if not, the surface which we see must be metallic, or nearly so. The appearance of her craters is not unlike that seen on the surface of some metals, such as bismuth, or, according to Prof. Phillips, silver, when cooling from fusion and just previous to solidifying; and it might be a fair subject of inquiry whether, if there be any coating of oxide on the surface, it may not be so thin as not to disguise the form of the congealed metallic masses, as they may have set in cooling from igneous fusion. M. Chacornac's recent observations lead him to suppose that many of the lunar craters were the result of a single explosion, which raised the surface as a bubble and deposited its debris around the orifice of eruption.

The eruptions on the surface of the moon clearly did not take place at one period only, for at many parts of the disk craters may be seen encroaching on and disfiguring more ancient craters, sometimes to the extent of three or four successive displacements: two important questions might, it seems to me, be solved by an attentive examination of such portions of the moon. By observing carefully with the most powerful telescopes the character of the ridges thus successively formed, the successive states of the lunar surface at different epochs might be elucidated; and secondly, as on the earth we should look for actual volcanic action at those points where recent eruptions have taken place, so on the moon the more recently active points being ascertained by the successive displacement of anterior formations, it is these points which should be examined for existing disruptive disturbances. Metius and Fabricius might be cited as points of this character, having been found by M. Chacornac to present successive displacements and to be perforated by numerous channels or cavities. M. Chacornac considers that the seas, as they are called, or smoother portions of the lunar surface have at some time made inroads on anteriorly formed craters; if so, a large portion of the surface of the moon must have been in a fused, liquid, semi-liquid, or alluvial state long after the solidifying of other portions of it. It would be difficult to suppose that this state was one of igneous fusion, for this could hardly exist over a large part of the surface without melting up the remaining parts; on the other hand, the total absence of any signs of water, and of any, or, if any, only the most attenuated atmosphere, would make it equally difficult to account for a large diluvial formation.

Some substances, like mercury on this planet, might have remained liquid after others had solidified; but the problem is one which needs more examination and study before any positive opinion can be pronounced.

I cannot pass from the subject of lunar physics without recording the obligation we are under to our late President for his most valuable observations and for his exertion in organizing a band of observers devoted to the examination of this our nearest celestial neighbour, and to Mr. Nasmyth and Mr. De La Rue for their important graphical and photographic contributions to this subject. The granular character of the sun's surface observed by Mr. Nasmyth in 1860 is also a discovery which ought not to be passed over in silence.

Before quitting the subject of Astronomy, I cannot avoid expressing a feeling of disappointment that the achromatic telescope, which has rendered such notable service to this science, still retains in practice the great defect which was known a century ago, at the time of Hall and Dollond, namely, the inaccuracy of definition arising from what was termed the irrationality of the spectrum, or the incommensurate divisions of the spectra formed by flint and crown glass.

The beautiful results obtained by Blair have

remained inoperative from the circumstance that evaporable liquids being employed between the lenses, a want of permanent uniformity in the instrument was experienced; and notwithstanding the high degree of perfection to which the grinding and polishing object-glasses has been brought by Clarke, Cooke, and Mertz,—notwithstanding the greatly improved instrumental manufacture, the defect to which I have adverted remains unremedied and an eyecore to the observer with the refracting telescope.

We have now a large variety of different kinds of glass formed from different metallic oxides. A list of many such was given by M. Jaquinan a few years back; the last specimen which I have seen is a heavy, highly-refracting glass, formed from the metal thallium by M. Lamy. Among all these could no two or three be selected which, having appropriate refracting and dispersing powers, would have the coloured spaces of their respective spectra, if not absolutely in the same proportions, at all events much more nearly so than those of flint and crown glass! Could not, again, oily or resinous substances having much action on the green or middle colour of the spectrum, such as castor oil, Canada balsam, &c., be made use of in combination with glass lenses to reduce, if not annihilate, this signal defect? This is not a problem the solution of which there seems any insuperable difficulty; the reason why it has not been solved is, I incline to think, that the great practical opticians have no time at their disposal to devote to long tentative experiments and calculations, and, on the other hand, the theoretic opticians have not the machinery and the skill in manipulation requisite to give the appropriate degree of excellence to the materials with which they experiment; yet the result is worth labouring for, as, could the defect be remedied, the refracting telescope would make nearly as great an advance upon its present state as the achromatic did on the single lens refractor.

While gravitation, physical constitution, and chemical analysis by the spectrum show us that matter has similar characteristics in other worlds than our own, when we pass to the consideration of those other attributes of matter which were at one time supposed to be peculiar kinds of matter itself, or, as they were called, imponderables, but which are now generally, if not universally, recognized as forces or modes of motion, we find the evidence of continuity still stronger.

When all that was known of magnetism was that a piece of steel rubbed against a particular mineral had the power of attracting iron, and, if freely suspended, of arranging itself nearly in a line with the earth's meridian, it seemed an exceptional phenomenon. When it was observed that amber, if rubbed, had the temporary power of attracting light bodies, this also seemed something peculiar and anomalous. What are now magnetism and electricity? Forces so universal, so apparently connected with matter as to become two of its invariable attributes; and that to speak of matter not being capable of being affected by these forces would seem almost as extravagant as to speak of matter not being affected by gravitation.

So with light, heat, and chemical affinity, not merely is every form of matter with which we are acquainted capable of manifesting all these modes of force, but so-called matter supposed incapable of such manifestations would to most minds cease to be matter.

Further than this, it seems to me (though, as I have taken an active part for many years, now dating from a quarter of a century, in promoting this view, I may not be considered an impartial judge), that it is now proved that all these forces are so invariably connected *inter se* and with motion as to be regarded as modifications of each other, and as resolving themselves objectively into motion, and subjectively into that something which produces or resists motion, and which we call force.

I may perhaps be permitted to recall a forgotten experiment, which nearly a quarter of a century ago I showed at the London Institution,—an experiment simple enough in itself, but which then seemed to me important, from the consequences to be deduced from it, and the importance of which will be much better appreciated now than then.

A train of multiplying wheels ended with a small metallic wheel which, when the train was put in motion, revolved with extreme rapidity against the periphery of the next wheel, a wooden one. In the metallic wheel was placed a small piece of phosphorus, and as long as the wheels revolved, the phosphorus remained unchanged, but the moment the last wheel was stopped by moving a small lever attached to it, the phosphorus burst into flame. My object was to show that while motion of the mass continued, heat was not generated, but that when this was arrested, the force continuing to operate, the motion of the mass became heat in the particles. The experiment differed from that of Rumford's cannon-boring and Davy's friction of ice, in showing that there was no heat while the motion was unresisted, but that the heat was in some way dependent on the motion being impeded or arrested. We have now become so accustomed to this view, that whenever we find motion resisted we look to heat, electricity, or some other force as the necessary and inevitable result.

It would be out of place here, and treating of matters too familiar to the bulk of my audience, to trace how, by the labours of Oersted, Seebeck, Faraday, Talbot, Daguerre, and others, the way has been prepared for the generalization now known as the correlation of forces or conservation of energy, while Davy, Rumford, Seguin, Mayer, Joule, Helmholtz, Thomson, and others (among whom I would not name myself, were it not that I may be misunderstood and supposed to have abandoned all claim to a share in the initiation of this, as I believe, important generalization) have carried on the work; and how, sometimes by independent and, as is commonly the case, nearly simultaneous deductions, sometimes by progressive and accumulated discoveries, the doctrine of the reciprocal interaction, of the quantitative relation, and of the necessary dependence of all the forces has, I think I may venture to say, been established.

If magnetism be, as it is proved to be, connected with the other forces or affections of matter, if electrical currents always produce, as they are proved to do, lines of magnetic force at right angles to their lines of action, magnetism must be cosmical; for where there is heat and light, there is electricity, and consequently magnetism. Magnetism, then, must be cosmical, and not merely terrestrial. Could we trace magnetism in other planets and suns as a force manifested in axial or meridional lines, i.e. in lines cutting at right angles the curves formed by their rotation round an axis, it would be a great step; but it is one hitherto unaccomplished. The apparent coincidences between the maxima and minima of solar spots, and the decennial or undecennial periods of terrestrial magnetic intensity, though only empirical at present, might tend to lead us to a knowledge of the connexion we are seeking; and the President of the Royal Society considers that an additional epoch of coincidence has arrived, making the fourth decennial period; but some doubt is thrown upon these coincidences by the magnetic observations made at Greenwich Observatory. In a paper published in the *Transactions* of the Royal Society, 1863, the Astronomer Royal says, speaking of results extending over seventeen years, there is no appearance of decennial cycle in the recurrence of great magnetic disturbances; and Mr. Glaisher last year, in the Physical Section of this Association, stated that, after persevering examination, he had been unable to trace any connexion between the magnetism of the earth and the spots on the sun.

Mr. Airy, however, in a more recent paper, suggests that currents of magnetic force having reference to the solar hour are detected, and seem to produce vortices or circular disturbances; and he invites farther co-operative observation on the subject, one of the highest interest, but at present remaining in great obscurity.

One of the most startling suggestions as to the consequence resulting from the dynamical theory of heat is that made by Mayer, that by the loss of *vis viva* occasioned by friction of the tidal waves, as well as by their forming, as it were, a drag upon the earth's rotatory movement, the velocity of the earth's rotation must be gradually diminishing, and that thus, unless some undiscovered compensa-

tory action exist, this rotation must ultimately cease, and changes hardly calculable take place in the solar system.

M. Delaunay considers that part of the acceleration of the moon's mean motion which is not at present accounted for by planetary disturbances, to be due to the gradual retardation of the earth's rotation; to which view, after an elaborate investigation, the Astronomer Royal has given his assent.

Another most interesting speculation of Mayer is that with which you are familiar, viz., that the heat of the sun is occasioned by friction or percussion of meteorites falling upon it: there are some difficulties, not perhaps insuperable, in this theory. Supposing such cosmical bodies to exist in sufficient numbers, they would, as they revolve round the sun, fall into it, not as an *aérolite* falls upon the earth directly by an intersection of orbits, but by the gradual reduction in size of the orbits, occasioned by a resisting medium; some portion of force would be lost, and heat generated in space by friction against such medium; when they arrive at the sun they would, assuming them, like the planets, to have revolved in the same direction, all impinge in a definite direction, and we might expect to see some symptoms of such in the sun's photosphere; but though this is in a constant state of motion, and the direction of these movements has been carefully investigated by Mr. Carrington and others, no such general direction is detected; and M. Faye, who some time ago wrote a paper pointing out many objections to the theory of solar heat being produced by the fall of meteoric bodies into the sun, has recently investigated the proper motions of sun-spots, and believes he has removed certain apparent anomalies and reduced their motions to a certain regularity in the motion of the photosphere, attributable to some general action arising from the internal mass of the sun.

It might be expected that comets, bodies so light and so easily deflected from their course, would show some symptoms of being acted on by gravitation, were such a number of bodies to exist in or near their paths, as are pre-supposed in the mechanical theory of solar heat.

Assuming the undulatory theory of light to be true, and that the motion which constitutes light is transmitted across the interplanetary spaces by a highly-elastic ether, then, unless this motion is confined to one direction, unless there be no interference, unless there be no viscosity, as it is now termed, in the medium, and consequently no friction, light must lose something in its progress from distant luminous bodies, that is to say, must lose something as light; for, as all reflecting minds are now convinced that force cannot be annihilated, the force is not lost, but its mode of action is changed. If light, then, is lost as light (and the observations of Struve seem to show this to be so, that, in fact, a star may be so far distant that it can never be seen in consequence of its luminous emissions becoming extinct), what becomes of the transmitted force lost as light, but existing in some other form? So with heat: our sun, our earth, and planets are constantly radiating heat into space, so in all probability are the other suns, the stars, and their attendant planets. What becomes of the heat thus radiated into space? If the universe have no limit, and it is difficult to conceive one, there is a constant evolution of light and heat; and yet more is given off than is received by each cosmical body, for otherwise night would be as light and as warm as day. What becomes of the enormous force thus apparently non-recurrent in the same form? Does it return as palpable motion? Does it move or contribute to move suns and planets? and can it be conceived as a force similar to that which Newton speculated on as universally repulsive and capable of being substituted for universal attraction? We are in no position at present to answer such questions as these; but I know of no problem in celestial dynamics more deeply interesting than this, and we may be no further removed from its solution than the predecessors of Newton were from the simple dynamical relation of matter to matter which that potent intellect detected and demonstrated.

Passing from extra-terrestrial theories to the narrower field of Molecular Physics, we find the

doctrine of Correlation of Forces steadily making its way. In the Bakerian Lecture for 1863 Mr. Sorby shows, not perhaps a direct correlation of mechanical and chemical forces, but that when, either by solution or by chemical action, a change in volume of the resulting substance as compared with that of its separate constituents is effected, the action of pressure retards or promotes the change, according as the substance formed would occupy a larger or a smaller space than that occupied by its separate constituents; the application of these experiments to geological inquiries as to subterranean changes which may have taken place under great pressure is obvious, and we may expect to form compounds under artificial compression which cannot be found under normal pressure.

In a practical point of view the power of converting one mode of force into another is of the highest importance, and with reference to a subject which at present, somewhat prematurely perhaps, occupies men's minds, viz. the prospective exhaustion of our coal-fields, there is every encouragement derivable from the knowledge that we can at will produce heat by the expenditure of other forces; but, more than that, we may probably be enabled to absorb or store up, as it were, diffused energy—for instance, Berthelot has found that the potential energy of formate of potash is much greater than that of its proximate constituents, caustic potash and carbonic oxide. This change may take place spontaneously and at ordinary temperatures, and by such change carbonic oxide becomes, so to speak, re-invested with the amount of potential energy which its carbon possessed before uniting with oxygen, or, in other words, the carbonic oxide is raised as a force-potential to the place of carbon by the direct absorption or conversion of heat from surrounding matter.

Here we have, as to force-absorption, an analogous result to that of the formation of coal from carbonic acid and water; and though this is a mere illustration, and may never become economical on a large scale, still it and similar examples may calm apprehension as to future means of supplying heat, should our present fuel become exhausted. As the sun's force, spent in times long past, is now returned to us from the coal which was formed by that light and heat, so the sun's rays, which are daily wasted, as far as we are concerned, on the sandy deserts of Africa, may hereafter, by chemical or mechanical means, be made to light and warm the habitations of the denizens of colder regions. The tidal wave is, again, a large reservoir of force hitherto almost unused.

The valuable researches of Prof. Tyndall on radiant heat afford many instances of the power of localizing, if the term be permitted, heat which would otherwise be dissipated.

The discoveries of Graham, by which atmospheric air, drawn through films of caoutchouc, leaves behind half its nitrogen, or, in other words, becomes richer by half in oxygen, and hence has a much increased potential energy, not only show a most remarkable instance of physical molecular action, merging into chemical, but afford us indications of means of storing up force, much of the force used in working the aspirator being capable at any period, however remote, of being evolved by burning the oxygen with a combustible.

What changes may take place in our modes of applying force before the coal-fields are exhausted it is impossible to predict. Even guesses at the probable period of their exhaustion are uncertain. There is a tendency to substitute for smelting in metallurgical processes, liquid chemical action, which of course has the effect of saving fuel; and the waste of fuel in ordinary operations is enormous, and can be much economized by already known processes. It is true that we are, at present, far from seeing a practical mode of replacing that granary of force the coal-fields; but we may with confidence rely on invention being in this case, as in others, born of necessity, when the necessity arises.

I will not further pursue this subject; at a time when science and civilization cannot prevent large tracts of country being irrigated by human blood in order to gratify the ambition of a few restless men, it seems an over-refined sensibility to occupy

ourselves with providing means for our descendants in the tenth generation to warm their dwellings or propel their locomotives.

Two very remarkable applications of the convertibility of force have been recently attained by the experiments of Mr. Wilde and Mr. Holz; the former finds that, by conveying electricity from the coils of a magneto-electric machine to an electro-magnet, a considerable increase of electrical power may be attained, and by applying this as a magneto-electric machine to a second, and in turn to a third electro-magnetic apparatus, the force is largely augmented. Of course, to produce this increase, more mechanical force must be used at each step to work the magneto-electric machines; but provided this be supplied there hardly seems a limit to the extent to which mechanical may be converted into electrical force.

Mr. Holz has contrived a Franklinic electrical machine, in which a similar principle is manifested. A varnished glass plate is made to revolve in close proximity to another plate having two or more pieces of card attached, which are electrified by a bit of rubbed glass or ebonite; the moment this is effected a resistance is felt by the operator who turns the handle of the machine, and the slight temporary electrization of the card converts into a continuous flood of intense electricity the force supplied by the arm of the operator.

These results offer great promise of extended application; they show that, by a mere formal disposition of matter, one force can be converted into another, and that not to the limited extent hitherto attained, but to an extent co-ordinate, or nearly so, with the increased initial force, so that, by a mere change in the arrangement of apparatus, a means of absorbing and again eliminating in a new form a given force may be obtained to an indefinite extent. As we may, in a not very distant future, need, for the daily uses of mankind, heat, light, and mechanical force, and find our present resources exhausted, the more we can invent new modes of conversion of forces, the more prospect we have of practically supplying such want. It is but a month from this time that the greatest triumph of force-conversion has been attained. The chemical action generated by a little salt water on a few pieces of zinc will now enable us to converse with inhabitants of the opposite hemisphere of this planet, and

Put a girdle round about the earth in forty minutes. The Atlantic Telegraph is an accomplished fact.

In Physiology very considerable strides are being made by studying the relation of organized bodies to external forces; and this branch of inquiry has been promoted by the labours of Carpenter, Bence Jones, Playfair, E. Smith, Frankland, and others. Vegetables acted on by light and heat decompose water, ammonia and carbonic acid, and transform them into, among other substances, oxalate of lime, lactic acid, starch, sugar, stearine, urea, and ultimately albumen; while the animal reverses the process, as does vegetable decay, and produces from albumen, urea, stearine, sugar, starch, lactic acid, oxalate of lime, and ultimately ammonia, water, and carbonic acid.

As, moreover, heat and light are absorbed, or converted in forming the synthetic processes going on in the vegetable, so, conversely, heat and sometimes light is given off by the living animal; but it must not be forgotten that the line of demarcation between a vegetable and an animal is difficult to draw, that there are no single attributes which are peculiar to either, and that it is only by a number of characteristics that either can be defined.

The series of processes above given may be simulated by the chemist in his laboratory; and the amount of labour which a man has undergone in the course of twenty-four hours may be approximately arrived at by an examination of the chemical changes which have taken place in his body; changed forms in matter indicating the anterior exercise of dynamical force. That muscular action is produced or supported by chemical change would probably now be a generally-accepted doctrine; but while many have thought that muscular power is derived from the oxidation of albuminous or nitrogenized substances, several recent researches seem to show

that the latter is rather an accompaniment than a cause of the former, and that it is by the oxidation of carbon and hydrogen compounds that muscular force is supplied. Traube has been prominent in advancing this view, and experiments detailed in a paper published this year by two Swiss professors, Drs. Fich and Wialicenus, which were made by and upon themselves in an ascent of the Faulhorn, have gone far to confirm it. Having fed themselves before and during the ascent, upon starch, fat, and sugar, avoiding all nitrogenized compounds, they found that the consumption of such food was amply sufficient to supply the force necessary for their expedition, and that they felt no exhaustion. By appropriate chemical examination they ascertained that there was no notable increase in the oxidation of the nitrogenized constituents of the body. After calculating the mechanical equivalents of the combustion effected, they then state, as their first conclusion, that "The burning of protein substances cannot be the only source of muscular power, for we have here two cases in which men performed more measurable work than the equivalent of the amount of heat, which, taken at a most absurdly high figure, could be calculated to result from the burning of the albumen."

They further go on to state that, so far from the oxidation of albuminous substances not being the only source of muscular power, "the substances by the burning of which force is generated in the muscles are not the albuminous constituents of those tissues, but non-nitrogenous substances, either fats or hydrates of carbon," and that the burning of albumen is not in any way concerned in the production of muscular power.

We must not confuse the question of the food which gives permanent capability of muscular force with that which supplies its requisites for temporary activity; no doubt the carnivora are the most powerfully-constituted animals, but the chamois, gazelle, &c., have great temporary capacity for muscular exertion, though their food is vegetable; for concentrated and sustained energy, however, they do not equal the carnivora; and with the domestic graminivora we certainly find that they are capable of performing more work when supplied with those vegetables which contain the greatest quantity of nitrogen.

These and many similar classes of research show that in chemical inquiries, as in other branches of science, we are gradually relieving ourselves of hypothetical existences, which certainly had the advantage that they might be varied to suit the requirements of the theorist.

Phlogiston, as Lavoisier said with a sneer, was sometimes heavy, sometimes light; sometimes fire in a free state, sometimes combined; sometimes passing through glass vessels, sometimes retained by them; which by its protean changes explained causticity and non-causticity, transparency and opacity, colours and their absence. As phlogiston and similar creations of the mind have passed away, so with hypothetic fluids, imponderable matters, specific ethers, and other inventions of entities made to vary according to the requirements of the theorist, I believe the day is approaching when these will be dispensed with, and when the two fundamental conceptions of matter and motion will be found sufficient to explain physical phenomena.

The facts made known to us by Geological inquiries, while on the one hand they afford striking evidence of Continuity, on the other, by the breaks in the record, may be used as arguments against it. The great question once was, whether these chasms represent sudden changes in the formation of the earth's crust, or whether they arise from dislocations occasioned since the original deposition of strata, or from gradual shifting of the areas of submergence. Few geologists of the present day would, I imagine, not adopt the latter alternatives. Then comes a second question, whether, when the geological formation is of a continuous character, the different characters of the fossils represent absolutely permanent varieties, or may be explained by gradual modifying changes.

Prof. Ansted, summing up the evidence on this head as applied to one division of stratified rocks, writes as follows: "Paleontologists have endeavoured to separate the Lias into a number of subdivisions, by the Ammonites, groups of species of those shells being characteristic of different zones. The evidence on this point rests on the assumption of specific differences being indicated by permanent modifications of the structure of the shell. But it is quite possible that these may mean nothing more than would be due to some change in the conditions of existence. Except between the Marlstone and the Upper Lias there is really no paleontological break, in the proper sense of the words; alterations of form and size consequent on the occurrence of circumstances more or less favourable, migration of species, and other well-known causes, sufficiently account for many of those modifications of the form of the shell that have been taken as specific marks. This view is strengthened by the fact that other shells and other organisms generally show no proof of a break of any importance except at the point already alluded to."

But, irrespectively of another deficiency in the geological record, which will be noticed presently, the physical breaks in the stratification make it next to impossible to fairly trace the order of succession of organisms by the evidence afforded by their fossil remains. Thus there are nine great breaks in the Palaeozoic series, four in the Secondary, and one in the Tertiary, besides those between Palaeozoic and Secondary and Secondary and Tertiary respectively. Thus in England there are sixteen important breaks in the succession of strata, together with a number of less important interruptions. But although these breaks exist, we find pervading the works of many geologists a belief, resulting from the evidence presented to their minds, sometimes avowed, sometimes unconsciously implied, that the succession of species bears some definite relation to the succession of strata. Thus Prof. Ramsay says that "in cases of superposition of fossiliferous strata, in proportion as the species are more or less continuous, that is to say, as the break in the succession of life is partial or complete, so was the time that elapsed between the close of the lower and the commencement of the upper strata a shorter or a longer interval. The break in life may be indicated not only by a difference in species, but yet more importantly by the absence of older and appearance of newer allied or unallied genera."

Indications of the connexion between cosmical studies and geological researches are dawning on us: there is, for instance, some reason to believe that we can trace many geological phenomena to our varying rotation round the sun; thus more than thirty years ago Sir J. Herschel proposed an explanation of the changes of climate on the earth's surface as evidenced by geological phenomena, founded on the changes of excentricity in the earth's orbit. He said he had entered on the subject "impressed with the magnificence of that view of geological revolutions which regards them rather as regular and necessary efforts of great and general causes, than as resulting from a series of convulsions and catastrophes regulated by no laws and reducible to no fixed principles."

As the mean distance of the earth from the sun is nearly invariable, it would seem at first sight that the mean annual supply of light and heat received by the earth would also be invariable; but according to his calculations it is inversely proportional to the minor axis of the orbit: this would give less heat when the excentricity of the earth's orbit is approaching towards or at its minimum. Mr. Croll has recently shown reason to believe that the climate, at all events in the circumpolar and temperate zones of the earth, would depend on whether the winter of a given region occurred when the earth at its period of greatest excentricity was in aphelion or perihelion—if the former, the annual average of temperature would be lower; if the latter, it would be higher than when the excentricity of the earth's orbit were less or approached more nearly to a circle. He calculates the difference in the amount of heat at the period of maximum excentricity of the earth's orbit to be as 19 to 26, according as the winter would take place when the earth was in aphelion or in perihelion. His reason may be briefly stated

thus: assuming the mean annual heat to be the same, whatever the eccentricity of orbit, yet if the extremes of heat and cold in winter and summer be greater, a colder climate will prevail, for there will be more snow and ice accumulated in the cold winter than the hot summer can melt, a result produced by the vapour (aided by the shelter from the sun's rays) suspended in consequence of the aqueous evaporation; hence we should get glacial periods, when the orbit of the earth is at its greatest eccentricity, at those parts of the earth's surface where it is winter when the earth is in aphelion; carboniferous or hot periods where it is winter in perihelion; and normal or temperate periods when the eccentricity of orbit is at a minimum; all these would gradually slide into each other, and would produce at long distant periods alternations of cold and heat, several of which we actually observe in geological records.

If this theory be borne out, we should approximate to a test of the time which has elapsed between different geological epochs. Mr. Croll's computation of this would make it certainly not less than 100,000 years since the last glacial epoch, a time not very long in geological chronology—probably it is much more.

When we compare with the old theories of the earth, by which the apparent changes on its surface were accounted for by convulsions and cataclysms, the modern view inaugurated by Lyell, your former President, and now, if not wholly, at all events to a great extent adopted, it seems strange that the referring past changes to similar causes to those which are now in operation should have remained uninvestigated until the present century; but with this, as with other branches of knowledge, the most simple is frequently the latest view which occurs to the mind. It is much more easy to invent a *Deus ex machina* than to trace out the influence of slow continuous change; the love of the marvellous is so much more attractive than the patient investigation of truth, that we find it to have prevailed almost universally in the early stages of science.

In astronomy we had crystal spheres, cycles, and epicycles; in chemistry the philosopher's stone, the elixir vite, the archæus or stomach demon, and phlogiston; in electricity the notion that amber possessed a soul, and that a mysterious fluid could knock down a steeple. In geology a deluge or a volcano was supplied. In palæontology a new race was created whenever theory required it: how such new races began, the theorist did not stop to inquire.

A curious speculator might say to a palæontologist of even recent date, in the words of Lucretius, *Nam neque de celo cecidisse animalia possunt Nec terrestria de salis exisse lacunis.*

E nihilo si crescere possent, Tum; serent juvenes subito ex infantibus parvis, E terræque exorta repente arbuta salirent; Quorum nihil fieri manifestum est, omnia quando Paulatim crescant, ut par est, semine certo, Crescentesque genus servant.

—which may be thus freely paraphrased: "You have abandoned the belief in one primeval creation at one point of time; you cannot assert that an elephant existed when the first saurians roamed over earth and water. Without, then, in any way limiting Almighty power, if an elephant were created without progenitors, the first elephant must, in some way or other, have physically arrived on this earth. Whence did he come? did he fall from the sky (i.e. from the interplanetary space)? did he rise moulded out of a mass of amorphous earth or rock? did he appear out of the cleft of a tree? If he had no antecedent progenitors, some such beginning must be assigned to him." I know of no scientific writer who has, since the discoveries of geology have become familiar, ventured to present in intelligible terms any definite notion of how such an event could have occurred. Those who do not adopt some view of continuity are content to say, God willed it; but would it not be more reverent and more philosophical to inquire by observation and experiment, and to reason from induction and analogy, as to the probabilities of such frequent miraculous interventions?

I know I am touching on delicate ground, and

that a long time may elapse before that calm inquiry after truth which it is the object of associations like this to promote can be fully attained; but I trust that the members of this body are sufficiently free from prejudice, whatever their opinions may be, to admit an inquiry into the general question whether what we term species are and have been rigidly limited, and have at numerous periods been created complete and unchangeable, or whether, in some mode or other, they have not gradually and indefinitely varied, and whether the changes due to the influence of surrounding circumstances, to efforts to accommodate themselves to surrounding changes, to what is called natural selection, or to the necessity of yielding to superior force in the struggle for existence, as maintained by our illustrious countryman Darwin, have not so modified organisms as to enable them to exist under changed conditions. I am not going to put forward any theory of my own, I am not going to argue in support of any special theory, but having endeavoured to show how, as science advances, the continuity of natural phenomena becomes more apparent, it would be cowardice not to present some of the main arguments for and against continuity as applied to the history of organic beings.

As we detect no such phenomenon as the creation or spontaneous generation of vegetables and animals which are large enough for the eye to see without instrumental assistance, as we have long ceased to expect to find a *Plesiosaurus* spontaneously generated in our fish-pond, or a *Pterodactyle* in our pheasant-cover, the field of this class of research has become identified with the field of the microscope, and at each new phase the investigation has passed from a larger to a smaller class of organisms. The question whether among the smallest and apparently the most elementary forms of organic life the phenomenon of spontaneous generation obtains, has recently formed the subject of careful experiment and animated discussion in France. If it could be found that organisms of a complex character were generated without progenitors out of amorphous matter, it might reasonably be argued that a similar mode of creation might obtain in regard to larger organisms. Although we see no such phenomenon as the formation of an animal such as an elephant, or a tree such as an oak, excepting from a parent which resembles it, yet if the microscope revealed to us organisms, smaller but equally complex, so formed without having been reproduced, it would render it not improbable that such might have been the case with larger organic beings. The controversy between M. Pasteur and M. Pouchet has led to a very close investigation of this subject; and the general opinion is, that when such precautions are taken as exclude from the substance submitted to experiment all possibility of germs from the atmosphere being introduced, as by passing the air which is to support the life of the animalcule through tubes heated to redness and other precautions, no formation of organisms takes place. Some experiments of Mr. Child's, communicated to the Royal Society during the last year, again throw doubt on the negative results obtained by M. Pasteur; so that the question may be not finally determined, but the balance of experiment and opinion is against spontaneous generation.

One argument presented by M. Pasteur is well worthy of remark, viz., that in proportion as our means of scrutiny become more searching, heterogeny, or the development of organisms without generation from parents of similar organism, has been gradually driven from higher to lower forms of life, so that if some apparent exceptions still exist they are of the lowest and simplest forms; and these exceptions may probably be removed, as M. Pasteur considers he has removed them, by a more searching investigation.

If it be otherwise, if heterogeny obtains at all, all will now admit that at present the result of the most careful experiments shows it to be confined to the most simple organic structures, such as vibrations and bacteria, and that all the progressive and more highly developed forms are, as far as the most enlarged experience shows, generated by reproduction.

The great difficulty which is met with at the threshold of inquiry into the origin of species, is the definition of species; in fact, species can hardly be defined without begging the question in dispute.

Thus, if species be said to be a perseverance of type incapable of blending itself with other types, or, which comes nearly to the same thing, incapable of producing by union with other types offspring of an intermediate character which can again reproduce, we arrive at this result, that whenever the advocate of continuity shows a blending of what had been hitherto deemed separate species, the answer is, they were considered separate species by mistake, they do not now come under the definition of species, because they interbreed.

The line of demarcation is thus *ex hypothesi* removed a step further, and thus, unless the advocate of continuity can, on his side, prove the whole question in dispute, by showing that all can directly or by intermediate varieties reproduce, he is defeated by the definition itself of species.

On the other hand, if this, or something in fact amounting to it, be not the definition of species—if it be admitted that distinct species can, under certain favourable conditions, produce intermediate offspring capable of reproduction, then continuity in some mode or other is admitted.

The question then takes this form:—Are there species or are there not? Is the word to be used as signifying a real, natural distinction, or as a mere convenient designation applied to subdivisions having a permanence which will probably outlive man's discussions on the subject, but not an absolute fixity? The same question, in a wider sense, and taking into consideration a much longer time, would be applicable to genera and families.

Actual experiment has done little to elucidate the question, nor, unless we can suppose the experiments continued through countless generations, is it likely to contribute much to its solution. We must, therefore, have recourse to the enlarged experience or induction from the facts of geology, palæontology and physiology, aided by analogy from the laws of action which Nature evidences in other departments.

The doctrine of gradual succession is hardly yet formularized; and though there are some high authorities for certain modifications of such view, the preponderance of authority would necessarily be on the other side. Geology and Palæontology are recent sciences, and we cannot tell what the older authors would have thought or written had the more recently discovered facts been presented to their view. Authority, therefore, does not much help us on this question.

Geological discoveries seemed, in the early period of the science, to show complete extinction of certain species and the appearance of new ones, great gaps existing between the characteristics of the extinct and the new species. As science advanced, these were more or less filled up; the apparent difficulty of admitting unlimited modification of species would seem to have arisen from the comparison of the extreme ends of the scale, where the intermediate links or some of them were wanting.

To suppose a Zoophyte the progenitor of a Mammal, or to suppose at some particular period of time a highly-developed animal to have come out of nothing, or suddenly grown out of inorganic matter, would appear at first sight equally extravagant hypotheses. As an effort of Almighty creative power, neither of these alternatives presents more difficulty than the other; but as we have no means of ascertaining how creative power worked but by an examination and study of the works themselves, we are not likely to get either side proved to ocular demonstration. A single phase in the progress of transmutation would probably require a term far transcending all that embraced by historical records; and, on the other hand, it might be said, sudden creations, though taking place frequently, if viewed with reference to the immensity of time involved in geological periods, may be so rare with reference to our experience, and so difficult of clear authentication, that the non-observation of such instances cannot be regarded as absolute disproof of their possible occurrence.

The more the gaps between species are filled up by the discovery of intermediate varieties, the stronger becomes the argument for transmutation and the weaker that for successive creations, because the former view then becomes more and more consistent with experience, the latter more discordant from it. As undoubted cases of variation, more or less permanent, from given characteristics, are produced by the effects of climate, food, domestication, &c., the more species are increased by intercalation, the more the distinctions slide down towards those which are within the limits of such observed deviations; while, on the other hand, to suppose the more and more frequent recurrence of fresh creations out of amorphous matter, is a multiplication of miracles or special interventions, not in accordance with what we see of the uniform and gradual progress of nature, either in the organic or inorganic world. If we were entitled to conclude that the progress of discovery would continue in the same course, and that species would become indefinitely multiplied, the distinctions would become infinitely minute, and all lines of demarcation would cease, the polygon would become a circle, the succession of points a line. Certain it is that the more we observe, the more we increase the subdivision of species, and consequently the number of these supposed creations; so that new creations become innumerable, and yet of these we have no one well-authenticated instance, and in no other observed operation of Nature have we seen this want of continuity, these frequent *per saltum* deviations from uniformity, each of which is a miracle.

The difficulty of producing intermediate offspring from what are termed distinct species and the infecundity in many instances of hybrids are used as strong arguments against continuity of succession; on the other hand, it may be said long-continued variation through countless generations has given rise to such differences of physical character, that reproduction is difficult in some cases and in others impossible.

Suppose, for instance, M to represent a parent-race whose offspring by successive changes through eons of time have divaricated, and produced on the one hand a species A, and on the other a species Z, the changes here have been so great that we should never expect directly to reproduce an intermediate between A and Z. A and B on the one hand, and Y and Z on the other, might reproduce; but to regain the original type M, we must not only retrocede through all the intermediates, but must have similar circumstances recalled in an inverse order at each phase of retrogression, conditions which it is obviously impossible to fulfil. But though among the higher forms of organic structure we cannot retrace the effects of time and reproduce intermediate types, yet among some of the lower forms we find it difficult to assign any line of specific demarcation; thus, as one result of the very elaborate and careful investigations of Dr. Carpenter on Foraminifera, he states, "It has been shown that a very wide range of variation exists among Orbitolites, not merely as regards external form, but also as to plan of development; and not merely as to the shape and aspect of the entire organism, but also with respect to the size and configuration of its component parts. It would have been easy, by selecting only the most divergent types from amongst the whole series of specimens which I have examined, to prefer an apparently substantial claim on behalf of these to be accounted as so many distinct species. But after having classified the specimens which could be arranged around these types, a large proportion would yet have remained, either presenting characters intermediate between those of two or more of them, or actually combining those characters in different parts of their fabric; thus showing that no lines of demarcation can be drawn across any part of the series that shall definitely separate it into any number of groups, each characterized by features entirely peculiar to itself."

At the conclusion of his inquiry he states:—

I. The range of variation is so great among Foraminifera as to include not merely the differential characters which systematists, proceeding upon the ordinary methods have accounted specific, but

also those upon which the greater part of the genera of this group have been founded, and even in some instances those of its orders.

II. The ordinary notion of species as assemblages of individuals marked out from each other by definite characters that have been genetically transmitted from original prototypes similarly distinguished, is quite inapplicable to this group; since even if the limits of such assemblages were extended so as to include what elsewhere would be accounted genera, they would still be found so intimately connected by gradational links, that definite lines could not be drawn between them.

III. The only natural classification of the vast aggregate of diversified forms which this group contains will be one which ranges them according to their direction and degree of divergence from a small number of principal family types; and any subordinate grouping of genera and species which may be adopted for the convenience of description and nomenclature must be regarded merely as assemblages of forms characterized by the nature and degree of the modifications of the original type, which they may have respectively acquired in the course of genetic descent from a common ancestry.

IV. Even in regard to these family types it may fairly be questioned whether analogical evidence does not rather favour the idea of their derivation from a common original than that of their primitive distinctness.

Mr. H. Bates, when investigating "the Lepidoptera of the Amazon Valley," may almost be said to have witnessed the origin of some species of butterflies, so close have been his observations on the habits of these animals that have led to their variation and segregation, so closely do the results follow his observations, and so great is the impossibility of otherwise accounting for any of the observed facts.

In the numerous localities of the Amazon region certain gregarious species of butterfly (Heliconidea) swarm in incredible numbers, almost outnumbering all the other butterflies in the neighbourhood; the species in the different localities being different, though often to be distinguished by a very slight shade.

In these swarms are to be found, in small numbers, other species of butterflies belonging to as many as ten different genera, and even some moths; and these intruders, though they structurally differ in *toto* from the swarms they mingle with, and from one another, mimic the Heliconidea so closely in colours, habits, mode of flight, &c., that it is almost impossible to distinguish the intruders from those they mingle with. The obvious benefit of this mimicry is safety, the intruders hence escaping detection by predatory animals.

Mr. Bates has extended his observations to the habits of life, food, variations, and geographical range of the species concerned in these mimetic phenomena, and finds in every case corroborative evidence of every variety and species being derivative, the species being modified from place to place to suit the peculiar form of Heliconidea stationed there.

Mr. Wallace has done similar service to the derivative theory by his observations and writings on the Butterflies and Birds of the Malay Archipelago, adducing instances of mimetic resemblances strictly analogous to the above; and adding in further illustration a beautiful series of instances where the form of the wing of the same butterfly is so modified in various islets, as to produce changes in their mode of flight that tend to the conservation of the variety by aiding its escape when chased by birds or predacious insects.

He has also adduced a multitude of examples of geographical and representative species, races, and varieties, forming so graduated a series as to render it obvious that they have had a common origin.

The effects of food in the formation and segregation of races and of certain groups of insects has been admirably demonstrated by Mr. B. D. Walsh, of North America.

Mr. M'Donnell has been led to the discovery of a new organ in electric fishes from the application of the theory of descent, and Dr. Fritz Müller

has published numerous observations showing the organs of very different structure may, through the operation of natural selection, acquire very similar and even identical functions. Sir John Lubbock's diving hymenopterous insect affords a remarkable illustration of analogous phenomena; it dives by the aid of its wings, and is the insect of the vast order it belongs to that is aquatic.

The discovery of the Eozoon is of the highest importance in reference to the derivative hypothesis, occurring as it does in strata that were formed at a period inconceivably antecedent to the pre-supposed introduction of life upon the globe, and displacing the argument derived from a supposition that at the dawn of life a machine of beings of high organization were simultaneously developed (in the Silurian and Cambrian strata).

Prof. A. de Candolle, one of the most distinguished continental botanists, has, to some extent, abandoned the tenets held in his 'Géométrie Botanique,' and favours the derivative hypothesis in his paper on the variation of oaks; following a paper by Dr. Hooker, on the oaks of Palestine, showing that some sixteen of them are derivative, he avows his belief that two-thirds of the species of this genus, which he himself describes are provisional only.

Dr. Hooker, who had only partially accepted the derivative hypothesis propounded before the publication of 'The Origin of Species through Natural Selection,' at the same time declining the doctrine of special creation, has since then cordially adopted the former, and illustrated its principles by applying them to the solution of various botanical questions: first, in reference to the Flora of Australia, the anomalies of which he appears to explain satisfactorily by the application of these principles; and, latterly, in reference to the Arctic Flora.

In the case of the Arctic Flora, he believes the originally Scandinavian types were spread over the high northern latitudes, that these were driven southwards during the glacial period, when many of them changed their forms in the struggle ensued with the displaced temperate plants; thus on the returning warmth, the Scandinavian plants whether changed or not, were driven again northwards and up to the mountains of the temperate latitudes, followed, in both cases, by series of pre-existing plants of the temperate Alps. The result is the present mixed Arctic Flora, consisting of a basis of more or less changed and unchanged Scandinavian plants, associated in each longitude with representatives of the mountain Flora of the more temperate regions to the south of them.

The publication of a previously totally unknown Flora, that of the Alps of tropical Africa, by Dr. Hooker, has afforded a multitude of facts that have been applied in confirmation of the derivative hypothesis. This Flora is found to have relationships with those of temperate Europe and North Africa, of the Cape of Good Hope, and of the mountains of tropical Madagascar and Abyssinia, that can be accounted for on no other hypothesis, but that there has been ancient climatal connexion, and some coincident or subsequent slight changes of specific character.

The doctrine of Cuvier, every day more and more borne out by observation, that each organ bears a definite relation to the whole of the individual, seems to support the view of indefinite variation. If an animal seeks its food or safety by climbing trees, its claws will become more prehensile, the muscles which act upon those claws will become more developed, the body will become agile by the very exercise which is necessary to it, and each portion of the frame will mould itself to the wants of the animal by the effect on it of the habits of the animal.

Another series of facts which present an argument in favour of gradual succession are the phases of resemblance to inferior orders which the embryo passes through in its development, and the relations shown in what is termed the metamorphosis of plants; facts difficult to account for on the theory of frequent separate creations, but almost inevitable on that of gradual succession. So also the existence of rudimentary and effete organs.

which must either be referred to a *luxus naturæ* or to some mode of continuous succession.

The doctrine of typical nuclei seems only a mode of evading the difficulty; experience does not give us the types of theory, and, after all, what are those types? It must be admitted there are none such in reality; how are we led to the theory of them? simply by a process of abstraction from classified existences. Having grouped from natural similitudes certain natural forms into a class, we select attributes common to each member of the class, and call the assemblage of such attributes a type of the class. This process gives us an abstract idea, and we then transfer this idea to the Creator, and make Him start with that which our own imperfect generalization has derived. It seems to me that the doctrine of types is, in fact, a concession to the theory of continuity or indefinite variability; for the admission that large groups have common characters shows, necessarily, a blending of forms within the scope of the group, which supports the view of each member being derived from some other member of it: can it be asserted that the assigned limits of such groups have a definite line of demarcation?

The condition of the earth's surface, or, at least, of large portions of it, has for long periods remained substantially the same; this would involve a greater degree of fixity in the organisms which have existed during such periods of little change than in those which have come into being during periods of more rapid transition; for, though rejecting catastrophes as the general *modus agendi* of Nature, I am far from saying that the march of physical changes has been always perfectly uniform.

There have been doubtless what may be termed secular seasons, and there have been local changes of varying degrees of extent and permanence; from such causes organized beings would be more concentrated in certain directions than in others, the fixity of character being in the ratio of the fixity of condition. This would throw natural forms into certain groups which would be more prominent than others, like the colours of the rainbow, which present certain predominant tints, though they merge into each other by insensible gradations.

While the evidence seems daily becoming stronger in favour of a derivative hypothesis as applied to the succession of organic beings, we are far removed from anything like a sufficient number of facts to show that, at all events within the existing geological periods capable of being investigated, there has been any great progression from a simpler or more embryonic to a more complex type.

Prof. Huxley, though inclined to the derivative hypothesis, shows, in the concluding portion of his address to the Geological Society, 1862, a great number of cases in which, though there is abundant evidence of variation, there is none of progression. There are, however, several groups of Vertebrata in which the endoskeleton of the older presents a less ossified condition than that of the younger genera. He cites the Devonian Ganoids, the Mesozoic Lepidosteidae, the Palæozoic Sharks, and the more ancient Crocodilia and Lacertilia, and particularly the Pycnodonts and Labyrinthodonts, as instances of this when compared with their more recent representatives.

The records of life on the globe may have been destroyed by the fusion of the rocks, which would otherwise have preserved them, or by crystallization after hydrothermal action. The earlier forms may have existed at a period when this planet was in course of formation, or being segregated or detached from other worlds or systems. We have not evidence enough to speculate on the subject, but by time and patience we may acquire it.

Were all the forms which have existed embalmed in rock, the question would be solved; but what a small proportion of extinct forms is so preserved, and must be, if we consider the circumstances necessary to fossilize organic remains. On the dry land, unwashed by rivers and seas, when an animal or plant dies, it undergoes chemical decomposition which changes its form; it is consumed by insects, its skeleton is oxidized and crumbles into dust. Of the myriads of animals and vegetables which annually perish, we find hardly an instance of a relic so preserved as to be likely to become a per-

manent fossil. So, again, in the deeper parts of the oceans, or of the larger lakes, the few fish there are perish and their remains sink to the bottom, and are there frequently consumed by other marine or lacustrine organisms, or chemically decomposed. As a general rule, it is only when the remains are silted up by marine, fluvial, or lacustrine sediments that the remains are preserved. Geology, therefore, might be expected to keep for us such organic remains only as were likely to inhabit deltas or the margins of seas, lakes, or rivers; here and there an exception may occur, but the mass of preserved relics would be those of creatures so situated: and so we find it, the bulk of fossil remains consists of fish and amphibia, shell-fish form the major part of the geological museum, limestone and chalk rocks frequently consisting of little else than a congeries of fossil shells. Plants of reed or rush-like character, fish which are capable of inhabiting shallow waters, and saurian animals form another large portion of geological remains.

Compare the shell-fish and amphibia of existing organisms with the other forms, and what a small proportion they supply; compare the shell-fish and amphibia of Palæontology with the other forms, and what an overwhelming majority they yield!

There is nothing, as Prof. Huxley has remarked, like an extinct order of Birds or Mammals, only a few isolated instances. It may be said, the ancient world possessed a larger proportion of fish and amphibia, and was more suited to their existence. I see no reason for believing this, at least to anything like the extent contended for; the Fauna and Flora now in course of being preserved for future ages would give the same idea to our successors.

Crowded as Europe is with cattle, birds, insects, &c., how few are geologically preserved! while the muddy or sandy margins of the ocean, the estuaries, and deltas are yearly accumulating numerous crustacea and molluscs, with some fishes and reptiles, for the study of future palæontologists.

If this position be right, then, notwithstanding the immense number of preserved fossils, there must have lived an immeasurably larger number of unpreserved organic beings, so that the chance of filling up the missing links, except in occasional instances, is very slight. Yet where circumstances have remained suitable for their preservation, many closely-connected species are preserved—in other words, while the intermediate types in certain cases are lost, in others they exist. The opponents of continuity lay all stress on the lost and none on the existing links.

But there is another difficulty in the way of tracing a given organism to its parent form, which, from our conventional mode of tracing genealogies, is never looked upon in its proper light.

Where are we to look for the remote ancestor of a given form? Each of us, supposing none of our progenitors to have intermarried with relatives, would have had at or about the period of the Norman Conquest upwards of a hundred million direct ancestors of that generation, and if we add the intermediate ancestors, double that number. As each individual has a male and female parent, we have only to multiply by two for each thirty years, the average duration of a generation, and it will give the above result.

Let any one assume that one of his ancestors at the time of the Norman Conquest was a Moor, another a Celt, and a third a Laplander, and that these three were preserved while all the others were lost, he would never recognize either of them as his ancestor; he would only have the one-hundred millionth of the blood of each of them, and as far as they were concerned there would be no perceptible sign of identity of race.

But the problem is more complex than that which I have stated. At the time of the Conquest there were hardly a hundred million people in Europe; it follows that a great number of the ancestors of the *propositus* must have intermarried with relations, and then the pedigree, going back to the time of the Conquest, instead of being represented by diverging lines, would form a network so tangled that no skill could unravel it; the law of probabilities would indicate that any two people in the same country, taken at hazard, would not have many generations to go back before they

would find a common ancestor, who probably, could they have seen him or her in the life, had no traceable resemblance to either of them. Thus two animals of a very different form, and of what would be termed very different species, might have a common geological ancestor, and yet the skill of no comparative anatomist could trace the descent.

From the long-continued conventional habit of tracing pedigrees through the male ancestor, we forget in talking of progenitors that each individual has a mother as well as a father, and there is no reason to suppose that he has in him less of the blood of the one than of the other.

The recent discoveries in palæontology show us that Man existed on this planet at an epoch far anterior to that commonly assigned to him. The instruments connected with human remains, and indisputably the work of human hands, show that to these remote periods the term civilization could hardly be applied—chipped flints of the rudest construction, probably, in the earlier cases, fabricated by holding an amorphous flint in the hand, and chipping off portions of it by striking it against a larger stone or rock; then, as time suggested improvements, it would be more carefully shaped, and another stone used as a tool; then (at what interval we can hardly guess) it would be ground, then roughly polished, and so on,—subsequently bronze weapons, and, nearly the last before we come to historical periods, iron. Such an apparently simple invention as a wheel must, in all probability, have been far subsequent to the rude hunting-tools or weapons of war to which I have alluded.

A little step-by-step reasoning will convince the unprejudiced that what we call civilization must have been a gradual process; can it be supposed that the inhabitants of Central America or of Egypt suddenly and what is called instinctively built their cities, carved and ornamented their monuments? if not, if they must have learnt to construct such erections, did it not take time to acquire such learning, to invent tools as occasion required, contrivances to raise weights, rules or laws by which men acted in concert to effect the design? Did not all this require time? and if, as the evidence of historical times shows, invention marches with a geometrical progression, how slow must have been the earlier steps! If even now habit, and prejudice resulting therefrom, vested interests, &c., retard for some time the general application of a new invention, what must have been the degree of retardation among the comparatively uneducated beings which then existed?

I have, of course, been able to indicate only a few of the broad arguments on this most interesting subject; for detailed results the works of Darwin, Hooker, Huxley, Carpenter, Lyell, and others must be examined. If I appear to lean to the view that the successive changes in organic beings do not take place by sudden leaps, it is, I believe, from no want of an impartial feeling; but if the facts are stronger in favour of one theory than another, it would be an affectation of impartiality to make the balance appear equipoised.

The prejudices of education and associations with the past are against this as against all new views; and while on the one hand a theory is not to be accepted because it is new and *prima facie* plausible, still to this assembly I need not say that its running counter to existing opinions is not necessarily a reason for its rejection; the *onus probandi* should rest on those who advance a new view, but the degree of proof must differ with the nature of the subject. The fair question is, Does the newly-proposed view remove more difficulties, require fewer assumptions, and present more consistency with observed facts than that which it seeks to supersede? if so, the philosopher will adopt it, and the world will follow the philosopher—after many days.

It must be borne in mind that even if we are satisfied from a persevering and impartial inquiry that organic forms have varied indefinitely in time, the *causa causans* of these changes is not explained by our researches; if it be admitted that we find no evidence of amorphous matter suddenly changed into complex structure, still why matter should be endowed with the plasticity by which it

slowly acquires modified structure is unexplained. If we assume that natural selection, or the struggle for existence, coupled with the tendency of like to reproduce like, gives rise to various organic changes, still our researches are at present uninformative as to why like should produce like, why acquired characteristics in the parent should be reproduced in the offspring. Reproduction itself is still an enigma, and this great question may involve deeper thoughts than it would be suitable to enter upon now.

Perhaps the most convincing argument in favour of continuity which could be presented to a doubting mind would be the difficulty it would feel in representing to itself any *per saltum* act of Nature. Who would not be astonished at beholding an oak-tree spring up in a day, and not from seed or shoot? We are forced by experience, though often unconsciously, to believe in continuity as to all effects now taking place; if any one of them be anomalous, we endeavour, by tracing its history and concomitant circumstances, to find its cause, i.e. to relate it to antecedent phenomena; are we then to reject similar inquiries as to the past? is it laudable to seek an explanation of present changes by observation, experiment, and analogy, and yet reprehensible to apply the same mode of investigation to the past history of the earth and of the organic remains embalmed in it?

If we disbelieve in sudden creations of matter or force, in the sudden formations of complex organisms now, if we now assign to the heat of the sun an action enabling vegetables to live by assimilating gases and amorphous earths into growing structures, why should such effects not have taken place in earlier periods of the world's history, when the sun shone as now, and when the same materials existed for his rays to fall upon?

If we are satisfied that continuity is a law of nature, the true expression of the action of Almighty power, then, though we may humbly confess our inability to explain why matter is impressed with this gradual tendency to structural formation, we should cease to look for special interventions of creative power in changes which are difficult to understand, because, being removed from us in time, their concomitants are lost; we should endeavour from the relics to evoke their history, and when we find a gap not try to bridge it over with a miracle.

If it be true that continuity pervades all physical phenomena, the doctrine applied by Cuvier to the relations of the different parts of an animal to each other might be capable of great extension. All the phenomena of inorganic and organized matter might be expected to be so inter-related that the study of an isolated phenomenon would lead to a knowledge of numerous other phenomena with which it is connected. As the antiquary deduces from a monolith the tools, the arts, the habits, and epoch of those by whom it is wrought, so the student of science may deduce from a spark of electricity or a ray of light the source whence it is generated; and by similar processes of reasoning other phenomena hitherto unknown may be deduced from their probable relation with the known. But, as with heat, light, magnetism, and electricity, though we may study the phenomena to which these names have been given, and their mutual relations, we know nothing of what they are; so, whether we adopt the view of natural selection, of effort, of plasticity, &c., we know not why organisms should have this *natus formatus*, or why the acquired habit or exceptional quality of the individual should reappear in the offspring.

Philosophy ought to have no likes or dislikes, truth is her only aim; but if a glow of admiration be permitted to a physical inquirer, to my mind a far more exquisite sense of the beautiful is conveyed by the orderly development, by the necessary inter-relation and inter-action of each element of the Cosmos, and by the conviction that a bullet falling to the ground changes the dynamical conditions of the universe, than can be conveyed by mysteries, by convulsions, or by cataclysms.

The sense of understanding is to the educated more gratifying than the love of the marvellous, though the latter need never be wanting to the nature-seeker.

But the doctrine of continuity is not solely applicable to physical inquiries.

The same modes of thought which lead us to see continuity in the field of the microscope as in the universe, in infinity downwards as in infinity upwards, will lead us to see it in the history of our own race; the revolutionary ideas of the so-called natural rights of man, and *a priori* reasoning from what are termed first principles, are far more unsound and give us far less ground for improvement of the race than the study of the gradual progressive changes arising from changed circumstances, changed wants, changed habits. Our language, our social institutions, our laws, the constitution of which we are proud, are the growth of time, the product of slow adaptations, resulting from continuous struggles. Happily in this country, though our philosophical writers do not always recognize it, practical experience has taught us to improve rather than to re-model; we follow the law of nature and avoid cataclysms.

The superiority of Man over other animals inhabiting this planet, of civilized over savage man, and of the more civilized over the less civilized, is proportioned to the extent which his thought can grasp of the past and of the future. His memory reaches further back, his capability of prediction reaches further forward in proportion as his knowledge increases. He has not only personal memory which brings to his mind at will the events of his individual life,—he has history, the memory of the race; he has geology, the history of the planet; he has astronomy, the geology of other worlds. Whence does the conviction to which I have alluded, that each material form bears in itself the records of its past history, arise? Is it not from the belief in continuity? Does not the worn hollow on the rock record the action of the tide, its stratified layers the slow deposition by which it was formed, the organic remains imbedded in it the beings living at the times these layers were deposited, so that from a fragment of stone we can get the history of a period myriads of years ago? From a fragment of bronze we may get the history of our race at a period antecedent to tradition. As science advances our power of reading this history improves and is extended. Saturn's ring may help us to a knowledge of how our solar system developed itself, for it as surely contains that history as the rock contains the record of its own formation.

By this patient investigation how much have we already learnt, which the most civilized of ancient human races ignored! While in ethics, in politics, in poetry, in sculpture, in painting, we have scarcely, if at all, advanced beyond the highest intellects of ancient Greece or Italy, how great are the steps we have made in physical science and its applications!

But how much more may we not expect to know?

We, this evening assembled, Ephemeræ as we are, have learnt by transmitted labour, to weigh, as in a balance, other worlds larger and heavier than our own, to know the length of their days and years, to measure their enormous distance from us and from each other, to detect and accurately ascertain the influence they have on the movements of our world and on each other, and to discover the substances of which they are composed; may we not fairly hope that similar methods of research to those which have taught us so much may give our race further information, until problems relating not only to remote worlds, but possibly to organic and sentient beings which may inhabit them, problems which it might now seem wildly visionary to enunciate, may be solved by progressive improvements in the modes of applying observation and experiment, induction and deduction?

SAMUEL MAYNARD.

THE above well-known mathematical bookseller recently died in the Booksellers' Retreat, at Abbott's Langley, in his seventy-seventh year. He was self-taught. At twenty years of age he came from Taunton to London and opened a school in Clarendon Square, Somers Town, in which he was successful for some years. He then opened a small shop, in Crown Court, Fleet Street, for the sale of

mathematical books; from whence he removed to Earl's Court, Leicester Square, where he carried on business for thirty years. In his old age he was glad to accept an asylum as above, in 1862, where he remained until his death. All who had anything to do with mathematics knew the little booth in Earl's Court, crowded with old and dusty books, and the man who seemed to know all the English part of his stock. Mr. Maynard was a competent mathematician, and edited, for booksellers, various works on the lower branches. His particular study was the almanack and its construction: on this point he has left a very elaborate manuscript, which is at present at the apartments of the Astronomical Society. Mr. Maynard carried on his business on the plan of high prices and slow returns: this is not the way to thrive in our day. But it was not altogether on commercial principles that he acted. He was, by his knowledge of the intellectual value of his store, a little bit of a bibliophile: we have reason to think he had this feeling to an extent he knew nothing of himself. When his books came to be sold by auction at his retirement—1,200 lots, most of them packages, for so the auctioneers sell miscellaneous shop-stock—many books turned up which, to our knowledge, he had been asked for, and did not produce. Some of them, we have no doubt, were reserved, not for private use, but to enjoy the feeling of possession. Maynard published fourteen catalogues: they are well known by the title-pages, which have, between the binomial theorem above and Taylor's theorem below, Euclid I. 47, with his name, address, and business worked into the diagram, supported on one side by the cone, sphere, and cylinder of Archimedes, and on the other by the Copernican system shining through clouds. He was an upright and simple-minded man. The mathematicians make no more pilgrimages to 8, Earl's Court. They miss the shop to which all their rare books came at last: and they miss their old friend, whom they used to interrupt when deep in the construction of a catalogue, and the consultation about the abbreviation of a word, or the meaning of a title.—We may add to the above a record of the passing away of two other persons known to book purchasers or authors; viz., Mr. Sothman, advanced in years and honours; and Mr. George Vertue, in the midst of a promising career.

LITERARY RESEARCH IN SPAIN.

76, Chester Square, August 20, 1866.
NOT long since it was reported in Madrid that Señor de la Barrera intends to offer a sequel of his former work to the forthcoming competition for the annual prize at the National Library. The aim of the award, it should be mentioned, is to encourage bibliographical studies. The productions judged to possess the requisite degree of merit are honoured with a moderate premium in money, and afterwards printed at the expense of the State. This reward was deservedly gained by Don Cayetano at the competition of 1860, when he produced the 'Catálogo Bibliográfico y Biográfico del Teatro antiguo Español,'—a large and substantial performance, the labour of years on a subject of extreme difficulty, presenting for the first time a comprehensive survey of a field rich in literary interest, and too long neglected. To pursue such a task through the decay of two centuries, among which the desired notices had to be sought with pain from obscure and miscellaneous sources, was an undertaking the difficulty of which those only who have studied the national drama of Spain can appreciate. Señor de la Barrera may be praised as having succeeded, in spite of such obstacles, in producing on this subject a manual of remarkable importance, surprisingly complete and accurate, all things considered; but in collecting and arranging such a mass of scattered details, comprising the lives and works of some hundreds of authors, errors and omissions were all but inevitable. The supplement, now completed, it is said will rectify in several particulars the earlier work, and enrich it with considerable additions. Among the latter is one important enough to form a work by itself,—an entirely new biography, namely, of Lope de Vega, founded on documents hitherto unknown; and especially on a precious series of the poet's

autograph letters, extending over his most brilliant period, which have but lately been brought to light from the archive of the Comte de Altamira. The value of such a treasure-trove can hardly be overrated. Until now the personal history of this remarkable man has been a mere blank; the few details current respecting him being of little importance, and too often of doubtful authority. The interest of continuous illustrations from his own hand may, therefore, be conceived.

With no little surprise, however, I have heard it rumoured that the reception and publicity of this notable discovery are threatened with opposition, ostensibly, it may be, on some point of form, but in reality on religious grounds! It is whispered that the letters in question will reveal the fact that Lope, even after he had assumed the tonsure, (whether in 1609 or somewhat later is not yet determined) did not at once and altogether take leave of secular frailties; and it seems that certain censors, in the ultra-Catholic sense, now prevalent at Court, opine that any reflexion on the impeccability of the priesthood, from so illustrious an instance, would be a scandal quite unfit to be divulged. This assumption is almost too absurd to be credible. —Note, that Lope then was, and for more than twenty years afterwards continued to be, monarch of the popular stage; to which, after his consecration, he gave upwards of *one thousand* plays; of which, it may safely be asserted, on the evidence of a number that have been preserved, more than two-thirds had love for their ruling theme, and the rest, however serious the subject, were never without a large infusion of the same element. It is in presence of this notorious fact that the *scandal* in question is deprecated. A far worse scandal would be the success of an attempt, in this nineteenth century, to stifle any better knowledge of the most singular phenomenon of its kind that the world has ever seen, on pretences fit only for a Capuchin of the Dark Ages. Can the parties concerned be blind to the fact that all educated minds throughout Europe, of whatever belief, are in this day agreed that it is imposture only which needs to invoke the suppression of truth? Should this act be done at one of the head-quarters of literature in Madrid, it would be a lamentable proof that Spain, instead of advancing in civilization, is now sinking below the position she held in the last century, under Charles the Third. It may be hoped, however, that a report so injurious to the credit of the nation may turn out to be itself a mere piece of scandalous gossip.

J. R. CHORLEY.

OUR WEEKLY GOSSIP.

ON Monday next the Gardens of the Royal Horticultural Society will be opened to the public free, in commemoration of the birthday of the late Prince Consort.

As between poet and publishers, it is but an act of justice to state that the withdrawal from circulation of Mr. Swinburne's 'Poems and Ballads' was entirely the act of Messrs. Moxon & Co.

Dr. Russell, the well-known correspondent of the *Times*, enters the ranks of novelists with a work entitled 'Dr. Brady.'

The Tenth Congress of the Association for the Promotion of Social Science (with which is united the Society for Promoting the Amendment of the Law) will be held in Manchester from the 3rd to the 10th of October, under the presidency of Lord Shaftesbury. The question of International Copyright is to be discussed, in its application to books, dramatic and musical compositions, the reproduction of works of art by engraving, photography, or otherwise, and the designs of manufacture.

A curious error has been circulating in the papers touching the artist who executed the cenotaph in memory of the Princess Charlotte of Wales, in St. George's Chapel, Windsor. It is attributed to Mr. R. J. Wyatt, the sculptor, of Rome. The artist who executed the cenotaph was Mr. Matthew C. Wyatt, of Paddington, and he was at least more successful in that sensational work than in his equestrian statue of the Duke of Wellington, which humiliates humanity and horseflesh

from its "coign of vantage" at the top of Grosvenor Place.

"Oriental Mysteries" are not often amusing nor easily developed, but under that title the Stereoscopic Company has published a mystery (if a mystery remain so after publication) which puzzles sages, and amuses all the world. As for explaining it, how can we venture to attempt to unravel what defies the scientific world?

With reference to 'Sketches of Russian Life, before and after the Emancipation of the Serfs,' and our doubt whether the personal anecdotes are to be taken as literal records, a Correspondent (E. C.) says: "I distinctly recollect reading the two anecdotes you quote, in *Chambers's Journal* of about eighteen years ago. I have not the numbers with me to refer to, but am quite certain as to the fact." The same journal has been drawn upon by various other original writers.

We have received the following communication:

"Christ Church, Jerusalem, Aug. 3, 1866.

"After reading Mr. Mill's letter of the 7th of July, I saw Priest Amram, and noted down from him the following statements:—1. That H.R.H. the Prince of Wales *did* see the most ancient roll of the Samaritans. 2. That the portion of it photographed by Mr. Bedford was written, and added to fill a decayed place, about sixteen centuries ago. 3. That he (Amram) would only undertake to affirm positively that the book Deuteronomy (excepting a gap, now patched with paper, before the record of the Law) is in the handwriting of Abishua. 4. That the Tarikh (Deut. vi. 10, &c.) runs as follows:—'I, Abishua—son of Phinehas, son of Eleazar, son of Aaron, the priests, to them be honour from Jehovah and His Will—wrote this Holy Book in the door of the Tabernacle, on Mount Gerizzim, in the year thirteen in the reign of the Children of Israel in the land of Canaan, with its boundaries. Praise Jehovah.' 5. This roll is exhibited at the seven feasts each year. 6. In conducting service, reading from a roll, reading from a quarto, and repeating from memory, are considered modes equally sacred. 7. Lieut. Anderson was not permitted to photograph the 'Abishua MSS.' One of the three rolls usually shown to visitors was opened to him for that purpose. 8. The Samaritans assert that when Ezra changed the letters, he also partially altered the matter of the Pentateuch. 9. In their chronology stands the entry, 'that in the year 4281 from Adam, and in the nineteenth year of the priesthood of Jehoiakim, Jesus, the son of Mary, was crucified in Cursed Salem' (Arusalem). 10. The relationship between Jews and Samaritans remains pretty much as of old. Yours, &c.,

"JOSEPH BARCLAY."

The Irish National Picture Gallery in Dublin is making most favourable progress. The collection has been made at an outlay of 10,000*l.*, of which sum 6,000*l.* has been raised by local subscriptions. This is creditable alike to Irish taste, wisdom, and liberality. The *Dublin Evening Mail*, in reference to the fact that, according to the Civil Service Estimates, 1,000*l.* will be voted for pictures when local subscription has already supplied the same amount, suggests that, if for every thousand subscribed another thousand will be added by Government, there remains the sum of 5,000*l.* due to the Irish Gallery, which has already received an instalment amounting to a fifth of that handsome total.

There is no end of queer mistakes. A few weeks ago we asked for the derivation of *salad*. A correspondent of *Notes and Queries* says that in the passage in which we ask this we repeat, inadvertently he supposes, almost verbatim, Cade's interesting soliloquy in the garden of the Kentish Squire. We cannot afford space to reprint: but if any reader will compare our paragraph (*ante*, p. 107) with the soliloquy in 'Henry the Sixth,' part II. act iv. scene 10, we think he will be amused. Not verbatim, we should say; only *herbatim*: for Cade mentions two kinds of salad, and so do we. But we had quite forgotten even this resemblance; and there is a great difference even here: for Cade puns, as became a runaway traitor; and we philologized, as became grave journalists.

According to the Report of the Commissioners of Patents, it appears that in 1865 there were 3,386 applications for patents; of these, 2,186 passed the great seal. Seventy per cent. of the latter became void by non-payment of the 50*l.* stamp then payable, and ninety per cent. of the remainder became void at the end of the seventh year by non-payment of the 100*l.* stamp, the amount then required to secure the patent for a second term of seven years. The receipts of the office during the above year were 115,340*l.* Of this sum, the Attorney and Solicitor General and their clerks received 10,118*l.*; 4,554*l.* was given for compensation, and 32,154*l.* was spent in general expenditure. After sundry other deductions, a surplus remained of 47,324*l.* The Commissioners are of opinion that the fees are not too high, as their effect is to stop the application for useless and too speculative patents. They further recommend that the surplus should be applied to the purchase of large offices and the establishment of a museum; and they consider that Fife House and the adjoining gardens would be admirably adapted for these purposes.

At a recent meeting of the Paris Academy of Sciences the Atlantic Telegraph Cable formed the subject of a prolonged discussion. M. Babinet was of opinion that although the Cable is admirably made, it will not remain long in efficient working order, and recommended that immediate steps should be taken to determine by its means the exact longitude of the American station at Newfoundland.

In the course of his recent explorations in Brazil, Capt. Burton discovered on the south bank of the Parahiba river, between San Pablo and Orio, a deposit of pizano or hard clay, bituminous shale, overlying a true coal-measure, containing petroleum, and also beds of limestone and ironstone.

After a delay of four years, the Royal Society of Victoria have published another volume, the sixth, of their *Transactions and Proceedings*, comprising the years 1861 to 1864 inclusive. This volume contains, besides the President's addresses, forty papers under the head of Transactions, chiefly on the botany, geology and natural history of the colony. Among other subjects we find 'Suggestions for the Formation of a Colonial Navy,' 'Determination of Personal Equation in Astronomical Observing,' 'Description of a Pendulum Apparatus for determining the Length of a Seconds Pendulum in Melbourne,' 'Notes on the Coast and Lakes of Gipps Land,' 'Water Supply and Irrigation,' 'Surface and Underground Drainage of Melbourne,' 'Determination of the Sun's Distance,' and 'Tidal Phenomena of Hobson's Bay.' After reading such a meritorious catalogue of scientific and useful researches, we can but wish success to the Royal Society of Victoria; may their future be as beneficial to science as that of the Royal Society of London!

The topographical and antiquarian library of the late Rev. J. M. Gresley has been sold during the past week by Messrs. Sotheby, Wilkinson & Hodge. The following are the most noteworthy: Memorials of the Bagot Family, compiled in 1823, with plates and pedigrees, privately printed, 16*l.*—Carlisle's Collections for a History of the Ancient Family of Carlisle, privately printed, 9*l.*—Collections for a History of the Ancient Family of Bland, privately printed, 3*l.* 10*s.*—Annals of the Shirley Family, privately printed, 11*l.* 5*s.*—Dibdin's Bibliographical Decameron, 11*l.* 10*s.*—Dibdin's Tour, 9*l.*—Appeal Cases, 1727–35, 11*l.* 15*s.*—Baker's History of Northampton, 12*l.* 5*s.*—Book of St. Alban's, the reprint, 10*l.*—Eyton's Antiquities of Shropshire, in parts, 16*l.* 10*s.*—Duncumb's History of Hereford, 4*l.* 10*s.*—Catalogue of the Library of Mr. Eytton, large paper, 2*l.* 6*s.*—Hasleng's Speech in Parliament in 1641, and letter concerning the recovery of Tinnmouth Castle, in which action Col. Lilburn was slain, 8*l.* 5*s.*—Dugdale's Monasticon, by Caley, Ellis and Bandinel, 26*l.*—Holinshed's Chronicles, first edition, 16*l.*—Nichols's History and Antiquities of the County of Leicester, 4 vols. in 8, uncut, 129*l.* 8*s.*, being the largest sum this book ever fetched.—Manuscript Notes to this work, compiled by Mr.

Gresley, 88l.—Nash's Warwickshire, 2 vols. 8l. 15s.—Plot's Staffordshire, 3l. 12s.—Thoroton's Nottinghamshire, 4l. 10s.—Turberville's Noble Art of Venerie and Hunting, 10l. 10s.—Shaw's Staffordshire, 2 vols., uncut, 25l.—Acts of Parliament relating to this county, 7l. 7s.—Thoroton's Nottinghamshire, wanting the leaf of "Imprimatur," 13l.—Whitaker's History of Leeds, wanting the Appendix, 4l. 6s.—Rubblings of Monumental Braames, 9l.—Whole-length Portrait of Prince Rupert, probably by Sir Peter Lely, 38l. 10s. A collection of Roman, Greek and English coins has been sold by the same auctioneers during the present week, from which the following may be quoted: A gold coin of Nerva, reverse Liberty, 9l.—Hadrian, with bust in high relief, 4l.—Lucilla, reverse Venns, 4l. 6s.—Commodus, reverse Emperor and Trophy, 4l. 10s.—Severus, reverse Warrior, 6l. 10s.—Alexander, reverse Liberty, 5l. 12s. 6d.—Gordian III., reverse Victory, 4l. 10s.—Pulcheria, reverse Victory, 4l. 12s.—Johannes, reverse Emperor, 4l. 12s.—Agrippa, reverse Head of Augustus, 4l. 14s.—Pescennius Niger, 5l.—Silver coin of Tigranes the Great, 7l. 5s.—Silver coin of Panormus, obverse Palm Tree, 5l. 10s.—Silver coin of Smyrna, with turreted head of Cybele-Sipylone, 9l. 9s.—Penny of Harold II., 6l.—Portcullis half crown of Elizabeth, 5l. 5s.—Portcullis crown of Elizabeth, 7l.—Angelet of Queen Mary, in gold, 9l. 9s.—Rial of Elizabeth, 31l.—In a former sale by the same auctioneers, the following coins are worthy of note, as belonging to the Bactrian Series: Diodotus, with beardless head to the right, 40l.—Agathokles, head of the king with fillet, 29l.—Euthydemus, with youthful bust to the right, 25l.—Demetrius, bust of the king to the right, 25l.

MR. MORBY'S COLLECTION OF MODERN HIGH-CLASS PICTURES is ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt—J. Phillip, R.A.—T. Faed, R.A.—J. Lewis, R.A.—Eggs, R.A.—Frith, R.A.—Reese Bonheur—Goodall, R.A.—Cooke, R.A.—Creswick, R.A.—Pickersill, R.A.—Calderson, A.R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Andell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Vernon, A.R.A.—P. Namyth—Linnell, sen.—Nelson, A.R.A.—Cooper, A.R.A.—Gale—Marks—F. Hardy—John Faed—Frère—Baupers—Brillouin—Liddell—George Smith—Duvrger, &c.—Admission on presentation of address card.

ROYAL POLYTECHNIC.—Exhibition of and Lecture on the Prussian Needle Gun and other Breech-loading Rifles—Henri Dreyfus's Musical Entertainments—The Cherubs floating in the Air—The Modern Delphic Oracle—Shakespeare and his Creations, with Recitals by F. Damer Cape, Esq.—Dugwar's Indian Fairs, &c.—Admission to the whole, 1s. Open from 11 till 5, and 7 till 10.

FINE ARTS

FINE-ART GOSSIP.

WE understand that Mr. Richmond, R.A., has undertaken to restore the very interesting portrait of Richard the Second, which formed probably the most ancient well-authenticated likeness at the National Portrait Exhibition, and is the property of the Dean and Chapter of Westminster.

The experiment of admitting the public to the National Portrait Exhibition may be considered a perfect success, sufficient, we trust, to justify a repetition of the gathering next year, by which time the importance and extraordinary interest of these gatherings will be appreciated even more widely than is now the case. In the fortnight preceding the 18th inst., the public was admitted at 3d. per head, and schools of poor children at the rate of thirty children and a teacher for 1s. In the week ending Saturday, the 11th inst., 6,217 persons paid 3d. each, besides 1,199 school-children and their teachers.

While repairing and re-setting the splendid example of *Opus Alexandrinum* that faces the altar at Westminster Abbey, where the reposed by Messrs. Clayton & Bell is about to be placed, the workmen came upon remains of an older building than that now in existence, to wit, part of the original work of Edward the Confessor, whose "old grave" was there situated. These remains comprised two pillars of very ancient character; also, a leaden casket, which, either by time or its original mould, had assumed the shape of the corpse. The casket was found on the south side of the altar, and the north side was dis-

covered a stone coffin, which is an object of great interest, and the occasion of many conjectures.

M. A. de Solomé completed last week at Osborne a crayon portrait of the Duke of Edinburgh, which is to be engraved by Mr. W. Holl.

The Buxton Memorial, at the corner of Great George Street, Westminster, has lately received a roof of metal in scales, and a finial in the form of a cross. These additions greatly enhance the beauty of its appearance. The work, which is designed by Mr. Teulon, will soon be complete, and devoted to its use as a drinking-fountain—decidedly the handsomest of the kind in London.

To design a good drinking-fountain would seem easier than to spoil such a thing when made. Both feats have been accomplished at the point of intersection of the Marylebone Road with the Edgware Road, where used to stand a creditable structure of granite and marble; one of the very few works of its sort which was not ridiculously disgraceful to those who put them up, and offensive to those who know better things. Some wiseacre has capped the pretty and simple vase of this fountain with a "lid." He doubtless thought such a utensil ought not to be without a cover, and probably drew his ideas of Art from the china-shops. This "lid" has a contour of very coarsely and vulgarly-ordered mouldings, and evidently came from a lathe. The mischief is not irremediable; let the lid be taken off again, and hidden out of sight. There is a good fountain yet remaining at the junction of Baker Street with Park Road, Regent's Park. We trust this will be spared by the foolish persons who have done so ill in the same neighbourhood. We call upon others, better informed, to protect it from a repetition of the folly in question.

The execution of the statue voted by Congress to the murdered President Lincoln has been intrusted to a lady whose name we hear for the first time, Miss Minnie Rearn.

There has been an exhibition of modern pictures this year at Lille.

The Norman nave of Leominster Priory Church, as restored by Mr. G. G. Scott, has been re-opened for use.

MUSIC AND THE DRAMA

SADLER'S WELLS.—On Monday, a performance took place at this theatre which will leave its mark. The old Grimaldi pantomime of 'Mother Goose' was revived, "to celebrate," say the playbills, "the opening of this theatre August 20, 1766, one hundred years ago." It was not quite sixty years ago, however, when the pantomime was first presented at this house, and the theatre itself had been opened three years earlier than stated. The pantomime had been previously acted at Covent Garden, where it produced more than 20,000l. profit to the managers. The author was Thomas Dibdin, who was connected with Sadler's Wells for fourteen years, and yet, after long management and writing and adapting a great number of successful dramas, he died in indigence. We may mention, in relation to the Clerkenwell theatre, that at the period of the production of the pantomime, it had been for two years "the Aquatic Theatre," and profited much by "real water." Previously to that period, the audience used to drink and smoke, and eat cheese-cakes, much after the fashion of our modern music-halls; but gradually the Art-element prevailed against these sensual indulgences, and the building grew into a regular playhouse. What service it has of late done in the cause of the legitimate drama is now matter of history. This has been, indeed, the uniform progress of similar buildings, such as the Grecian, for instance, where Bacchus has in a similar manner made room for dramatic entertainments. Mr. Cave, as the conductor of the theatre, has published a bill with the cast of the pantomime as it was performed at this house in 1810, stating that he has placed the work on the stage now, exactly as it was done then, and employed Mr. Tom Matthews to superintend its production. Considerable curiosity, of course, was excited, on Mon-

day, to witness this reproduction of an old pantomime in the old style; and a large audience assembled. The pantomime was preceded by the date of 'The Police-Spy,' which was scarcely lived to, so great was the impatience to live the pantomime over again with Grimaldi! Most of the incidents cumulative as they were, and reducing the pantomime to the deepest distress, were used as the occasion of laughter; nor was the house quieted until the curtain rose upon the farm-scene in 'Mother Goose.' The tale of the opening is soon told, and as briefly acted. The farmer's daughter is great the peasant, to the chagrin of the jilted squires, the mercenary father, who accepts the gold of the goose, and straightway proceeds to sell up the magic bird, but is prevented by the kind and benevolent Mother. The slightest portion of dialogue suffices to tell the story, and then the harlequinade commences, not, however, as a separate and independent piece, but still in connexion with the plot of the opening; Mother Goose appearing at the end, to re-transform the characters of their trials in the state of pantomime proper. This plan implies a meaning, and almost raises the work to the rank of an allegory. In the scenes, also, a specific meaning is observable. The outline is a severe one, steadily keeping the eye in view, and not suffering the matter to run into extravagance. Such is the scene in which all the persons are spell-bound, while the Clown paints their unconscious faces; and such the clamber-scene, where the Clown himself, haunted by the ghost of Harlequin, feels supernatural terrors. The are regular situations, carefully set, and requiring good acting. One sees in them that the Clown may be personated by a good histrionic artist, and no longer wonder that Grimaldi should have gained a high reputation by his performance. The means adopted for effect were much simpler than those now resorted to; but they indicated a thoughtful and original treatment.

ALEXANDRA.—This house has brought out a new burlesque, under the title of 'Cassiope's Hunky Dorum the Monster.' The author is Messrs. H. C. Hazlewood and Edward Charles Lain. The main action of the burlesque is again with the story of Perseus and Andromeda, the classical personages impersonated by Miss Ed. Hamilton and Miss Heathcote. Cassiope, the distracted mother, is given to Mr. J. C. Taylor, whose comic power is great in this class of assumption. The outline of the fable is well enough preserved, and so disposed as to form a series of scenes which are new and sparkling. But the dialogue is not equally brilliant, nor are the puns and puns uniformly happy. It was too evident on Saturday that the rehearsals had been incomplete. Mr. Giovannelli, indeed, made an apology for the defects of the performance, and promised that they should be remedied on future occasions.

MUSICAL AND DRAMATIC GOSSIP.

Mr. Mellon has given a Beethoven night at Weber night and a Spohr night at his *Prosecco Concerts*.—Mlle. Carlotta Patti is announced about to arrive in England, to appear at Covent Garden immediately.

The *Crystal Palace* "improves each shining hour" of popular success, or of calamity, by an opportune performance. Its last feat was a concert for the benefit of those who have suffered by the German war; the appeal was liberally responded to by German artists. A part of Bach's *Chaconne* for four pianos; a *March* of Schubert's given by eight pianists; a *Concertante*, by Maurer, for the violins; M. Gounod's "Meditation" on Bach's prelude, in its choral form; a Logerian arrangement of Weber's 'Invitation to Waltz,' for orchestra and eight pianos; and Luther's Hymn 'Es feste Burg,' were among other of the pieces figured in the bill of this peculiar and interesting concert. Should our present hopes of peace be realized, what an opportunity is there for great international concerts!

Verily, Music is now put to new uses in all places. The other day the newspapers told of a "choral wedding" celebrated in Westminster.

boy. In the hymn tune, or "chorale" (as the boy of the time hath it), "four harps behind a son" were employed. What will those *Dryad* tunes who cleave to Gregorian and Ambrosian tones be of such a piece of allurements? And yet why should not brides have harps as well as organs, if the instrumental music there is to be? We can hold to the unalterable sanctity of any representative form of worship. But "harps behind a screen" Westminster Abbey, at an aristocratic choral singing, have an odd sound. It should be added; Mr. Turtle, the excellent organist of the Cathedral, had nothing to do with "the celebrity" (as they coxcomically described the Handel Festival, having been out of town. — Science seems used to call in Music as an adornment to its hearings. The Meeting of the British Association close with a "choral *fic*."

Not wishing to write history incorrectly, we mention that the project of the Welsh touring party, which we lately announced, has not been carried out. The new *Cantata* prepared by John Thomas for the Chester Eisteddfod, under the title of 'The Bride of the Neath Valley,' the nonsense written concerning Gluck's operas did fill many a room. Only last week we read his 'Iphigenia' is "a curious but rather interesting mummy—the still, motionless effigy of a past tence"; and, further, find the master described as is Teutonic pigmy in harmonic adhesions,—"one so had about him an unbounded stock of moral parity." Later we are assured, "that, with all petty manoeuvring, he is rapidly passing away to the horizon." Nothing like courage in dealing with facts! The writer of the above chooses to ignore such realities as that Gluck's five operas never ceased to form part of the repertory of the first class German theatres as those of Berlin, Vienna, Munich, and Vienna, as the recent and coming festivals in Paris, which have occupied so large a share of public attention,—as the awakening of a living interest in England (if only attested by such an easy success as attended the performances given by Mr. Halle in Manchester as concert music) not be denied, save by Bigotry in its most perverse form.

Ignorance Verdi's 'Don Carlos' is in course of rehearsal at the Grand Opéra. The singers are to Messadmes Sasse and Gueymard (in the parts of Isabella and the Princess Eboli), M.M. Morère, Verne, Obin, Belval, and David.—The rehearsals of M. Gounod's 'Romeo et Juliette' have commenced at the Théâtre Lyrique, and January 7 is mentioned as the month in which the opera is to be produced; but, seeing that the tenor has not yet been found, for January one may read March. The *Gazette Musicale* states that, on the occasion of the gratuitous performance of 'L'Africaine,' given at the Grand Opéra on the Emperor's birthday, boxes, commonly holding only six, were occupied by six-and-thirty persons! We cannot fancy some mistake of figures here.

The new music school at Copenhagen, founded by a legacy of a jeweller, is to commence its sessions during the present year. M. Gade is one of the directors.

Madame Bishop and other artists of an English Opera Company, on the way from San Francisco to Hong-Kong, have narrowly escaped one of the most horrible deaths conceivable, having been at sea during thirteen days and nights in the long tail of the wrecked ship *Libelle*.

The festival of the musical societies of Alsace for this year be held at Benfeld, Lower Rhine.

The *Gazette Musicale* announces that Señor Serra, editor of a musical journal at Barcelona, has been writing a series of intelligent articles on genius and music of Meyerbeer.—Herr Otto Hilbrecht announces yet another catalogue ofethoven's works.

Madame Lagrass is engaged for the Italian Opera House at Paris.—Middle Orgen has left the Grand Opera House, and will sing at Vienna.

Among the operas selected for the coming season are Boieldieu's 'Chaperon Rouge,' and Herr Wagner's 'Rienzi.'

A new opera, 'Il Pionto d'Onore,' by Signor Aglia, has been given at a minor theatre in London, without success.

'Les Don Juans de Village,' a new drama, in *patois*, by Madame George Sand and her son, has been produced at the Théâtre Vaudeville. The story—one of village profligacy—appears to be repulsive; and the play has been found tedious by the public.

MISCELLANEA

John Bunyan.—I thank Mr. Cole for the information he has furnished of what he has of the early copies of John Bunyan's works. Respecting the first and third piece which Mr. Cole has informed us he has, the painstaking inquirer (Mr. Offer) after all the early copies of Bunyan's works could not find either. In fact, he states respecting 'Instructions of the Ignorant,' that the first edition could not be discovered, so we are now wiser than Mr. Offer could make us. Since so many early copies of Bunyan's works were destroyed (which Mr. Offer had taken such great pains to collect) when the fire occurred at the sale of his library, all early copies are now *rarer*. Mr. Offer appears to have collected, of various editions of Bunyan's works, about 500 copies; but he had not more than six or seven that were first editions. Seeing then that first editions of Bunyan's works are now so very rare, it would be well if they could be all publicly known. I have two of the rarest. Mr. Cole has two, if not three. One or two I believe are in the British Museum, and three or four more are in possession of private individuals. If any of your readers would therefore make it known that they have a copy or more, it would be, I think, a source of great pleasure to all the admirers of our great divine. W. TARBUTT.

Mechanical Impressions of Light on the Eye.—On the 8th of July, 1848, you favoured me by giving insertion to a note 'On the Decomposition of Light by the Eye,' wherein a simple method was given of proving that the impression of light upon the retina remains for a short period, and that it disperses itself gradually, the light decomposing itself into its primitive colours in the order of the spectrum. M. L'Abbé Daborde has recently demonstrated the same thing by an ingenious but more complicated means, submitted to the Paris Academy of Sciences ('Comptes Rendus,' No. 3, 16th of July, 1866, p. 87). To my former communication I would beg to add the following. Falling asleep whilst reading in a bright light, I have frequently observed, on awaking, the impression of the print remaining in the eye so distinctly that for two or three seconds the letters have been distinguishable. When the light has been of inferior strength, the impression has been that of obscure lines, as those of a book appear to a person who cannot read without spectacles. The above would seem to include a very important operation of nature, namely, the communication between the immaterial, or, perhaps, rather, the imponderable, with the material. On one side is light in its active operations; on the other a mechanical effect produced by the impinging of light on the retina and communicated through the optic nerve to the brain. The method of the operation appears to be analogous to, if not the same as that of light in photography, which acts upon the chemical substances employed, disturbing their electric equilibrium. This disturbance of the optic nerve, which produces the sense of vision, finds a parallel in the act of thinking, which has been shown to be connected with motion in the fibres of the brain. JOHN JOS. LAKE.

TO CORRESPONDENTS.—E. R. P.—E. M. C.—C. C.—R. C.—D.—T.—G. J.—Z. (Manchester)—K.—H.—N. O.—received.

*. Since the controversy between Mr. Otley and Mr. Bohn was first closed, each gentleman has had our columns opened to him once, at his own request, and has made a certain statement. Mr. Otley now complains, that in Mr. Bohn's last letter there are statements "disparaging to my literary repute and to my character as a gentleman." With this, so far as we are concerned, the controversy must terminate, or "more last words" would go on without end. For these our advertising columns are still available.

Erratum.—P. 210, col. 1, line 40, for "could" read *could* not.

BOOKS FOR THE COUNTRY AND SEASIDE.

SIXTH THOUSAND, NOW READY.

A THOUSAND MILES IN THE ROE

ROY CANOE on the DANUBE, MOSELLE, RHINE, REUSS, AAR, MARNE, THAMES, MAINE, SEINE, MEUSE, and the LAKES of CONSTANCE and LUCERNE. &c. By J. MACGREGOR, Trin. Coll. Cambridge, Barrister-at-Law. Small port 8vo. with Map and Illustrations, 5s.

"It possesses the rare merit of displaying familiar districts of Europe from an entirely new point of view: it is written in a lively, unaffected style, so that one thoroughly sympathizes with the hero of the tale; and it is profusely illustrated with a number of spirited and occasionally very humorous woodcuts, displaying the skipper and his craft in all sorts of places and positions." *Times*.

FOURTH THOUSAND, NOW READY.

CAPTAIN HALL'S LIFE with the

ESQUIMAUX. New and Cheaper Edition, with Coloured Engravings and upwards of 100 Woodcuts. With a Map. Forming the cheapest and most popular edition of a work on Arctic life and exploration ever published. Cloth extra, 7s. 6d.

"This is a very remarkable book; and, unless we very much misunderstand him and his age, the hero of the tale is one of those men of whom great nations do well to be proud."—*Spectator*.

A New Book for the Seaside.

UNDER THE WAVES; or, the Hermit

Crab in Society. Price 3s. 6d.; or gilt edges, 4s. "This is one of the best books we know of to place in the hands of young and intelligent persons during a visit to the seaside." *Reader*.

THIRD THOUSAND, NOW READY.

The CRUISE of the FROLIC. By

W. H. G. KINGSTON. A Story for Young Yacht-loving People. Third Thousand. New and Illustrated Edition. 5s. [Now ready.]

"Who does not welcome Mr. W. H. G. Kingston? Here he is again with an admirable boy's book. If boys do not love this book, there is no truth in boyhood, and no use in reviewing; it is just the book for a present."—*Illustrated Times*.

Also, by the same Author, well illustrated,

The BOY'S OWN BOOK OF BOATS. Illustrated by Weedon. 5s. ERNEST BRACEBRIDGE; or, the Boy's Book of Sports. 5s. The FIRE SHIPS. [In preparation.]

JACK BUNTLINE: the Life of a Sailor Boy. 2s.

TENTH THOUSAND, NOW READY.

The PHYSICAL GEOGRAPHY of

the SEA and its METEOROLOGY; or, the Economy of the Sea and its Adaptations, its Salts, its Waters, its Climates, its Inhabitants, and whatever there may be of general interest in its Commercial Uses or Industrial Pursuits. By COM-MANDER M. F. MAURY, U.S.N. Third Edition of the Author's Revised and Enlarged Work. Small port 8vo. 5s.

"To Captain Maury we are indebted for much information—indeed, for all that mankind possesses—of the crust of the earth beneath the blue waters of the Atlantic and Pacific Oceans. Hopelessly scientific would these subjects be in the hands of most men, yet upon each and all of them Captain Maury casts our attention, or charms us with explanations and theories replete with originality and genius. His is indeed a nautical manual, a handbook of the sea, investing with fresh interest every wave that beats upon our shores; and it cannot fail to awaken in both sailors and landmen a yearning to know more intimately the secrets of that wonderful element. The good that Maury has done in awakening the powers of observation of the Royal and Mercantile Navies of England and America is incalculable."—*Blackwood's Magazine*. "We are greatly indebted to Captain Maury's book, which will hereafter be classed with the works of the great men who have taken the lead in extending and improving knowledge and Art; his book displays in a remarkable degree, like 'The Advancement of Learning,' and the 'Natural History' of Buffon, profound research and magnificent imagination."—*Illustrated London News*.

THIRD EDITION, NOW READY.

TOILERS of the SEA. By Victor

HUGO. Third Edition. 3 vols. post 8vo. price 34s.

"As an idyl of homely love and simple heroism, we know nothing save parts of 'Enoch Arden' that can compare with the touching sweetness of the closing scenes of the book."—*Athenæum*. "A fisherman encounters all the fury, and caprice, and treachery of outer nature in order to win a woman whom, on his return, he finds to have unconsciously, but irrevocably, lost her heart to another. But this poignant story is worked into genuine tragedy by an exercise of poetic power which, at least in some portions of its display, has very rarely been surpassed in literature." *Saturday Review*.

"A free, spirited translation of a noble book. It is difficult to dissent from those who fancy they discover in the author's three volumes a romance, an epic poem, and a drama of real life. There is also in the volumes a charming idyl, full of grace, sweetness, and simplicity. If there be any one who can rise from the perusal of the book without feeling, not only deeply moved, but also enlightened and, and, for at least the moment, improved, let no such man be trusted."—*Illustrated London News*.

"It is impossible for us not to feel chained to the book by the spell and sway of a master hand. The fight of man with sea and storm is rendered as it never has been rendered before, and probably will never be rendered again, by human pen."—*Spectator*.

**THE LETTERS and JOURNALS of
ROBERT BAILLIE, Principal of the University of Glas-
gow, 1827-68, and Commissioner from Scotland to the Westminster
Assembly. New Edition, edited by DAVID LAING, Esq.**
"Baillie is the true newspaper—he is to be used and studied
like one. There is a strange, homely worth in him, loveable and
indispensable; a strange mass of shrewd simplicities, naïvetés,
blundering ingenuities, and of right wholesome vitalities withal.
Many-tinted treasures of Scotch humours, such as a Galt, a Scott,
or a Smollett might have rejoiced over. He in this man, unoblite-
rated by the Covenant and all distance of time. We could laugh
much over him, and love him much, this good Baillie, but have
not time at present. We will point out his existence, advise all
persons who have a call that way to read that same 'contem-
poraneous newspaper' of his, with much attention and thanks. We
give it small praise when we say there is perhaps no book of that
period which will in the end better reward the trouble of reading.
Alas to those unfortunate persons who have sat for long months
and years obstinately incurring the danger of lockjaw in stubborn
perusal of Whitlocke, Heylin, Prynn, Burton, Laud, and com-
pany—all flat, boundless, dead, and dismal as an Irish bog. Such
praise will not seem too promissory!"—*Times* and *Concord*.
London: Hamilton, Adams & Co.; and all Booksellers.

Just ready, demy 8vo. 2s.

This day is published, price 12s.
A DICTIONARY of BRITISH BIRDS, con-
taining a full Account of the Plumage, Weight, Habits,
Food, Migrations, Nest and Eggs of every Bird found in Great
Britain and Ireland. The whole arranged in Alphabetical order
under the English Names. By EDWARD NEWMAN, F.L.S.
F.Z.S., &c.
London: Van Voorst, Paternoster-row.

Just published, XXXVIII. Band, 3 u. 4 Heft,
**ARCHIV für das STUDIUM der NEUEREN
SPRACHEN und LITERATUREN;** containing a further
Continuation of 'Shakespeare Illustrated by Old Authors,' by
W. L. RUSHTON.
Braunschweig: Druck und Verlag von George Westermann.

Crown 8vo. cloth, price 4s. 6d.
**PHILOCTETES: a Metrical Drama after the
Antique.** By M. A.
"This is a fine poem, beautiful in detail, powerful as a whole;
leaving the same sort of impression of sad majesty upon us as
many of the finest Greek dramas themselves; combining the self-
restrained and subdued passion of the antique style with, here
and there, a touch of luxuriance of conception, and everywhere
that wider range of emotions and deeper love of natural beauty
characteristic of the modern."—*Saturday Review*.
"In careful structure of plot, in classic chasteness of style and
language, in nice and exact interweaving of part with part, in
finish and completeness of the whole, the 'Philoctetes' of M. A.
is worthy—indeed, deserving much to be named in the same
day with—"
London: 5, Bishopsgate-street Without.

Lately published, 8vo. cloth, price 10s. 6d.
**PINACEE; being a Handbook of the Firs
and Pines.** By SENILIS.

"There is much that is useful and interesting in this work."
Field.
"We can conscientiously recommend this volume."
North British Agriculturist.
"This is a practical work, well and ably written."
Bell's Life in London.
"A practical treatise, handled in a thoroughly scientific
manner."—*Press*.
"This is a book of national importance, and is sure to become
a standard work of reference on Pinaceae."—*Dundee Advertiser*.
"This is really a valuable book, not only useful and instructive,
but readable also."—*Court Circular*.
London: Hatchard & Co. 187, Piccadilly.

Just published, price 2s. 12mo. cloth limp.
**MANUEL de LITTÉRATURE FRANÇAISE
à l'USAGE des ÉCOLES.**

and Remarkable Characters, by JACOB LARWOOD and JOHN CAMDEN
HOTTEN, may be obtained at all Booksellers.*

Recommendations of the Press.

"A curious book for the world of curious readers. A valuable addition to our antiquarian and gossiping literature."—*Athenæum*.
"This book has not appeared a day too soon. Those who love old stories, old prints, old broadsides, and old advertisements, will revel to their hearts' content in this volume."—*Reader*.
"A book which will delight all who like to study the by-ways of thought and literature."—*Spectator*.
"A subject which has scarcely been touched on before, and a volume abounding in oddity, in information, and in entertainment."—*London Review*.

London: JOHN CAMDEN HOTTEN, 74 and 75, Piccadilly.

HUMBER'S RECORD OF ENGINEERING, 1865.

Now ready, in imperial 4to. Illustrated by 40 Plates, with Photographic Portrait and Memoir of J. R. M'CALL, Esq. C.E., price 3l. 3s. half morocco.

A RECORD OF THE PROGRESS OF MODERN ENGINEERING, 1865.

COMPRISING

CIVIL, MECHANICAL, MARINE, HYDRAULIC, RAILWAY, BRIDGE
and OTHER ENGINEERING WORKS,

With Essays and Reviews.

By W. HUMBER,
Assoc. Inst. C.E., and M. Inst. M.E.

THIS volume contains detailed drawings of the principal works executed in the Main Drainage of the Metropolis (excepting the Pumping Stations, which will be included in a subsequent volume); and also detailed drawings of the Thames Embankment.

Amongst the Illustrations are the following:—*Metropolitan Main Drainage*: Works on the Northern Side—*West* at River Lea: Bridge over Marsh Lane and Bow and Barking Railway Junction; Bridge over Main Line of Bow and Barking Railway; Bridge over the East London Water Works Feeder; Details of the Reservoirs, Outlets into the Bow and Penstocks. On the Southern Side—The Bellmouth Junctions of the Sewers on the Bermondsey Branch; Details of Reservoirs, and General Sections of Sewers. *Thames Embankment*: Steam Boat Pier, Westminster Bridge; Landing Stairs between Waterloo and Charing Cross; Landing Stairs at York Gate; Steam Boat Pier Waterloo Bridge; &c. &c. with full detailed Sections of River Wall and Subway.

The Letter-press contains a full description of the works of the Main Drainage and Thames Embankment, together with articles on the Formation of Harbours, Ports, and Breakwaters, Fortifications, Rolling Stock, and Armour Plate.

The following Volumes may still be had:—

In imperial 4to. with 36 Double Plates, drawn to a large scale, and Portrait of ROBERT STEPHENSON, Esq. C.E., price 3l. 3s. half morocco.

A RECORD of the PROGRESS of MODERN ENGINEERING, 1866
comprising Civil, Mechanical, Marine, Hydraulic, Railway, Bridge, and other Engineering Works. By WILLIAM HUMBER, Assoc. Inst. C.E., and M. Inst. M.E., Author of 'A Complete and Practical Treatise on Cast and Wrought Iron Bridge Construction.'

"It is, as it professes to be, a résumé of all the most interesting and important works lately completed in Great Britain; and containing, as it does, carefully executed drawings, with full working details, will be found a valuable accessory to the profession at large."—*Engineer*, Nov. 24, 1866.

Also, uniform with the above, imperial 4to. Illustrated with 36 Double Plates, and Portrait of Mr. HAWKINS, price 3l. 3s.

HUMBER'S RECORD OF ENGINEERING, 1863.

"Handsomely lithographed and printed, it will find favour with many who desire to preserve in a permanent form copies of the plans and specifications prepared for the guidance of the contractors for many important engineering works."—*Engineer*.

London: LOCKWOOD & Co. 7, Stationers' Hall-court, E.C.

THE AUTHOR OF 'MARGARET AND HER BRIDESMAIDS.'

Now ready at all Libraries, in 3 vols.

LORDS AND LADIES, the NEW NOVEL,

By the AUTHOR of 'MARGARET and her BRIDESMAIDS,' &c.

"Among our lady novelists there is, perhaps, no one who for playful vivacity of style, and lively graceful gossip, excels the favourite authoress of 'Margaret and her Bridesmaids,' and some other pleasant works. 'Lords and Ladies' will at all events interest the fairer and better half of novel readers. It is just the book for a companion in the busyness of the sea-beach or the country-side. Whenever taken up, and whenever opened, the reader will find pleasant matter to while away an agreeable hour."—*Sun*.

MISS BRADDON'S FIRST NOVEL.

This day, at all Libraries, in 1 vol. price 6s., thoroughly revised and in parts re-written, with Frontispiece and Vignette Title-page, worked in Tint on toned paper, crown 8vo. cloth gilt, lettered, THE

TRAIL OF THE SERPENT

"Poor race of Men!" said the pitying Spirit,

"Dearly ye pay for your primal Fall,—

Some flow'rets of Eden ye still inherit,

But the TRAIL OF THE SERPENT is over them all!"—MOORE.

CHEAP EDITION OF 'JOHN MARCHMONT'S LEGACY.'

In a few days, price 2s. complete: uniform with the Cheap Edition of 'Lady Audley's Secret,' 'Aurora Floyd,' 'Eleanor's Victory,' and 'Henry Dunbar,'

JOHN MARCHMONT'S LEGACY

Opinion of *The Times* on 'JOHN MARCHMONT'S LEGACY.'

"Miss Braddon writes frankly for amusement; and in each succeeding novel she rises above herself. 'Lady Audley's Secret' was good, 'Aurora Floyd' better, 'Eleanor's Victory' still better, and now 'John Marchmont's Legacy' may be pronounced the best of all."—See *The Times*, Jan. 2, 1864.

LIBRARY EDITION OF MISS BRADDON'S NOVELS.

Just ready, with Frontispieces and Vignette Title-pages, cloth gilt, price 6s. each,

SIR JASPER'S TENANT

LADY AUDLEY'S SECRET.
AURORA FLOYD.
ELEANOR'S VICTORY.
ONLY A

HENRY DUNBAR.
THE DOCTOR'S WIFE.
JOHN MARCHMONT'S LEGACY.
THE TRAIL OF THE SERPENT.

R & TYLER, Publishers, Warwick House, Paternoster-row.

NEW WORKS.

Francis E. Anstie, M.D. F.R.C.P.

NOTES on CHOLERA and other EPIDEMIC DISEASES: for the Use of the Public. By FRANCIS E. ANSTIE, M.D. F.R.C.P. Senior Assistant Physician to the Westminster Hospital. Fcap. 8vo. 1s. cloth.

"An important work, useful alike to the public and the practitioner, accurate in its facts, clear in its descriptions, and logical in its inferences, up to the most recent advances of modern science."—*Popular Science Review*.
"Contains much sound information set forth in good English. The latest and most generally accepted views of the progress of epidemic diseases in this country are very clearly described."—*Saturday Review*.

Margaret Howitt.

TWELVEMONTHS with FREDRIKA BREMER. In 3 vols. with Photographs and Illustrations. price 22s. cloth.

"This charming book, charming alike in style, tone, and matter. Never was a pleasanter picture than that which Howitt has painted for us."—*Literary Churchman*.

"Sketches with lively good humour, and brings out interesting details of Miss Bremer's domestic habits, benevolent character, and well-earned popularity."—*Morning Post*.

"She has the hereditary genius of observation—of nature's language; in brief, commands accomplishments which are often lacking to the daughter of two poets."—*Athenæum*.

"Two volumes which give us not only a good view of Miss Bremer in her private life, but also a most interesting glimpse of the Swedes themselves. We are brought face to face not only with Swedish manners."—*Reader*.

E. de Pressensé, D.D.

JESUS CHRIST: his Times, Life, and

Work. By E. DE PRESSENSÉ, D.D. In 2 vols. price 12s. each.

"The real value of M. de Pressensé's treatise lies in the profound spiritual insight, and the loving and reverential seriousness with which it combines with a truly scientific and historical method on the greatest of all subjects, and has written with a simplicity of intention to instruct, with a ripeness of ability and learning and Christian wisdom, and a largeness of comprehension worthy to be devoted to the illustration of so great and sacred a theme."—*Contemporary Review*.

Rev. R. W. Dale, M.A.

DISCOURSES delivered on SPECIAL

OCCASIONS. By R. W. DALE, M.A. In crown 8vo. 7s. 6s. cloth.

"In Mr. Dale's 'Discourses on Special Occasions' we have one of the finest specimens of modern preaching."—*Contemporary Review*.

London: JACKSON, WALFORD & HODDER, 25, Paternoster-row.

BURROW'S GLASSES

OPERA, RACE, FIELD, and MARINE, &c. &c. &c. Catalogue gratis.

W. & J. BURROW, MALVERN.

London: Arnold, 73, Baker-street; Wals & McCulloch, 56, Cheapside.

SALOM'S NEW OPERA and FIELD GLASS

and THE RECONNOITERER GLASS, price 14s. 6d. each. free.—"This 'Tourist's Favourite,' through extraordinary economy of labour, distinctly shows small windows 10 miles off, houses at 30 miles, Jupiter's moons, &c.—The Marquis of Cambridge."—*The Reconnoiterer* is very good.—"Earl of Cairnness."—"I find it all you say, and wonderfully powerful for so tiny a glass."—"Earl of Cairnness."—"It is a beautiful glass."—"Lord SCARSDALE" approves of it.—"Lord Gifford."—"Most useful."—"Lord Gifford."—"Remarkably good."—"Sir Robert Gordon."—"It gives me complete satisfaction, and is wonderfully good."—"CAPT. SENDEY, Royal Small Arms Factory, Enfield."—"I have found it effective at the 1,000-yards range."—"F. H. HARRIS, Esq."—"I never before met an article that answered the recommendation of its maker, nor, although I have tried many, a glass combining so much power for its size with so much clearness."—"The Field."—"We have carefully tried it at an 800-yard rifle range against all the glasses possessed by members of the Corps, and found it fully equal to any of them present, although they had cost more than four times its price."

—*Votes and Queries*:—"What intending tourist will not go without such an indispensable companion to a pleasure trip?"

The celebrated "HYTHE" GLASS shows buildings at 1,200 yards, and men at 34 miles, price 14s. 6d. The COLLEGE SESSION for 1866-67 will begin on TUESDAY, the 16th of October, when the Examinations will commence.

The College Lectures in the Faculties of Arts and Medicine will begin on November 1st; the Law Lectures on December 1st.

Fifty-five Junior and Senior Scholarships, varying in value from 150 to 400, are awarded by Annual Examination in the several departments, with the Exhibitions founded by Dr. Sullivan, Mr. Wilson, and Mr. Charteris. The payments for these will be subject to the continuance of the benefaction.

Scholars are exempted from one-half of the Class Fees.

All Fees must be paid in full before the names are entered on the roll.

The ordinary Classes embrace the Branches required for Examinations for the Civil Service.

Further information will be found in the Belfast Queen's College Calendar for 1866; or may be had, on application, from the Registrar.

By order of the President.

RICHARD OULTON, Registrar.

Queen's College, Belfast, July, 1866.

ROYAL COLLEGES OF PHYSICIANS and SURGEONS of EDINBURGH.

PRELIMINARY EXAMINATIONS IN GENERAL EDUCATION.

NOTICE IS HEREBY GIVEN that the EXAMINATIONS in General Education by the Royal Colleges of Physicians and Surgeons of Edinburgh, for the years 1866-67, will take place at the following periods, viz.: SATURDAY, October 27, 1866, SATURDAY, November 10, 1866, SATURDAY, April 27, 1867, and SATURDAY, July 27, 1867; and on each occasion the Examination will be continued on the succeeding Monday.

Intending Students of Medicine are reminded that a Certificate of having passed the above Examinations, or one of those recognized by the General Medical Council as equivalent to it, is required before their names can be enrolled in the Register of Medical Students.

Lists of the Subjects of Examination, and all other Information, can be had from the Officer of either College.

D. R. HALDANE, Secretary to the Royal College of Physicians.

JAMES SIMON, Secretary to the Royal College of Surgeons.

Sept. 1, 1866.

The Fee for Students taking a Senior Class in any subject, without previous attendance on the Junior Class in the same subject, is 2/3s. Matriculation Fee, 1/2s. For the Degree of M.A., 1/2s. for each of three Examinations.

The Course of Study for the Degree of M.A. embraces two years' attendance on Greek, Latin, and Mathematics, and one on English Literature, Natural Philosophy, Logic, Moral Philosophy, and Natural History. Any Student, who, at the time of his entrance to the University, shall, on examination, be found qualified to attend the Higher Classes of Latin, Greek, and Mathematics, or any of them, shall be admitted to such Higher Class or Classes, without having attended the first or Junior Class or Classes.

BURSARIES.

The Annual Bursary Competition will begin on Monday, 30th October, at 9 A.M., on which occasion there will be offered thirty-eight Bursaries, of which thirty-one are in the patronage of the University, and seven in that of the Magistrates and Town Council of Aberdeen. All but ten are open without restriction. They are tenable during the four years of the Curriculum, and are of the following annual value:—Two of 32s.; five of 30s.; one of 18s. 10s.; two of 18s.; one of 14s.; seven of 13s.; four of 14s.; one of 11s. 10s.; two of 11s.; five of 10s.; one of 8s.; one of 5s.; one of 7s.; and one of 6s.

Candidates are requested to bring with them Certificates of their age, signed by the Ministers and Session-Clerks of their respective Parishes, to be produced, if required, when the result of the Examinations is intimated.

In addition to the usual Macpherson Bursary of 80s. there will be offered for competition, on the same conditions, one of 5s. or thereby.

Candidates for these Bursaries are requested to lodge with the Secretary, on or before the 1st of November, a Certificate from a Gaelic Minister as to their knowledge of the Gaelic language.

Of the Bursaries under private Patronage, thirty were vacant at the close of last Session, viz.:—Two of 34s.; six of 28s. 10s.; two

of 30s.; one of 18s. 10s.; two of 18s.; one of 14s.; one of 11s. 10s.; seven of 11s.; three of 10s.; and five of inferior value. Presences to these Bursaries will be examined on Thursday, 1st November.

Other Examinations.

For passing from Junior to Senior Classes of Latin, Greek and Mathematics, on Friday, the 2nd November, at 10 A.M.

For passing over the Junior Mathematical Class, on Friday, the 2nd November, at 10 A.M.

For passing over the Junior Latin or Greek Classes, on Saturday, the 3rd November, at 10 A.M.

(Students intending to come forward for either of the three last-mentioned Examinations are required to give in their names to the Secretary of the Faculty, Prof. Bain, not later than the preceding day.)

For the Degree of M.A., on the 3rd, 5th and 6th November.

CLASS AND SPECIAL PRIZES.

Books of the value of 130s. are awarded to the most distinguished Students in each Class. At the close of the Curriculum the best Greek and Mathematical Scholars are entitled each to a Simpson Prize of 70s. or thereby; the second in point of merit in Mathematics to a Bexil of 57s.; and the best general Scholars to the Hutton of 30s. and to the Gold Medal of the Magistrates and Town Council of Aberdeen.

SCHOLARSHIPS.

Masters of Arts of not more than two years' standing may compete for the Fullerton, &c. Scholarships, of the value of 63s., and tenable for four years, of which two are vacant annually, one for Classics and Mental Philosophy, the other for Mathematics and Natural Philosophy; and if of under three years' standing, they are eligible for the Murray Scholarship of 70s., tenable for three years.

FOR EVER AND EVER.

By FLORENCE MARRYAT.

(Daughter of the late Captain Marryat, R.N.)

Author of 'Love's Conflict' and 'Too Good for Him.'

RICHARD BENTLEY, New Burlington-street.

BOOKS TO TAKE TO THE SEA-SIDE.

SECOND EDITION OF UP THE COUNTRY.

By the Hon. EMILY EDEN, Author of 'The Semi-Attached House' and 'The Semi-Attached Couple.' In 2 vols. crown 8vo. 21s.

From the Times.—"In cabinet pictures of domestic life in India Miss Eden's book is scarcely equalled. To those who have never seen the country it will be as full of interest and amusement as to the old Indian, for of all the letters here reprinted there is not one which is not full of life and humour. They contain by far the most picturesque and vivid descriptions of life in India which have been laid before the public for many years, and are as fresh and vigorous as if they had only come by the last overland mail."

From the Saturday Review.—"Miss Eden has performed the astonishing feat of writing two volumes about life in India which are thoroughly amusing and readable, from the first page to the last. She never seems to go anywhere without bringing back some comical trait of character or life, which is described in the happiest style."

"Not a page too long."—Pall Mall Gazette.

"Anything more refreshing, genial, and laughter-provoking than these letters, it would be difficult to find."—Spectator.

"One of the most seducing books one can get hold of."—Reader.

"It is difficult to part with these charming volumes without noticing the piquancy of style and unaffectedness of language which prevail throughout their pages. The every-day nothings are elevated by this magic touch into real and tangible sources of amusement."—Morning Post.

LIFE of the MARCHESSA GIULIA FALLETTI DI BAROLO.

Reformer of the Turin Prisons. By SILVIO PELLICO, and his wife, Le Mie Prigioni. From the Original by Lady GEORGINA FULLERTON. In 1 vol. post 8vo. 6s.

New Work by the Author of 'Mary Powell.'

The FAIRE GOSPELIER, Passages

in the Life of MISTRESS ANNE ASKEW. By the Author of 'Mary Powell.' In 1 vol. crown 8vo. 10s. 6d.

WHICH SHALL IT BE? a Novel.

In 3 vols. post 8vo.

AFTER the STORM; or, Brother

Jonathan and his Neighbours in 1865-66. By J. E. HILARY SKINNER, Barrister-at-Law. Author of 'The Tale of Danish Herolm.' In 2 vols. post 8vo. 21s.

"As readable and thoroughly entertaining a book about American life and politics as any we have read for some time past. Mr. Skinner deserves emphatic praise for his sagacity in reading character, and the lightness and skill with which he tells a good story."—Athenæum.

THRICE HIS: a Novel. In 2 vols.

post 8vo.

The NATURALIST in VANCOUVER

ISLAND and BRITISH COLUMBIA. By JOHN KEAST LORD, F.R.S., late Naturalist to the British North American Boundary Commission. 3 vols. crown 8vo. with many beautiful illustrations. 24s.

The BANDOLERO: a Tale. By

Captain MAYNE RIDG. In 1 vol. post 8vo. with 10 illustrations. price 6s.

RICHARD BENTLEY, New Burlington-street.

Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

TRAVELS in FRANCE and GER-

MANY in 1865 and 1866; including a Steam Voyage down the Danube, and a Ride across the Mountains of European Turkey, from Belgrade to Montenegro. By Capt. SPENCER, Author of 'Travels in Circassia.' 2 vols. 21s.

"This is a valuable publication, and well deserving of attention. Captain Spencer's volumes are devoted to something more than a mere narrative of travel, as they contain a variety of notes and observations on the social, moral, and political condition of the countries which the author visited. The present condition of Germany and France is very ably discussed by Captain Spencer, and his voyage down the Danube and ride across the mountains of European Turkey will be found very interesting to the reader."—Observer.

FIELD-MARSHAL VISCOUNT

COMBERNERE'S MEMOIRS and CORRESPONDENCE. From his Family Papers. By the RIGHT HON. MARY VISC. COMBERNERE, and Capt. W. W. KNOLLYS. 2 vols. 8vo. with Portraits, &c. 30s. bound.

"A welcome and gracefully-written memorial of one of the great of England's soldiers and worthiest of her sons."—Post.

"Apart from the biographical and professional details, the volumes are full of sketches of persons of importance or interest who came into connexion with Lord Comberner."—Athenæum.

The SPORTSMAN and NATURAL-

IST IN CANADA; or, Notes on the Natural History of the Game, Game-Birds, and Fish of that Country. By MAJOR W. ROSS KING, F.R.G.S., F.S.A., Royal Soc. Illustrated with beautiful Coloured Plates and Woodcuts. 20s. bound.

"Truthful, simple, and extremely observant, Major King has been able to throw much light on the habits as well as the zoological relations of the animals with which he came in collision; and his descriptions of the country, as well as of the creatures inhabiting it, are as bright and graphic as they are evidently correct."—Athenæum.

PRISON CHARACTERS DRAWN

from LIFE. By a PRISON MATRON, Author of 'Female Life in Prison.' 3 vols. 21s.

"This is a book of the most striking interest. It ought to be widely read."—Post.

The BEAUTIFUL in NATURE and

ART. By Mrs. ELLIS, Author of 'The Women of England.' 1 vol. with Portrait. 10s. 6d. bound.

"This volume is written with great skill and beauty. It should be in the hands of every teacher and in the library of every young person."—British Quarterly Review.

LITERATURE

Oxford University Extension. Report on the Foundation of a New College or Hall. (Macmillan & Co.)

THE exclusiveness of Oxford is mainly, if not altogether, due to the collegiate system from which the University derives the more distinctive features of her tone and culture, and which is so paramount over all the other influences of her academic life that it requires a considerable effort to think of the University—the great school for students and the parent of learned men—apart from the establishments in which her scholars are lodged and taught. The growth of the colleges has dwarfed the tree of which they are offshoots, and in proportion as they have grown in number, vigour and material prosperity, the University has become more and more the seminary of a class, instead of what many thoughtful persons would wish it to be, and many of its earlier benefactors desired it to be—a school for the entire nation. Her members, no doubt, speak of themselves as Oxford men, and magnify the claims of their Alma Mater when they are drawn into the excitements of a University election; and a very considerable number of her graduates—for the most part to be found within the ranks of the clerical order—cherish a reverential love for Oxford as a whole, that is not in any way limited or qualified by a more intense affection for one of her parts; but when full allowance has been made for the conventional expressions of her members, and the hold which the University, in the strictest sense of the word, still possesses on the affections of her clergy, it remains a fact that, to the average Oxford man, his college, especially if it be one of the more distinguished houses, is a much nearer object of concern than the parent foundation. The college shuts the University out of sight. Whereas the latter is but a system, with a machinery for the control of examinations and the distribution of degrees, the former is a home, in which he has studied, made friendships, and gained personal influence. The pursuits, honours, traditions, and peculiar usages of this home make up seven-eighths of the sum of his academic happiness and pride. He exults over its good and mourns over its evil fortune; the members who lessen its repute and influence with the outer world are odious to him; in his pastimes as well as his hours of study—on the river or the cricket-ground no less than in the lecture-room and in his private reading—he is spurred to exertion by the hope that his efforts may bring fresh *éclat* to his peculiar fraternity, that his successes will redound to its glory, that his triumphs will win him the admiration of its members. He is chiefly ambitious of University honours because by bearing them away he will convert them into college distinctions. He is an "Oxford man" but he prefers to be designated by the name of his college, and to be mentioned as a "Balliol man," or a "Christ-Church man."

Of course, the system which has engrossed so large a share of the functions and influence of the University stands in no need of apologists, and suffers from no lack of admirers. Success may in most cases be fairly construed as proof of merit of some sort; and the reasons for the growth and vigour of the collegiate system are at the same time so manifest and so honourable that no one regards them with surprise or unreserved dissatisfaction. Although our attachment to the system is not without a qualification, its advantages preponderate so greatly over

its disadvantages that we should not witness its abolition or great relaxation without regretful apprehension. If it is fairly chargeable with a certain amount of evil result, in so far as it secures employment for a considerable number of inferior tutors, and compels a small though not unimportant percentage of the industrious undergraduates to waste valuable time in attendance on lecturers who are not at the same time competent and zealous, it is, on the other hand, to be commended in a far higher degree for the general efficiency with which it discharges the functions of instruction and the conscientious concern which it shows to foster studious habits amongst the younger members of the University. But its chief recommendation must be based on the means which it provides for the moral discipline of the young men confided to its care. The advantages which it unquestionably possesses in this respect over any conceivable sort of free-studentship system, and also over any such relaxed collegiate system as that which works successfully enough at Cambridge, induce us to concur with the authors of this proposal for university extension in thinking that, so far as Oxford is concerned, the maintenance of her collegiate plan should be jealously guarded. Still it cannot be denied that the system has its drawbacks, amongst the chief of which may be mentioned the great costliness of residence, certain obvious temptations to extravagant living, and the consequent exclusion of persons who do not belong to the comparatively wealthy classes of society. The maintenance of so many establishments, capable of receiving altogether only a small number of residents, falls heavily on the poorer students, each of whom is thereby required to expend on lodging, food, attendance and tuition a sum that greatly exceeds the price for which the same commodities can be purchased by an undergraduate of Edinburgh or London. Regard being had to the system which it is felt desirable to maintain, each separate charge in the college bill of an Oxford undergraduate is reasonable enough; but the sum of the accounts for six months' residence is so high that, by themselves and without the additional burdens of the personal expenditure required of an undergraduate apart from the necessities supplied by his college authorities, they place an Oxford residence far beyond the reach of the poorer grades of our great middle class, and still further beyond the means of studious mechanics and such other poor scholars as could formerly command the culture of the University. Indeed, the college system is so necessarily attended with expenses which are not attached to a system of free studentship, that even in the cheap hall at Durham, the college bills amount to 60*l.* per annum, a sum which, although it includes every actual necessary, represents a rate of expenditure which puts the least costly kind of residence at this comparatively inexpensive university beyond the attainment of a vast and rapidly growing number of Englishmen for whom it is desirable to provide academic culture.

But at Oxford the bills periodically distributed by college bursars represent only a small part of the expense which is directly attributable to the college system. By bringing into social intercourse young men of various degrees of material prosperity, the system encourages a liberal scale of personal expenditure, even where it does not offer temptations to culpable and ruinous extravagance. Here we have the grand defect of the system; and it is a defect to which Oxford dons pay too little heed. Oxford tutors may be divided, so far as this feature of the

case is concerned, into two classes: those who recognize with approval, or at least without dissatisfaction, the stimulus to extravagance, thinking that its ill effects on the poorer men who thrust themselves into the aristocratic University are more than compensated by the *éclat* derived to the University from its general repute for the wealth and luxurious habits of its members; and those more earnest and conscientious men who prefer to look away from a painful fact, and to persuade themselves that it either has no real existence, or is greatly exaggerated by the enemies of Oxford. With some persons this blindness commences in an amiable endeavour to counteract the deleterious influence by assuming that antagonistic considerations render it wholly inoperative. In these cases it usually happens that the assumption soon becomes a genuine belief, and that the words which were at first merely a protest against a tendency become a sincere declaration of opinion that the tendency does not exist. With other persons the false judgment is the result of natural disinclination to see anything wrong in a system from which they derive a large measure of personal influence and prosperity. By what steps the proposers of this scheme of university extension have arrived at their conclusion on this point we do not venture to inquire; but it is worthy of observation, that whilst they are projecting a plan for admitting poor students to Oxford, under conditions that shall guard them against temptations to extravagance, they maintain that "in those colleges in which the general scale of living is not expensive, the position of a really poor man is quite understood and recognized. In no place in the world, probably, is poverty a less bar to joining in general society." Holding this opinion, it is somewhat remarkable that the advocates of university extension have not contemplated the possibility of achieving their purpose by inducing some of the more economical colleges to build rooms for the accommodation of poor students, who should be required to pay for their maintenance and tuition only such sums as would defray the actual cost of their entertainment. If Pembroke, Worcester, Wadham, St. John's, and Jesus would make arrangements to receive twenty poor students, for a payment of one sovereign or thirty shillings per week for each student, whilst in residence, accommodation would be provided for the hundred poor scholars for whom it is proposed to build a new Hall.

The advantages of such a plan over the scheme proposed by the writers of this Report are obvious. The expense of building new rooms within the walls of the existing colleges would be trifling in comparison with the cost of a new Hall, standing on its own ground. If the present colleges undertook to meet the demand for university extension in this manner, they could instruct their new pupils without any increase of tutorial power. Twenty men added to the present number of undergraduates in any one of the five colleges just mentioned would not overtax its existing staff of lecturers, or overcrowd its lecture-rooms. Thus the annual cost of the tutorial body, required by a separate establishment, would be avoided. By this means the poor students could be taken in and "done for" at a rate of charge certainly not exceeding one-half of the sum that they would be required to pay at a new Poor Man's Hall; and unless this Report is in error, their presence in the college would be attended with few inconveniences and no dangers. They would be actual members of their colleges, and consequently would

escape the contempt that might attach to them if they were formed into separate fraternities, living in halls dependent on the colleges. Mixing with the other undergraduates at lecture, in chapel, and in hall, they would form friendships and live on terms of perfect social equality with their more fortunate fellow-collegians. Their position being "quite understood and recognized," they would not be asked to subscribe to college boats or cricket-clubs, or be required to spend money on amusements; and notwithstanding their indigence and consequent inability to "do as others do," they would take part in the general society of the house without discomfort.

Enough has already been said of this Report to show that the extension recommended by the reporters would not affect any large proportion of our poor students. To draw within the arms of the University a multitude of needy scholars from social grades that have hitherto looked on Oxford as a place of education reserved for the wealthy is not the aim of the nine graduates of Oxford who were deputed, in November, 1865, "to consider the suggestion for extending the University by founding a college or hall on a large scale, with a view—not exclusively, but especially—to the education of persons needing and desiring of admission into the Christian ministry." Instead of aiming at an enlargement of the University that would render it a place of education for men of every class and variety of purpose, they would rest content if they could draw from her schools such an additional supply of graduates bent on entering holy orders as would render the Established Church less dependent upon the services of clergymen who have no degrees. Whether the "Literates" are not as likely to be useful and intelligent curates as the young gentlemen who attain the rank of B.A. or M.A. before offering themselves for ordination, is a question open to discussion; but there can be no doubt that the Church will perceptibly lose influence in the higher ranks of society if her clergy should surrender their long-established reputation for scholarship and gentle culture. Nor is it less certain that she is already suffering in prestige from the growing impression that the young men of our universities are yearly manifesting greater reluctance to enrol themselves in her service. Under these circumstances, Oxford does well to exert herself to meet the special need; but we are far from satisfied that the reporters have hit upon the best course of action. So far as material aid is concerned, their suggestions will not prove impracticable. Since they are able to show that Oxford will not for many years have at her disposal any surplus fund sufficient to carry out the proposed extension, a certain wealthy section of the public would not be slow to respond to one of their suggestions by subscribing the necessary amount. Of course there will be laughter in certain quarters at the thought of Oxford in the character of a mendicant, soliciting pecuniary assistance from the benevolent; but such a reception of the reporters' proposal for a public subscription would be by no means general, and would have no influence whatever on the section from which the projectors of the Poor Man's Hall look for assistance. But if the house were built, the tutors found, and the establishment set going, would the new Hall thrive? would it find a hundred students willing to pay 60*l.* per annum for the education? would the graduates educated within its walls be the equals of other graduates in respect to tone, style, and those moral qualities which are the most valuable result of the present Oxford system? Would these hundred poor men, drawn from the inferior ranks of society, and educated in a

separate college, really obtain what is at present understood by an Oxford education? Scarcely coming in contact with persons of higher refinement or finer tone, would they acquire the temper and spirit for which, far more than for intellectual training, we send our boys to the old universities under existing circumstances? In short, would these students become Oxford men, *i.e.* gentlemen, as well as Oxford graduates? and would they, on leaving their University, be at all better qualified to sustain the reputation of the clerical order in gentle circles than those literates whom it is the fashion to mention with less respect than they deserve? To these and similar questions the reporters answer by asserting that the social texture of their Poor Man's College would be almost identical with that of wealthier colleges. "The evidence," they say, "before us goes to show that a large proportion of the members of a new college would be drawn from precisely the same classes as those which now fill the colleges to which we refer. There would be a sprinkling of the sons of wealthier men, who prefer for their sons a college where plain living and steady reading set the prevailing tone. There would be many fathers who have afforded with difficulty to send one son to one of the existing colleges, but whose whole family would feel the relief of a diminished cost, or who, on the other hand, might be induced to send two or more sons to the University where now they would only send one. There are others, socially in no way inferior, who are kept aloof from us by the tone of indolent extravagance which is believed to prevail among us, even more than it really does, but who would be induced to send their sons to a place the whole genius of which would be antagonistic to the tone they deprecate." In all this the reporters are mistaken, and show themselves to be wanting in accurate knowledge of society and human nature. Doubtless the average father of the English middle class would welcome any reform that would reduce the cost of University education; but it does not follow that, for the sake of economy, he would place his son at a college to which an unenviable repute would attach until it had achieved signal success. Because a man is unwilling to pay an exorbitant price for a good thing, which he would gladly purchase for a moderate sum, it is not to be inferred that he will pay the moderate sum for an inferior article, or for that which he would regard as an inferior article.

Collectanea relating to Manchester and its Neighbourhood, at Various Periods. Compiled, Arranged, and Edited by John Harland. (Printed for the Chetham Society.)

AMTD a mass of historical and antiquarian subjects relating to Manchester in every period of its existence, and showing its progress and fortune,—subjects not of very general interest, yet not unimportant,—there come upon us, like a double oasis in the desert, two papers relating to a couple of wig-makers; one of which papers is full of description of character and illustration of social life. It is the diary of one Edmund Harrold, a Manchester "perruquier," kept between the years 1710 and 1715, and it contains character-painting of a singular quality and description. We gather from it that the wig-maker had a great appetite for sermons and a great thirst for good liquor. Any excuse was good enough to warrant more than satisfying the thirst, and no opportunity was neglected of listening to sermons and performing public and private prayer by way of atonement. The roysterings are duly registered, the bearing of the sermons explained and illustrated. He buys the

hair off the head of a carrier's daughter for 5*s.* 6*d.*, reads Sparks 'On Advent,' turns from the ale-house to read Ambrosius, and only does not communicate weekly lest his wife should rate him for presumption! Then he "neglects all duty, public and private," but "fetches it up again." Anon he "gets too much," but goes home to read Sherlock 'On Death and Judgment.' He tipsles with a good fellow, but lends him Tully 'On Thoughts,' to take after his liquor; and the wig-maker wonders how it is he is dull on one Sunday, seeing that he went to church "both ends o' the day," and heard Dr. Bolton on "The end of these things is death." On another occasion he says, "I observe that it's best to keep good decorum, and to please wife; it makes everything pleasant and easy." But the thirsty soul yields again, and Harrold records his lapses in order to inflict on himself humiliation, "all to humble my soul with," as the poor fellow writes, adding, subsequently, a cry almost of anguish at his folly, his violation of good resolves, and his commission of pleasant sins at night, which make him sick and sorry next morning. Then he denounces ale before breakfast, sets himself to wig-making, reads his monthly 'Mercury,' Bishop Hall 'On the Invisible World,' and Beveridge 'On Restitution.' The flesh, however, is still weak; he gets "ill drunk," mends, and is "sober eight o'clock at night, but was merry before I went to bed."

This is the strain to the end of the diary, which closes abruptly. In his tipsy outbreaks we find him twice accompanied by a parson; but such companionship does not appear to help Harrold to an excuse for such unrighteous proceedings. It is fair to say that the wig-maker loved books quite as ardently as he loved liquor. We learn, from one entry, that human hair for wigs was worth about 20*s.* the pound weight. Harrold, moreover, sold books by auction, and was a bit of a doctor in his way. To women who, after childbirth, suffered certain discomforts, he rendered very strange service. He speaks of some as if they had been oranges, and notices one operation as having effected a greater cure than he had ever before accomplished. Harrold was a trifle vain, too, in character, and he speaks of other perruquiers, disparagingly, as "barbers."

Of folk-lore the diary contains little. We hear one of Mrs. Harrold's metal pots crack three times, and yet prove sound on ringing it. "Says Sarah Sharples, it's a sign of death, says she." Harrold adds: "Some says it's ominous, others not; but I have noted it down, in order to observe the event concerning theirs or our families to come." This gave wide opportunity for the omen to be realized, but it required no such favour. The pot cracked (or sounded as if it had) in August, 1712, and Mrs. Harrold died in the following December, as any other woman might have done in similar condition. Before death the diarist "discoursed her about her burial," and sent for "Parson Birch," and "before her face" ordered a funeral sermon at 10*s.* to be preached for her by that worthy personage. When this is settled, "I'm making me," writes Harrold, "a black shute of her black mantue and petticoat I bought her of Edwards, and if God gives life and health I will wear them for her sake." There is something amusing in the idea of a widower converting his late good lady's petticoats into wearing apparel for himself, at once to do her honour and turn his loss to some account.

In this costume the bereaved wig-maker soon went a-courting. He found one Martha "laddishly inclined," but missed her. One provoking Ellen first would, and then would not. A flattering wooer tempted her, but after all

Ellen deemed that a highly religious and drunken wig-maker was no "catch," and she would have nothing to do with him. The light-hearted widower next addressed himself to a nonconformist, Anne Horrocks. He plied a double suit. The tripping slip of orthodoxy must have a wife who would take the sacrament with him, when he was sober enough, in church. He had more ado to bring the stubborn Anne to become a churchwoman than to express readiness to become his wife. The wooing was made up of doctrinal discussions, disciplinary arguments, and animadversions on the trials of life, the temptations of the world, the charms of lovely Anne, and the inconveniences of children, not merely as to their bringing up, but also the bringing them in to the world. And this wooing, although not long a-doing, was sometimes long about. Swain and nymph were often together, from nine at night to six in the morning, discoursing on human love and church conformity. In this old Lancashire custom there was no scandal. The end of it was that, in August, 1713, the wig-maker married Anne at eight in the morning, "worked hard all day till nine at night," fetched his (third) wife home at half-past eleven; and "gave a bride's posset among the company in the house." In the following February this scamp of a fellow, who sold his own wig off his head for 9s. 6d., makes this entry in his Journal: "23rd. Tried wife's temper. Clean brought her to subjection." The drunken scamp could not subjugate himself. The last entry in his diary is to the effect that he had reached home in liquor, with "broke knuckles, head, and other parts," and next day "heard Bishop Gastrell, of Chester, preach at Old Church, forenoon, on Gal. vi. 15. The text speaks of the unavailingness of circumcision or uncircumcision of all, 'but of a new creature.'" Let us hope that the perruquier took the matter seriously, once and for all, at last.

We turn from the well-read but rollicking wig-maker to a better sample, in the Syddals, father and son. The elder Syddal was of those men who preferred the son of King James for his sovereign to the son of a German prince. For fighting in a Jacobite regiment at Preston, Syddal was hanged at Manchester, in 1715. In 1745 his son eagerly seized the occasion to avenge his father's death, entered as ensign in the Manchester regiment of Jacobites, was captured at Carlisle, and was hanged, dying like a hero and a gentleman, at Kennington soon after. The details will be found to be of great interest.

Finally, we must note that the Manchester barbers and wig-makers of the last century contributed a good scholar to literature, in the person of Thomas Podmore, author of a very remarkable book, 'The Layman's Apology for returning to Primitive Christianity.' This volume, written in support of the pure episcopal church in England, bristles, so to speak, with knowledge, and overflows with learning. The deep acquaintance of the barber with the Fathers, and all controversial writers generally, would have done honour to the two archbishops themselves, Potter of Canterbury and Herring of York.

The Eastern Hunters. With Illustrations. By Capt. J. T. Newall. (Tinsley Brothers.)

THE advantage of dressing up a real narrative of sporting adventures in the way adopted in this book is rather questionable. The author tells us, in his Preface, that his book "is mainly a compilation of actual occurrences"; that most of the sporting incidents are derived from his own journals and note-books, but that for a few

he is "indebted to the experiences of others." Now it appears to us that it would have been better to have omitted the scenes of which the author himself was not an eye-witness, and, instead of introducing fictitious names on which to hang his story, to have told it in the first person, just as it occurred. The charm of a sporting book is that it should be real; otherwise, however terrible and startling the incidents, they lack interest for the reader as soon as he begins to doubt their genuineness. He would be a marvellously clever writer, for instance, who could make a combat with a dragon interesting, or render a new series of Gordon Cumming adventures acceptable, if they were known to be inventions. Capt. Newall has evidently a keen perception of the beauties of scenery, and describes well; but we should like to have from him the real names of places, and not start from an imaginary "Jehangerpore." It must be remembered, that while the chief places on the main routes in India have all again and again been described, the out-of-the-way spots which hunters visit are virgin ground for the writer and reader, and it would really be instructive and interesting to have a graphic account of a fresh district. In the same way we do not care to know what the natives might have said, or what, according to our notions, they ought to have said. We want to know what they really did say, and who they were that said it.

The following is our author's account of the spot in which the hunting of the three friends, the heroes of his pages, commenced. It is extremely graphic, and we do not at all see why he should have robbed it of the only grace it wants by withholding from us the specification of its exact locality:—

"On the present occasion it had been selected with great judgment. A small grove of mangoes, with several isolated trees of the same kind scattered in the immediate vicinity, offered a fine amount of shade. They stood on open ground near the bank of the river, and thus water and free circulation of air were also secured. About twenty yards from the grove, the bank sloped down towards the water—in that part a long deep pool. This was belted by a narrow strip of brilliant green, contrasting strongly with the parched appearance of the yellow grass above. On the opposite side of the pool small trees and shrubs, jutting out or depending from above, bathed their hanging branches in the water, while behind them the bank rose to some height. Some open land separated the river from a belt of forest-trees which extended to the foot of a range of jungle-covered, ravine-cleft hills. Beyond these again rose others, all well wooded with low brush and occasional trees. Range on range, spliced one into the other, thus filled up the background: in some places rising abruptly into points or peaks; in others flat, with sheer descents at either end of the table-land. The neighbouring village was situated lower down on a salient angle, round which the river swept, about two hundred yards from the little camp. The huts of which it was composed were well sheltered by tamarind, mango, and peepul trees, which grew thickly in and around it. It was on the same side of the river as the camp, the intervening space being cleared and cultivated. Fields, now mostly fallow, also extended for a considerable distance around, and these were dotted with trees and wells, the latter used for purposes of irrigation. At this season, the very middle of the hot weather, the rivers attain their smallest dimensions. The one I am describing now consisted of a succession of pools connected by mere rivulets of running water. A few hundred yards above the camp, where cultivation ceased, its banks were fringed by narrow broken strips of trees and low jungle, and its bed filled with large boulders of rock, partly hidden by the bastard cypress and high tiger-grass which there grew plentiful and thick. A few bushes and stunted trees were also scattered amongst the rocks. It was the excellent cover this afforded for tigers,

which, in the hot season, delight in such cool retreats in the beds of rivers, that had induced the native Shikarees to select Mungaum as a favourable starting-point for the campaign. Nor was the expected presence of tigers the only attraction which existed for the sportsman. The neighbouring hills were, as I have said, thickly wooded with low jungle; but, in the numerous ravines, or, more correctly speaking, basin-like clefts which seamed the rocky front of the first range, there grew every here and there fine forest-trees. Dispersed among these somewhat plentifully was the mowar-tree, on the sweet, fleshy, and flower-like fruit of which bears delight to feed. From it also is distilled a spirit, regarding which it may briefly be said that it is alike potent and detestable. The masses of overturned rock and caves which girt in many places the precipitous sides of these jungle fastnesses, afforded secure and pleasant retreat to those animals. They afforded shelter from the noon-day sun, whilst their chosen food was close at hand for nightly depredation. Water, too, was in the vicinity; so that it formed altogether a small terrestrial ursine paradise. Tigers also would not unfrequently lie in these secluded spots. The cattle of the villagers, it is true, often fell victims to a tigress' appetite for beef; but sambar, neilghye, and cheetul—all of which abounded in the hills—formed perhaps the larger portion of their bill of fare."

Launched in such a region, the hunters are not long in finding "a splendid tigress," which they kill after a running fight of three hours, and not till the ninth bullet had pierced her. The horse-keepers of the party must, it seems, have been rather sharp-set, for they petition to have some of the meat, selecting a part which they call "leg mutton." Capt. Newall, who is chary of his Hindustani, does not give us the native equivalent for this curious phrase, and to our mind the anecdote sounds rather apocryphal. Still, as some filthy people in India—such as the Aghor Panths, for example—are said to feed on corpses, it is possible that the ghorewallas, or grooms, may have asked for dead tiger. But before long we come to some things even more difficult of credence. Here, for instance, we have a tiger holding on by his fore-paws, with his body in mid-air, while the hunter hammers his skull with his double-barrelled gun:—

"His attention was shortly after attracted to a troop of monkeys in the bottom of the ravine, somewhat higher than his station. Their movements evinced some unusual excitement, as they skipped from tree to tree, gesticulating, chattering, and screeching, as if in great anger. He had heard that these creatures do, for some reason of their own, hold tigers in great aversion, which they never fail to display when they happen to discover the object of their wrath, by some such exhibition as he was now witnessing. In his boyish days he had seen the movements of magpies give a clue to the line of the fox; and he presumed that he was, perhaps, now observing a similar natural instinct on a larger scale. There was evidently some special cause for the commotion which prevailed, so unusual in the heat of the day. As he was pondering this, and wondering if a tiger was really a-foot, his gun-bearer whispered the word 'Bagh' (tiger).—'Where? Where is he?' he ejaculated quickly, making ready at the same time. 'I don't see him.'—'No, Sahib,' replied the attendant; 'I only spoke for you to be prepared. I have not seen him, but the monkeys must have done so.'—The chattering soon diminished. Hawkes, however, kept a vigilant look-out near the spot where the monkeys were still moving about the trees, but in an undecided sort of way. He was beginning to think there must have existed some other cause for their excitement, when he felt a twitch at his coat. He turned sharply, and his gun-bearer pointed down into the nullah, which entered the ravine nearly at right angles, and which formed a portion of his watch and ward. He followed the direction of the man's finger, and peered into the thick undergrowth at the foot of the trees which grew plentiful at the spot, without, for a few seconds, discerning

anything. Quickly, however, he caught sight of an object moving in the shade; and, as it passed across a more open space, saw it was a tiger sneaking along with the head and body low; its whole back, from the snout to the setting on of the tail, appeared to form one straight line, the latter appendage being carried in a drooping state. His rifle was quickly brought to bear, and he let drive both barrels in rapid succession, rolling the tiger over; but it immediately recovered itself, sprang up roaring with rage and pain, and, catching a sight of his adversary on the rock-faced bank above, came bounding towards him over the boulders and stones at the foot of the low cliff on which Hawkes stood. The hunter seized his second gun, and poured in its contents as the tiger came on, but without the effect of stopping his headlong charge. The beast reached the base of the rocky height, and, making a desperate spring, managed to gain a hold with his fore paws on its top, but its flat and slippery face presented nothing on which to fix his hind-feet, or give it purchase to assist in dragging itself bodily to the top. As Hawkes turned to seize his third gun from the attendant, he perceived that individual some distance in the rear, racing with full power on towards the nearest tree. It was too late for him to follow suit: retreat was now out of the question; so he clubbed his gun and brought it down with force on the head of the tiger as it rested snarling between its paws within a few feet of the stream. The beast winced, but did not let go its hold; indeed, appeared to redouble its efforts to effect a lodgment. The stick flew into splinters as it came in contact with the hard skull of the tiger; but Hawkes continued to belabour him with the barrels. He laid on with a will, but the result was yet doubtful. Despite the desperate blows, the beast maintained his position; and, had he not been weakened by his wounds, would probably have made good his object. All this time it had been growling, with rage depicted in every line of its countenance. Suddenly it emitted a short low roar, a gliver seemed to run through it, its jaws relaxed, its eyes lost their fire, its hold of the rock gave way, and it fell back crashing among the boulders of rock and bushes into the nullah below, a distant rifle crack accompanying its downfall.—"Hurrah!" Hawkes shouted in mad excitement, brandishing his gun-barrels. "Hurrah!" He cooed. "Yoicks! Tally ho!"—"Run for it. For God's sake, get into a tree!" shouted Norman from the other side of the nullah, in eager, anxious tones. "He may get up, and be at you again by some path."—"No, no, it's all right. He's cooned. Tui-lul-lul-lal-lal!" and Hawkes continued to make excited demonstrations as he stood on the rock and looked over.—"Get back, man, get back. Are you mad?" Norman again shouted, with much anxiety. "Perhaps he's only stunned. I can't answer for hitting him again. Run off, confound you; run away, will you?"—"It's all serene, old fellow," was the reply. "I see him lying quite still, and dead as a door-nail. There he is under the tree."

On the whole, however, we have little to say against the possibility of Capt. Newall's "actual occurrences," and they are recounted in a manner amusing enough. The faults of his book are, we repeat, the indirect form in which the adventures are told,—great diffuseness, particularly in the dialogue, which has but little merit,—and a want of accurate detail. In no one instance has he given any dimensions of the animals killed. There are also some blunders in the native words, which are strange, coming from one who has been so long in India. To call the *Felis leopardus a cheetah*, is like talking of Apoller, and is bringing in a new error in spelling.

NEW NOVELS.

The Man of Mark. By the Author of 'Richard Langdon.' 3 vols. (Tinsley Brothers.)

THE author of 'Richard Langdon,' impressed, we suppose, with the tolerable success of that effort, has dashed at once into an ambitious struggle for a genuine new novel. "Sen-

sation" (why, by the way, has Mr. Hotten left that indispensable word out of his Slang Dictionary?) he has given us with a vengeance. Battle and murder to begin with, and sudden death for a pleasing finale, are two fitting sign-posts to a road literally chockfull of broken hearts, midnight apparitions, mysterious whippers, and signs of robbery, violence, terror and death. Nor are these the only horrors through which the Man of Mark (whatever that may signify) leads us in his track. A dim twilight which is so gloomy that perfect darkness would be absolutely preferable—so dim and gloomy that, on suddenly reaching daylight at the end, the traveller finds a painful effort of thought and memory in explaining to himself what it all means—makes the sombre excitement of the journey as complete as the most romantic Don Quixote could imagine or desire. When we add, that the hero is a young man of fabulous wealth, of overpowering genius, and with a dreadful worm always gnawing at his heart, have we not said enough—what with plain English and what with figures of speech—to allow the author to congratulate himself with at least the unequivocal assurance that he has devised an exceedingly sensational story?

Unfortunately, however, even the novel-reading tastes of this age require something more than this to make it content to own a book as "a good novel." The kind of plot which we have indicated is, no doubt, the order of the day; and we do not grumble at those whose business it is to keep Messrs. Mudie's counters stocked, for accommodating the character of this supply to that of the demand. But, as we have had occasion to remark more than once lately, a good plot—whether it be that of 'A Strange Story' or of the Brothers Dromio—is not all that is wanted to warrant a person in thinking himself capable of discharging the functions of a literary Pandarus. We doubt if 'Monte Christo' itself—all the worst points of which this book imitates so closely—would be tolerated except for its charms of style and graphic descriptive power. In 'The Man of Mark' both these qualities are (with few and rare exceptions of which we shall speak directly) "conspicuous by their absence." There is not one of its numerous *dramatis personæ* to whom one could apply the epithet "a strong character," either for good or evil. More than this, there is hardly one whom we would like to admit, without reserve and hesitation, to be flesh and blood at all. From the good cottage girl, whom all the world falls instantaneously in love with, and wants to marry off-hand, to the hero who lives in marble halls and mother-of-pearl rooms, who spends 50,000*l.* over a few weeks' residence in St. Petersburg, and whom "the prime minister himself, one of the haughtiest men in England, solicits to accept a very high office," the world is not the world we live in. It is a world specially invented and called into existence by the author of 'The Man of Mark,' for the express purpose of giving his puppets a local habitation and a name. The consequence of all this is, that these three volumes must be pronounced very far below the level of either a captivating or an enjoyable novel. The most intricate maze gets wearisome after a time, if its windings are its only merit, and unless there are pretty hedges on each side of the path, and pleasant resting places every now and then; and the larger the maze, and the longer the process of threading it, the more tedious does the operation become, and the more wearisome the bare stone walls. In 'The Man of Mark' there are, so to speak, neither hedges nor arbours. Its sole plea of interest is the perplexity of its labyrinth. Even the temple at

the end is barely worth getting to; and if one's sensation on arriving there is not exactly that a great deal of fuss has been wasted over nothing, it is at all events that the goal and the road to it are both of them very unsatisfactory. Society has such a plethora of novels to choose from, now-a-days, that it has no inducement to encourage those—of which the number seems every day increasing—whose only attraction is a wild romance, which, after all, we all know cannot by any possibility be founded on fact.

We have spoken of two or three exceptions to the general dearth of descriptive power which pervades these volumes. On these two or three exceptions we are going to rest a word of serious and friendly advice. They are quite enough to prove that the author is capable of far better work than such unsatisfactory stuff as this. A pen that can portray incidents with the vigour and truthfulness to human nature which he follows the supposed murderer in his wild flight; or a pen that can sketch so quickly, so tenderly, with so much genuine pathos, good feeling and good taste, a happy death-bed scene, is, we believe, the pen of an artist, who, by curbing his ambition, by saying good-bye to the marvellous, and confining himself to real life, could raise himself very high in the ranks of fiction. His fertile imagination will then be a blessing instead of a curse.

Uncle Armstrong: a Narrative. By Lord B*****m. 3 vols. (Newby.)

ANYBODY who knows anything about a long sea-voyage knows that there are few things better capable of whiling away time than to be sunning one's self on the fore-deck, listening to a tale of impossible adventures told by a veteran yarn-spinner. The absolute incredibility of it all, the insult that is being momentarily perpetrated on one's common sense and intelligence, the waste of time and trouble involved in exerting one's faculties to attend,—every such consideration vanishes pleasantly under the cool self-complacency, the masterly impudence of the experienced romancer at whose feet one is loling, and even adds a good deal to the lazy zest of the amusement. We do not know the ethical explanation of this, and do not care one bit to inquire; but a person must be a great philosopher who does not recognize the fact, and is not ready to admit, moreover, that not only on board ship but everywhere else human nature clings to fairy tales, and a good many other things too, long after they have ceased to be trusted.

It is in the same way that 'Uncle Armstrong' will, we feel sure, interest and please a large number of readers. Unblushingly sensational, very well told, and a great deal more engrossing than it deserves, it wants hardly anything but forgetfulness of reason and probability to make it a really good novel. Its plot is most elaborate. Its mystery is as well sustained as it is unfathomable. Every other page is a beautiful crisis—a crowded chamber of horrors. Muzzles of pistols inserted in mouths, and their contents going "directly to the brain," positively causing instant death,—fire shovels "bent and bloody, with" old women's "grey hairs sticking" to them,—and young ladies "lying pale and motionless as" corpses "in the middle of the kitchen floor," are positive oases in this wilderness of sin and tragedy—welcome opportunities for drawing a long breath, and getting courage for the next stage. We have not experienced so great a sense of relief and thankfulness since, in early childhood, we learned that bogies are imaginary beings, as when, at the end of the third volume, we had time to reflect that—thank Heaven!—this "Narrative" of Uncle

Armstrong's woes and persecutions and bamboozlement is nothing more terrible than a most amusing and clever extravaganza. Let our readers take our warning, and if they find themselves growing interested in the book (as they may well do on some occasion when they feel up to nothing more intellectual than yarn-spinning), let them steel themselves beforehand by the assurance that the "Narrative" of the Priory and the Manor House is not, and can never have been meant for, a tale of real life.

One word more. Our readers will observe that the author of 'Uncle Armstrong' appears to be of opinion that there is not only something in a name, but a good deal even in a rebus. Of the solution of this we have no idea. The dark hint intended to be conveyed in "Lord B*****m" is unluckily too dark to be useful. Only one faint glimmer of light seems to come to one's aid for a moment, showing a solitary possibility in the pages of the Peerage; but we quickly give up the puzzle, and content ourselves with wondering who on earth "Lord B*****m" is, and why he or she writes his or her name in dignified hieroglyphics. "Masters and Workmen," "The Fate of Folly," and "Naples," owe, we are told, their origin to the same great unknown; but even this information is useless. Fate has neither given us the gratification of ever lighting upon those works, nor has it thought fit to immortalize the author by placing them in the catalogues of the British Museum. It is quite within the bounds of possibility that neither the catalogues nor ourselves may have very much claim to condolence.

The Critical English Testament: being an Adaptation of Bengel's 'Gnomon.' With Numerous Notes, showing the Precise Results of Modern Criticism and Exegesis. Edited by the Rev. W. L. Blackley and the Rev. James Hawes. Vol. II. The Acts and the Epistles (to 2nd Thessalonians). (Strahan.)

THIS volume bears out the truth of the remarks which we felt it our duty to make on the appearance of the first. As an adaptation of Bengel's 'Gnomon' it is a failure. The numerous notes do not show the precise results of modern criticism and exegesis. On the contrary, they are usually silent as to those results. What they show is, some of the readings which Tischendorf and others have adopted instead of the received text; and some of the remarks made by Alford in his notes to the Greek Testament. A few observations are appended by the editors, or by one of them, which are commonly brief and of little value. Bengel's 'Gnomon' itself would be preferred to this book by all scholars; and the English reader is likely to be deceived by the title, 'Critical English Testament,' if he supposes that he is about to get the results of recent criticism. Those results seem to lie beyond the editors' horizon, for the best and most recent critical editions of the books of the New Testament are hardly mentioned; certainly they are not used. Thus Zeller on the Acts is a book unknown to the editors, though it is a masterly specimen of the highest criticism. Even Baumgarten is passed by. On the Epistle to the Romans, Philippi is ignored; so is Rückert on the Corinthians. The chief guide to the editors is Alford, beyond whom they seldom go, as if he were an impersonation of whatever is excellent in modern criticism and exegesis. Hence difficulties are unnoticed or unresolved; and Bengel's ideas are retained without rectification even where they are erroneous. The notes, though numerous, are often trivial; to have fulfilled the purpose proposed, they ought to have been of equal extent with the commentary of Bengel himself; while many observa-

tions of the latter should have been omitted as antiquated. Thus, the long exposition of Acts vii. 16, which is incorrect, should have been left out, and another substituted. In Galatians iii. 20, a passage which has called forth more dissertations than any other in the New Testament, not a word is added to the exposition of it given by Bengel, though the latter is erroneous. In like manner, the paragraph in 2 Thessalonians, second chapter, relating to "the Man of Sin," is left unexplained by the editors, who observe with truth that Bengel's view is now abandoned, but do not give one of their own. Yet it is confessedly a very intricate one, needing elucidation more than the great majority of chapters in the New Testament. We have reason to complain of the edition in this respect, because useless notes are common enough, such as, "for *Jesus Christ* read *Christus* Tisch. Alf." "Eng. vers. is marvellously erroneous;" "Philip being but a deacon, and evidently not competent to administer the rite" (of laying hands on the eunuch); "Add also before the gates. Tisch. Alf." &c. A few good notes where Bengel has misapprehended the sense would have been much better than these trifling remarks.

It is not worth while to reproduce Bengel in English for the sake of all the notes given by the editors. Modern criticism requires much more. And far more is available for ordinary readers, had it been presented along with the old 'Gnomon.'

The wants of the day appear to be ill understood by the clergymen who have superintended the translation. Those wants are too extensive and deep to be satisfied with the meagre fare provided. The repetition of Alford's remarks is out of place here; readers can go to his own works for them. Commentators and critics lying beyond the ordinary range of theologians in this country should have been freely consulted, and their best annotations furnished in a plain English dress. The following extract will show Bengel's ideas about an elaborate part of a gentleman's dress in his day. He is commenting on the apostle Paul's language about covering the head in prayer:—

"The question here arises: what is to be thought of wigs? In the first place they cannot be regarded in the light of coverings for the head; for a wig is an imitation of the human hair, and, where that is scanty, its substitute, rendered in our own day sometimes almost necessary to health. A wig, moreover, does not hide the face any more than a man's own hair would do; while women, if they were wont to use such coverings, would not be held to be sufficiently covered. Granting all this, it follows that a man's head is scarcely more dishonoured by a wig when he is praying than when he is not. But, in fact, a wig, particularly a flowing one, with bushy luxuriance, utterly unlike the natural hair, is something adventitious, which has its birth and growth in pride, or, at best, in effeminacy, whether wilful or the result of an imaginary necessity. It was not so from the beginning, nor will it always be so. Could we now consult the apostle Paul, it is my belief that while he would not compel those who wear wigs entirely to cast them off, he would decidedly recommend those who have not yet begun the habit to leave them alone for ever, as anything but becoming to men, and especially to men who pray."

We regret to see so poor an adaptation of Bengel to the requirements of the time by men whose knowledge, learning and critical powers are inadequate to the right performance of their task.

Ye Byrde of Gryme. An Apologue. By the Rev. G. Oliver, D.D. (Grimsby, Gait.)

THE little port of Great Grimsby, lying at the mouth of the Humber, at the north-east corner

of Lincolnshire, is once more rising to fame, after having for some 300 years been sunk in obscurity. In this it resembles the port of Poole, in Dorsetshire, which has lately had the hardihood to open steam communication with France, and has exchanged civic hospitalities with the far-famed naval port of Cherbourg. It would probably be easy to point out many places which, from change of habits or fluctuations of trade, have been allowed to dwindle to mere villages in size, while still retaining the title and organization of towns. One of the most striking instances that we remember is the little town of Wareham, only a few miles from Poole, where the ancient ramparts inclose large gardens, orchards, and fields, once the site of busy streets, and where the fourteen churches which the town is said to have then possessed are represented by two or three dilapidated towers, and one parish church in actual use. Compared to such a decay as this, the falling off of Grimsby has been but slight; for it never had more than two churches, of which it still possesses one. Still it suffered much from the rise of larger centres of trade, and probably also from the suppression of the monasteries, and from the increased security of property, which enabled some of its most important inhabitants to give up their large houses in Grimsby, and become what we should now call "county families." No doubt the Abbots of Wellow were sometimes inconvenient neighbours; but when the last Abbot, Whitgift, uncle of the celebrated Archbishop of that name, who was a native of Grimsby, made a merit of necessity, and surrendered the monastery into the king's hands, there was, perhaps, more regret than exultation in the hearts of the civic dignitaries who had once wished the Abbey and its haughty rulers somewhere further off. The well-known Gervase Holles, M.P., historian of Grimsby, lived in the town, in a house which is now parcelled out among working men. Even in his time the place had sunk from its former prosperity, as we learn from his feeling lament: "The haven," he tells us, "hath been heretofore commodious, now decayed; the traffic good, now gone; the place rich and populous, the houses now mean and straggling, by reason of depopulation; one church is down, the other going to decay for want of proper repairs; one solitary coal-sloop is sufficient to supply the town; so will we leave it, venerable for antiquities, and write over the gate, *Fruit Nilum*." It is only a native who can be expected entirely to sympathize in these regrets for a place which, after all, was never very important. Still, for its size, Grimsby possesses many reminiscences of interest. The De La Sees or De Lacys were mayors and members for the borough for several generations. The first charter was granted by King John (who visited the town in person), and was signed by William de Albini, one of the barons whose seals are affixed to Magna Charta. It may be remembered that John de Lacy was also one of the paladins of Runnymede; and we are assured that the Kingstons, Tunstalls, Grymesbys, Ayscoughs, Tyrwhitts, De La Sees, and Barnardistons had their family mansions within the precincts of the borough. All these were important families, especially the Lacys, as we may gather from Jack Cade's proud boast, "My wife is descended of the Lacies." As they seem to have taken part in the commercial enterprises of Grimsby, the gibe of the sarcastic Dick, "She was indeed a pedlar's daughter, and sold many laces," may, perhaps, have had more point than is generally supposed. Our readers will not take the less interest in this little book about Grimsby when they learn that the writer

is eighty-four years old, while the style is so light and genial that Sam Weller might exclaim, "Blest if his heart isn't five-and-twenty years younger than his body." Apart from this, many of the circumstances mentioned are so curious that they have more than a local interest. What an estimate must we form of the political energy of the Grimsbæans, when we read that the election of 1790 lasted nine months, with public-houses open all the time, the expenditure on both sides being 80,000*l.*, and killing off one-fourth of the electors! A curious illustration of the recreations of our forefathers is exhibited in a by-law of the corporation, "That no butcher shall in future kill a bull within this borough, nor shall any bull's flesh be sold, or any bull brought into the market for sale, unless it has been baited openly before the mayor and burgesses." This need not, however, surprise us, in a country where, to our shame, the amusement of seeing two strong men pound each other to mummies is only just getting out of fashion!

Last Words of Eminent Persons. Compiled by Joseph Kaines. (Routledge & Co.)

Mr. Kaines has compiled a tolerably complete volume with a creditable amount of industry and research, and has brought it into the world in all the attractive elegance that distinguishes the great majority of Messrs. Routledge's publications. His list of authorities indicates that, whatever may be the merits of his scheme, he sets about it in earnest; and as his book consists entirely of quotations, many of which are from the most brilliant of modern English writers, the result is a pleasant variety both of style and thought. When we have said this, however, we fear we have said nearly all by way of gratitude to the author or recommendation of his work. It is but a dismal subject at best—this of last dying speeches and confessions,—and one which, unless treated on very homeopathic principles, and moulded into interest by genuine master-hands, is only, as it seems to us, capable of being of possible use in one of two ways, either as a book of reference for the historical student, or as a practical sermon on the difference between a good man's death-bed and another's. Now this latter object Mr. Kaines avowedly and deliberately abjures, and for a reason in the sufficiency of which we cordially agree with him. "Of death-bed scenes," he tells us, "in which the last hours of persons assumed to be infidels are contrasted with those of persons known to be Christians, there are enough extant." Something in his language makes us inclined to imagine that we hold with him in his more "catholic" aim on other grounds than his own; but, be that as it may, his belief is "that a readable book could be made" of "the last words of illustrious characters of all nations, ranks and occupations, . . . from the contemplation of which all might derive advantage, whatever their creed, party, age or sex." We think, too, that such a book might possibly be written, but that it is only just possible. If it fails at all, if it is not literally and decidedly "readable," there remains but one end it can serve—to be, as we have said, valuable as an historical text-book of minutiae. In the attainment of this end, as much as in the effort to endow this topic of "Last Words" with that pathetic interest of which it is just capable, Mr. Kaines cannot be said to have achieved much success. In his long list of eminent *moribundi*, ranging from the Emperor Augustus to our own Prince Consort, a large proportion of the information given is deprived of such value by being easily accessible in the very first quarters to which an inquirer would be likely

to direct his attention. Conspicuous amid a long list of examples which we have marked are the stories of the deaths of Brutus, Julius Cæsar, ÆBecket, and General Wolfe, and the executions of Anne Boleyn, Lady Jane Grey, and Charles the First. In others, again, such as in the cases of Bayle, Sir Charles Bell, Euler, James Watt, and a host of others, we look in vain for anything which, in death at least, they appear to have said or done either very interesting or worthy of commemoration as a pattern, as a warning, or as an illustration of character. The compiler should surely have reflected that even if a great man's life was sublime, it does not at all follow that his death must be worth writing about. Dead weights of this sort in a book not only tend to make it tedious and unattractive, but aggravate the reader into thinking of incidents which ought to have occupied a place here, and making him inquire why a number of every class and every description of character under heaven—from Whitefield or Wellington to Joanna Southcote or Dr. Dodd—have not been taken and the others left. Still, there is very much in Mr. Kaines's selections that is both striking and, to the general reader, likely to be new; and if we may venture to give him a bit of confident advice, it is that by weeding out of the volume about two-thirds of its contents, substituting some obvious omissions, arranging his subjects chronologically instead of alphabetically, and prefixing to each the briefest possible summary of a memoir, he will change a heavy book into a "readable" one, and make it a good deal more valuable into the bargain.

America during and after the War. By Robert Ferguson. (Longmans & Co.)

LIKE Mr. Hilary Skinner, whose book about America we recently noticed, Mr. Robert Ferguson has visited the United States since the termination of the war, and after reviewing scenes which he had studied under different circumstances, he now presents the public with the results of his observations. His first arrival in Brother Jonathan's territory was made whilst the re-election of Abraham Lincoln was the immediate object of interest with the politicians of both sections of the divided States,—his second at a time when Mr. Wendell Phillips had begun to denounce the reconstruction policy of President Johnson. Notwithstanding its shortness, the period between the two journeys had witnessed momentous changes in the tone and aspects as well as the framework of American society; and the English tourist, after landing for the second time at Boston, encountered frequent occasions for moralizing on the past and present of the great republic. It is as a record of such social contrasts that the narrative of these excursions merits notice, and may be recommended as a source of entertainment. So far as literary style and texture are concerned, the earlier part of the story is greatly inferior to the later portion, which relates to affairs subsequent to the fall of Richmond. Indeed, the outset of the volume is so crude and unalluring, that had we closed it at the fiftieth page our opinion of Mr. Ferguson, as a special correspondent in a strange land, would have been by no means favourable. It is rather late in the day of our knowledge of America for a reporter to think it worth his while to inform English readers that New York contains some very large hotels; that Barnum's museum is "surely the queerest collection of rubbish, relics, and curiosities that the industry of man has ever scraped together"; that Broadway omnibuses are "worked" without the intervention of conductors; and that "the amount

of salivation which the habit of chewing induces is prodigious." A certain amount of prejudgment is surely excusable in the critic who is met in the opening pages of a book with an entire chapter on American Railways, written in this fashion: "The American car has its entrance at the two ends, and a passage down the middle,—the seats, each of which holds two persons, being arranged transversely along each side. To each seat there is a window; and as the sitting which commands the prospect and the fresh air is of course the preferable one, not only on that account, but also on account of the freedom from the annoyance caused by passengers continually forcing their way through the middle, it is always first occupied. . . . Upon the whole, then, if we compare the American railway car with the British first-class carriage, there is no comparison as to the comfort between the two. But if we compare it with the English third-class, to which it most nearly corresponds in price, it must be admitted to have the advantage." When this style of writing is compared with that of an inferior newspaper correspondent, it does not appear to have the advantage. After wading through several chapters of such composition, we did not feel any keen surprise on learning that General Neal Dow was an inattentive listener to Mr. Ferguson's remarks on public questions. "He discoursed," says Mr. Ferguson, with delicious simplicity, "somewhat in the American fashion, on the political features of the day, and in particular on the relations between England and America—the latter being, of course, represented by himself, and the former by a correspondent of his in Manchester. But what struck me as rather odd was, that he did not seem to care to know what I, an Englishman present before him in the flesh, had to say upon the matter." It does not seem to have struck Mr. Ferguson that General Neal Dow may have been of one mind with the small boy, concerning whom the author tells the following story:—"It was here that I met with the first specimen of what is generally called an Americanism. A small boy belonging to the hotel carried my portmanteau upstairs to my bedroom, having done which he sat down, and proceeded leisurely to read aloud all the labels and directions upon it. 'I guess you're English,' he at length said; to which I replied that I was. 'Well,' he said, 'you talk just as if you was a greenhorn.'" As if the youthful student of character had by this speech given proof of intellectual and moral worthlessness, Mr. Ferguson adds, "This quaint youth seemed, however, to have some element of good about him, for just as I was about leaving he came and sat down beside me, and, pointing mysteriously to one of the hotel servants, whispered, 'If you give the boys anything, give it to that one,' 'cos he's the poorest." That the remarkably smart youth may have had a purely commercial reason for thus endeavouring to promote the poor waiter's welfare does not appear to have occurred to the author.

But whilst the reader is adapting the small boy's pungent criticism to Mr. Ferguson's literary style, the book brightens, and, becoming stronger with each turn of a fresh leaf, makes sufficient atonement for early offences. Speaking of the sensational advertisements of American speculators, the writer says, "The greatest hit in the advertising line was made by the proprietors of the former on the occasion of the celebration of Independence Day in Boston, when, as usual, there was a grand display of fireworks, and all Boston was there to see. The final tableau had just died away in darkness, when, in a moment, before the spectators had time to turn away their eyes, another shower

of many-coloured flames lighted up the sky, and in all the glory of fire leaped out the words—*Drake's Plantation Bitters!* With equal originality the manufacturer of an "unfermented bread" drew attention to his special product by a placard headed, in very large type, with the words—"As pure as a soul without sin!" Another advertisement that arrested the tourist's attention during his first visit was, "Soldiers! send your dead comrades to their Northern homes,"—these painful words being followed by statements of the terms at which "bodies were embalmed and disinfected." During the same trip Mr. Ferguson was presented at the White House to Abraham Lincoln, who condescended to shake him by the hand in a "promiscuous manner." "He shook hands," says Mr. Ferguson, "not with the vice-like grasp of which I had read,—probably by this time he had learnt to husband his resources,—but rather in a promiscuous manner, as when one shakes up a bottle." Concerning this promiscuous hand-shaker's re-election the reader is told—

"Among the curious features of the election were the various ridiculous penances which members of the beaten party had to perform. For as wagers for money would have vitiated the votes of those laying them, the conditions were generally that the loser should exhibit himself in some ridiculous point of view—the absurdity of the thing being heightened by the social position of the individual. Thus a gentleman in Chicago had to carry a fat Republican on his shoulders through the streets, preceded by a band of music. A well-known New Yorker, as an appropriate punishment for being a Copperhead, was condemned to wear for a year a hat two feet high, with a brim seven inches wide. A student in Maine was compelled to part with his cherished whiskers and moustache. Another man had to whittle two barrels of shavings in the street. Another—and I think this was certainly a case for the interference of the police—had to promenade in a public thoroughfare with nothing but his shirt on. The last time that I visited Boston I found a great crowd in the street, and learned that a well-known citizen of that place had just gone by, having in fulfilment of the terms of a wager wheeled a barrel of oysters all the way from Portland to his house in Bouduin Square, a journey which occupied him nearly a week. The affair having got wind, a great number of people had assembled to see him pass with his barrow, which was painted with appropriate mottoes—'We pay our debts,' in allusion, I suppose, to the fulfilment of his wager; 'We obey the laws,' 'We bide our time,' in reference to the principles of his party. It was mentioned that at one place on the road a sturdy Republican innkeeper had refused to take him in, though he had cheerfully received 'black Jonas,' a negro sent with him to see that he did not shrink any of his task. This may be taken as one of the straws which serve to show the way the wind blows."

On his second visit to the States Mr. Ferguson encountered in every direction those maimed veterans to supply whose wants an "Artificial Arm and Leg Company" has been established in Washington. "Though the beaten party," observes the author, with regard to these victims of war in the Southern States, "have not the same means at their disposal for the relief of their crippled veterans as their opponents, they are not less zealous in their efforts to assist them. All posts that are available are bestowed upon the wounded soldiers of the Confederacy, and the Legislative Assembly at New Orleans is a curious instance. There the Sergeant-at-Arms of the Senate is without legs, the doorkeeper of the House without arms, the Secretary of the Senate and the Clerk of the House both upon crutches; and yet all these officials discharge their duties—at least, it is said so—in a highly satisfactory manner." Other and more eloquent

signs of the price with which the liberty of the negroes had been purchased met the traveller's eye. Families scattered by bankruptcy, gentlemen reduced to abject indigence, women of good birth and luxurious nurture brought to open mendicancy, feeble children whose cheeks had been blanched by the diseases that attend on grinding poverty told the ghastly consequences of the struggle upon many of the wealthier classes of the people. Here is a cruelly suggestive picture of the kind of misery that arrested the writer's attention in Charleston:—

"The gay groups were all gone; the beauty and fashion of Charleston were shut up at home in mourning; desolation and gloom reigned in the city of Secession. As I turned down the main street on my way back to the hotel, I met an old lady who, as I thought, spoke to me in passing. I stopped, thinking she perhaps wanted to ask her way, and said, 'Did you speak to me?'—'Yes,' she said, with an effort, 'I asked you for assistance.' Struck with her appearance, which for all her dress of threadbare black, was unmistakably that of a gentlewoman, I inquired her history. It was a sad story; she was a widow, whose two sons—'good sons as ever were'—had both fallen in the war, whose little home lay a blackened heap, and who now in her last days was driven out into the world to seek a precarious living by needlework. What she wanted was money to pay her rent; 'not that her landlord was a harsh man,'—how her anxiety to do him justice showed the lady!—'no, he had said that come what might she should never be turned from the door, but he was a poor man himself, and it was hard upon him.' I told her how much I felt for her, and expressed my regret that not being a resident, but only a passing traveller from England, I was only able to give her temporary assistance. 'Are you from England?' she said; 'Ah! so am I—my husband was a major in the Scots Greys, living at York; in an evil hour he left England for this country, where he died some years ago.' All her new griefs she had told me looking up into my face with tearless eyes, but the thought of her husband, and of her old home, opened a fountain not yet dried up, and she turned away her head and wept. Ah! little thought the gay group who gathered on the Battery to see the first gun fired on Fort Sumpter, what the bitter end would be! I was much pleased to read afterwards in the papers of the formation of a society for the especial relief of persons of her class in Charleston."

The existence of such misery, apart from the humiliations of mere defeat, is enough to account for the exasperation which consumes the hearts of many of the Southerners, and often found expression in terms that ill be-seemed the rank and sex of the speakers. "I wish the Yankees were all in Hell, and I raking the coals," was the exclamation of a young Carolinian girl, whose ancient and wealthy family had suffered severely in the struggle.

So far as it goes, Mr. Ferguson's evidence about the negroes accords on all important points with the testimony given by Mr. Skinner; but 'During and After the War' is somewhat less hopeful than 'After the Storm' with regard to the education of the freedmen. Amongst the upper grades of Southern proprietors the author detected manifestations of benevolence to the black workmen; but the inferior whites did not seem to participate in this humane disposition. Of General Pillow—who is setting a fine example to his countrymen—it is recorded, "Wisely accepting the situation, and foreseeing how much the future of the South must depend upon a labouring class drilled into habits of industry, thoughtfulness, and providence, the General had thrown himself with all his energy into the cause of negro education. He had erected a fine school-house for the negro children on his own estate, and was working cordially hand-in-hand with the officers of the Freedman's Bureau in all their

efforts for the mental and moral improvement of the coloured people." On the other hand, in opposition to such men as Pillow and other gallant soldiers who have turned to the tasks of planters the energies and manliness that characterized them on fields of battle, a large proportion of the superior gentry look with coldness or angry aversion on the steps that are being taken for the elevation of the inferior race. Many who admit the propriety of educating the negro, declare their resentment at the means which are being used for that end. "If that, then," says Mr. Ferguson, "be the sentiment of the better educated classes of the South, we cannot wonder that the feeling of the ignorant whites should be one of bitter hostility to anything which tends to place the negro on a level with, or it may be, a higher position than themselves. And Mr. Fiske had been sorrowfully forced to the conclusion that while one or two of the schools in the larger towns may possibly be able to maintain their ground, those in the country districts generally will have to be given up. But as the Freedman's Bureau will, at all events, remain in existence for another year, a work will ere that time have been done which it will be impossible to undo."

Of the persons with whom he came in contact on American soil Mr. Ferguson tells us no better story than the following anecdote concerning an "unprotected female":—

"We returned to Oil City, where we spent the night, and on the following morning took the train for Pittsburg. Arriving at the station in good time, we got possession of seats, always considered the more desirable, which commanded the windows. Not long had we been seated, however, before there came up a woman, who quietly said to my friend, 'I'll thank you to let me have that seat,' a command which he instantly obeyed. 'Well,' thought I, 'I have read of women doing such things in America, but I never witnessed such a cool proceeding before! The new comer, however, seemed lively and good natured, and presently entered into conversation, giving us an account of a scene she had witnessed in the cars on the day before, when a passenger had cruelly beaten one of the little news-boys on account of some dispute about a paper. 'And didn't I wish,' she said, 'that I had been a man for the occasion.'—'Well,' I thought, 'modesty may not be one of her strong points, but there is evidently some good about her after all.' Presently I overheard a friend of hers in the seat behind ask her in a whisper if she couldn't get that gentleman beside her to change places, so that the two friends might sit together. 'Why,' she whispered in reply, 'I have just made him give up his place once, and I really haven't the face to ask him again.' So then I perceived that even of modesty she was not utterly bereft. My friend, however, guessing the object of the conversation, volunteered to give her his seat, and came and sat beside me, the two women having opposite seats. Presently the comer produced some apples, and offered one to her companion. 'Ah!' said the other, 'these are not to compare with English apples.' My curiosity was roused. 'Why,' I said, 'are you so fond of English apples?'—'Why?' she said, 'because I am English.' So I learned another lesson against forming hasty conclusions."

Is it not possible and probable that this droll story gives the true explanation of many of the audacities attributed to American gentlemen by English writers of books about the United States?

OUR LIBRARY TABLE.

What shall we do with Tom? By the Rev. Dr. R. K. Brewer. (Leeds, Walker; London, Hamilton, Adams & Co.)

THIS is a question that may be variously answered. Mr. Squeers would say, "lick him"; Mamma, if she dared, would say, "pet him"; a cautious modernist would recommend a good private forcing-

house, where all the living languages are taught by "natives"; while Mr. Fivebars and Mr. Doublefirst, of Balliol, albeit they approach the ground of dispute from very different points of the compass, would exclaim with unwonted unanimity, "Let him go to Westminster or Rugby, and rough it, as we did." Dr. Brewer falls into no extremes and is misguided by no prejudices. He sees that a small school may be suitable to one boy, a large one to another. He looks at the matter in a practical point of view; and, while he would be unwilling to throw a young pupil into unnecessary temptation, he knows well that everybody except a hermit must one day see the world as it is, and he would therefore not refrain from sending a boy to a large school merely because the purity of the nursery cannot be ensured there. On this and many other points the author's observations are very sensible. He considers corporal punishment necessary for "sauciness and cruelty." We should be inclined to add, for resolute idleness and lying; but every schoolmaster must judge of these things for himself. No man is competent to write on schools who has not himself been a schoolmaster as well as a schoolboy,—for no one without this double experience can know the difficulties which teacher and pupil have respectively to encounter. Dr. Brewer has evidently gone through both these phases; and his little book, which is written in a pleasant and chatty style, will give useful hints to any anxious instructor who is striving for the first time to understand the anomalies and contradictions of juvenile human nature.

Poems. By Magnolia. (Bennett.)

THESE are innocent and kindly effusions; but we fear that they have scarcely sufficient character to attract much attention. May we hope that the author is young, and that future efforts will display increased power and better poetic training? The roughness of some of the verses and the occasional incorrectness of the rhymes would seem to favour the supposition that a number of early exercises of different degrees of merit have been thrown together to make a volume. We find "blossom" as a rhyme to "bosom," "hear me" to "near thee," and "ghostly" to "closely," in the first poem in the book; but as we read on we find more attention paid both to rhyme and to metre. 'The Landscape Painter,' a tale in blank verse, is a very fair imitation of the Poet Laureate's peculiar manner of narrating. It will be better, however, for the author to seek a style of her own. The short poems entitled 'The Heart's Chamber' and 'Lenora' are indicative of nascent power, but they are somewhat obscure. We must take the liberty of mentioning that Heidelberg is on the Neckar, not on the Rhine.

A Few Thoughts concerning Infanticide. By Mrs. M. A. Baines. (Chapman & Hall.)

Mrs. Baines, in common phrase, "takes the bull by the horns." She has no idea of "Thou shalt do no murder" being construed in favour of mothers who kill their babies. She recommends rewards being offered for the discovery of perpetrators, points to the necessity of proving "wilful murder" whenever possible, and objects to a remission of the sentence of death when it has been once passed on a justly-convicted infanticide. Mrs. Baines says, "It is a mistake to suppose that shame prompts the women to commit the crime;" and she suggests that the institution of a Refuge Lying-in Hospital and Nursery would meet the exigencies of the case. The public sympathy will not, we think, be extended to such a means of preventing one bad end by affording facilities for another.

The Revelations of a Police Court Interpreter; or, "Truth is sometimes Stranger than Fiction." By Dr. J. Jacobson. (Whittaker & Co.)

By registering his book at Stationers' Hall, a course not unusual with authors, and by reserving to himself the rights of translation, Dr. Jacobson shows that he looks hopefully to the consequences of publication. Having put forth his revelations, which are not of a very alarming kind, the interpreter of the Hull Police Court publishes at the close of his volume an original drama, entitled 'The Trial, or, Broken Hearts and Homes,' which was performed during last September in the Queen's Theatre, Hull, to the satisfaction of certain com-

plaisant critics attached to the local press. The learned Doctor should have rested content with the applause at the Hull theatre. Through aiming at more, he may, perhaps, lose what he had. The fable of the dog and the shadow has many applications.

Karl of the Locket and his Three Wishes. By David Smith. (Edinburgh, Nimmo.)

PLEASANTLY written, well-printed and handsomely bound, 'Karl of the Locket' belongs to the higher class of stories for children. "The reader will see," observes Mr. Smith, of Karl, at the end of his tale, when, by the way, the reader has seen and considered the facts pointed out, "that each of his three wishes was granted to him, but he had to refuse every one of them. How often do we wish in ignorance for things that would not benefit us, and which we would be glad to be quit of, even if we had them." The moral of the story is declared in this passage with sufficient distinctness.

Select Tales for the Use of Colleges and Schools and for Self-Instruction: a short and easy Method of Learning the French Language. By Edward A. Oppen. (Asher & Co.)

TEACHERS of children will find this a useful selection of passages from French writers.

LIST OF NEW BOOKS.

[ADVERTISEMENT.]

OTTLEY'S SUPPLEMENT TO BRYAN'S DICTIONARY.—A notice which appeared under the head "To Correspondents" in last week's *Athenæum* will account for the tardy publication of the following letter in this form.

To the Editor of the *Athenæum*.

Sir,—Mr. Bohn's letter, inserted in last Saturday's *Athenæum*, invites the controversy between us with a more serious aspect than it has before presented. Mr. Bohn reiterates his denial of my statement that a stipulation had been made to append his initials to his contributions, and, in so doing, adduces matter in corroboration of his position which renders it incumbent upon me to take a bold issue with him upon the simple question of veracity. It is with much pain that I find myself compelled to turn to the references to one who has held a respectable position in business; but the circumstances leave me no alternative, if I would guard my own honour from reckless impeachment.

Mr. Bohn repeats the assertion that "the book was all printed off and in his my hands before he (I) requested my initials," which I had thrice stated was not the case. In now for the fourth time reiterating my position, I think it desirable to have the support of some other evidence than mere assertion. I have, therefore, looked up the correspondence between Mr. Bohn and myself in reference to this part of the transaction, from which I will make one or two quotations, which, I think, you will consider conclusive.

On the occasion of sending me the bundle of what I termed "revises," Mr. Bohn, under date March 2, 1866, wrote me a letter, which commenced as follows:—

"Dear Sir,—I have had some trouble in getting from the printer a complete set of the stereotyped sheets, called press proofs, as they had to be pulled by hand before being finally put to press. I believe all the deaths which have occurred since the sheets were cast have been added in MS., as you will see, and will be corrected in the plates—a somewhat expensive process."

"I also inclose a proof of your Preface, leaving you to do with it, in respect to my additions, what you please. Pray return the whole for press without delay.—Yours truly, HENRY G. BORN."

To this I replied (March 19) as follows:—
"Upon examining the proof sheets of the Bryan Supplement, I find matters which I was wholly unprepared to see, and which will require consideration. Besides matters of opinion in which I cannot concur, are some mis-statements of fact, which could not possibly be allowed to pass. I will endeavour to be more definitely on the subject in the course of the week. Yours truly, H. G. BORN."

"To H. G. Bohn, Esq."
On the 26th of March I received another note from Mr. Bohn, begging to know the particulars to which I objected, and my views on the subject, as soon as possible; and on the 28th of the same month I wrote him a letter, enumerating the articles to which I objected, and stating, "with respect to all these articles, I propose to acknowledge them and others as having been contributed by you, and that your initials be appended to them."

On the evening of the 5th of April Mr. Bohn went to the Society of Fine Arts, in Conduit Street, where, before a Lecture Evening, he thought he should probably find me, and there a short conversation took place between us, in the result of which Mr. Bohn agreed to my demand for the insertion of his initials, as well as of a reference thereto in the Preface.

The next day, or the day after, I accordingly returned the Press Proofs, with my corrections and his initials marked in red ink, and a paragraph inserted in the Preface acknowledging the Publisher's "friendly contributions," and stating that they would be found distinguished by that gentleman's initials ("H. G. B.")—an intimation which was duly printed, but not noticed.

Mr. Bohn asserts, "It is true that I corrected the blunder of making Mr. A. Cooper the father of Sidney Cooper, but this caused the cancelling of two pages; and if I had been obliged to add my initials to the seventy articles I have contributed, I must have cancelled nearly the whole book."
In dealing with this daring statement I have to observe that the notice of S. Woodward, in which the reference to Mr. A. Cooper occurs, is printed in pages 181-2, which correspond, and form one continuous sheet of paper with pages 175-6, and jointly with them with pages 177-180,—in other words, are part and parcel of the half-sheet (signature N), comprising pages 176 to 189 inclusive,

—and that, therefore, there has been no cancel of any two pages in this half-sheet. I may state further that, although many other quite as considerable alterations as that in the case of Woodward have been made in various parts of the work, in accordance with the corrections in the "Press Proofs" submitted to me, there is not a single cancelled leaf from beginning to end.

The case needs no further comment from
Your obedient Servant,
HENRY OTTLEY.

ON THE CAMPAIGN OF AULUS PLAUTIUS IN BRITAIN.

Royal Observatory, Greenwich, August 24, 1866.

I have read Dr. Guest's papers in the *Athenæum* 'On the Origin of London' with great interest, and have, I trust, derived from them, as I have from many of my friend's essays, much instruction. Yet to the principal conclusions of these papers I cannot assent. I think I shall be able to show that, in some cases by relying on positive statements of ancient historians, and in other cases by reasoning on well-understood physical circumstances, we are necessarily led to final inferences very different from those of Dr. Guest.

But first, I would express my belief that the reasons for adopting the Cowey Stakes at Halliford as the place of Julius Caesar's passage of the Thames have never been stated so clearly before, and that to my mind they are convincing. This matter, however, as I shall explain, appears to me to have no connexion with the general subject of Dr. Guest's paper. Before leaving it, I will remark that the itinerary distance of the Cowey Stakes from Penvensey (which I adopt as the landing-place of Julius Caesar), or from any point in the line between Penvensey and Robertbridge, supposing Julius Caesar to have gained the head of Stone Street, and to have marched through the passes of Dorking and Leatherhead, agrees well with the distance, 80 Roman miles, assigned by Caesar. The distance in a bee-line is about 57 English miles.

The real subject of Dr. Guest's papers is not so much the Origin of London as the Campaign of Aulus Plautius. The tracing out of this campaign depends virtually on the determination of the place of landing; and Dr. Guest assumes this fundamental point, without giving any reason of his own, and without examination of any part of Dion's narrative which can bear upon it. He merely says, "There can be little doubt that the three points to which the fleet directed its course were the three little ports.....Hythe, Dover, and Richborough." But there is no reason, in the historian's account, for fixing on these three ports; there is no cogent reason to believe that the expedition landed at three separate ports; there is no reason, in the account, for believing that the expedition, whether in one locality or in three, had anything to do with any one of the ports named, or with any other point on the coast of Kent. On the contrary, there are reasons against it, which appear to me to be demonstrative. They are:—

1. The fleet, in making for the place of debarkation, had a westerly course so long that there was time for the soldiers to rise in a mutiny, to reverse their course, and to be pacified; they were finally encouraged by a meteor which rose in the east and set in the west, "the direction in which they were sailing."

This is irreconcilable with Dr. Guest's suppositions; Richborough and Dover are scarcely at all west of Boulogne; and Hythe only a few miles west of it, and more nearly north than west.

2. The Romans, in a short time, encountered the armies of Camulodunum.

It is improbable that these could have been met on the south-east coast of Kent.

3. Before reaching Camulodunum, Plautius crossed the Thames twice (not once, or three times). At the first crossing, he failed in the first attempt; then some Kelts swam across, and a detachment passed at a bridge higher up the river (gentilis absolute), and probably effected a diversion; then the whole army (the former nominative of *Perpetua*) mingled with the retiring Britons, who had already passed the river (*διαβαρυνται*), and killed many; but, pursuing them into difficult marches, lost many of the legionaries. In this there is no mention of retreat over the river (which would probably have been ruinous); on the contrary, Plautius, though he made no further military advances, secured himself in the position which he had gained. The first

crossing of the Thames was therefore complete. The second crossing is quite clear.

It is impossible to reconcile this with the supposition of a first landing in Kent, even though we should adopt the hypothesis that Dion included the river-course of the Lea under the name Thames. A double crossing of the river necessarily implies that the place of first debarkation and the place of ultimate arrival (Camulodunum) were on the same side of the river.

I consider it to be demonstrated that the landing cannot have taken place on the south side of the Thames. And, this hypothesis failing, it does not appear that the other parts of Dr. Guest's plan of the campaign can be sustained.

I have shown elsewhere that the account of Dion is precisely represented by supposing the Romans to have rounded the North Foreland and landed near Southend (which gives a westerly course of about thirty-five miles); to have crossed the intermediate river, the Lea (which crossing Dr. Guest explains by supposing the "certain river" to be the Thames itself, an interpretation which I cannot accept); and to have crossed the Thames, partly by struggling through the water, partly by passing over a bridge near London. (The places of these movements cannot now be ascertained; but, remarking that there is at Bermondey a peat-bog or ancient marsh which occasioned great difficulties in the construction of the Greenwich Railway; that in Southwark it was necessary, for the foundation of the Charing Cross Railway, to dig through thirty-two feet of peat; and that a part of Lambeth still bears the name of "The Marsh"; I have little doubt that these were the marshes in which so many Romans perished.) I add, as plausible, the supposition that the intrenchments of Plautius are still preserved in the large double-walled fort which incloses Holwood House, now the seat of Lord Cranworth.

I understood, from the general plan of my friend's essay, that the question of fords was intended to have some bearing upon the movements of Plautius; but I think it clear that the historian does not intend to intimate that Plautius crossed either the Thames or the intermediate river at a ford, that is, at a place commonly used for passage. Indeed, the proximity of the bridge over the Thames shows that the wet passage was not in ordinary use. When Dion speaks of Caesar's crossing, he uses the words *τον ποτον*; he has no such words, and no simple words, for the places at which Plautius crossed the two rivers.

Nor in any case can I imagine that Caesar's statement (that there was no other foot-passage across the Thames) excludes passages much lower down the river; as certainly it does not exclude passages much higher up the river. It only excludes passages on so much of the river as would engage the attention of a general who was making a march direct on Verulam.

Dr. Guest supposes that there may have been difficulty in constructing a bridge at London, especially with a difference of level, at high and low water, of twenty feet. Such a tide had then no existence. The space for influx of tidal waters into the estuary of the Thames has been strictly defined in all ages by the gap between Shoebury and Sheerness. But the area which the tide had to supply was formerly much greater than it is now. Up the vast space now represented by the marshes of the Thames, shallow everywhere, the tidal waters wended their lazy way. Instead of a twenty-foot tide, I doubt whether the tide exceeded three or four feet. Perhaps no river in the world has had its condition changed so much. The first embankment of the Thames (possibly in the time of Henry the Sixth) gave it that funnel-shape which is of all forms the most effectual for the propagation and increase of the vertical tide. Since that time, man has done his best to deepen the channel (a shoal near Woolwich was dredged away but a few years ago), and he has been well seconded by the scour which the contraction of the channel has caused. The consequence is, that while a river-course has been produced the most favourable in the world for commercial navigation, there has also been produced a facility for the flow of the tide which scarcely exists elsewhere. It is no matter of wonder

that the range of tide under such circumstances may have been increased from three or four to twenty feet.

A timber bridge, I remark, is built anywhere with little difficulty.

It is worthy of notice that the masonry of the piers of Old London Bridge (whose foundations were scarcely below the present surface of the river at low water) showed that the river must have been exceedingly shallow at the time of construction of the bridge; that is to say, even to the Norman times. The raving tide which my friend and myself remember was not between the piers of the bridge, but between its "stirlings,"—parts of the original ground, which, on account of the scour in later times, it had become necessary to defend by careful strengthening of the surfaces, and on which the bridge stood, stilted high in air.

The establishment, by the Romans, of London as an important place does not appear to have been made till after a lapse of several years. The Roman road from the first capital (Colchester) to London is but a branch from the road which leads direct from Colchester to Stortford, as may be verified by any one on the ground or on the Ordnance map. The Stortford road, therefore, is the older of the two. This anxiety of the Romans to insure military communication across the north of Essex suggests as probable the system of their territorial military policy which I have elsewhere explained. For their mere military wants, the Colne gave them excellent communication with the sea. But when they felt themselves secure in a military point of view, then, and not till then, they gave attention to establishing communication with the rising commercial port.

Before closing this communication, I will allude to a totally different matter, suggested by one of Dr. Guest's remarks.

The name "Brockley Hill" is given for a British station on the north frontier of Middlesex. There is also a "Brockley Hill" at Lewisham, south-east of London. It would seem not improbable that the name "Brockley" is generic.

Now there is mention, in one of Scott's poems, of

Bersay's Burgh and Greensay's Isle;

and the former of these places, a fortified point on the west coast of the Mainland of Orkney, is marked in maps as the "Burgh of Bersay." But it is not so pronounced in the country. The best representation of the sound which I can give is "Brokhk." I have heard the word frequently in Orkney, both as applied to the special point which I mention, and as a generic word following the indefinite article, "a brokhk," and applied, in the sense of "an old fortified post," to other places.

It seems likely, therefore, that "Brockley" is a generic word, descended from "Brokhk," and having precisely the same meaning as "Burgh."

G. B. AIRY.

LITERARY PARALLELS.

18, Manor Terrace, Brixton, Aug. 18, 1866.

Observing that in the number of the *Athenæum* published to-day you have inserted a letter noticing the strong resemblance between the earlier story in a poem by Miss A. A. Procter, called 'Home-ward Bound,' and that of 'Enoch Arden,' by the Laureate, I think it possible that the still closer likeness between a poem called 'Dora,' by Tennyson, and a sketch styled 'Dora Cresswell,' by Miss Mitford, may interest those who have read 'Our Village,' published by that lady in 1828, and the poetical version of some years later date given by Tennyson.

In 'Dora Cresswell' the scene opens with the description of a plentiful harvest. The loaded waggons in a narrow lane leave so little room for the teller of the story that she escapes into a harvest-field belonging to Farmer Cresswell, by the aid of a five-barred gate. "A beautiful child lay on the ground at some little distance, whilst a young girl, resting from the labour of reaping, was twisting a rustic wreath round his hat." "The young girl was the orphan niece of Farmer Cresswell, one of the wealthiest yeomen in our part of the world, the only child of his only brother," and

having lost both parents in her infancy, "had been reared by her widowed uncle as tenderly as his own son Walter." "Though it was impossible for a father not to be proud of the bold handsome youth, who at eighteen had a man's strength and a man's stature; was the best ringer, the best cricketer, and the best shot in the county; yet the fairy Dora, who, nearly ten years younger, was at once his housekeeper and his plaything, was as the apple of his eye." "Before Dora was ten years old he had resolved that in due time his son should marry her. He was obstinate in the highest degree, had never been known to yield a point, and the fault was the more inveterate, because he called it firmness, and accounted it a virtue." His son Walter inherited his disposition and was, moreover, fiery and bold. He might perhaps, left to himself, in time have loved Dora; but to be chained down to a distant engagement disgusted him, and he attached himself to a delicate girl named Mary Hay, the daughter of a village schoolmistress, and after a tedious courtship, kept secret for months and years, married the object of his passion clandestinely. An immediate discovery ensued. Walter was turned out of doors by his father, and in three months his death came quickly through a fever, leaving his widow destitute, unowned and unaided by his stern father, to bring into the world an orphan son. Dora, finding her prayers and entreaties fail to soften her uncle, gave all her pocket-money to her cousins; "she worked for them, begged for them, and transferred to them every present made to herself." "Everything that was her own she gave, but nothing of her uncle's." Much as she longed to give from the plenty around her to those whose claims were so just, "she felt that she was trusted, and that she must prove herself trustworthy."

When she is found in the corn-field trimming the boy's hat with "a rustic wreath of enamelled corn-flowers, brilliant poppies, snow-white lily-bines, and light, fragile harebells, mingled with tufts of the richest wheatears," it is that the beauty and innocence of the boy may arrest the farmer's eyes, and melt to forgiveness a heart already softened by a bounteous harvest, and all the more "because the land never bore so much before, and it's all owing to his management in dressing and drilling." The plot is successful, and Dora, telling its result next day, weeps, as she says to the friend who had seen her in the harvest-field conjuring up "Dis and Proserpine," and Lavinia, and the "far lovelier Ruth" of sacred story, by her presence there. "Very strange that I should cry, when I am the happiest creature alive; for Mary and Walter are to live with us; and my dear uncle, instead of being angry with me, says that he loves me better than ever. How very strange it is," said Dora, as the tears fell down faster and faster, "that I should be so foolish as to cry." Tennyson begins the idyl of Dora thus:—

With Farmer Allan at the farm abode
William and Dora. William was his son,
And she his niece. He often looked at them,
And often thought "I'll make them man and wife."
Now Dora felt her uncle's will in all,
And yearn'd towards William, but the youth, because
He had been always with her in the house,
Thought not of Dora.

Then, the marriage being urged by the father, and refused by the son, he has a month to think upon his answer.—

Then before
The month was out he left his father's house,
And hired himself to work within the fields;
And half in love, half spite, he woo'd and wed
A labourer's daughter, Mary Morrison.

"While the bells were ringing," Allan told his niece that if she spoke to her cousins she would forfeit her home, adding, "my will is law."

And days went on, and there was born a boy
To William; then distresses came on him;
And day by day he passed his father's gate,
Heart-broken, and his father help'd him not.
But Dora stored what little she could save
And gave it them by stealth, nor did they know
Who sent it; till at last a fever seized
On William, and in harvest-time he died.

Then Dora went to Mary. Mary sat
And look'd with tears upon her boy, and thought
Hard things of Dora. Dora came, and said,
"I have obeyed my uncle until now,
And I have sinn'd, for it was all thro' me

This evil came on William at the first.
But, Mary, for the sake of him that's gone,
And for your sake, the woman that he chose,
And for this orphan, I am come to you!
You know there has not been for these five years
So full a harvest: let me take the boy,
And I will set him in my uncle's eye,
Among the wheat; that when his heart is glad
Of the full harvest, he may see the boy,
And bless him for the sake of him that's gone."

After a fruitless visit to the field, "for none of all his men dare tell him Dora waited with the child," when the morrow came,

She rose and took
The child once more, and sat upon the mound;
And made a little wreath of all the flowers
That grew about, and tied it round his hat,
To make him pleasing in his uncle's eye.
Then when the farmer passed into the field
He spied her.

She is reminded that his word is law; and the farmer, thinking the whole thing a trick, prepared by the two women, says he will take the boy, but bids Dora "go hence and never see him more." Dora having told this all to Mary, and asked to be allowed to live and work with her,—

Then answer'd Mary, "This shall never be,
That thou shouldst take my trouble on thyself,"—

and, fearing her child should learn to despise her, and grow hard under his grandfather's influence, she goes to Farmer Allan, and tells him so, demanding her boy, and desiring he should take Dora back,

"And let all this be as it was before."

So Mary said, and Dora hid her face
By Mary. There was silence in the room;
And all at once the old man burst in sobb'g—
"I have been to blame—to blame. I have kill'd my son.
I have kill'd him—but I loved him—my dear son.
May God forgive me! I have been to blame.
Kiss me, my children."

(Are not Dora's tears more natural in Miss Mitford's tale?)

Then they clung about
The old man's neck, and kiss'd him many times.
And all the man was broken with remorse;
And all his love came back a hundred-fold;
And for three hours he sobb'd o'er William's child,
Thinking of William.

So these four abode
Within one house together; and as years
Went forward, Mary took another mate;
But Dora lived unmarried till her death.

It is impossible the similarity here can be accidental, as the poet has followed the story even to the names of the niece and the wife. The peculiarly fine harvest being chosen in both stories as a reason for hoping the farmer may be in a humour favourable to the plot, and the wreathing the child's hat with corn-flowers growing near, to attract the cruel grandfather's attention, being in both Dora's employment. But Miss Mitford has given a finer character to her Dora, who, in spite of her "melting charity," does not become guilty of breach of trust, while Tennyson's Dora "stores what little she can save,"—he does not say of her own,—and "sends it them by stealth." Having done so she speaks incorrectly to Mary, saying, "I have obeyed my uncle until now."

Tennyson, to heighten the effect produced by Dora's noble qualities, has made her a woman when her hand is rejected by her cousin, and contrasted her undying love for him with his widow's inconstancy in taking another mate, and still more to increase our interest in Dora has made Mary a labourer's daughter, not "a delicate creature with a fair, downcast face like a snowdrop."

Your judgment will decide whether the superior art in the later narrative excels the simple nature painted in the earlier tale. M. SYMS.

OUR WEEKLY GOSSIP.

Lord Lyttelton and Mr. C. S. Calverley have (among others) promised to contribute Latin verse translations of several English hymns to Mr. L. C. Biggs's forthcoming annotated edition of 'Hymns Ancient and Modern.'

Messrs. Saunders, Otley & Co. announce for publication a work on the Universities Mission to Central Africa, by the Rev. H. Rowley, one of the two surviving members of Bishop Mackenzie's clerical staff.

A new Vice-Master has been appointed to University College School, London, in the person

of Mr. E. R. Horton, Fellow of St. Peter's, Cambridge. This gentleman takes the place of Mr. W. A. Case, who has been connected with the school in question during the sixteen years last past. On the retirement of the latter gentleman a testimonial of high esteem was presented to him by his fellow-teachers in the school.

The British Association meeting is over, and will be memorable for the hospitality so extensively displayed by the inhabitants of Nottingham and the gentry, mine-owners and manufacturers of the neighbouring country. It will be remarkable also and remembered for the boldness and ability of the Presidential Address, in which Mr. Grove has so fearlessly advocated the much-attacked doctrine of Continuity. Newstead, redolent with the memory of Lord Byron, was the most sought for of excursions, and never was there such a universal preference given to one place over another as for the visit to that cherished ruin and mansion, now the residence of Mr. and Mrs. Webb, whose care and respect for every relic of the honoured and lovely home of our great poet, a home rendered famous in his unrivalled poetry, deserves national appreciation. Derby, Chatsworth, Haddon Hall, and Belvoir, have also had most numerous devotees. The papers read have been of average interest and one or two of considerable importance, but nothing remarkably original. Mr. Daft's plan for sheathing iron ships with zinc was brought prominently forward and met with favour; the importance of some effectual means for protecting iron ships from corrosion and from fouling it is not possible to overrate, and the method should now be put to the practical test. Mr. Matteucci's letter on the electrical testing of earth currents, and Capt. Noble's essay on the penetration of shot and the resistance of armour-plating, were the only two papers ordered to be printed in *extenso* in the volume of *Transactions*. It was observed that there was a remarkable absence of some of those most eminent men whom the world has been in the habit of regarding in past years as amongst the magnates of the Association. The attendance, however, of men of mark has been very good, and the proceedings were conducted with a regularity which has never been exceeded; the plan of separating the excursion days from the working days deserves to become a fixed rule of the institution.

The grants of money for scientific purposes were:—Maintaining the Establishment of Kew Observatory, 600*l*. *Mathematics and Physics*: General Sabine, Instruments for Observations in India, 200*l*.—Mr. Glaisher, Lunar Committee, 120*l*.—Prof. Williamson, Electrical Standards, 100*l*.—Mr. Airy, Reduction of Rümker's Observations (renewed), 150*l*.—Mr. Glaisher, British Rainfall, 50*l*.—Colonel Sykes, Balloon Experiments, 50*l*.—Mr. Glaisher, Luminous Meteors, 50*l*.—Kew Committee, Meteorological Observations in Palestine, 50*l*.—Dr. Robinson, Sound under Water, 30*l*. *Geology*: Mr. Mitchell, Alum Bay Fossil Leaf Beds, 25*l*.—Sir C. Lyell, Kent's Hole Investigation, 100*l*.—Mr. Mitchell, Bournemouth Fossil Leaf Beds, 30*l*.—Mr. Busk, Maltese Fossil Elephants, 50*l*.—Mr. Bate, Fossil Crustacea, 25*l*.—Dr. E. P. Wright, Kilkenny Coal-Field, 25*l*.—Mr. R. H. Scott, Plant Beds of North Greenland, 100*l*.—Prof. Phillips, Secondary Reptiles, 50*l*. *Biology*: Mr. Tristram, Insect Fauna, Palestine, 30*l*.—Mr. Gwyn Jeffreys, Marine Fauna, Ireland, 25*l*.—Mr. Gwyn Jeffreys, Dredging West Coast of Shetland, 75*l*.—Dr. Richardson, Physiological Action of the Ethyl and Methyl Series, 25*l*.—Dr. E. P. Wright, Coast of North Greenland, Flora and Fauna, 75*l*. *Geography and Ethnology*: Sir C. Nicholson, Palestine Exploration, 50*l*. *Statistics and Economic Science*: Sir J. Bowring, Metrical Committee, 30*l*. *Mechanics*: Mr. Scott Russell, Analysis of Reports on Steamship Performance, 100*l*.—Mr. Fairbairn, Manufacture of Iron and Steel, 25*l*.—Mr. Webster, Patent Laws, 25*l*. The General concluding Meeting was held on Wednesday, when the grants of money voted by the General Committee were made known, and the customary votes of thanks passed with unanimity. The numbers present at the Meeting were:—Old life members, 207; new life members, 3; old annual members, 218; new annual members, 105;

associates, 906; ladies, 771; foreigners, 11; total, 2,221; amount received, 2,469*l*. The Association will meet in 1867 at Dundee, under the presidency of the Duke of Buccleuch.

On Thursday evening, last week, at the Nottingham *soirée*, the philosophers and their gayer companions had a narrow escape. A breech-loading rifle was being exhibited. To show the method of loading, cartridges filled with coal-dust were employed. A gentleman, after loading one of the rifles, pulled the trigger; an explosion followed, and a bullet from the gun made its unpleasant passage through the room,—without injury save to one coat-sleeve. The explanation of what might have led to a frightful catastrophe, may be philosophical, but is not satisfactory; it does not enlighten us. We are simply told that "a cartridge actually used for firing, and containing powder, shot, and percussion-cap," had "got amongst them (the coal-dust cartridges) by some means or other." Just so.

The number of visitors to Newstead on Saturday may have led Mr. Webb to make some such reflection as the wife of an Irish Secretary is said to have made at one of the entertainments given by her in Ireland, during her husband's secretaryship: "What a kind-hearted people the Irish are. I ask two hundred to a dance and supper, and twice the number always come!"

The cost has just been paid of securing the Houses of Parliament from danger of fire. In the April of last year Mr. Barry drew attention to the wooden fittings placed beneath the roof (which is itself incombustible), to aid in the ventilation of the House; also to the proximity of the gas-burners to the ribs of the ceiling. The high temperature caused by the method of lighting added to the peril. In August last year Mr. Inmray undertook to execute works (substituting metal for wood, or covering the latter with metal, with other arrangements) which should render the roof fire-proof. For this useful work he has just received the sum of 1,400*l*. (the time employed by him was four months), and such a sum has seldom been laid out to more useful purpose.

The Earl of Craven, who died on Saturday, at Scarborough, was the third Earl. His mother, the Countess who died in 1860, was formerly Miss Brunton, an actress of great ability and repute, and the aunt of another actress of celebrity, the late Mrs. Yates. Some two centuries and a half ago there was a driver of a line of packhorses from Yorkshire to London, whose name was Craven, probably because he had no other than that of the place whence he came. The packmen for whom he drove recommended him to a London draper, after serving whom young Craven set up in Leadenhall Street as a draper on his own account. He became Lord Mayor, left a large fortune, and founded a family of gentlemen. His grandson, a distinguished soldier under Henry, Prince of Orange, was created Baron Craven in 1626, Earl in 1665. The earldom was created just over two centuries ago. It expired with the first Earl in 1697, but was renewed in his descendant in 1801. The barony, meanwhile, had continued. The first Earl was the reputed husband of the ex-Queen of Bohemia, daughter of James the First. One of the most celebrated of the ladies Craven was the wife of the sixth lord, a half-mad Berkeley, subsequently notorious as the Margravine of Anspach. Four of the eight peers died childless, but the succession has never gone out of the male line. Of those eight peers, all but one bore the name of William. The Christian name of the fourth lord was Fulwar, that of the ninth Earl is George, who became heir on the death of his elder brother, last year.

More than a generation has passed away since the late Sir Robert Peel, when writing to invite Chevalier Bunsen to meet Cornelius, the German artist, at dinner, remarked incidentally of the German people: "The ultimate union and patriotism of this people, spread as it is over the centre of Europe, will offer the best guarantee for the peace of the world, and the most powerful check against the propagation of doctrines pernicious alike to the cause of religion and order, and to that freedom which respects the rights of others." Sir Robert finished by expressing "cordial wishes for the

union and welfare of the German race." In the present light, this letter is not without interest.

We have received the following from Prof. Morley:—"The author of 'Sketches of Russian Life, before and after the Emancipation of the Serfs,' was, in the last number of the *Athenæum*, accused of theft upon the personal authority of the two letters of the alphabet, 'E. C.,' in these words:— 'I distinctly recollect reading the two anecdotes you quote in *Chambers's Journal* of about eighteen years ago. I have not the numbers with me to refer to, but am quite certain as to the fact.' Making due allowance for the looseness of statement to be expected from a gentleman who does not flinch from charging another with petty larceny upon the strength of an impression verified only by an 'am quite certain,' I have given the widest interpretation to E. C.'s 'about eighteen years ago,' and have searched carefully through every volume of the series of *Chambers's Journal* which was at that time in course of issue. In the twenty volumes of that series, extending from January, 1844,—twenty-two years ago,—to December, 1853,—thirteen years ago,—I have examined every article on Russia, every article on Railways, because one of the anecdotes is a railway anecdote (not given as an incident of personal experience), and every paper that might incidentally contain anything transportable into the 'Sketches of Russian Life,' which I have edited with full confidence in their author's honour. There is not a line in that whole series of *Chambers's Journal* to justify your Correspondent's accusation. Had I found evidence of any fraud, I should have published in your columns the name of the author of the dishonest book; but I still have reason to think him as incapable of claiming credit for what he had not written, as of basing a slander upon what he had not read. The fact is, that your friendly reviewer of the volume accidentally omitted to repeat the statement of its Preface that the Sketches first appeared in *All the Year Round*, from which journal they are said to be reprinted, with substantial additions. The parts of it referred to by you were published in *All the Year Round* three or four years ago. E. C. had read them there. When he met with them again, they were not new to him; and to say that he had read eighteen years ago in *Chambers's Journal* what, in fact, he read four years ago in *All the Year Round*, is a moderate degree of looseness of statement for the sort of writer who makes a dishonouring charge without any more explicit evidence than his anonymous 'am quite certain.'

"HENRY MORLEY."

The Honorary Treasurer and Secretary to the Sothern Testimonial Fund states that "all the accounts, receipts, and disbursements (duly audited), together with the minutes of the Committee, and Mr. Sothern's letter acknowledging the safe arrival of the piece of plate purchased by the Committee of Messrs. Garrard, may be inspected at the advertised place of meeting of the said Committee, viz., the Café de l'Europe, next the Haymarket Theatre."

Mr. Orridge, a member of the London Common Council, has addressed his fellow Councillors in a letter urging them to sanction the publication of a Civic Biography, which shall include the names and tell the deeds of all noble Londoners (and their name is legion) who have rendered great services to their country. Mr. H. T. Riley, editor of the *Liber Albus*, to whom the archives of the City are better known than to those who have the documents themselves in safe keeping, states that there is no city in the world that has so complete and ancient a series. He urged the Corporation to publish extracts from these records. The Corporation gave no sign either way. Let us hope that Mr. Orridge will win one in the affirmative.

The announcement by a draper and mercer that his "coloured establishment" was in a certain locality would not, perhaps, have the same significance beyond the Atlantic that it has here. In London a tradesman of the above class makes this announcement, with the addition, addressed to those for whom "colours" would ill agree with a subdued spirit, that his "mourning establishment" is at a place named, in the adjoining parish. We

shall probably hear that in the suburbs the same sympathizing trader has opened, for the benefit of persons requiring half-mourning, a "mitigated affliction department."

The authorities of Brighton, like those of most other English bathing-places, neither provide against decency being outraged nor against peril to life. On Wednesday, four youths, all school-fellows, were drowned while bathing, and without the accident being known till aid was useless. In France this calamity does not happen. A watch-boat is kept rowing backwards and forwards during bathing-hours. In England, by lack of fitting arrangements, indecency is encouraged and life put in daily peril.

A quaint example of provincial journal-writing has been sent to us in the form of a cutting from a west-country newspaper, which is generally remarkable for the ability and care with which it is edited and compiled. This supplies one of the most wonderful anticlimaxes we know, and refers to the subject of a recent execution for murder, thus: "For the safety of society it is impossible mercy can be extended to him (the condemned) in this world; beyond that, the province of the journalist does not extend." These italics are our own.

The pleasure-grounds at Worcester have been, says a contemporary, sold for building purposes.

It is reported that Austria will not be represented at the Exposition in Paris next year. Two of the most capable provinces, Bohemia and Moravia, have suffered so terribly, it appears, by the Prussian occupation, that they will not be in a position to contribute in a worthy manner, and will, therefore, abstain altogether.

MR. MORLEY'S COLLECTION OF MODERN HIGH-CLASS PICTURES IS ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt—J. Phillip R.A.—T. Faed R.A.—J. Lewis, R.A.—Egg, R.A.—Frith, R.A.—Rosa Bonheur—Goodall, R.A.—Cooke, R.A.—Creswick, R.A.—Pickersgill, R.A.—Calderson, A.R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Ansell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—P. Namyth—Linnell, sen.—Dobson, A.R.A.—Cooper, A.R.A.—Gale—Marks—F. Hardy—John Ford—Frère—Ruizperez—Brillouin—Lidderdale—George Smith—Duverger, &c.—Admission on presentation of address card.

MAURY, M. l'abbé Moigno, Prof. Phillips, Prof. Purser, Prof. Plücker, W. H. L. Russell, G. J. Symons, G. J. Stoney, Prof. Sylvester, Col. Sykes, Sir Andrew S. Waugh.

THURSDAY.

Report on Observations of Luminous Meteors, 1865-6, by a Committee consisting of Messrs. J. GLAISHER, R. P. GREY, E. W. BRAYLEY, and A. S. HERSCHEL.—The Committee reported a marked degree of progress over their success in previous years, and dwell in detail upon the various investigations of the past year. Bearing in mind the strong probability that exists of the occurrence during the present year of a more extraordinary meteoric shower on the morning of the 13th of November, than any that has yet been observed at the English observatories, the Committee during the past year deemed it inadvisable to incur avoidable expense, or to exceed the means at their command in lithographing the charts of general radiant points of shooting-stars until a more convenient time. The occasion of the return of the great November meteoric shower being one of very rare occurrence, the Committee, with a view of profiting by the opportunity afforded of observing the spectra of luminous meteors, have this year provided themselves with two spectroscopes, specially adapted for analyzing the light of shooting-stars by means of their prismatic spectra. The spectroscopes were directed for trial towards the luminous meteors of the 10th of August last, and seventeen spectra were observed. For this purpose, Mr. Browning had constructed

three binocular spectroscopes for the British Association, on a plan approved by the Committee, and the instruments were employed by Mr. Glaisher and Mr. Browning on the 9th and 10th of August. At the Royal Observatory and at Richmond on the Thames, the sky on the night of the 10th was for the most part cloudy, and all attempts to catch the spectrum of a meteor proved unsuccessful. Spectrum observations were begun at Hawkhurst on the evening of the 9th, and, the sky proving remarkably clear, the observations were continued until daybreak on both of the following nights. No difficulty was found in mapping the course of the meteors in the spectrocope by the stars, of which a whole constellation, as, for example, the seven stars of *Ursa major*, can be seen in the instrument at a glance. The spectra of the meteor nuclei were seen distinctly in a few cases only. They were commonly hidden by the light of the streak when that was yellow, and presented highly-coloured and continuous spectra, like the spectrum of white-hot solid matter when the streak was greyish white. A better night for observing nucleus spectra would be the 12th of December, when meteors leaving no trains are for the most part very brilliant. That which the spectral observations of the August meteors appear most distinctly to evince is the existence of an extraordinary amount of the vapour of sodium. It is impossible to suppose that the vapour of the metal sodium already exists in any sensible quantity at the confines of the atmosphere. It must manifestly be brought into the atmosphere by the meteors themselves from without, so as to be deposited by them in their flight in the luminous trains that mark their course. The nucleus is, therefore, probably a fragment of mineral matter, of which sodium is one of the chemical ingredients. The Report contained also, as usual, a full catalogue—on this occasion a very long one—of the luminous meteors observed in 1865-6.

Report of the Lunar Committee for Mapping the Surface of the Moon.—The Report notices that during the past year the Committee have met several times, and determined at the first meeting—in accordance with the remarks of the President, Prof. Phillips, at Birmingham, where an outline map of 75 inches in diameter was exhibited—upon the construction of a map of 100 inches in diameter, photographs, if available, to be employed. The only photograph available for laying down positions was taken by Mr. Warren De La Rue, 1865, October 4. This has been enlarged to 10 inches in diameter, and employed for this purpose, as the measures taken from it are either without appreciable error, or require but a small correction. Mr. Birt has laid down during the past year, on one sheet, the whole of Quadrant IV. (meridians and parallels), 50 inches radius, and inserted Beer and Madler's 23 points of the first order. The greatest error in the position of these points is '0008 of the moon's semi-diameter. The whole of the objects on a surface of 15° of longitude and 10° of latitude have been laid down on this sheet from the full-moon photograph, and several of them have been identified with objects seen conspicuously when near the terminator. A portion of this surface, 6° of longitude and 5° of latitude, is completed, and enlarged to 400 inches diameter. It contains 30 superficial degrees. On it are laid down the positions of 89 objects, from 3 independent sets of measures, made on 8 separate photographs, the magnitudes, which are given in the catalogue in seconds of an arc, being determined by a separate set of measures.—Register: The whole of the 89 objects above mentioned have been inserted, and an abbreviated catalogue drawn up, with topographical and other notices, the full-moon aspect of the surface given, and a discussion of the lines of upheaval and depression appended.—Taking into consideration the difficulty, arising from differing epochs of libration, of obtaining photographs suitable for the work, and the fact that the only photograph available for positions was taken since the last meeting of the Association, the completion of 30 superficial degrees of the map, an important step has been made in advancing the study of the physical aspect of the moon's surface.

'On some recent Improvements in Astronomi-

cal Telescopes with Silvered Glass Specula,' by Mr. J. BROWNING.

'On the Heat attained by the Moon under Solar Radiation,' by Mr. J. P. HARRISON.—When the author brought forward the subject of lunar insulation a year ago, he showed by a single diagram that the surplus or accumulated heat in the moon, beyond what it radiates off into space, or to other matter, owing to the long-continued action of the sun's rays upon her crust, would necessarily reach its maximum several days after the date of complete illumination. The mean duration of solar radiation for the whole periods of the first and third quarters being in fact in the proportion of 4:25:11:25; and, consequently, the days on which the moon's surface opposite the earth would be longest withdrawn from, or exposed to, the sun's heat; or, in other words, the days on which the moon completes her first and third quarters would be not far removed from the day and date of her maximum and minimum temperature. He had since learnt that Herr Althaus, some few years back, approximately estimated the temperature of the moon at 840° F. on the 22nd day of the lunation, seven days after the day of full moon. His method was to measure the sun's radiation by the pyrheliometer, and then, applying the results to the moon, to deduce from the extent of her area the amount of heat intercepted; his measure of the moon's capacity for heat was that of Quartz. Assuming this deduction to be correct, the heat attained by the moon would approach very closely the temperature at which iron appears red in twilight, and it exceeds the fusing point of tin and lead. Unfortunately the estimate cannot be compared with that made by Sir John Herschel, which was confined to the moon's heat at the period of complete illumination, and which (without any definite temperature being named) it was stated would be far in excess of boiling water. But as the moon's crust would, at the last quarter, have been exposed to some 180 additional hours of uninterrupted solar radiation, it is probable that the total heat attained must be very great indeed. Whatever this may be, the maximum will, it is believed, occur as stated, at or near last quarter. The date of the greatest cold in the moon appears to be less certain; for though the German physicist already cited arrives at the conclusion that it would be found about half a day after new moon, the problem is more complex, and the author could not but think that it must occur later in the lunation; at the period, in fact, when, as was said before, the region of the moon opposite the earth has been the longest time unexposed to the sun's rays. (He was throughout speaking of the moon's hemisphere turned towards us as "the moon.") If a temperature of -92° Fahr. occurs at the time fixed by Althaus, it would suppose a fall of 940° Fahr. (or 522° Cent.) in about eight days. It is true that bodies at very high temperatures cool, both in air and in vacuo, with great rapidity; yet it has been proved that the rate of cooling is greatest in air, by reason of its conduction and convection of heat. This is one of the laws laid down by Dulong and Petit, and admitted by those whose judgment in the matter is most to be relied on. Still the author had thought it desirable to submit the point to experiment in the large air-pump at Kew, where the velocity of cooling, shown by a thermometer with a half-inch bulb coated with lamp black, for temperatures a little above the boiling-point, was found, for the first 100°, 25 per cent. quicker in the glass filled with air, than in the exhausted receiver. Thus it would seem that the absence of an atmosphere might in the case of the moon favour an accumulation of heat, though in a different manner from that in which the presence of air and vapour affects the earth, where the slight heat stored up in her crust would be speedily lost if it were not for the counter-radiation to her surface from cloud and vapour. As regards the theory that the solar rays would have no power to heat matter if surrounded by dry air or ether, there would seem no reason to believe that this is the case. It would be necessary that the observations which are supposed to point to that conclusion should be verified by trustworthy and independent testimony before the possibility of a result so contrary to common sense is admitted. Sir H.

Davy, he was informed by an eminent physicist, satisfied himself by experiment that absorption of heat from the cool points of the electric light took place in vacuo. Indeed, his own experiment with the solar rays upon the blackened bulb of a mercurial thermometer in the 16-inch receiver already referred to, though undecisive as regards the relative speed of heating in air and vacuo (for which the use of the sun as the source of heat presents a difficulty in the case of experiments which succeed each other with the same apparatus at an hour's interval), yet showed a gain of 16½° Fahr. in two minutes (or 71° 11' Cent.) in a vacuum of about one-eighth of an inch. Also in several experiments with thermometers with both black and blackened glass bulbs enclosed in exhausted two-inch globes, lent to me by Mr. Casella, one with a lamp-blackened bulb in a globe filled with air made for the purpose, the thermometers in the exhausted globes, and more especially the one with the blackened bulb, were found to rise quicker and read higher in equal intervals of time than the one in the globe filled with air. On a view of the whole case at the present time, there would seem to be reason to believe that the sun's rays must penetrate the moon's crust to a depth that would prevent the possibility of her acquired heat being easily or speedily dissipated.

'On an Error in the usual Method of Obtaining Meteorological Statistics of the Ocean,' by Mr. F. GALTON.—The meteorological statistics of the ocean have been hitherto obtained by extracting observations from the logs of different ships, and by sorting those that were made in different geographical divisions of the ocean into corresponding groups. The usual geographical divisions are bounded by each fifth degree of latitude and longitude. They therefore are 300 miles in length, and have an average breadth of 150 miles. Each of the groups is treated as if it were composed of observations taken at irregular periods, by a single person, stationed at a fixed observatory in the centre of the group, that is to say, the mean barometer. Thermometer and other elements are determined by computing the simple mean of all the recorded observations. The proportion of winds that blow to the different points of the compass is computed in a similar manner. Only one limitation is exacted in respect to the admission of an observation into a group. It is, that it should not have been made at an interval of less than eight hours from any other observation made by the same ship already included in the group. Were it not for this limitation, a zealous observer might contribute hourly or yet more frequent observations, which, by their multitude, would prevent the scantier observations of other ships from having a just influence on the general average. In an extreme case of this description, the weather met with by a single ship, on one particular voyage, might mainly govern the computed results. In a recent report on the condition of the Meteorological Department of the Board of Trade, by Mr. Farrer, Capt. Evans and the author, they had pointed out many objections to the existing methods of computing ocean statistics. The object of the present paper was to draw attention to yet another objection, and to show that an additional limitation is required before an observation ought to be admitted into a group. The objection the author made was, that the observations by a sailing ship are more numerous in respect to antagonistic winds or calms than in respect to favourable weather. Therefore, as some parts of the ocean are mainly frequented by outward-bound, and others by homeward-bound ships, the means of the recorded observations in those squares must differ materially from the true average weather. When favourable winds are blowing, a ship is rapidly wafted across the area of observation, and comparatively few observations are made within it. The wind may continue blowing, but the ship is unable to record its continuance after it has left the area in question. On the other hand, if an antagonistic wind blows, or if calms or light breezes prevail, then the ship is delayed within the area and continues making observations during the whole or nearly the whole period of their continuance. The author's objection would be of little consequence if the areas into which the ocean is

divided for the purposes of meteorology were so large that no ship could cross them without experiencing frequent changes of wind. But this is by no means the case in the five-degree squares. Even if a ship's course lay along the diagonal of an average "square," the length of passage within it would be only 335 miles, and would be traversed in less than five eight-hourly periods with a favourable wind. Taking one course with another across the square, some cutting through a mere corner of it, some crossing it lengthways and some breadthways, an average of three eight-hourly periods, or one day, would be an ample estimate. Now in the ocean regions of variable winds, the changes of the wind are, on the average, much less frequent than once in a day. We might fairly estimate them as lasting in the same quadrant, for an average of not less than three days, or nine eight-hourly periods, at a time. The length of time during which ships are windbound in the English Channel, where the changes are unusually rapid, confirms this rough estimate. On this hypothesis, a favourable wind would, on an average, be recorded three times by a ship sailing across a five-degree square, and an unfavourable wind or a calm of the same real duration would be recorded nine times; therefore the observations contributed by a ship resemble observations made at a fixed observatory under instructions that only three eight-hourly observations were to be taken during the continuance of winds, say, from the northerly quadrant, but that when the wind was in the southerly quadrant the observations were to be continued during the whole of its duration. No one would be inclined to accept the means of these observations as a just statement of the weather, yet this is precisely what is given by the method of compilation adopted by the Meteorological Department. The weather under which a ship enters a square may be of any description whatever, except that of an absolute calm in a sea without a current; therefore it has no bearing on the present question. It must further be observed, that the error pointed out not only affects the winds, but it affects all the meteorological elements so far as they are correlated with the winds; the temperature and dampness are especially affected by it. The method the author proposed, by which this error may be obviated in future work, is to impose a limitation to the observations received, in respect to interval in distance, in addition to the existing eight-hourly interval in respect to time. He proposed that observations should not be included in the groups, unless the places where they were made were at least as far asunder, measured in the direction of the ship's general course (and not counting tacks), as she could traverse with a favourable wind in eight hours. Thus on an average not more than three observations would be accepted from a single log-book in any five-degree ocean square. He did not possess data to show how far the accuracy of the existing wind-charts is impaired by the neglect of this cause of error; but he presumed it was only in certain parts of the ocean that it would exercise considerable influence. It is sufficient that he should point it out as one to be guarded against for the future; for he trusted that the whole of the work in the Meteorological Office would be submitted to re-computation, and an improved method of handling and grouping the observations would be adopted, in accordance with the recommendations of that Report to which he had already alluded.

Spence, Dr. E. Smith, J. Spiller, A. Voelker.

THURSDAY.

This Section was held at the School of Art, —H. Bence Jones, Esq., M.D., presiding.—In the course of his opening address, the President remarked that, from the foundation of the British Association, in 1831, no practising physician had been President of the Chemical Section. For centuries the union of chemistry and medicine

has been at one time admitted and at another disallowed; but in the last half-century the discovery of Dr. Bright has proved that chemistry is absolutely requisite for the detection of a large class of diseases, and that without chemistry the nature of these diseases cannot be understood. When the union of chemistry and medicine is perfect, then science will show us how to keep or to regain the greatest of blessings, health. Among the harvest of new truths of the last year, Dr. Bence Jones noticed Prof. Frankland's synthetical researches on ethers, and his researches with Mr. Duppa on the synthesis of acids of the lactic series. The President next alluded to Prof. Roscoe's paper 'On the Chemical Intensities of Sunlight,' as the direction in which the chemist looks for the climax of all his synthetical investigations—the discovery of the chemical architecture of substances in the vegetable world.—Dr. Bence Jones then proceeded: "A most remarkable discovery has been made by the Master of the Mint on the absorption and dialytic separation of gases by colloid septa: for example, he finds that mixed gases pass through india-rubber at different rates, proportioned to their powers of liquefaction. The oxygen of atmospheric air passes through rapidly, whilst the nitrogen is comparatively stopped. The importance of this discovery in metallurgy, and its application to the physiology of respiration and of the passage of oxygen from the blood into the textures, must be apparent to all. It seems but a few years ago when we were taught that the animal and vegetable kingdoms were composed of entirely different kinds of substances. Nitrogenous compounds were said to belong to the animal kingdom; and the vegetable kingdom was said to be formed of carbonaceous matters only. First starch, then woody fibre, then colouring matters like indigo, then alkaloïds like quinine, were, one after the other, thought to distinguish the vegetable from the animal creation; and each of these substances, or their representatives, have at last been found in animals. At the present time no chemical distinction whatever between vegetables and animals can be made; and, except in the mode in which these different substances are produced in the two kingdoms of Nature, no chemical differences exist. Although we are beginning to ask how our present formula for education has arisen, and why it remains almost unchanged whilst all natural knowledge is advancing, and although an entire change in everything except the highest education has taken place, yet public opinion is affected so slowly, and the prejudices of our earliest years fix themselves so firmly in our minds, and the belief we inherit is so strong, that an education far inferior to that which a Greek or a Roman youth, say twenty centuries ago, would have received is the only education fit to make an English gentleman, that I consider it is of no use, notwithstanding the power which this Association can bring to bear on the public, to occupy your time with the whole of this vast question. But there is an outlying portion of this subject which personally touches each one of us here present. I allude to the present state of education in natural knowledge of that portion of the community who may at any moment be asked to tell any of us here present what mechanical means should be used to lessen or increase the mechanical actions of the body, and what chemical substances should be taken to lessen or increase the different chemical actions within us when they rise or fall to such a degree as to constitute disease. I will, as shortly as possible, put before you the present education of those who practise medicine. The present higher education for the medical profession consists, shortly, in learning reading, writing, and arithmetic in the first ten years of life. In the second ten years, Latin, Greek, some mathematics or divinity, and perhaps some modern language. In the third ten years, physics, chemistry, botany, anatomy, physiology, and medicine, and perhaps surgery. Looking at the final result that is wanted, namely, the attainment of the power of employing the mechanical, chemical, electrical, and other forces of all things around us for increasing or diminishing the mechanical, chemical, and other actions taking place in the different textures of which our bodies

are composed, it is quite clear that the second decennial period is passed without our advancing one step towards the object required; and that in the third decennial period the amount to be learnt is very far beyond what is possible to be attained in the time allowed. If we turn to the lower education, in the first eighteen years of life, reading, writing, and arithmetic, and enough Latin to read and write a prescription, constitute the minimum to be acquired. During the next three years, physics, chemistry, botany, anatomy, physiology, and the practice of medicine, surgery, and midwifery, have all to be learnt, and from this crowding it follows that the study of physiology is begun at the same time as the study of physics and chemistry. In other words, the structure and the foundation are commenced at the same time. The top of the house may be almost finished when part of the foundation has not been begun. What chance is there of any one understanding the action of the chemical, mechanical, and electrical forces in the body, until a fundamental knowledge of chemistry, mechanics and electricity, has been first obtained? What chance has a medical man of regulating the forces in the body by giving or withholding motion, food, or medicine with any reasonable prospect of success, when a preliminary education in these sciences is thought to be of no importance? It seems to me that the only possible way to make the present preliminary education for medical men less suited to the present state of our knowledge, would be to require them to know Hebrew or Arabic instead of Latin, in order that the origin of some of our words might be better understood, or that prescriptions might be written in one or other of these languages. Let me now, for contrast sake, draw you a picture of a medical education, based upon the smallest amount of classical knowledge, and the greatest amount of natural knowledge which can be obtained. In the first ten or twelve years of life, a first-rate education in the most widely used modern language in the world, English, with writing and arithmetic, might be acquired, and in the next five or ten years a sound basis of knowledge of physics, chemistry, and botany, with German or French, might be obtained; and in the following five years anatomy, physiology and medicine, surgery and midwifery. If every medical man were thoroughly well educated in the English language, and could explain the nature of the disease and the course to be followed in the most idiomatic and unmistakable English, and if he could use all the forces in nature for the cure or relief of his patient, and if he could, from his knowledge of chemistry and physics, and their application to disease and medicine become the best authority within reach on every question connected with the health and welfare of his neighbours; and if he possessed the power of supervising and directing the druggist in all the analyses and investigations which could be required as to the nature and actions of food and medicines and as to the products of disease, surely the position and power and agreement of medical men would be very different from that which they now obtain by learning some Latin and less Greek. At present, so far from physicians possessing more knowledge of food and of medicine than any other class of persons in the community, the analytical and pharmaceutical chemists are rapidly increasing in knowledge, which will enable them not only to understand fully the nature and uses of food and medicines, but even to detect the first appearances of a multitude of chemical diseases. Their habits of investigation and their knowledge of the nature of the forces acting in the body will gradually lead them to become advisers in all questions regarding the health of the community, and from this they will, like M. Bouchardat, in Paris, become almost, if not altogether, practitioners of medicine. In confirmation of my opinion of the direction in which the treatment of disease is progressing, I may just refer to the cattle-plague, which in 1745 was treated by Dr. Mortimer, at that time Secretary of the Royal Society, and therefore one of the most scientific physicians in the country, with antimony and bleeding. In 1866, two chemists, Dr. Angus Smith and Mr. Crookes, gave the only useful suggestion for combating the disease,

namely, by the arrest or the destruction of the poison by chemical agents. There is yet another point of view in which chemists will see the harm that results from our present medical education. The use of Latin in our prescriptions requires that the pharmacutists should learn at least sufficient Latin to read what we have written. Many errors have arisen and will arise from the dispenser being unable to give the directions rightly. To avoid such mistakes, a portion of the time that ought to be given to the attainment of the highest possible amount of chemical acquirement, and a perfect knowledge of the English language, or some foreign language wherein he might learn the discoveries in chemistry and the improvements in pharmacy of other countries, must be devoted to the learning of Latin, in which the physician writes his directions. All our druggists in England ought to be what they are in Germany and in France, chemists capable of any analysis that might be required of them, and able to satisfy themselves and the medical men that the substances they sell are what they profess to be—pure, unadulterated chemical compounds. No one of my hearers in this Section will consider five years a long time for the acquirement of such knowledge, and until the pharmacutists all obtain this education, medicine will be subject to a great cause of uncertainty in the variations in the quality and quantity of the different substances which, under the same name, are obtained from different druggists. Before I conclude, I must apologize to some in this Section who may think that this subject is of no interest to them, by reminding them that none but chemists can judge what the worth of chemical education really is; and I am sure that no body of scientific men exists who are so fitted to judge of the necessity of an education in natural knowledge for those who employ the forces around us to regulate the forces within us as the Chemical Section of the British Association. Last year Prof. Miller said, 'It behoves all who are themselves engaged in the pursuit of science to consider in what way they can themselves aid in forwarding the cultivation of natural knowledge.' I ask you, for the good of science, and for your own good, to exert your influence in the first place, and more especially to effect a change in the preliminary education of all those who intend to practise medicine; so that leaving Greek and Latin to be the ornaments and exceptions in their education, they may have time to obtain the best possible knowledge of the chemical and physical forces with which they have to deal. I urge this because of my conviction that whenever the most perfect knowledge of chemistry and physics becomes the basis of rational medicine, then, and not till then, medicine will obtain the highest place among all the arts that minister to the welfare and happiness of man."

Dr. RUSSELL read a preliminary Report, prepared by Dr. A. Matthiessen, 'On the Chemical Nature of Cast Iron.'

'On a Proposed Use of Fluorine in the Manufacture of Soda,' by Mr. W. WELDON.

'On the Assay of Coal, &c., for Crude Paraffin Oil, and of Crude Oil and Petroleum for Spirit, Photogen, Lubricating Oil, and Paraffin,' by Dr. ATTFIELD.

'On the Poisonous Nature of Crude Paraffin Oil, and the Products of its Rectification upon Fish,' by Dr. STEVENSON MACADAM.

'On a Phosphatic Deposit in the Lower Greensand of Bedfordshire,' by Mr. J. F. WALKER.

FRIDAY.

'On Ozone,' by Dr. DAUBENY.—In the course of the discussion on this paper, Mr. GLAISHER stated, as a result of his observations, that "where there was ozone he found abundant health, and where there was none, a great deal of sickness prevailed."

'On an Extraordinary Ironstone,' by Mr. T. L. PHIPSON.

'On a new Process in the Manufacture of White Lead,' by Mr. J. P. SPENCE.

'On Disinfectants,' by Mr. W. CROOKES.

'On the Oxidizing Action of Carbon,' by Dr. C. CALVERT.

SECTION C.—GEOLOGY.

President—Prof. A. C. RAMSAY.

Vice-Presidents—Prof. DAUBNEY, Prof. HARKNESS, J. B. JONES, Sir R. I. MURCHISON, Prof. PHILLIPS.

Secretaries—R. ETHERIDGE, W. PENGELLY, Dr. T. WILSON, G. H. WALTON.
Committee—Prof. ANSTED, H. B. BRADY, G. BUCK, HANDEL COMBAM, Rev. J. CROMPTON, Dr. C. LE NÈVE FOSTER, Capt. DOUGLAS GALTON, R. A. GODWIN-ANSTED, Rev. J. GUNN, Prof. HARKNESS, Prof. HENNESSY, Prof. HITCHCOCK, J. GWYN JEFFREYS, Rev. S. W. KING, E. R. LANKESTER, J. E. LEE, R. LIGHTBODY, Sir J. LUBBOCK, Prof. MCCHESNEY, W. S. MITCHELL, G. H. MORSON, R. W. MYLNE, J. ROSE, S. SHARP, W. W. STODDART, Hon. A. STRUTT, M. PIERRE DE TOUHATCHEF, Prof. TENNANT, Rev. H. B. TRISTRAM, Rev. H. H. WINWOOD, E. WOOD, Major WOODALL, H. WOODWARD, J. WYATT, — Wylie, A. B. WYNNE.

THURSDAY.

The PRESIDENT (Prof. Ramsay, LL.D.), after some preliminary remarks, said, "When people had thoroughly made up their minds that the world consisted, as far as the outside of it is concerned, of two classes of rocks—igneous rocks and aqueous rocks, it was for a long time the fashion to attribute all the disturbances which the crust of the earth exhibits to the admission or exclusion of igneous masses. But a closer analysis of the rocks, founded on careful survey of kingdoms and countries, has tended to disprove this old, fashionable idea. If we look at those formations in which igneous rocks are most generally developed, what do we find? Go first to North Wales, to the Silurian formation, which is to a great extent composed of igneous rocks, but instead of being great masses that have broken through the crust of the earth and tumbled that crust into confusion, they consist chiefly of beds of great thickness interstratified among the lower Silurian formation, with here and there a pretty mass of porphyry, which may represent, as some think, the rocks of old volcanoes; but the mountainous character of the country is due not to the igneous strata as a cause, because all these strata have been disturbed and thrown into various states by the agencies that produced disturbance; the igneous rocks were not the cause, for they have been disturbed altogether afterwards, and the mountainous character of the country is due to the unequal hardness of the rocks, denudations, some of them sub-aerial, having afterwards given rise to the forms of the surface, the hard rocks refusing to be denuded, the soft ones yielding; the hard rocks therefore make the mountains, the soft ones being found in the valleys. This kind of argument I could also go on to apply to the carboniferous rocks of Scotland, where igneous rocks are rare, and to all those areas where igneous rocks are always found. If we go to the Alps, and look at the strata there, which are disturbed on the greatest scale, at all events the greatest scale on which I have seen it, in an analysis of the structure of the Alps, of that part of it that I know, from east to west for more than 100 miles, I have never seen a fragment of true igneous rock. Gneiss there is, and granite there is, which people have been apt to classify as of common igneous production, but no basalts or common greenstones or any of those rocks, although the strata have been disturbed in a manner of which no conception can be formed by persons who have only seen those in the British Isles. There are instances of areas as large as half an English county, which have, however, been turned upside down." The learned President went on to attribute the phenomena to the gradual cooling which the earth had undergone, owing to the radiation of heat into space, causing a consequent shrinking, which, taking place unevenly, caused diversities of surface. "Now," he said, "the question arises whether the agencies have been sudden in their operations, or if the changes have been progressive and gradual. It is a very puzzling question to geologists, and various opinions have been stated. One opinion is, that we now live in a world as nearly as can be in a finished state, which has to suffer no more catastrophes; another that we are now remaining in a temporary state after a succession of spasms, but that they may recur again at some period a long way before us; or again, that the state of tranquillity we now enjoy has been the seeming order in all time, as far as geologists can trace back the action of the processes which have brought us to the present condition of the world. There are the true leading opinions, and the question inclines to the last. Proceeding further, the connexion of life with the geological changes which have taken place

in the crust of the earth, leads us to come to something like a definite opinion on the subject, which may have some possible value. There have been a great number of species, as every one knows, inhabiting the world at various times, the remains of which are shown in the different formations taken on a large scale; there has been a clear succession of life, each formation being marked by its own particular Fauna. This fact led to the doctrine being held that there had been sudden great creations, by which the world was peopled at once, and that those existences, after long intervals, were destroyed by sudden agencies, and then, that afterwards, a new creation came in, and that each formation was in this way marked by its peculiar forms of life. When, however, it was found that in some formations they ran into each other this theory of complete sudden extinction was seen to be untenable, and by and by, when the structure of the rocks was better analyzed, it was found that the various strata had some of them suffered disturbances, and new forms were placed upon them unconformably, and it was shown that, in the strata which lay unconformably, there was about to be a greater break in the line of life than in instances where two formations were found lying in order one after another. It has been a question with some geologists whether two distinct marine Faunas could not have been contemporaneous in some of the past eras. It is very possible that this may have been the case, but in my opinion this is only a minor point. When we take the great formations, such an opinion is put aside. I could never expect to find that some of those mixed fossils had been actually contemporaneous. However we may look upon this question, this is certain: that the great principle remains of a succession of life, which shows a method of progress, the old disappearing, and the new coming in, and that these breaks have a close connexion with unconformability of strata." After following out this view with particulars, the President continued: "This reasoning assures us that there never has been universally over the world any complete destruction of life, but that the succession of existences has gone on in regular order and sequence; but that we have lost a great number of the records,—whole chapters, whole books, by the immense disturbances of the earth's crust in the late periods of time. We must remember, looking at this duration, that we have still a large percentage of the marine life which has managed to live on to the present day; this must show that there has not been any universal catastrophe which destroyed the life of the world; there cannot possibly have been so, because so many of the forms are still alive."

Report on the Geology of St. David's, Pembroke-shire, by Messrs. H. HICKS and J. W. SALTER.

Second Report on the Fossil Crustacea, by Mr. H. WOODWARD.

Report of the Committee appointed to investigate the Alum Bay Leaf-bed, by Mr. W. S. MITCHELL.

Report on Dredging among the Hebrides, with regard to Geological Considerations, by Mr. J. G. JEFFREYS.

Second Report on the Maltese Caves, by Dr. L. ADAMS.

'On the Geological Distribution of Petroleum in North America,' by Prof. HITCHCOCK.

'On Raised Beaches,' by Mr. W. PENGELLY.

FRIDAY.

'On an Attempt to Approximate the Date of the Flint Flakes of Devon and Cornwall,' by Mr. C. S. BATE.—From the geological history of the different formations, he inferred that the flint flakes were coeval with the period which immediately preceded the Roman invasion of this country.

'On the Correlation of the Lower Lias at Barrow-on-Soar, Leicestershire, with the same Strata in Warwick, Worcester, and Gloucestershires, and on the Occurrence of the Remains of Insects at Barrow,' by the Rev. P. B. BRODIE.

'On Fossil from the Graptolite Shales of Dumfriesshire,' by Mr. H. A. NICHOLSON.

Second Report of Committee for exploring Kent's Cave, Devonshire, by Mr. W. PENGELLY.—He showed that in the past year a quantity of bones, chiefly of the hyæna and rhinoceros, with some very young and small elephants, have been

brought out, as well as twenty flint implements; but no human bones were found.

'On the Geology of East Yorkshire,' by Mr. W. TOPLEY.

'Notes on the Physical Features of the Land as connected with Denudation,' by Mr. A. R. WYNNE.—He attributed the declivities in this country to the action of the sea, and not to violent upheavals.

'On Intermittent Discharges of Petroleum and Large Deposits of Bitumen in the Valley of Pescara, Italy,' by Prof. ANSTED.

'On a Saline or Mud Volcano on the Flanks of Etna,' by Prof. ANSTED.

SECTION D.—BIOLOGY.

President—Prof. HUXLEY.

Vice-Presidents—GEORGE BUSK, Dr. DAVY, Dr. J. D. HOOKER, Prof. HUMPHRY, Sir J. LUBBOCK, Dr. P. L. SCLATER, Dr. THOMSON, A. R. WALLACE.

Secretaries—J. BEDDARD, W. FALLEN, Rev. H. B. TRISTRAM, W. TURNER, E. E. TILLOT, Dr. E. PERCY ALL WRIGHT.

Committee—Spence Bate, H. B. Brady, H. W. Bates, — Buckley, Dr. Bennett, Prof. Bentley, Dr. Baird, J. Crawford, Sir Walter Elliott, Dr. A. Günther, Dr. Hunt, J. Gwyn Jeffreys, E. R. Layard, E. R. Lankester, R. M'Andrew, Dr. Murray, Prof. Newton, Rev. A. Merle Norman, Dr. Ransom, H. T. Stansfeld, Dr. E. Smith, Dr. H. Stewart, — Stevenson.

THURSDAY.

The PRESIDENT observed that he would not offer any formal address. He, however, proposed on the Friday morning to unite the three departments into which the Section had for convenience been divided, and to offer some observations on the relations of the sciences known as Biology, when there would be an opportunity for discussion.

Report on the Extinct Birds of the Mascarene Islands, by Prof. A. NEWTON, M.A.—The Committee appointed by the British Association at Birmingham, September, 1865, for the purpose of assisting Mr. E. Newton in his researches for the remains of the extinct Didine Birds of the Mascarene Islands have the honour to report as follows:

—Almost immediately after the appointment of the Committee, intelligence was received in England of the very important discovery by Mr. G. Clark, of Mahébourg, in Mauritius, of a large deposit of bones of the true Dodo (*Didus ineptus*, L.) in a marsh known as the "Mareaux Songes," an account of which that gentleman has published in the *Ibis* magazine for April, 1866. Several fine series of these bones having been sent to England, some were purchased by the Trustees of the British Museum, and formed the subject of a memoir 'On the Osteology of the Dodo,' read by Prof. Owen at a meeting of the Zoological Society of London, 9th January, 1866. This memoir is understood to be nearly ready for publication, and will appear, copiously illustrated, in the *Transactions* of that Society. Some other fine series of these bones have, by the liberality of Mr. Clark, passed into the possession of one of the members of your Committee, and a portion of them is now exhibited. Several smaller series of bones have likewise been variously distributed by sale or gift both in England and the Continent, so that numerous museums and collections have reaped the benefit of Mr. Clark's valuable discovery; the importance of which may be better appreciated when it is remembered that previously the only remains of the Dodo known to naturalists were the head and foot at Oxford, the skull at Copenhagen, the portion of an upper mandible at Prague, and the foot in the British Museum. Now it is believed that almost every bone of the bird's skeleton has been recovered with the exception—though that is an important exception—of the extremity of the wing. The attention of Mr. E. Newton has been especially called to this deficiency, which seems likely to be supplied by a thorough and systematic examination of the "Mareaux Songes," or at least of the part of it which has been most prolific in Dodo's bones. That gentleman has accordingly determined to carry out the undertaking so far as may be expedient; but according to the latest accounts received from him he had been obliged to defer commencing operations in this quarter till the expiration of the rainy season, as the marsh still continued to hold much water, and he expected to be able to do no real good there until next month, when the Committee hope that complete success may attend his excavations.

Report on Dredging in the Hebrides, by Mr. J. G. JEFFREYS.

'Remarks on the Rhizopod Fauna of the Hebrides,' by Mr. H. B. BRADY.

'On the Distribution of Mosses in Great Britain and Ireland as affecting the Geography and Geological History of the present Flora,' by Mr. J. SHAW.

'On the Systematic Position of the American Prong Horn (*Antilocapra Americana*),' by Mr. P. L. SCLATER.

'On a Remarkable Mode of Gestation in an undescribed Species of Arius,' by Mr. W. TURNER.

'On the Food and Economical Value of British Butterflies and Moths,' by Mr. O. GROOM-NAPIER.

'On the Causes of the Variation in the Eggs of British Birds,' by Mr. O. GROOM-NAPIER.

FRIDAY.

The PRESIDENT (Prof. Huxley) gave an address to hear and discuss which the three departments of the Section met in one room, which became tensely crowded. Alluding to the large attendance, Prof. Huxley remarked that his intention was simply to give an exceedingly short abstract discourse upon the general subject of Biology, and although some discussion would probably follow, as far as he knew there would be no quarrel and no heresy. If this announcement should have any effect in clearing the room he should be extremely glad. He wished to consider for a short time the object of the science indicated by the new term Biology, and the scope of those persons who pursue it, and subsequently the position which had been given to its various branches in this Section of the Association. Suppose him to be provided with two properties, an egg and a bean, he would draw the attention of his listeners to their contents. Neither of them contains anything but an incomplete rudimentary foreshadowing of what they will produce. Imagine the egg incubated, or the seed placed in the ground. After a time, a being full of life and activity, and possessing even mental powers, will come from the egg; the chick will eventually become a fowl. So, too, the bean will become a beanstalk. In the whole set of changes undergone there is a definite order and succession of forms, to which the name Development is applied. In studying each stage of this development, we only study a series of distinct forms. It is only form which is studied, as a rule, in development. The inquirer does not ask how or why these changes take place, but simply what they may be. When our chick or bean has arrived at maturity we have not a homogeneous mass. There are muscles and bones in the one and fibres and tissues in the other. The study of the form of the internal parts is called Anatomy, and it is anatomy whether on a small or on a large scale. The size does not affect the nature of the study; it is anatomy whether we deal with parts one inch or one-thousandth of an inch in diameter. He would lay particular stress on this, because some persons had a confused notion on the matter; microscopic anatomy, or Histology, is assuredly anatomy. In all this we deal with form. So, in considering the relation of being to being, we observe that the form of an oak is more like that of a beanstalk than it is like a man's; again, a man is more like a monkey than he is like a crocodile. This study is that of Taxonomy, Classification, Systematic Zoology and Botany. Form has still another study, that of Distribution, not only in space, but in time. The life on our earth is not a thing of yesterday, but goes back so far into past ages that the record breaks off ere we find its first commencement. Paleontology is the biology of the past, and a fossil animal differs only in this regard from a stuffed one, that it has been dead ages instead of days. We have, then, Development, Anatomy, Classification, and Distribution, all relating to form, constituting Morphology; its methods are Observation, Classification and Registration. The facts concerning form are questions of force: every form is force visible; a form at rest is a balance of forces; a form undergoing change is the predominance of one over others. How has form come about? how does it commence? how does it end? The question *why* belongs to Physiology in its broader sense. In a narrow sense it has been used only in regard to the properties of individuals, as we say the Physiology of Man. But there is another physiology, dealing

with the causes of life, the foundations of which as a science have been laid by Mr. Darwin, whose name will go down to posterity as that of the first man to organize this study. Such is a view of the relations of the various branches of biological science. Two things are wrapped up in it: Form and Cause. The study of physiology requires great preparation; over the door of the physiological department might well be written, "Let no one enter here who is not a chemist and physicist."—Next, as regards the arrangements of Section D. Practical expediency is all that can be considered. The Council of the Association was alone responsible for the arrangements. If there were such a thing as scientific education in our schools, then we might expect to keep our Biological section well together in one room; but as it is there is no chance for this. The stick won't beat dog, dog won't bite pig, and so the old woman can't get home. The university won't recognize natural science, and hence the public school won't teach it to the boys, and consequently all men are not versed in all the subjects of the Section. Hence the Council have provided a department for the medical physiologists, and another for the students of ethnology, as a matter of convenience, and Dr. Humphry and Mr. Wallace were respectively conducting these departments. The division is not a philosophical, but it is an expedient one. We give off buds like an animal of low organization as we are, but, unlike this animal, we retain the power of re-absorbing those buds.

Dr. HUMPHRY (of Cambridge) attempted to defend his university from the charge of indifference to science. He considered Physiology the very highest and noblest of the sciences, and thought it was wet-blanketed by the Association. He wished that a separate Section might be formed for it.—D. H. BENNETT (of Edinburgh) agreed with Prof. Huxley, but wished for two equal sections of Morphology and Physiology.—Sir J. LUBBOCK, thanking the President for his address, observed that the success of the Physiological Sub-section in former years had been like that of the broom-seller, who made a few brooms and stole the rest; the physiologists had got a few legitimate papers and had stolen the rest from the Morphological department.

'On the Teaching of Science at the Public Schools,' by the Rev. F. W. FARRAR, M.A.—After alluding to the strangeness of the fact that science, to which the most characteristic progress of this epoch was due, should have been hitherto disregarded at our oldest seats of learning, the author proceeds to argue that the introduction of scientific instruction into the public school system was necessary on three grounds: first, because it called into play a *different* order of faculties in boys who had studied language with success; secondly, because it evolved those faculties in boys who were naturally unsuited for classical training; and thirdly, because the schools had ceased to be solely preparatory for the Universities, and were therefore bound to give boys the opportunity of acquiring some knowledge which would be of direct practical use to them in their future professions. He next treated of the difficulties in the way of carrying out these views. Those difficulties did not in the least arise from the prejudices of public-school masters, the majority of whom had used their best efforts to introduce more or less of scientific teaching into the schools,—but from the conflicting opinions of scientific men; from the absence of any definite and well-considered scheme; from the badness of many existing textbooks; and from the immense amount of time already devoted to the teaching of the modern languages, mathematics and classics, a term which now involved a very wide range of studies. The author suggested that many of these difficulties might be removed if a committee were appointed by the Association, partly composed of scientific men and partly of masters accustomed to the methods of public schools. He stated that at almost every school something was being done, but that the plans mainly adopted were three; viz., 1. Modern schools in which science was made a part of the course. 2. Occasional and compulsory lectures, of which notes were taken by the boys;

and 3. A voluntary system, by which boys were encouraged rather than compelled to make themselves acquainted with various sciences. Rugby is the only school at which science is now regularly and completely introduced, and the author therefore described the system there introduced, and the no less characteristic voluntary system which has been established with much care at Harrow, and which is working most advantageously. Finally, the author suggested his own scheme, which was a combination of the voluntary and compulsory systems, for which in the case of many boys ample time could be gained by a wise abandonment of the practice of Greek and Latin composition—an abandonment which (in the case of all but first-rate scholars) he warmly advocated as most desirable after a certain age.

Prof. HUXLEY, observing that this was one of the most profoundly interesting papers he had listened to, said that he felt sure that, at the present time, the important question for England was not the duration of her coal, but the due comprehension of the truths of science, and the labours of her scientific men.—After remarks from Lord AMBERLEY and Mr. WILKINS, Mr. TRISTRAM recommended the study of botany for developing the powers of observation rather than chemistry.—Dr. HOOKER thought botany and zoology were the most suitable studies for boys, but they must be taught by thorough men of science.—Mr. STANTON, Mr. SEELEY, Prof. BRASIER, and the DEAN OF HEREFORD, made a few remarks, concurring in the value and fitness of science-teaching in schools.—Prof. TYNDALL told how he had instructed a class of little boys with a lump of sugar-candy, how they had listened and been absorbed in interest. He dwelt on the necessity of true science being taught, and not the nonsense which some persons dignified by its name.—Mr. J. PAYNE urged the difficulty of obtaining competent teachers. He animadverted on the use of the term "gerund-grinding" as applied to classical teaching, and charged the men of science who had most urged the value of scientific education with a want of earnestness. If they really were in earnest they would condescend to teach in schools, for it was their teaching which was required.—Mr. FARRAR, alluding to the increased labour for boys, which additional study would involve, said he would remove a mountain of hard and useless labour from the boy—his verse-making, and in its place impose a light and pleasing study.

'On the Results of Cinchona Cultivation in India,' by Mr. C. R. MARKHAM.—The author gave the details of the success which had attended the introduction of quinine plants into India, in which he himself had been mainly instrumental.

'On the Entozoa of the Dog in relation to Public Health,' by Dr. T. S. COBBOLD.

SECTION D.—DEPARTMENT OF PHYSIOLOGY.

President.—Dr. HUMPHRY.

Secretaries.—Dr. SPENCER COBBOLD, J. BEDDARD, Committee.—Dr. J. H. BENNETT, Dr. ARTHUR GAMGEE, Dr. KELLERME, King, Dr. RICHARD NORTIS, Dr. W. B. RICHARDSON, Dr. W. T. ROBERTSON, Dr. SIMON.

THURSDAY.

Dr. HUMPHRY, who presided over this department, gave an address, in which he dealt with the general questions of the origin of life and death, and contested the doctrine of Continuity in life—of the origin of species by natural selection.

'On the State of Lime, whether Crystalline or not, in the Egg shells of Birds,' by Dr. J. DAVY.

'On the Physiological Action of Medicine,' by Dr. W. SHARP.

'Remarks on the so-called Cattle Plague Entozoa,' by Dr. COBBOLD.

FRIDAY.

'On the Conditions of the Protoplasmic Movements in the Egg of Osseous Fishes,' by Dr. RANSOM.—The subject of these rotations or oscillations had engaged attention since the time of Rosconi. By means of diagrams, the phenomena of movement visible in the unimpregnated egg were shown. After water has entered the ovum, a distension of the outer rim and a diminution of the yolk mass itself occur, while the separation of the food-yolk takes place. Then the protoplasmic movements cease, fissile contractions commence, and the gene-

ral process of yolk-division occurs. The author detailed the results of a number of experiments with various agents, the object of which was to ascertain their action on the rhythmic movements he had described in the yolk.

Dr. HUMPHRY congratulated the author on his laborious work, which had a high scientific value.

—Mr. F. BUCKLAND elicited from Dr. Ransom the opinion that it was a mistake to pack eggs in damp moss, since they required oxygenation by fresh pure water, and he had found them liveliest under that condition.

'On the Colour of Man,' by Dr. J. DAVY.—The author first enumerated the various shades of complexion and the position in which they were found, and then went into the subject of causation. The warmer the climate, the less the difference in the venous and arterial blood. The Esquimaux were neither fair nor dark-brown, but intermediate. The long, continuous solar effect for one half the year, associated them with the inhabitants of the tropics, whilst their living underground the other half, assimilated them to inhabitants of the fairer countries. He showed that the circumstances of a colder climate favour fairness of the skin. With regard to the Chinese, he ventured the conjecture that their colour might be owing to the imperfect development of blood in the bile. The hereditary colour might pass in course of time into that distinctive of the climate. Of this he gave a variety of instances; and invited discussion on a subject of no ordinary interest in regard to health and beauty.

'On the Sources of the Fat of the Animal Body,' by Drs. J. H. GILBERT and J. B. LAWES.

SECTION D.—DEPARTMENT OF ANTHROPOLOGY.

President.—ALFRED R. WALLACE.

Secretaries.—W. FELKIN, JUN., EDWARD BURNETT TYLOR, Committee.—C. Carter Blake, George Busk, Dr. R. S. Charnock, John Crawford, Dr. J. Bernard Davis, Robert Dunn, Dr. F. R. Fairbank, Rev. F. W. Farrar, James Hunt, Sir John Lubbock, D. W. Nash, Herbert Spencer, W. H. Wesley, Thomas Wright.

THURSDAY.

Mr. WALLACE in opening the proceedings remarked:—"Anthropology is the science which contemplates man under all his varied aspects—as an animal, and as a moral and intellectual being—in his relations to lower organisms, to his fellow men, and to the universe. The anthropologist seeks to collect together and systematize the facts and the laws which have been brought to light by all those branches of study which, directly or indirectly, have Man for their object. These are very various. The physiologist, for example, studies man as a wondrous and most complicated machine, whose parts and motions, actions and re-actions, he seeks thoroughly to understand. The comparative anatomist and the zoologist compare his structure with that of other animals, take note of their likenesses and differences, determine their degrees of affinity, and seek after the common plan of their organization and the law of their development. The psychologist studies the mind of man, its mode of action, and its development, compares it with the instincts and the reasoning faculties of the lower animals, and ever aims at the solution of the greatest of problems—whence and what is mind. The historian collects and arranges the facts of man's progress in recent times; the geographer determines the localities of the various races that now inhabit the earth, their manners, customs, and physical characteristics; the archaeologist seeks, by studying the remains of man and his works, to supplement written history, and to carry back our knowledge of man's physical, mental, and moral condition into *pre-historic times*; the geologist extends this kind of knowledge to a still earlier epoch, by proving that man co-existed with numerous animals now extinct, and inhabited Europe at so remote a period that the very contour of its surface, the form of its hills and valleys, no less than its climate, vegetation, and geology, were materially different from what they now are, or ever have been during the epoch of authentic history; the philologist devotes himself to the study of human speech, and through it seeks to trace out the chief migrations of nations, and the common origin of many of the races of mankind; and, lastly, the phrenologist and the craniologist have tried to special sciences out of the study of

brain and skull. Considering the brain as the organ of the mind, the phrenologist seeks to discover in what way they correspond to each other, and to connect mental peculiarities with the form and dimensions of the brain as indicated by the corresponding form of its bony covering. The craniologist, confining his attention to the skull as an indication of race, endeavours to trace out the affinities of modern and ancient races of men, by the forms and dimensions of their crania. These various studies have hitherto been pursued separately. There has been great division of labour, but no combination of results. Now, it is our object as anthropologists to accept the well-ascertained conclusions which have been arrived at by the students of all these various sciences, to search after every new fact which may throw additional light upon any of them, and, as far as we are able, to combine and generalize the whole of the information thus obtained. We cannot, therefore, afford to neglect any facts relating to man, however trivial, unmeaning, or distasteful some of them may appear to us. Each custom, superstition, or belief of savage or of civilized man may guide us towards an explanation of their origin in common tendencies of the human mind. Each peculiarity of form, colour, or constitution may give us a clue to the affinities of an obscure race. The anthropologist must ever bear in mind that, as the object of his study is *man*, nothing pertaining to or characteristic of man can be unworthy of his attention. It will be only after we have brought together and arranged all the facts and principles which have been established by the various special studies to which I have alluded, that we shall be in a condition to determine the particular lines of investigation most needed to complete our knowledge of man; and may hope ultimately to arrive at some definite conclusions on the great problems which must interest us all—the questions of the origin, the nature, and the destiny of the human race. I would beg you to recollect also that *here* we must treat all these problems as purely questions of science, to be decided solely by facts and by legitimate deductions from facts. We can accept no conclusions as authoritative that have not been thus established. Our sole object is to find out for ourselves what is our true nature,—to feel our way cautiously, step by step, into the dark and mysterious past of human history,—to study man under every phase and aspect of his present condition; and from the knowledge thus gained to derive (as we cannot fail to do) some assistance in our attempts to govern and improve uncivilized tribes, some guidance in our own national and individual progress."

'On a Supposed Human Jaw from the Belgian Bone Caves,' by Mr. C. C. BLAKE.

'On Colonies in South Africa,' by Mr. W. J. BLACK.

'Notes on Madagascar,' by Mr. T. WILKINSON.

'On the Indians of the Paraná,' by Consul T. J. HUTCHINSON.

'On the Indians of the Mosquito Territory,' by Mr. J. COLLINSON.

'On the People of Andorra,' by Dr. R. S. CHARNOCK.

FRIDAY.

'Phenomena of the Higher Civilization traceable to a Rudimentary Origin among Savage Tribes,' by Mr. E. B. TYLOR.—The author contended that Darwinism was not capable of explaining the facts of anthropology; it did not reconcile the monogenist and the polygenist. He did not believe that man's place in nature was by any means ascertained; and considered the doctrine of the unity of the human species as most premature.

'On the Principle of Natural Selection applied to Anthropology, in Reply to Views propounded by some of Mr. Darwin's Disciples,' by Dr. J. HUNT.

SECTION E.—GEOGRAPHY AND ETHNOLOGY.

President.—SIR CHARLES NICHOLSON.

Vice-Presidents.—SIR R. I. MURCHISON, Viscount STRANGFORD, JOHN CRAWFORD, Major-Gen. SIR A. S. WAUGH, Secretaries.—H. W. BATES, Rev. T. P. CUSINS, CLEMENTS R. MARKHAM, D. W. NASH, THOS. WRIGHT, Committee.—Lord Amberley, Duke of St. Albans, Col. Sir J. G. Alexander, Prof. D. T. Ansted, John Arrowsmith, Hugh T. C. Bevan, Sir A. W. Baker, Dr. Beke, Admiral Sir Edward Belcher, C. Carter Blake, J. Campbell, M. F. B. Du Chailu, Dr. Cheadle,

Rev. P. W. Claydon, R. Dunn, Sir Walter Elliott, A. G. Friday, Capt. Douglas Galton, Fra. Galton, Rev. Dunn, Rev. H. H. Hindmarsh, John Hogg, Dr. J. D. Hooker, James Hunt, R. H. Major, Viscount Milton, J. March, Prof. A. Newton, Rev. Admiral Ormanouy, — (new), Clifford Palgrave, T. Reddie, W. Spottiswoode, M. Pierre de Teilbatscher, Dr. T. Thompson, Rev. H. B. Tristram, E. B. Tylor, A. R. Wallace, W. Webb, Charles White.

THURSDAY.

The PRESIDENT, in opening the business of this Section, gave an address, in which he passed in review the recent acquisitions and speculations in the sciences of Geography and Ethnology. Geography, he said, in the restricted sense in which it is now used, was chiefly confined, in its scope, to inquiries as to the leading features of the earth's physiognomy, without dealing with those special causes and remoter influences to which all the great phenomena of the surface of the globe were referable. This circumscription, and yet indefiniteness, of aim was not, however, peculiar to the subject we had to deal with; it belonged to every other department of human knowledge, the bounds of which are more or less arbitrary, each being but a part of one great whole, each separated from the other by faint and often invisible lines, reciprocally melting into each other. The same remark applied to Ethnology; the indefiniteness of the name having become a source of difficulty. A fastidious criticism might find equal objection to the employment of such terms as ethnography, zoophagy, anthropology, biology, and others. Many of these terms are sufficiently elastic not only to include man in all his objective relations,—in which anatomy and physiology, human as well as comparative, could be embraced,—but all the ethical and moral qualities of his nature would become alike objects of contemplation and research. Facts are, after all, the ultimate aim of all inquiry, and it was of little consequence with what special machinery or under what particular designation they might be gathered together. In reviewing the recent progress of geographical research, he alluded to the discovery of the Lake Albert Nyanza by Sir Samuel Baker, and described the nature of the problem which now remained to be solved in the geography of this part of Africa. This was the connexion or separation of the two great inland seas, the Tanganyika and the Albert Nyanza. The difference of level between them, 800 feet, militated against the supposition of their union; but a doubt existed as to the correctness of the levels given in the case of the Tanganyika, the measurement having been made by Burton and Speke with a single and very imperfect instrument. It was hoped that this point might be settled by Livingstone, the last news from whom informed us of his arrival at the mouth of the Rovuma river on the east coast, whence he was about to travel by land into the interior. The road to the great southern lake, Nyassa, was reported to be open, and this distinguished and intrepid traveller was, in all probability, now on his march. In other parts of Africa, the expeditions of the Baron von der Decken and M. Du Chailu were mentioned, and he announced to the meeting that the latter traveller would communicate a paper to the Section embodying his principal observations on the physical geography and tribes of the new region he had traversed in his last journey. In Asia several very important geographical expeditions had recently been undertaken. Two of these were in connexion with the great trigonometrical survey of India now in course of execution. To Capt. Montgomerie, who had been charged with the survey of Cashmere and the North-Western Himalayas, we were indebted for one of these Central Asian explorations; the other was undertaken by Mr. W. H. Johnson, a civil assistant in the survey. This gentleman, having carried the survey to the summit of the Karakorum Pass, the extreme limit of the territory under British influence, had been there invited by the chief of Khotan, in Chinese Tartary, to visit his dominions. Mr. Johnson had boldly undertaken the journey over the as yet unknown plateau stretching between the Himalayan and Kuen Lun ranges, and reached Ilihi, the capital of Khotan. The plateau was surveyed, and the position of Ilihi accurately determined. The vast plains of Central and Western Asia still presented, however, innumerable features deserving of minute investigation. Amongst these was the problem of the alleged ancient course of

the Oxus into the Caspian Sea, instead of the Aral, as at present. In South-Eastern Asia, a young man, Mr. J. Thomson, had recently returned from a successful enterprise in Cambodia. Mr. Thomson had been excited by the account which the late Mr. Mouhot had given of the splendour of the ruins of ancient temples buried in the tropical forests of that country, and had resolved, alone and unaided, to visit them, and bring away photographs and plans of these structures. He had returned, and brought with him a very large series of pictures of great beauty, which would be exhibited to the Section. The useful labours of the Palestine Exploration Fund were next noticed, and afterwards the minute and accurate surveys made by Mr. W. Chandless on the river Purus, in South America, and also the recent expedition into the interior of Australia undertaken for the purpose of discovering remains of the unfortunate Leichhardt expedition. This search, so munificently supported by several of the Australian governments and by Her Majesty the Queen, had not yet accomplished much. A severe drought had impeded the progress of the searching party, but they had succeeded in traversing the continent to the banks of the Flinders river, and had examined the trees on which the L's were cut at a spot which was supposed to be the last halting-place of the lost explorers. Now that settlements are formed along the whole east coast of Australia, at short distances from each other, it was very desirable that exact registers should be established at various points, so as to determine whether there be any appreciable change in the relative levels of land and water along the coast, and thus throw light on an interesting question in physical geography, namely, the gradual subsidence of the Pacific coasts of Australia. After noticing the great extent of unknown lands, especially in Africa and New Guinea, yet remaining to be explored, the President concluded by a review of the recent great strides made in the science of ethnology since the discovery of stone implements in the alluvial deposits of St. Acheul. We here see the widest field opening for speculation and inquiry. There was a tendency with many ethnologists in their inquiries to disparage the force of the evidence afforded by language as a key to the history and the relationship of the different sections of mankind to each other. Yet it was impossible to gainsay the absolute co-relation that exists between certain organic forms of speech and some of the great typical divisions of man. Language, in his opinion, constitutes one of the most permanent and indelible tests of race, and no system of ethnology could dispense with the aid of philology. The early utterances of man have become stamped with a certain degree of immortality. The Celtic and the Hindoo, the early Persian, the Hellenic and Latin races betray the community of their origin in the dialectic affinities of the tongues they speak. On the banks of the Tigris and the Euphrates the Arab employs a language which is the lineal descendant, with few fundamental changes, of that spoken by his forefathers in the days of the Hebrew patriarchs; whilst in the Semitic names scattered along the shores of the Mediterranean Sea and eastern coast of Africa, we have unerring indications of the progress and settlements of early Semitic tribes. However plastic and evanescent, under certain local conditions, characteristic forms of speech may be, they still afford, in the history of man, the key to many of the vicissitudes that have marked his migrations, his conquests, his religion, his social polity, the measure of many of the attributes by which as an individual or a race he is distinguished from his fellow-men.

'On the Relations of the Abyssinian Tributaries of the Nile and the Equatorial Lakes to the Inundations of Egypt,' by Sir S. W. BAKER.—This was the subject of an unwritten address by Sir Samuel Baker. He commenced by giving a description of the ancient mystery of the Nile and the long-continued doubt and speculations as to the source of the annual inundations and river deposit which caused the fertility of Egypt. He then gave, in the form of a brief narrative of his own explorations, first of the Abyssinian tributaries and then of the lakes at the head of the White Nile, an account of the two separate sources, first, of the inundations

and fertilizing mud, and secondly, of the perennial flow of water which prevented the Lower Nile from becoming annually dry when the inundation ceased. His exploration of the Atbara and Blue Nile, in 1861, was undertaken mainly for the purpose of investigating their relations to the main stream. The attempts of the ancient Egyptians, and afterwards of Nero's centurions, to ascend to the sources of the Nile all failed. The latter ascended to a point where the White Nile expanded into vast marshes in about 9° N. lat. No other expedition went so far, until the one under St. Arnaud, despatched by the Viceroy Mehemet Ali, one result of which was the establishment of the trading settlement of Gondokoro, the starting-point of his own expedition to the great lakes. When he reached the Atbara, from Cairo, on the 13th of June, 1861, he found the broad and deep bed of the river almost entirely dry. He looked in vain for a river, but not a drop of water flowed from it into the Nile. Ascending for 180 miles to Gozerajup, he witnessed, on the 23rd of June, the sudden on-coming of the flood caused by the heavy rainfall of Abyssinia at the commencement of the wet season. In a few minutes the Atbara was no longer a desert, but a noble river, twenty feet deep and 500 yards wide. Further up, at Goorassé, he reached the country whence the Atbara derives the vast amount of rich soil which it carries down towards Egypt. The waters were of the consistency of soup. He crossed in succession a number of its tributaries, and found the general trend of the drainage from S.E. to N.W. The Settite, or Taccazy, is the principal tributary, and brings down almost the entire drainage of Eastern Abyssinia. It has the same character as the Atbara, with the exception that it does not become dry in the dry season. After being delayed for many weeks by the heavy rains, he resumed his journey, and, descending by the banks of the Blue Nile, reached Khartum on the 11th of June, 1862, having been just twelve months on the journey. The full significance of the fluvial phenomena which he had observed on this expedition he did not appreciate until he arrived in the region of the great lakes near the equator, which he now prepared to visit. On sailing up the White Nile he found a complete contrast to the rivers which descend from Abyssinia. For forty-five days he struggled through the almost boundless swamps through which it flows. He passed the point at which Nero's centurions had turned back, and the thought came to his mind that what the Romans had failed to do might perhaps be accomplished by Englishmen. At length the elevated land on which Gondokoro is situated was reached, and from thence, with great difficulty, and after many perils, the narrative of which he had already presented to the public, he reached the shores of the great lake. The result of his examination was to prove that the main river of the Nile makes its exit in a perennial stream from the Albert Nyanza, and that the river discovered by Speke, and flowing from the Victoria Nyanza, was a tributary, discharging its waters into the Albert, and following the same course as all the eastern affluents of the Nile, namely, from S.E. to N.W. With regard to the disputed question of the sources of the Nile, we ought to speak comparatively, and not look to the ultimate spring whence the remotest tributary of such a lake flowed, but accept this great reservoir as the true source. He believed geographers were in error in denying that a lake could be a source. He believed that no geographer in England or on the Continent now refused his assent to the statement that the White Nile flowed out of the Albert Nyanza. The continuity of the river discovered by Speke and Grant, now called the Victoria Nile, was also now accepted as a fact. He believed that there was no connexion between the Tanganyika and the Albert Lake, but that the watershed of the drainage to the south and north lies between the two. The fullest credence might be given to the altitudes which he had given, as they were made by Casella's thermometers, proved at Kew before leaving England, and again proved after his return. Now the relation of the White Nile to the fertility of Egypt was this: Egypt would be utterly annihilated if it depended for its irrigation

on the Abyssinian rivers. These simply cause the annual inundations, and are full only three months in the year, corresponding with the three months' rainfall in Abyssinia, from June to September. The supply of water from the great White Nile lakes is constant, for they are fed by a ten months' rainfall over the high lands near the equator. It is this steady flow which prevents Egypt from becoming a desert, and it is great enough to overcome the great absorption in the extensive sandy regions which intervene. When no rain falls in Abyssinia, the supply from the lakes keeps up the flow of the Nile until the rainy season comes round again. On the other hand, the fertilizing soil which annually overpreads the Delta is due exclusively to the rich sediment brought down by the Abyssinian tributaries.

'On the Possibility of Diverting the Waters of the Nile into the Red Sea,' by Dr. C. T. BEKE.—The author stated that a tradition which is founded on fact has often been misunderstood or misrepresented by commentators on ancient authors. Thus it has happened with the story that the rulers of Ethiopia possessed, and at times exercised, the power to prevent the waters of the Nile from flowing down to Egypt. After noticing various traditions connected with the river-history of Africa, Dr. Beke continued:—From descriptions given by several modern travellers, especially M. Linant, it appears that the Atbara is called *Bahr-el-Awad*, or Black River, from the quantity of black earth brought down by it during the rains, which is so great as to discolour the main stream of the Nile; that it is this branch which is the best source of irrigation, as it contributes most of the slime that manures the lands in Egypt; that it might easily be turned into the Red Sea at Sawakin, and that the remains of a bed or canal exist from the Atbara to the Red Sea. The main stream of the Nile being deprived of so great a bulk of its waters, and especially of that portion of them which contains the fertilizing principle, the dire results recorded in history would not fail to ensue.

In the discussion which followed, Sir S. BAKER said that he must totally deny that there existed any natural facilities in the country for a diversion of the waters, such as Dr. Beke described.

'On Caesar's Account of Britain and its Inhabitants,' by Mr. J. CRAWFORD.

'On the Eruption at Santorin, and its Present Condition,' by Commander LINDSAY BRIDE, R.N.

'On the probable Lower Course of the Limpopo River in South-east Africa,' by Mr. T. BAINES.

'On the Zambesi River and its probable Westernmost Source,' by Mr. T. BAINES.—This was a recital of various reports of natives and traders regarding the upper streams of the Zambesi system, which the author heard whilst travelling to the Zambesi in 1863. The most trustworthy accounts described the upper branches of the Zambesi as forming a complete network of rivers, the several streams, for want of sufficient slope in the country, wandering in numerous channels.

SECTION F.—ECONOMIC SCIENCE AND STATISTICS.

President.—Prof. ROGERS.
Vice-Presidents.—Lord BELPER, Mr. JOHN BOWRING, Dr. WILLIAM FAIR, WILLIAM FELKIN, JAMES HETWOOD, Col. NILES.
Secretaries.—R. BIRKIN, jun., Prof. LEONARD LEVI, EDMUND MACROBY.
Committee.—Samuel Brown, Rev. W. Cairne, Dr. William Cairns, William Endicott, F. P. Fellows, Lord Houghton, The Mayor of Nottingham, Charles Paret, Henry Yates Thompson, Samuel Timmins, Alderman Vickers, Joseph White, Robert Wilkinson, James Yates.

THURSDAY.

The PRESIDENT, in his opening address, said—
"Among the various questions of great economical importance which have been before the public during the past year, there are two on which I will make a few brief comments. These are the contingency, at no remote date, of a considerable exhaustion of certain mineral resources in this country, and the altered position which England might consequently assume; and the present condition of what is familiarly called the money market. The first of these questions raises a variety of issues, the magnitude of which cannot be over-estimated; the second is a crisis unparalleled for its severity and its duration. It cannot be denied that a limited quantity of any natural product, the demand for which is incessant, must ultimately be exhausted. But the real question is. When will the scarcity

price operate on consumption, and, when it does so operate, in what will the saving be effected? That the scarcity price is not yet operative is manifest from the increase in the aggregate consumption of coal and from the increased production of metals; for it is in the smelting of metals that the largest consumption occurs. Nor can it be doubted that, when the saving becomes necessary from enhanced price, the economy will be exercised in this direction. But the total value of all metals produced in this country in the year 1864 (the largest in value, though not the largest in amount, yet recorded) was worth little more than sixteen millions—a great but not a dominant quantity in the annual aggregate of British industry. It would seem, then, that the alarm, if it be not premature, is certainly excessive; that there will be abundant warnings of future scarcity, and necessary economies in dealing with the residue, long before that residue verges to exhaustion. The material wealth of this country, greatly as it is related to its manufactures, one of the raw materials of which is locally limited, is far more fully derived from its geographical position, and thereupon its trade, the advantages and aids of which are permanent. Occupying, as Great Britain does, the most central position between the New and the Old Worlds, it is, and will be, so long as its people are industrious and resolute, the highway and the mart of nations. Its commerce, by virtue of causes which cannot be reft from it, increases at a far more rapid rate than its manufactures; and if that commerce remain unfettered and unshackled, there seems no limit to the width which its markets may attain. It would not become me, in an introductory address, to enter on the vexed question of the currency, and, in particular, to criticize the Act of 1844. Opinions are, as is well known, broadly and sharply divided on that famous measure. With some thinkers this measure is lauded as one of consummate wisdom; with others it is censured as one of needless and mischievous interference with that part of the machinery of trade which would be self-adjusting without it, and which is not really supported by it. As a rule, indeed, when one set of persons confessedly competent to form a judgment decide that a law dealing with commerce is wise and useful, and another set of persons equally competent declare that it is foolish and mischievous, it will generally be found, in course of time, that the latter are in the right. Such was the case with the Colonial system, with the Corn Laws, with the Navigation Laws, with the Sinking Fund, with the laws regulating or prohibiting the exportation of corn, with bounties, with export duties, with the favoured nation clause in commercial treaties. It has been stated, but not, I think, proved, that the cause of the present crisis has been excessive or over trading. As far, however, as can yet be discovered, it seems to be due far more to imprudent action on the part of certain banks, who have made advances at long dates or on securities not readily convertible. The distrust which has followed on the failure of some among these banks had led to the absorption of a large amount of the note currency by the solvent banks, with a view to make their position impregnable. But this retention of notes, as it has limited the amount of accommodation, has indirectly raised the rate of discount; and thus it follows that as long as the rate is high the notes are hoarded, and as long as the notes are hoarded the rate will be high."

'On the State and Prospects of the Rate of Discount with reference to the Recent Monetary Crisis,' by Prof. L. LEVI.

'On Free Trade in Banking in the Western States of America and Manchuria (Tartary), from Statements of W. Wells Brown and I. T. Meadows, Her Majesty's Consul at Newchang,' communicated by Col. SYKES, M.P.

FRIDAY.

Report of the Committee of the British Association on Scientific Evidence in Courts of Law, by Prof. WILLIAMSON.

Report of the Committee of the British Association on Uniformity of Weights and Measures, by Prof. L. LEVI.

'On the Statistics of the General Hospital, near Nottingham,' by Mr. J. WHITE.

'On Classification of the various Occupations of the People,' by Mr. F. J. WILSON.

'On some of the Results of the Free Licensing System in Liverpool during the last Four Years,' by Rev. W. CAINE.—Mr. Caine (of Manchester) drew a sad picture of Liverpool, and traced its condition to the drinking promoted by the free licensing system acted upon by the magistrates during the last four years. Within the last four years drunkenness and its fruits had increased in a far greater ratio than previously. In Liverpool they far exceed the proportions in other towns, manufacturing and maritime. The crime of Liverpool is increasing every year out of all proportion to the rate of the increase of the population. Baron Martin only a few days ago attributed nine-tenths of this crime to drunkenness; and a Lancashire magistrate had declared publicly that "Liverpool was the most drunken, and had the highest range of criminality, of any town, perhaps, in England." Medical papers spoke of it as a "national danger." The Registrar General spoke of "portentous darkness" on the Mersey. The disproportionate social evils of Liverpool, Mr. Caine thought, were reducible by the diminution of the facilities for the sale of intoxicating drinks.

A discussion ensued, in the course of which it was suggested that the conclusions of Mr. Caine might, perhaps, be qualified by considerations which he had lost sight of. One omission which he was unable to supply was the comparison of the purely sailor population of Liverpool with that of other towns.

SECTION G.—MECHANICAL SCIENCE.

President.—THOMAS HAWESLEY.

Vice-Presidents.—Sir W. G. ARMISTON, J. F. BATHMAN, W. FAIRBAIRN, Capt. D. GALTON, J. OLDFHAM, C. VIGNOLES, J. WHITWORTH.

Secretaries.—P. LE NEVE FOSTER, J. F. ISSELIN, M. O. TARBOTTON. Committee.—R. Abernethy, Admiral Sir E. Belcher, N. B. Barmore, Mons. Bergeon, F. J. Bramwell, W. Carmichael, H. Ditch, J. C. Gilbert, G. Glover, R. W. Mylne, W. J. M. Rankine, W. Sissons, B. E. Stoney, Sir A. Waugh.

THURSDAY.

The PRESIDENT opened the proceedings of the Section by delivering the following address:—"The subject-matter of the department of the British Association over which I have on this occasion been called to preside is that of Mechanics; and, although properly speaking this department embraces within its confines the whole of the vast range of Mechanical Philosophy, extending from the infinitely great of the universe down to the infinitely small of the ultimate atom, yet, as I apprehend it is our more immediate purpose to limit our inquiries for the most part, if not altogether, to those branches of Statics and Dynamics which are or may be employed for the realization of so-called 'practical ends,' I now offer for consideration a few thoughts with regard to the unhappy necessity which the events of the last few years have only too sadly established for devoting much of the science and skill of the members of the Association to the defence of the homes of the people of this great nation. Whatever may have been the advancement which civilized people have made in the arts of peace, it is only too evident that those people have even outstripped themselves in advancing the arts of destruction. We have seen in the great internal contention of our American brethren, and still later in the struggle in which several of the most important states of Europe have engaged, that war is no longer carried on by means of mere animal courage and brutal force. On the contrary, we perceive, much to our amazement, I believe, that the highest branches of mechanical science and the most refined processes and operations of the mechanical arts are resorted to by the modern warrior for the purposes of offence and defence; and we are taught by the logic of facts that the modern soldier must cease to remain a passive machine, but, on the contrary, must henceforth be trained as a skilled labourer, if not, indeed, even as a skilled artisan. At the present moment the defences of this country are in a most unsatisfactory condition. Many endeavours have been made, and much money, reckoned by millions, has been expended, for the most part uselessly, in endeavours to secure our coasts against the attacks of a foreign enemy. Forts have been erected where an adversary would never seek to

land. Ships of an enormous size, and carrying enormous armaments, have been constructed which can neither sail on shallow waters nor safely encounter a hurricane in deeper ones, which, with vast mechanical power on board, can yet not carry a sufficient quantity of coal to enable them to find their way to, and act as protectors of, our colonies, and which, for the same reason, are wholly unable to convey our merchantmen to those distant climes, without a safe communication with which the trade and commerce of England must be annihilated. Arsenals have been enlarged, if not constructed, in situations in which they can only be secured from an enemy's fire by fortifications which it will require an additional army to man. Guns, each one larger or more elaborate than the last, have been invented and constructed and tried, and floating castles, each one heavier and uglier and more unmanageable and more useless, except for special applications, than the former one, have been built and cast upon the waters to resist them, and yet nearly all naval and military officers acknowledge that this great country is not in a position to defend either herself or her colonies against a combined attack from more than one of those foreign friends we have heretofore recognized under a different appellation. It is a function of this department of our Association to study and discuss the forms of ships suitable for the purposes of commerce and war, to ascertain the conditions under which they will attain the highest velocities or carry the heaviest burdens, to know and define the laws of resistance to motion in water,—a subject to which I have devoted a not altogether useless attention,—and to apply the motive force necessary to overcome that resistance in the most economical, most convenient, and most serviceable manner; and it is also a function of this department to deal with the theory and practice of projectiles, and to contrive the means by which these warlike instruments, both large and small, may be most advantageously employed by our military and naval forces. But whilst, as good Englishmen, we feel the necessity of being prepared for war in order to secure a lasting and respected peace, we must not neglect the consideration of so much more of our science as contributes to the material wealth and prosperity of our country, and to the social comfort and intellectual improvement of its inhabitants, and, I may add, of the whole world. Before sitting down, permit me to request your attention to the many points of interest peculiar to this town and its neighbourhood. You will find here, in the lace-machine, combinations and arrangements of mechanism of the most complicated yet of the most exact kind, all tending to the cheap and rapid fabrication of an article of commerce which has made its way over the entire world, and without the possession of which no home, and I had almost said no lady's dress, can be considered complete. The present state and extent of this really wonderful manufacture is an instance, and a remarkable one, of the effect of that law of Continuity which last evening formed the staple of our President's address. It has only been by little and little, but by slow and continuous progression, that the lace mechanism of Nottingham has become developed into that condition of almost perfection to which it has now attained. The excursionists will find in the geology of this district much to invite their attention. Within a very few miles many of the most interesting formations of the earth's crust come to the surface, from the syenite at the base of the system to the more recent deposits of lias and oolite. Coal and ironstone are very abundant; and although it is to be regretted that the town of Nottingham has not yet availed itself of the vast amount of mineral wealth within its reach, yet, in the large undertakings of Buttery, Riddings, and other places, as well as the great extent to which the Midland Coal Field is being wrought for the supply of distant countries, you will see evidences of the growth of a local industry, which, as I believe, is yet in its infancy."

Prof. J. W. M. RANKINE, LL.D. read the Report of the Committee appointed to make Experiments on the Difference between the Resistance of Water to Floating and Immersed Bodies.

—From the Report it appears that the experiments were conducted by means of two models, referred to as A and B. These models were of painted wood, ship-shape, each consisting of two equal and similar halves, joined together at the middle water-line, the detailed elements of the models being given in the Report. Model A was of two parts, joined at the circular midship section, so that by turning the after-body through a right angle about a longitudinal axis, the water-lines could be converted into buttock-lines, and *vice versa*.—The experiments made were 220 in all, and the result of each experiment is given in detail in a tabular form.

Prof. RANKINE read a paper entitled 'Remarks on the Experiments of the Committee.'—He said that his object in reading the paper was not so much to bring forward any opinions of his own, as to open the way for a discussion on the subject of the resistance of water to bodies passing through it. The experiments recorded in the Report formed a body of facts which were available for every inquirer to reduce in his own way. From a brief investigation of their results, by the aid of graphic projection, the following conclusions might safely be drawn: "1. That agreeably to what was previously known as to the resistance of water to the motion of bodies of small dimensions at two speeds, the resistance increased on the whole somewhat more slowly than the square of the velocity. 2. That when the velocity went beyond the maximum velocity suited to the length, according to Mr. Scott Russell's rule (that is to say, about $3\frac{1}{2}$ feet per second, the models being four feet long), the resistance showed a tendency to increase at a more rapid rate; and the water became so much disturbed by waves as to make it difficult, and sometimes impracticable, to continue the experiments. 3. That while the midship section of Model A was to that of Model B as 1.57 to 1, and the mean girth of Model A was to that of Model B as 1.45 to 1, the resistance of Model A was to that of Model B in a somewhat less ratio than the latter proportion, though not very much less at moderate speeds. 4. That the resistance of Model A, when just covered with water, was almost exactly double of its resistance at the same speed when half immersed. 5. That the resistance of Model B, when immersed to about $3\frac{1}{2}$ times its depth, was sensibly more than double its resistance when half immersed."

Mr. FAIRBAIRN said, the facts and figures given in the Report just read would afford the means for individuals to deduce a general law for themselves. He believed he was the first to ascertain by experiment the amount of resistance offered to bodies passing at different velocities through water, and referred to experiments made on the Paisley Canal. Mr. Scott Russell and others had made similar experiments, but they had not driven their boats at a higher speed than seven miles an hour.—Mr. G. BAILEY drew the attention of Prof. Rankine to the peculiar line of friction shown on the bottoms of copper-bottomed vessels. The copper was striated along the line of friction. It presented the appearance of being grooved, but the grooves were not continuous, as the harder portions of the copper were left intact—only the softer portions being worn away. This appeared to him to be at variance with Mr. Scott Russell's wave-line theory, which he believed to be a mistaken one. As a naval architect, he would undertake to build two vessels on the "wave-line" principle which should be totally dissimilar in their qualities as sea-going ships. The wave-line principle was not generally adopted, and in the cases where it had been carried out, the vessels were unsuccessful as sea-going ships. In one instance, where a vessel had been built upon this principle, she was subsequently altered by having the hollow bow filled up to the extent of eighteen inches, with the happiest results, as she became much more handy, more "sea-kindly," and rose better to the waves. He might also advert to a remarkable instance of "slip" that had come to his knowledge lately in the case of the North German Lloyd's screw-propeller Herman, where the slip amounted to nearly one-seventh—the propeller having travelled 4,000 miles, whereas the distance actually run was only

3,400 miles. He had been much astonished at the results attained by means of the twin screw-propeller, results which at first he was not prepared to expect.—Admiral Sir E. BELCHER agreed with Mr. Bailey that the fastest ships in the navy were constructed upon principles other than that of the "wave-line," the efficiency of which he disputed. Years ago sailing-ships went sixteen knots an hour, and it was strange that the same speed could not be attained with steam. He attributed this loss of speed to the erroneous principles upon which steamers were built at the present day. The Cunard steamers, well known for their great speed, were built with straight lines.—Prof. RANKINE, in reply to Mr. Smithies, referred that gentleman to the details of experiments given in the Report. He might, however, say that the boat went faster when the long end went first. He thought most persons, when discussing the wave-line theory, forgot that it was divided into two branches, one relating to the form of the bows, and the other to the relation between the length of the vessel and the speed at which she was to be propelled through the water. He did not attach much weight to the hollow bow form, as he found that a bow constructed on the straight-line system answered equally well with that constructed on the former system. He thought that there was much to be said in favour of the theory, that the length must form a certain relation to the speed. To ascertain the line of friction along the bottom and sides of a vessel, it had been proposed to cover the copper with grease, and then to drive in a number of pins. The grease would be removed by the action of the water in all places in the line of friction, except just in the rear of the pins.

Mr. W. E. CARRETT read a paper descriptive of 'An Hydraulic Coal-cutting Machine,' and exhibited a small working model. The machine, by means of a series of ingenious mechanical arrangements, is capable of being most readily adjusted and moved to suit the various conditions under which it is required to be used in the pit, and these could only be made intelligible by means of elaborate diagrams or inspection of the machine itself or the model. The principle on which the machine works is that of the planing and slotting machine, the cutters acting by direct continuous pressure derived from a column of water, and not by blows. The machine has been in successful operation for more than two years.

In reply to Mr. BATEMAN, Mr. CARRETT stated that it would act on hard materials, and that it successfully cut pyrites and "blackband." There was no difficulty in sharpening the tool, as from its shape it simply required the grinding of a flat surface.—Dr. C. LE NEVE FOSTER inquired the cost of the machine, which Mr. Carrett stated to be 125*l*.—Mr. WHITWELL confirmed the successful working of the machine which had come under his own knowledge. It had crushed the hard stone in a surprising manner.

Mr. F. INGLE read a paper 'On Recent Improvements in the Application of Concrete to Fire-Proof Constructions.' The author pointed out what he considered a radical defect of concrete formed of lime as ordinarily used, viz., that by the action of fire it becomes reconverted into lime, which, when the water from the engines is brought to bear upon it, expands greatly, and forces out the walls to the destruction of the building. He advocated the use of a concrete formed from gypsum, which is not liable to this defect. The gypsum, which is of a coarse and inexpensive character, is formed into plaster of Paris by roasting, and mixed with a peculiar kind of clay found in connexion with the beds of gypsum.

MEETINGS FOR THE ENSUING WEEK.

MONDAY. Entomological, 7.
TUESDAY. Horticultural, 3.—General Meeting, and Lecture.

FINE ARTS

OUTRAM'S MONUMENT.

To Mr. M. Noble, as sculptor, we are indebted for a new version of combination in design in the form of a memorial to Gen. Outram, lately erected in Westminster Abbey. We cannot say that the

result is fortunate. The bust, or rather half-figure, is mounted on a pedestal, in the front of which last is placed a Gothic quatrefoil panel, inclosing a carving in relief representing a meeting between the General and some native authorities. The style of it is aptly enough adapted from that of Ghiberti, on the gates to the Baptistery at Pisa, but very decidedly inferior to it in respect to execution and refinement,—the figures, as they are situated at a considerable height above the eye, looking short and rather stumpy—an unfortunate defect. The actions of the figures are fairly expressed in a somewhat commonplace manner. The style thus produced does not harmonize with the prosaic naturalism of the bust, which is the leading element of the composition, or with that of those subordinate statues which, placed at the sides of the pedestal, and less than the size of life, are too evidently intended to make up the trite pyramidal arrangement so much affected in modern trivial monuments. These statues represent, the one a naked, the other a robed native; both recline towards the centre of the composition, their heads being close to the upper portion of the pedestal; their feet are, of course, most removed from that portion: thus the pyramid is produced, not much to the satisfaction of those who prefer novelty in design. The execution of these figures is tolerably good in the modern, that is, the picturesque, non-monumental fashion to which the half-education of our sculptors so frequently inclines their minds. We lament this lack of gravity and dignity in design, but do not wonder at seeing that modern sculptural training rarely leads a student either to the profound elaboration and severity of antique Art or the more purely architectonic method of treatment which prevailed with the great Gothic artists who produced the Abbey itself, and should be followed in works which are intended to be there enshrined. So weakly have the principles of these immortal schools of design been appreciated by Mr. Noble, that his composition, together with its ruling motive, approaches the ludicrous. The "weepers," if we may so style them, or supporters—they much resemble what are called supporters in heraldry—have diverse expressions and varied attitudes,—a good thing if it were well attained, and noble in itself. On the contrary, however, one of the statues leans his head against the pedestal as if it ached (this idea is irresistible by the spectator), and looks downwards; the other figure is in a woful-looking attitude, not one of genuine sorrow or deep meditation, as Michael Angelo might have chosen, but as if he were the victim of a raging tooth, and leans his head like that of his fellow, but looks up in vain hope for a dentist. Placed, but temporarily we hope, immediately in front of the mural monument of General Wade,—a curious piece of eighteenth-century Art in marble, a thorough disgrace to the Abbey,—this memorial to Outram is thoroughly in keeping with it as regards design, but infinitely inferior to it in elaboration and thoroughness of treatment. The Indians of Mr. Noble are less expressive than the scythe-armed Time of his predecessor; his half-length figure is less commendable than the angels of his neighbour in intrusion; his quasi-Gothic panel, with its Renaissance carvings of dumpy figures, less valuable, because not so well in keeping, than the banners, trumpets and trophy of the other. We trust this monument may find another place. In the Abbey it does but tend to perpetuate the absurdities in marble that are so rife and destructive to the beauty of the building. Now that even our village churches rarely receive monuments that show no signs of Christianity, and are but vainglorious braggings,—not of the belief of the dead, but of the deeds of the living,—it is very hard indeed to find the noblest, most gloriously consecrated abbey continued as the receptacle for such blunders in thought, such anachronisms in taste, and such feeble designs as that in question. Those who placed, or suffered such a work to be placed, at Westminster are evidently untaught in Art and indifferent to the propriety of a church. That "amiable spy," Major André, has been commemorated to the anger or the laughter of succeeding generations by the standing Red Indians and their trappings, which occupy the sides of a sarcophagus not many feet

from where Outram stares across the nave. Have we not advanced in knowledge of design since this absurdity was achieved? It would seem that the day of cannon-balls, flags, rocks, Fames, Glories, Nymphs, Times, scythes, guns, spears, "bustoes," and the rest of their order in trash, has not yet past. Mr. Noble has done some very pretty figures in what is called "drawing-room sculpture." He has now failed woefully in monumental and even in pathetic design; nothing less than success in this is tolerable, in commemorating the brave; still less can we endure that which is trivial in a church.

FINE-ART GOSSIP.

THE first part of M. J. Ph. Berjeau's collection of Early Dutch, German, and English Printers' Marks has been published by Mr. E. Rasool, Brydges Street, Covent Garden, and contains twenty-three examples of varied, but, generally speaking, great interest, commencing, chronologically, with Johann Koelhoff's shield of arms and its quaint crest, dated 1470—1500, "J.K.," in black letter, in the upper corners of the block, including the "W.C." of Caxton and its entwined figure, "1476—1491," concluding, in the like order, with Richard Watkine's cartouche, uncouth and rude as it is, "London, 1557—1591." Some of the examples are very well designed indeed, showing a feeling for Art beyond the mere habit of copying modes of the time. Thus, the "V.S." of Valentine Schumann, of Leipzig, 1502—1534, between two saplings,—the monogram of Lawrence Andrew, London, 1499—1527, although on a florid shield,—are good in their way. A good signature of the "merchant's mark" order is that of Hugh Singleton, London, 1553—1588, with the ever-present "4" rising from the cipher "H.S.," making, in more ways than one, the emblem of the Trinity and the monogram of Christ. Fust and Schoeffer's signature, Mentz, 1457—1460. Jacob de Breda's (Deventer, 1486—1519) handsome mark, probably the handsomest of the whole before us, comprises, not only the evangelistic emblems, but the sacred monogram, and some beautifully designed and executed foliage.

At Messrs. Colnaghi's may be seen a picture by M. Mignot, who has so often painted South American and tropical scenery, representing the Falls of Niagara as seen from the Terrapin Tower, which is joined to Goat Island by a bridge. Here is seen the Horseshoe Fall, over which the greater portion of the water goes. The work is executed with remarkable spirit, and contains none of that too common effect of exaggerating the peculiar character of the scene it depicts: the aspect of the grass-green and glassy surges plunging as they go towards the edge is effective enough. M. Mignot has been eminently successful in representing the effect of light, transmitted or reflected, upon his canvas; in treating atmospheric effect he has done even better than is usual with him.

The bosses in the roof of the nave of Westminster Abbey are being cleaned and re-gilt.

The first contract for the restoration of Salisbury Cathedral has been carried out, and a second contract entered upon for further works, which embrace the renovation of the west front: this portion will be completed by June next. The difficult task of strengthening the tower and spire has been performed. We trust these portions of the glorious structure will not require further attention for centuries to come.

MUSIC AND THE DRAMA

MUSICAL AND DRAMATIC GOSSIP.

IN a busy section of our world of London society, that of musical amateurs, a tendency has appeared increasingly of late years to cross the line which separates dilettantism from serious musical effort, whether the same be composition or performance. The feat is a harder one than the generality of the ladies and gentlemen having such ambitions suppose. Granting them the advantages of an education more liberal and refined than falls to the lot of many who raise themselves to a good social position by their accomplishments in art, they labour under a counter-

balancing disadvantage, which must be faced and overcome ere any real excellence can be achieved,—the vanity engendered by courteous flattery and easily-won praise. They must forget and cast aside as valueless things which 'mean nothing, all drawing-room successes. Who will dare to speak the truth to those who good-naturedly devote themselves to the amusement of their friends,—to tell *Lady Celia* that her voice is out of tune, and that her scales are unfinished,—to hint to *Sir Plume* that, gentle-born though he be, he still sings a *little worse* than Rubini! What bystander in the corner has not been amazed by airs and graces, and pretensions and rivalries of a florid growth which has no prototype in the world of those who must, in the main, rely on public justice and discrimination for the place they are to hold? We have been led to repeat these considerations by hearing of another gentleman with a tenor voice, whose private triumphs have encouraged him to turn his talent to professional account, and who meditates entering on a course of grave study with that object. In proportion as he acts on the principle just intimated, and acknowledges the difficulties under which he begins the task of needed correction and completion, will the fulfilment of his admirers' hopes or their disappointment be real and great.

It is said that Mr. Mapleson has the project of giving English Opera a chance during the autumn and early winter, and that a new work by Mr. Balfe will figure in his programme. The composer of 'The Bohemian Girl' owes it to himself to retrieve his old popularity, which was lost by the last half-dozen careless and ill-considered operas thrown out from his pen, the best of which would not bear revival for a week.

The acetics will rejoice to read that, owing to want of support, the Sunday band in the Regent's Park will be obliged to give up its performances; the sale of penny programmes, from which a large portion of its income was derived, being entirely insufficient for its purpose.

Though wilful mis-statement, made under the excuse of a slashing and would-be sarcastic style, is ninety-nine times out of a hundred unworthy of attention, there are cases in which ignorance of fact and presumption of conclusion must be shown for what they are. It might have been thought that no one dealing with the question of musical education in this country and the chance of its support by government assistance who can read plain English, could conceive the *Athenæum* to be in favour of a repatching of the Royal Academy, still less of its transfer to South Kensington. Yet a paragraph, containing such a distortion of every word and thought that emanated from this journal, absolutely figured last week in the columns of a contemporary paper! Such want of common understanding (not to use a stronger word) brings with it the condemnation of all exhibiting it,—be their motives what they may.

Our journals advertise that the winter term of the Stuttgart Conservatory of Music will commence in October next. Nothing can be more modest than the annual fee, which is stated at 10*l.* for female, 8*l.* 8*s.* for male students.

There is a report in the *Orchestra* that the spirited managers of the well-managed Alhambra have applied to M. Offenbach to compose a work expressly for that establishment, and to conduct its performance in person.

Signor Morini, who played *Faust* in Paris, and who has been described to us as having essentially improved since that period, has been engaged by Mr. Mapleson to make one of a travelling company about to make the round of England during the recess.—Mr. Gye is said to have engaged Signor Cotogni, "the celebrated baritone," for his next season.—The *Gazzetta dei Teatri* is profuse in its praises of Signorina Margarita Gigli, a new Sicilian singer, who has appeared at Catania with the utmost success. "They say," says the same authority, "that Signor Rossini is composing a *Cantata* to celebrate the restoration of Venice to Italy."

It is now stated as past doubt that M. Carvalho intends to produce Herr Wagner's 'Lohengrin' at the Théâtre Lyrique in January.—A new three-act comic opera, 'Deborah,' with music by M.

Devin-Duvivier, is to be given at the same theatre; also, a revised and condensed edition of M. Gounod's 'Philemon et Baucis,' which contains some of his most delicate and charming music, and a revival of his merry 'Le Médecin.'—A new tenor, it is added, with a beautiful voice, has been found in one of the *cafés chantants*, and secured by M. Carvalho.

A new opera, 'Lucifer,' by M. Benoit, is in preparation at Ghent.

M. Gade has produced a new *Cantata*, 'The Crusaders,' at Copenhagen.

For the benefit of the extraordinary critic to whose wisdom concerning the extinction of *Pigny* Gluck's fame due publicity was given a week ago, we may mention that his 'Orphée' and 'Alceste' are, at the time present, among the most important works in the repertory of the Prague Opera.

M. Fétis contributes to the *Gazette Musicale* a detailed account of the grand organ just erected in the concert-room of the *Conservatoire* at Brussels. He signalizes, in particular, some improvements added to the invention of Mr. Barker, for the lightening of the touch of the instrument. With his usual modesty he gives an account of the piece for organ and orchestra written by him for the occasion, conceiving that it inaugurates a new period in musical composition.

From the same journal we derive the following piece of news, the sequel of which may be looked for with interest: On the day of the Emperor's *fête*, a poor Italian woman of agreeable appearance attracted the attention of several amateurs and artists by singing before the Café Riche. Her voice is described as a superb *contralto*, and her method as good. So real was the impression made that, besides a liberal recompense, a subscription was opened among the artists on the spot, with the view, by completing her education, of giving her that place in the profession for which her natural gifts qualify her.

The revival of Méhul's 'Joseph' at the Opéra Comique has taken place.

On Monday, a new farce was produced at the Strand under the title of 'Waiting for the Underground.' It is written by Mr. L. H. F. du Terreaux. There is in the incidents nothing special as to an underground railway. Mr. Turner acted his part (*Jeremiah Pumpkin*) with such force and character that the success of the farce may be fairly attributed to his efforts.

On Wednesday, Mr. J. L. Warner, the only son of the celebrated *tragedienne*, the late Mrs. Warner, made his *début* at Sadler's Wells, in the character of *Hamlet*. To distinguish the occasion, an address in his favour, written by Mr. John Oxenford, was delivered by Miss Edith Heraud. Mr. Warner is young, and not without ability. Nature has gifted him with a fine voice and tall person, and, as he has been performing in the provinces for the last three years, he must not be regarded as altogether unpractised in his profession.

Among other pieces about to be given at Drury Lane during the season at hand will be (we hear) a revival of 'Rob Roy,' in which Messrs. Anderson, Sims Reeves, Phelps, and Miss Helen Faucit will perform.

The Lyceum Theatre will commence its season on the 15th of next month, with 'A Long Strike,' the new drama by Mr. Boucicault, in which he will appear with his wife. The report, which has found its way into print, that this play is based on Mr. Dickens's 'Hard Times,' is, we believe, erroneous.—Messrs. Creswick and Shepherd have come together again in the management of the Surrey Theatre, which is to open, on the 8th, with the new T. P. Cooke prize drama, 'True to the Core,' by Mr. Slous.

Miss Kate Terry is about to appear at the Adelphi Theatre.

Miss Harris, the daughter of the excellent stage manager of our Royal Italian Opera, is engaged at the Théâtre Porte St.-Martin.

Two new Italian dramas are announced in *Il Trovatore*—'Cuor di Moglie,' by Signor Azzi, given at Aquila; and at Naples, 'L'Ombra di Paganini,' by a better-known writer, Signor Dall'Ongaro.

The *Times* of Thursday announced that the principal theatre at Constantinople has been destroyed by fire.

MISCELLANEA

The Execution of Charlotte Corday.—It is not generally known that the executioner's assistant, who slapped the cheek of Charlotte Corday after decapitation, was legally punished by imprisonment for having exceeded his duty in this act of brutality. I have read a record of this fact in the *Moniteur* of, I think, the second day after the execution. The asserted blushing is regarded by some as a physiological impossibility, owing to the severance of connexion with the heart. K.

* * The execution, which took place on the 17th of July, is not reported in the *Moniteur* till the 20th. We can find no record of the alleged outrage.

The Sensitive Plant.—"Some months ago it occurred to me that the motion of the folioles of the sensitive plant, on being touched by the finger, might be due to the transmission or interchange of electricity between the two points in contact. Impressed with this idea, I took the opportunity a few days ago of putting the matter to the test, by using for the purpose of touching the folioles a non-conductor, a steel conductor and the finger. The experiment quite answered my expectations, as the subjoined letter from my friend, Prof. Divers, will testify. The plant, I should state, was in flower, and at this period it is probably more sensitive than at other times. On the 12th August I experimented three or four times; and on the 19th I again repeated these trials with a similar result, so that the care-taker spontaneously remarked upon the difference of the effects produced. They were these: on touching gently and even lightly pressing the folioles with glass they remained as they were; on touching them with steel held in the fingers, or (in other instances) with the fingers, they made their usual movement. Again, before I applied these tests, a gentleman asked me to explain how it happened that the plant moved more readily when touched by any of his children than by himself. He had seen this take place several times and could not account for it. I thought it harmonized exactly with my theory, and have since had reason to believe that with the same individual the action will be more evident when he is in a tonic state (if I may use the expression) than when he is exhausted and weary. Although what I have shown goes to prove that the passage of electricity between the points in contact will account for the movement of the folioles in such instance, I do not mean to say that whenever the foliole moves there must be contact with a conductor. For I hold it possible that the plant may be capable of developing within itself sufficient of such force to close its folioles (a seemingly protective movement) if roughly handled. From what I had observed with regard to the sensitive plant, it appeared to me probable that the fly-trap movement of the processes of the *Dionaea muscipula* was due to the same cause. Having gently touched these exteriorly, I was disappointed to find no result produced. Laying the tip of the little finger (in two cases) softly within the expanded processes, I found them to close, whereupon I immediately withdrew it, that there might be no possibility of injury to the plant. I thought the fact almost valueless, as there was no opportunity of testing what would be the action with a non-conductor. However, but a few moments had elapsed, when my attention was drawn to a distinctly painful sensation in the ulnar nerve at the right elbow,—it being the little finger of the right hand I had used. This sensation persisted for some time; then imperceptibly passed away. I admit that the subject is capable of many more tests and much more development than I can give it in this letter, or at this time. It is my intention, however, to pursue the investigation, confident that it will be recognized as one of considerable importance and replete with interest. Now, when the rigid limit drawn by the old naturalists between the animal and vegetable kingdoms has been found untenable, there will be many, I presume, to admit that *a priori* there is no abso-

lute reason why individuals of the former kingdom should be endowed with power of generating electricity essentially denied to all members of the latter; few, also, I believe, will assert the antecedent impossibility of any of those plant-organs, termed 'vessels' and 'ribs,' subserving, in a very restricted sense, it may be, the purpose of nerves.—I am, &c.,

GEORGE SIGERSON, M.D."

The following is a copy of the letter from Dr. Divers, referred to above:

"Charing Cross Hospital, London,
"August 15, 1866.

"My dear Dr. Sigerson,—At your request, I am very glad to be able to acknowledge witnessing the interesting fact you showed me at Kew, on the 12th of the present month, concerning the sensitive plant. The fact was this, that while the leaves of the plant proved highly sensitive to the slight contact of your finger, or of a piece of steel held in your hand, they were not sensitive to the similar contact of glass. This fact was new to me at the time.—Yours, my dear Dr. Sigerson, very truly,

"EDWARD DIVERS, M.D."

"George Sigerson, Esq., M.D."

Morgenroth.—A Correspondent of the *Allgemeine Zeitung* writes from Stuttgart: "Just now, when we are continually hearing sung by the marching troops the favourite 'Morgenroth,' it may prove interesting to many to learn the origin of this song, as it has been related to the writer of these lines some time ago by a fellow-student of the prematurely deceased poet. In the year 1824, Wilhelm Hauff was living in his mother's house, in the Haag-gasse (now non-existent), of Tübingen. Here he was awakened one morning, while it was yet scarcely daylight, by some near singing; it was in long-drawn and singularly moving chords; he opened the window to listen. The sounds came from the washing-house beneath, where the female domestics commenced their early labour with a social song. The words themselves he could not hear, but the tender melancholy of the national melody, combined with the profound silence all around, had a deep effect on the youthful imagination of the hearer. He seated himself in the face of the breaking dawn which just began to colour the sky, and soon brought to his admiring friends the successful poem with which Aurora had inspired him. One may see from this tale—and for this reason we like it so well—that Hauff's poem was a poem produced by the 'occasion' in the finest sense of Goethe's well-known saying. The whole character of the song, the situation, the tone, the national tinge, and the inner harmony with the melody, is all given with this origin. When Dietrich von Kraft, in Hauff's celebrated novel, 'Lichtenstein,' about to pay a visit to his noble guest, remains before the door, listening to this song, with which George accompanies the cleaning of his arms, perhaps a recollection haunted the author of his own first acquaintance with the old national melody. Well might his friends be delighted, for their young companion, whom they had hitherto only known to celebrate their student festivities with the common enthusiastic expressions of an earnest heart, suddenly stood before them a finished poet; for he who understands how to touch human souls so deeply with such simple words is, and remains, a poet, even were he only to have written that one song. Indeed, in no later poems of Hauff do we find such plastic power as in this one; while it is often conspicuous in his prose writings—merely to mention the 'Landknechte' or the exquisite characters of the Bremer Rathskeller—in so striking a manner as to have justified hopes of a yet riper finish of the author's early-developed genius. It almost seems as though an inner presentiment that the "blushing dawn would light the way to his own early death" had urged him to throw the whole power of his poetic nature into this song."

To CORRESPONDENTS.—J. L.—Eos.—N. C. S.—R. B.—C. H. M.—T. L. M. (no)—H. L.—received.
J. B., Southport.—Your method is quite right, and well known.

Erratum.—P. 250, col. 2, line 41, for "Bearn" read Ream.

This day, at all the Libraries,

The PRISON LIFE of JEFFERSON DAVIS; comprising Details and Incidents in his Captivity, and Conversations on Topics of great Public Interest. By John J. Craven, M.D., Physician in Attendance on the Prisoner. Post 8vo. price 8s.

"This is the English edition of a book published simultaneously in London and New York, which might be a monument of bad taste, but is not. Dr. Craven has played Boswell to a prisoner whose ideas in the hour of failure upon matters connected with the great American Civil War, in which he was the able chief of one of the two parties, it must needs interest the world to know; and a very good sort of Boswell the good Doctor makes." *Examiner*.

"A work destined to create a great sensation in the United States, and to excite no little interest elsewhere."—*Standard*.

"We are indebted to Dr. Craven's indiscretion—if indiscretion it be—for a volume of remarkable interest; and we will not further qualify the praise which in this respect, at all events, its author justly deserves. One of the most noticeable things in the book is the largeness of the field which Mr. Davis's conversations embrace, and the keen and varied observation for which he seems to have found time in the course of a very busy life." *Saturday Review*.

"We commend this book for its entertaining pictures of a man who has enjoyed a large share of the world's attention during these latter years."—*Athenæum*.

"A very interesting volume: full of spirit and character..... This is one of the many good things."—*London Review*.

"Likely to be much read."—*Court Journal*.

London: SAMPSON LOW, SON & MARSTON,
Milton House, Ludgate-hill.

NEW BOOKS, Now Ready.

I.
The ELEMENTS of INTERNATIONAL LAW. By HENRY WHEATON, LL.D. An entirely new and Revised Edition, by R. H. DANA, Esq. Royal 8vo. cloth, 30s.

II.
SOUTH AUSTRALIA: its Progress and Prospects. By A. FOSTER, Esq., late Member of the Legislative Council of Adelaide. Demy 8vo. with Map, cloth, price 12s.

"Supplies a gap in colonial literature. The book is a capital manual of its subject, and those who read it for use will find everything they are likely to require."—*Spectator*.

"A solid, satisfactory book."—*Reader*.

III.
The LIFE and CORRESPONDENCE of BENJAMIN SILLIMAN, M.D. LL.D., late Professor of Chemistry, Mineralogy, and Geology in Yale College, U.S.A. Chiefly from his own MSS. and Diary. By GEORGE FISHER. 2 vols. post 8vo. with Portrait, price 34s.

IV.
The LIFE of the late Dr. MOUNTAIN, Bishop of Quebec. 8vo. cloth, price 10s. 6d.

V.
A HISTORY of SAVINGS' BANKS: with an Account of the Origin and Progress of the Government Financial Measures for Post-office Banks, Annuities, and Life Insurance. By WILLIAM LEWINS, Author of 'Her Majesty's Mail.' 8vo. price 16s.

"A more deeply interesting volume has seldom been offered to serious thinkers and practical reformers." *Illustrated London News*.

"Those who desire to know all that can be known of the career of a valuable class of provident institutions, should read Mr. Lewins's 'History of Savings' Bank.' The last few years have seen some extraordinary and beneficial legislation in respect to these institutions—have seen, indeed, a new order of them created—calculated largely to extend their salutary influence. All these, together with the past history of savings' banks, Mr. Lewins describes. And he does it with so much lucidity, that there is no possibility of the reader of his book stumbling upon any doubts. The merits of the institutions, their failings, the advantages they confer, and the drawbacks upon their usefulness, are all clearly pointed out. Those who know nothing, or very little, of this subject should read the book. In every respect it will amply repay perusal."—*Morning Star*.

London: SAMPSON LOW, SON & MARSTON,
Milton House, Ludgate-hill.

NEW NOVELS, Now Ready.

The JOURNAL of a WAITING GENTLE-WOMAN. 1 vol. 8s.

TOILERS of the SEA. By Victor Hugo. Third Edition. 3 vols. post 8vo. 24s.

The STORY of KENNETT. By Bayard TAYLOR. 2 vols. 16s.

A CASUAL ACQUAINTANCE. By Mrs. DUFFUS HARDY. 2 vols. 16s.

MATTINS and MUTTON'S. By Outhbert BEDE. 2 vols. 16s.

The WHITE FAVOUR. By Henry HOLL. 3 vols. 24s.

Edition, revised. 1 vol. post 8vo. 10s. 6d. bevelled edges.
[Ready.]

DR. M. J. CHAPMAN.
HEBREW IDYLLS and DRAMAS.
By Dr. M. J. CHAPMAN, Trinity College, Cambridge. Ori-
ginally published in *Fraser's Magazine*. 1 vol. post 8vo.
10s. 6d. bevelled edges. [Ready.]

London:
SAUNDERS, OTLEY & Co. 66, Brook-street, W.

COMPLETION OF THE WORK.
Issued to Subscribers only, in 8 Parts, imperial folio, 12s. each,
or complete in handsome Portfolio for 8s.

THE ANATOMY OF FOLIAGE, PART VIII.
Plate I.—THE LIME IN WINTER.
Plate II.—THE SAME TREE IN SUMMER.
Arranged by THOMAS HATTON. Photographed by Edward Fox.
Valuable for reference to all who wish to possess trustworthy
copies of arboreal forms. —*Athenæum*.
"Excellent studies for the landscape-painter." —*Art-Journal*.
In use at the Government School of Art, South Kensington,
where Specimens of the Plates may be seen.
Subscribers' Names received by T. HATTON, 3, Ship-street, Brighton.

**NEWSPAPER FOR THE GARDENING AND FARMING
INTEREST.**

Registered for Transmission Abroad.
Published every Saturday, price 5d., or 6d. stamped.
Each Yearly Volume complete in itself, with Title-page and Index.
**THE GARDENERS' CHRONICLE AND
AGRICULTURAL GAZETTE:**
A WEEKLY RECORD OF RURAL ECONOMY AND
GENERAL NEWS.

Table of Contents for Saturday, August 25th.

2 vols. demy 8vo. 32s.

A CENTURY OF PAINTERS OF THE ENGLISH SCHOOL;

With Critical Notices of their Works, and an Account of
the Progress of Art in England.

By RICHARD REDGRAVE, R.A.
(Surveyor of Her Majesty's Pictures, and Inspector-General
for Art),
And SAMUEL REDGRAVE.

"We must conclude our observations on this work with
congratulation to the authors on the very large measure
of success which has rewarded their efforts to produce a
connected and concise history of Art in England. It is
one of the most readable books of the kind. This is not
of the highest order. They have produced an immense
mass of new thoughts—a perfect mine of observation
described with perspicuity and the most obvious intention
to be impartial." —*Athenæum*.

"In addition to an admirable method, as regards group-
ing and arrangement, our authors add to the other charms
of their book a rich store of sparkling anecdote, and a con-
siderable amount of varied reminiscences and humour of
their own.... The book will become a great authority, and
we heartily congratulate the Messrs. Redgrave on the ac-
complishment of their great work. They were pre-eminently
fitted for the task, and English Art-literature may well be
proud of their performance." —*Reader*.

"The reader who has any taste at all for any kind of art
cannot fail to find something in these pages to gratify and
whet it; while the reader whose appetite is omnivorous
will find it abundantly supplied." —*Morning Post*.

"We do not agree with all the Masters Redgrave have
to say upon Art-matters, but there is very much that is
exceedingly interesting and extremely important in their
history." —*Press*.

SMITH, ELDER & Co. 65, Cornhill.

Francis E. Anstie, M.D. F.R.C.P.

NOTES on CHOLERA and other EPIDEMIC DISEASES: for the Use of the Public. By FRANCIS E. ANSTIE, M.D. F.R.C.P., Senior Assistant-Physician to the Westminster Hospital. Fcap. 8vo. price 4s. cloth.

"An important work, useful alike to the public and the practitioner, accurate in its facts, clear in its descriptions, and logical in its inferences, up to the most recent advances of medical science."—*Popular Science Review*.

"Contains much sound information set forth in good English. The latest and most generally accepted views of the profession on epidemic diseases in this country are very clearly presented."—*Saturday Review*.

Margaret Howitt.

TWELVE MONTHS with FREDRIKA BREMER.

IN 2 vols. with Photographs and Illustrations, price 21s. cloth.

"This charming book, charming alike in style, tone, and subject-matter. Never was a pleasanter picture than that which Miss Howitt has painted for us."—*Literary Churchman*.

"Sketched with lively good humour, and brings out interesting details of Miss Bremer's domestic habits, benevolent character, and well-earned popularity."—*Morning Post*.

"She has the hereditary genius of observation—of painting in language; in brief, commands accomplishments which do not often belong to the daughter of two poets."—*Advertiser*.

"Two volumes which give us, not only a good view of Miss Bremer in her private life, but also a most interesting description of the Swedes themselves. We are brought face to face most charmingly with Swedish manners."—*Reader*.

E. de Pressensé, D.D.

JESUS CHRIST: his Times, Life, and

Work. By E. DE PRESSENSÉ, D.D. In 8vo. price 14s. cloth.

"The real value of M. de Pressensé's treatise lies in the profound spiritual insight, and the loving and reverential seriousness which it combines with a truly scientific breadth of view. He has written on the greatest of all subjects, and has written with a simplicity of intention to instruct, with a ripeness of ability and learning, and Christian wisdom, and a largeness of comprehension well worthy to be devoted to the illustration of so great and sacred a theme."—*Contemporary Review*.

Rev. R. W. Dale, M.A.

THE FIRST BOOK of the ILIAD of HOMER rendered in the HEROIC COUPLET. By OMEGA.

"Omega sticks pretty close to the text, and translates with smoothness, elegance, and decided taste."—*Atlas*.

"Omega has succeeded. In some places there are evinced considerable care and aptitude for closeness of translation."—*Court Circular*.

LONDON: HATCHARD & CO. 187, PICCADILLY.

Crown 8vo. cloth, price 4s. 6d.

PHILOCTETES: a Metrical Drama after the Antique. By M. A.

"This is a fine poem, beautiful in detail, powerful as a whole; leaving the same sort of impression of grand majesty on us as many of the finest Greek dramas themselves; combining the self-restrained and subdued passion of the antique style with, here and there, a touch of luxuriance of conception, and everywhere that wider range of emotions and deeper love of natural beauty characteristic of the modern."—*Spectator*.

"In careful structure of plot, in classic chasteness of style and language, in nice and exact interweaving of part with part, in finish and completeness of the whole, the 'Philoctetes' of M. A. is worthy—and that is saying much—to be named in the same day with 'Atalanta in Calydon.'"—*Saturday Review*.

LONDON: ALFRED W. BENNETT, 5, BISHOPSGATE-STREET WITHOUT.

SALOM'S NEW OPERA and FIELD GLASS, and THE RECONNOITERER GLASS, price 10s. 10d., sent free.

—This "Tourist's Favourite," through extraordinary division of labour, distinctly shows small windows 10 miles off, landscape at 30 miles, Jupiter's head, &c.—"The Marksmen of CARMARTHEN:" "The Reconnoiterer is very good."—EARL OF BREADALBANE: "I find it all you say, and wonderfully powerful for so very small a glass."—EARL OF CAITHNESS: "It is a beautiful glass."—REV. LORD SCARSDALE "approves of it." LORD GIFFORD: "Most useful." LORD GAVARIN: "Remarkably good."—SIR DIOGY CAWLEY: "It gives me complete satisfaction, and is wonderfully good."—CAPT. SENDY, Royal Small Arms Factory, Enfield: "I have found it effective at the 1,000-yards range."—F. H. HAWKES, of Farnley, Esq.: "I never before met an article that so completely answered the recommendation of its maker, nor, although I have tried many, a glass combining so much power for its size with so much clearness."—*The Field*: "We have carefully tried it at an 800-yard rifle range against all the Glasses possessed by members of the Corps, and found it fully equal to any of those present, although they had cost more than four times its price." "Notes and Queries": "What intending tourist to a pleasure trip?" The celebrated "HYTHE" GLASS shows bullet-marks at 1,200 yards, and men at 34 miles, price 11s. 6d. All the above Glasses, respectively bearing the registered trade marks, "Salom," "Reconnoiterer," and "Hythe" are ready to be had direct from SALOM & CO. 28, PRINCES-STREET, EDINBURGH, and 137, REGENT-STREET, LONDON.

HUMBER'S RECORD OF ENGINEERING, 1865.

Now ready, in Imperial 4to. Illustrated by 40 Plates, with Photographic Portrait and Memoir of J. R. M'CLEAN, Esq. C.E., price 3l. 3s. half morocco.

A RECORD OF THE
PROGRESS OF MODERN ENGINEERING, 1865,

COMPRISING

CIVIL, MECHANICAL, MARINE, HYDRAULIC, RAILWAY, BRIDGE,
and OTHER ENGINEERING WORKS,

With Essays and Reviews.

By W. HUMBER,

ASSOC. INST. C.E., AND M. INST. M.E.

This volume contains detailed drawings of the principal works executed in the Main Drainage of the Metropolis (excepting the Pumping Stations, which will be included in a subsequent volume); and also detailed drawings of the Thames Embankment.

Amongst the Illustrations are the following:—Metropolitan Main Drainage: Works on the Northern Side—Works at River Lea; Bridge over Marsh Lane and Bow and Barking Railway Junction; Bridge over Main Line of Bow and Barking Railway; Bridge over the East London Water Works Feeder; Details of the Reservoirs, Outlets into the River and Penstocks. On the Southern Side—The Bellmouth Junctions of the Sewers on the Bermondsey Branch; Details of Reservoirs, and General Sections of Sewers. Thames Embankment: Steam Boat Pier, Westminster Bridge; Landing Stairs between Waterloo and Charing Cross; Landing Stairs at York Gate; Steam Boat Pier Waterloo Bridge; &c. &c., with full detailed Sections of River Wall and Subway.

The Letter-press contains a full description of the works of the Main Drainage and Thames Embankment, together with articles on the Formation of Harbours, Ports, and Breakwaters, Fortifications, Rolling Stock, and Armour Plates.

The following Volumes may still be had:—

In Imperial 4to. with 36 Double Plates, drawn to a large scale, and Portrait of ROBERT STEPHENSON, Esq. C.E., price 3l. 3s. half morocco.

A RECORD of the PROGRESS of MODERN ENGINEERING, 1864,

comprising Civil, Mechanical, Marine, Hydraulic, Railway, Bridge, and other Engineering Works. By WILLIAM HUMBER, Assoc. Inst. C.E., and M. Inst. M.E., Author of 'A Complete and Practical Treatise on Cast and Wrought Iron Bridge Construction.'

"It is, as it professes to be, a résumé of all the most interesting and important works lately completed in Great Britain; and containing, as it does, carefully executed drawings, with full working details, will be found a valuable accessory to the profession at large."—*Engineer*, Nov. 24, 1865.

Also, uniform with the above, Imperial 4to. Illustrated with 36 Double Plates, and Portrait of Mr. HAWKSHAW, price 3l. 3s.

HUMBER'S RECORD OF ENGINEERING, 1863.

"This volume is thoroughly and printed, it will find favour with many who desire to preserve in a permanent form the results of the progress of modern engineering prepared for the guidance of the contractors for many important engineering works."—*Engineer*.

MR. BUCHANAN'S POEMS.

Just published, small 8vo. 5s.

LONDON POEMS.

BY

ROBERT BUCHANAN.

"There is something very graceful in every one of these dozen 'London Idylls,' and it is the grace of thorough completeness and proportion—the sound mind in the sound body—so far superior to any mere polish or trick of style. Several are exquisitely touching."

Church and State Review, August 3.

"We hardly know of any narrative poetry greater than is found in some of these sad and mourning lines.... These verses have been lived before they were written down."

Athenæum, July 21.

"What Wordsworth calls 'the power of hills' is on him, and the glory of nature gives a sweetness, a melody, and a melancholy to his verses.... In their way some of the finest poems of the present generation.... No volume has appeared for many years in London which so certainly announces a poetic fame."—*Spectator*, July 28.

"As a poet combining simplicity with pathos, and a wonderful talent for giving to his subjects the forms of reality and life, Mr. Buchanan is unsurpassed. Among contemporaries and recent writers he is unequalled."

Court Circular, July 28.

"They are in their subject so pathetic—so repelling, one might almost say; in their realism so pre-Raphaelite; and yet in their poetic treatment so delicately and tenderly artistic, that one cannot choose but wonder and admire, and be sad over them."—*Morning Star*, July 30.

"The design of the poet—a most noble and beautiful design—becomes distinctly visible as soon as we have got over the first impression of wonder at the largeness of his intelligence, his power of dramatic individualization (so to speak), the beneficent daring with which he paints, the generous humanity of his painting, and the originality of his music.... The writings of Mr. Buchanan, however, present to the most careful, as well as to the most superficial observation every 'note' and characteristic of the true poet; and when we observe how flexible are his sympathies with all that is human, we may well slide into the adjective alarming in speaking of such a poet. If this is only the 'spring' of the arch, what is its course to be? We may well rejoice, meanwhile, in the prospect that we are to have a very great poet."—*Illustrated Times*, August 18.

DAYS OF YORE.

By SARAH TYTLER,
Author of 'Citoyenne Jacqueline,' &c.
2 vols. post 8vo. 21s.

"The meditative mood into which Miss Tytler falls in these eighteenth-century reminiscences—a mood between pathos and geniality—is very like that delightful behind-the-scenes chit-chat with which Thackeray indulged his readers so often. Indeed, if Miss Tytler were seriously to undertake a great work, to which we entirely believe her to be equal, and to make our great-grandfathers and great-grandmothers live before us once more, we would welcome very heartily the fruit of her labour, and give her work as honoured place beside 'Edmond' and 'The Virginians.'"—*Spectator*.

A R N E:

A Sketch of Norwegian Peasant Life.

By BJÖRNSTJERNE BJÖRNSSON.

Translated by AUGUSTA PLESNER and SUSAN RUGELEY POWERS.

Post 8vo. 10s. 6d.

"We know of nothing more beautiful than some of these stories. What originality, purity, and simplicity—what poetry! His heroes are peasants, his heroines peasant girls; but how happy we feel in their society—how deeply interested in what they say and do. The characters described are so true to nature, so real, that you seem to feel their presence, and fancy them old acquaintances after a few strokes of the pen. With M. Björnson a new era begins in Scandinavian literature."—*Athenæum*.
"Arne" is one of Herr Björnson's late compositions and a sweet, simple idyll it is—a strain of rustic music from beginning to end. The most delightful sketches of Norwegian life and character."—*London Review*.

COSAS DE ESPAÑA:

Illustrative of Spain and the Spaniards as they are.

By Mrs. WILLIAM PITT BYRNE,
Author of 'Flemish Interiors,' &c.
With Illustrations. 2 vols. 21s.

"We strongly commend to all who wish for accurate and full information respecting the public and private life of Spain this book of Mrs. Byrne's. Nothing escapes her keen scrutiny.... She gives such glimpses of the domestic life of Spaniards as only a woman could give, and such as are hardly equalled by her own 'Flemish Interiors.'"
"Mrs. Byrne's two volumes are readable, useful, and nicely illustrated. There are in them a fullness and minuteness of detail which are wanting in other works on the same subject, and which will therefore be all the more appreciated."—*Illustrated London News*.

A SUMMER IN SKYE.

By ALEXANDER SMITH.
With Coloured Frontispiece. Crown 8vo. 6s.

"Mr. Smith has great command of language. Every page displays ingenious expressions, highly wrought comparisons, minute descriptions. 'A Summer in Skye' is to us very interesting indeed."—*Saturday Review*.
"There are passages in the present volume which show the author's marvellous power of reproducing at will the magnificent effects of mountain scenery—passages in which a play of fancy and a true poetic insight strongly reinforce an illustration already presented with great facility of expression and rich colouring."—*Nonconformist*.
"Mr. Alexander Smith speaks of Boswell's 'Journal' as 'delicious reading'; his own work, though after a very different fashion, affords delicious reading also. His egotism is never offensive; it is very often charming. If the traveller is sometimes lost in the essayist, who will not prefer an Elia to a Pennant?"—*Daily News*.

CITOYENNE JACQUELINE:

A Woman's Lot in the Great French Revolution.

By SARAH TYTLER.
With Frontispiece and Vignette. Crown 8vo. 6s.

"Watteau himself could not more exquisitely have painted the Tour de Faye and its inhabitants, aristocratic and unaristocratic. Monsieur and Madame de Faye are perfect; portraits of the fine old patrician race; and how full of life are Mademoiselle Jacqueline, restless as Sterne's stalling, and her high-coloured maid, Babette. Not less admirable are the Sart family at the auberge, the two sons, Michel and Jonquille, being definite pictures of manhood, such as George Eliot might paint.... We pronounce 'Citoyenne Jacqueline' superior to any, except three or four, of the novels of the age."—*Press*.
"The characters stand out in marked individuality, living and breathing creatures, while the scenery is as delicately true to nature as if a Gainsborough or a Linnell had painted it. It is a charming book."—*Reader*.

QUEEN'S UNIVERSITY IN IRELAND.

QUEEN'S COLLEGE, GALWAY.

The SESSION 1866-7 will commence on TUESDAY, the 14th of October, when the Supplemental Scholarship and other Examinations will be proceeded with, as laid down in the Prospectus. The Examination for Matriculation in the several Faculties of Arts, Law, and Medicine, and in the Department of Engineering, will be held on FRIDAY, the 20th of October.

Further information and Copies of the Prospectuses may be had on application to the Registrar.

By order of the President.

WM. LUPTON, M.A., Registrar.
Queen's College, Galway, August 26, 1866.

UNIVERSITY COLLEGE, LONDON.—

THE SESSION of the FACULTY of MEDICINE will open on MONDAY, October 1st. Introductory Lecture at 3 p.m. by Professor RINGER, M.D.

LECTURES FOR WINTER TERM.

Medicine—Professor Jenner, M.D. F.R.S.
Anatomy and Physiology—Professor Sharpey, M.D. F.R.S.
Chemistry—Professor Williamson, F.R.S.
Anatomy—Professor Ellis.
Comparative Anatomy—Professor Grant, M.D. F.R.S.
Surgery—Professor Marshall, M.D. F.R.S.
Dental Surgery—Mr. Ibbetson, M.R.C.S.E.

LECTURES FOR SUMMER TERM.

Physiology—Professor Graily Hewitt, M.D.
Anatomical Anatomy—Professor Wilson Fox, M.D.
Practical Physiology and Histology—Professor Harley, M.D. F.R.S.

Medical Jurisprudence—Professor Harley, M.D. F.R.S.
Veternary Chemistry—Professor Williamson, F.R.S.
Veternary Medicine and Therapeutics—Professor Ringer, M.D.
Veternary Physiology—Professor Grant, M.D. F.R.S.
Veternary Pathology and Surgery—Professor W. Jones, F.R.S.
Veternary Anatomy—Professor Oliver, F.R.S. F.L.S.
Veternary Diseases—Lecturer, W. H. O. Sankey, M.D.
Veternary Instruction in Operative Surgery—Professor Harley, M.D. F.R.S.
Veternary Chemistry—Professor Williamson, throughout the Session.

UNIVERSITY COLLEGE HOSPITAL.

Physician—Dr. Jenner, F.R.S. Dr. Hale, Dr. Reynolds, Dr. Harley, F.R.S. Dr. Wilson Fox, Dr. Ringer.
Surgical Physician—Dr. Graily Hewitt.
Physician to the Skin Infirmary—Dr. Hillier.
Physician—Mr. Erichsen, Mr. Marshall, F.R.S., Mr. Henry Thompson.

Surgeon—Mr. Berkeley Hill.
Consulting Surgeon to the Eye Infirmary—Mr. Quain, F.R.S.
Veternary Surgeon—Mr. Wharton Jones, F.R.S.
Veternary Ophthalmic Surgeon—Mr. J. F. Stratfield, F.R.S.
Veternary Surgery—Mr. Ibbetson.

CLINICAL INSTRUCTION.

Medical Clinical Lectures by Prof. Jenner, M.D., Prof. Hale, D. and Prof. Graily Hewitt, M.D.; also by Dr. Reynolds, and Professor of Clinical Medicine, whose special duty it is to teach the pupils the practical study of disease.
Surgical Clinical Lectures by Mr. Erichsen, Holmes Professor of Vascular Surgery, Prof. Marshall, and Mr. Henry Thompson.
Lectures on Ophthalmic Cases by Mr. Wharton Jones.
Veternary Demonstrations by Mr. Stratfield.

SCHOLARSHIPS, EXHIBITIONS, AND PRIZES.

ENTRANCE EXHIBITIONS.

Two Entrance Exhibitions, of the respective value of 30l. and 100l. are announced, for two years, to be awarded upon examination to gentlemen who are about to commence their first attendance in a Medical School. The examination will be in Latin, Elementary Mathematics, Natural Philosophy, and either French or German, at the option of the candidate.
Students of the Faculty of Arts who have obtained the Jew's Scholarship may hold it during their attendance at the Faculty of Medicine.

ATKINSON MOSELEY SCHOLARSHIP for the promotion of study of Surgery, 400l. tenable for three years.

ATKINSON EXHIBITION for general proficiency in Pathology, 100l. tenable for three years.

WILSON FOX MEDAL for Clinical Surgery.

TWO GOLD MEDALS for Clinical Medicine, two gold silver.

Other Class Prizes.

Regulations and the Regulations concerning the Scholarships and Exhibitions may be obtained on application, either personal or by letter, at the office of the College.

WILSON FOX, M.D., Dean of the Faculty.

CHAS. C. ATKINSON, Secretary to the Council.

member, 1866.

Lectures in the Faculty of Arts will commence on Monday, 1st Oct.

Exhibitions will open on Tuesday, September 26th.

UNIVERSITY COLLEGE, LONDON.—

FACULTY OF ARTS AND LAWS.

Session 1866-67.

The SESSION will commence on MONDAY, October 8th. INTRODUCTORY LECTURE at 3 p.m., by Professor H. J. ROBY, M.A. Subject:—The Importance and Position of Law as a subject of General Education.

CLASSES.

Latin—Professor Seely, M.A.
Greek—Professor Malden, M.A.
Sanskrit—Professor Goldstücker.
Hebrew (Goldsmid Professorship)—Professor Marks.
Arabic and Persian—Professor Kieue, Ph.D.
Tolugu—Professor C. P. Brown.
Marathi—Teacher, Mr. W. B. Price.
Hindustani and Hindi—Teacher, the Rev. F. G. Ullmann.
Bengali—Teacher, Mr. Goolam Hyder.
Oriya—Teacher, Mr. Rustomjee Cowasjee.
Hindoo Law—Professor E. Wood, B.A.
English Language and Literature—Professor H. Morley.
French Language and Literature—Professor Camal, LL.D.
Italian Language and Literature—Professor G. Volpe.
German Language and Literature—Professor Heimann, Ph.D.
Comparative Grammar—Professor Key, M.A. F.R.S.
Mathematics—Professor De Morgan.
Mathematical Physics—Professor Hirst, Ph.D. F.R.S.
Experimental Physics—Professor Foster, B.A.
Physiology—Professor Sharpey, LL.D. M.D. F.R.S.
Chemistry and Practical Chemistry—Prof. Williamson, F.R.S.
Civil Engineering—Professor Fole, F.R.S. M.I.C.E.
Architecture—Professor Hayter Lewis, F.S.A. F.I.B.A.
Geology (Goldsmid Professorship)—Professor Morris, F.G.S.
Mineralogy—Professor Morris, F.G.S.
Drawing—Teacher, Mr. Moore.
Botany—Professor Oliver, F.R.S.
Zoology (Recent and Fossil)—Professor Grant, M.D. F.R.S.
Philosophy of Mind and Logic—Professor Grant vacant.
Ancient and Modern History—Professor Seely, M.A.
Political Economy—Professor J. E. Cairnes, M.A.
Law—Professor J. A. Russell, LL.B.
Jurisprudence—Professor H. J. Roby, M.A.

RESIDENCE OF STUDENTS.—Some of the Professors receive Students to reside with them; and in the Office of the College there is kept a Register of Persons who receive Boarders into their Families. The Register will afford information as to terms and other particulars.

Information concerning Andrews' Entrance Exhibitions, Classicals, three of 300l. tenable for three years; Andrews' Prizes, Andrews' Scholarships, Jew's Commemoration Scholarship, David Ricardo and Joseph Hume Scholarships in Political Economy, and Joseph Hume Scholarship in Jurisprudence, and other Prizes, will be found in the Prospectus of the Faculty. These may be had on application at the Office of the College.

The Session of the Faculty of Medicine will commence on Monday, October 1st.

The School will open on Tuesday, September 26th.

CHAS. C. ATKINSON, Secretary to the Council.

August 21st, 1866.

KING'S COLLEGE, LONDON.—The

THEOLOGICAL DEPARTMENT will RE-OPEN on THURSDAY, October 4.

New Students must present themselves on the preceding Tuesday, and may enter for the whole or for any part of the Course.

The following are the Subjects embraced in this Course:—

Exegesis of the New Testament, by the Rev. E. H. Plumptre, Prof.
Ecclesiastical History, by the Rev. Canon Robertson, M.A., Prof.
Pastoral Theology, by the Rev. S. Cheetham, M.A., Professor.
Vocal Music, by John Hullah, Esq., Professor.
Public Reading, by the Rev. A. J. D. O'Neary, B.D., Lecturer.

The Class of Candidates for admission to this Department, conducted by the Rev. Henry Jones, A.C.C., will re-open on the same day.

For information, apply personally, or by letter marked outside "Prospectus," to J. W. CUNNINGHAM, Esq., Secretary.

KING'S COLLEGE, LONDON.—DEPART-

MENT OF GENERAL LITERATURE AND SCIENCE.

LECTURES, adapted for those who purpose to offer themselves for the Indian Civil Service, or to enter one of the Learned Professions, will COMMENCE on THURSDAY, October 4.

New Students must present themselves for Examination on the preceding Tuesday.

Divinity—The Rev. the Principal; the Rev. E. H. Plumptre, M.A.

Classical Literature—Professor, Rev. James G. Lonsdale, M.A.; Lecturers, Rev. J. J. Heywood, and C. S. Townshend, Esq. M.A.

Mathematics—Professor, Rev. T. G. Hall, M.A.; Lecturers, Rev. T. A. Cook, M.A., and Rev. W. Howse, M.A.

English Literature, Language and Modern History—Professor, the Rev. J. S. Brewer, M.A.; Lecturers, Rev. J. J. Heywood, M.A., and C. S. Townshend, Esq. M.A.

French—Professor, A. Mariette; and M. Stiévenard, Lecturer.

German—Professor, Dr. Buchheim.

For information, apply personally, or by letter marked outside "Prospectus," to J. W. CUNNINGHAM, Esq., Secretary.

KING'S COLLEGE, LONDON.—The

SCHOOL.

Acting Head-Master—Rev. G. F. MACLEAB, M.A.

Vice-Master—Rev. JOHN TWENTYMAY, M.A.

This Department will RE-OPEN on TUESDAY, September 18.

Pupils can be admitted to—

1. The Division of Classics, Mathematics, and General Literature, the studies in which are directed to prepare Pupils for the Universities, for the Theological, General Literature, and Medical Departments of King's College, and for the Learned Professions.

2. The Division of Modern Instruction, including Pupils intended for Mercantile Pursuits, for the classes of Architecture and Engineering in King's College, for the Military Academies, for the Civil Service, for the Royal Navy, and for the Commercial Marine.

Scholarships.—On entrance to the School, every Boy under 16 years of age is entitled to compete for a Scholarship. One is given in each division of 100l. per annum for three years. The subjects will be found in the Calendar.

For information, apply personally, or by letter marked outside "Prospectus," to J. W. CUNNINGHAM, Esq., Secretary.

KING'S COLLEGE, LONDON.—DEPART-

MENT OF APPLIED SCIENCES.—LECTURES COMMENCE THURSDAY, October 4.

New Students must present themselves on the preceding Tuesday.

Divinity—The Rev. the Chaplain.

Mathematics—Professor, the Rev. T. G. Hall, M.A.; Lecturers, Rev. T. A. Cook, M.A., and Rev. W. Howse, M.A.

Natural Philosophy—Professor, W. G. Adams, M.A.

Arts of Construction—Professor Kerr.

Manufacturing Art and Machinery—Professor Shelley.

Land Surveying and Levelling—Professor H. J. Castle, Lecturer and W. Marshall, Esq.

Drawing—Professor Bradley and Professor Glenny.

Chemistry—Professor Miller, M.D. and Professor Bloxam.

Geology and Mineralogy—Professor Tennant, F.G.S.

Workshop—G. A. Timme, Esq.

Photography—George Dawson, Esq. M.A.

For information, apply personally or by letter marked outside "Prospectus," to J. W. CUNNINGHAM, Esq., Secretary.

ROYAL SCHOOL of MINES, Jermyn-street,

London.—The Sixteenth Session will commence on MONDAY, the 1st OCTOBER. Prospectuses of the course of study may be had on application to the Registrar.

TRENHAM REEKS, Registrar.

THE PRESS.—WANTED, a Situation as

READER and PARAGRAPHIST, by a Young Man, aged 26, intelligent, and of good experience. Good references.—Address E. H., Post-Office, St. Thomas, Exeter.

LONDON LETTER.—An Accomplished

Writer, moving in good Society, wishes to contribute a LETTER of LONDON TALK on Politics, Literature, Art, and Social Subjects, to a Provincial Paper; or he would furnish a weekly Leading Article. Moderate terms.—Address ERSLER, Theatrical Library, Scarborough.

THE ADVERTISER desires an Engagement

as SUB-EDITOR on a London Paper. Accustomed to proof revision. A practised Descriptive Writer and good Paragraphist. Could also undertake the Art and Musical Criticism, for which he is specially qualified. Terms very moderate for a commencement.—Siona, 6, St. Augustine-road, N.W.

PROVINCIAL NEWSPAPER.—TO BE

SOLD, a HALF-SHARE of an old-established and successful WEEKLY PROVINCIAL CONSERVATIVE NEWSPAPER. The purchaser would be expected to devote his time to the interests of the paper.—Address P. G., care of Messrs. Eyre, Boulevard-street, Fleet-street, London.

THE PRESS.—A YOUNG MAN, aged 29,

respectably connected and fully qualified, offers his SERVICES as Publisher, Assistant-Publisher, or Reader. Country not objected to. First-class references, and security if desired.—ALPHA, Post-Office, King-street, Covent-garden, W.C.

A PROSPECTUS of a New Work on the

LIFE and WRITINGS of SHAKESPEARE, printed for Subscribers only, to be profusely illustrated by Wood Engravings, will be sent free to any persons forwarding their Names and Addresses, legibly written, to J. O. HALLIWELL, Esq., No. 6, St. Mary's-place, West Brompton, near London.

On Monday,

NAPOLEON III. AND THE RHINE.

By J. POPE HENNESSY.

Robert Hardwicke, 194, Piccadilly.

LITERARY VOLUNTEERS, who may be

willing to contribute Poetry, Tales, Miscellaneous Papers, or Funds to a Weekly Periodical, and other occasional Publications, to develop a feeling for principles of Protectionist rather than of Free-trade tendency, are desired to write to STRAYMARR, Messrs. Bickers & Son, Booksellers, Leicester-square, London.

PRIVATE TUTOR.—A Scholar of a College,

Cambridge, and late Captain of a Public School, would be glad to accept an Engagement as PRIVATE TUTOR, for the next five or six weeks.—Address X. Y. Z., Christ's College, Cambridge.

A LADY, of great experience in Tuition, desires

a Re-engagement as RESIDENT GOVERNESS. She is of the Established Church, and can present the most satisfactory Testimonials of Principles and Ability. She professes to Teach English, French (acquired during a residence of some years in France), German, and Italian. Music thoroughly, though not a performer. She is also well versed in the Literature of her own and other Countries.—Address C. T., Mr. Hughes, Bookseller, 8, Park-street, Regent's Park.

BOARD.—A Physician, in a most healthy

Watering-place, in the West of England, can offer UNUSUAL ADVANTAGES, at a delightful winter residence.—Address DELTA, 10, Upper Victoria-place, Clifton.

MENTAL AFFECTIONS.—A Physician,

residing within an easy distance of London by rail, has at the present time VACANCIES in his house for TWO LADIES and ONE GENTLEMAN. This House has been established over 60 years for the reception of ten high-class Patients only.—Address M. D., care of Messrs. Whicker & Blaise, 67, St. James's-st., S.W.

EDUCATION.—OAKLEY HOUSE, WEL-

LINGTON-PLACE, READING.

The next Session will commence on Thursday, September 20th.

Mr. WATSON will be happy to forward references, &c. on application.

UNIVERSITY OF LONDON.—MR. WIL-

LIAM WATSON, B.A., formerly of Oakley-square, London, will be able to RECEIVE, on or after September 20th, TWO additional PUPILS, to prepare for Matriculation or for Degrees in Arts, Terms, 1st, a month.—For particulars apply to Mr. Watson, Oakley House, Wellington-place, Reading.

LADIES' COLLEGE, THE WOODLANDS, UNION-ROAD, CLAPHAM RISE.

The Pupils will RE-ASSEMBLE on SATURDAY, September 15th, when Classes will be formed for the usual branches of Education. The Lectures on Natural History and Chemistry will be resumed in October; those on History, Literature, and other subjects, will commence in September.

THE LONDON SCHOOL OF DENTAL SURGERY AND DENTAL HOSPITAL of LONDON, 32, SOHO-SQUARE.

The WINTER SESSION will commence on WEDNESDAY, October 2.

LECTURES.

Mechanical Dentistry—Mr. Robert Hepburn, L.D.S., on Wednesday, at 7 p.m.

Metalurgy in its Application to Dental Purposes—Mr. G. H. Makins, M.R.C.S. & F.C.S., on Friday, at 6.30 p.m.

The SUMMER SESSION will commence in MAY, 1867.

Dental Surgery and Pathology—Mr. Cartwright, F.R.C.S. L.D.S., at 8 a.m.

Dental Anatomy and Physiology (Human and Comparative)—Mr. Ibbetson, F.R.C.S. L.D.S., at 8 a.m.

General Fee for Special Lectures required by the Curriculum, 15s. 15s.

DENTAL HOSPITAL of LONDON.

ROYAL COLLEGES of PHYSICIANS and SURGEONS, EDINBURGH.

The following COURSES of LECTURES on MEDICAL and SURGICAL SCIENCE, and also those delivered in the University, qualify for Examination for the Diplomas of the Royal Colleges of Physicians and Surgeons:—

WINTER SESSION, 1866-7.

Classes open on Thursday, November 1.

Surgery—Dr. P. H. Watson.
Surgery—Dr. Joseph Bell.
Surgery—Mr. Annandale.
Chemistry: Practical and Analytical Chemistry—Dr. Stevenson Macadam.
Chemistry: Practical and Analytical Chemistry—Dr. A. C. Brown.
Physiology—Dr. Sanders.
Royal Infirmary.
Clinical Medicine (Royal Infirmary)—Drs. Sanders, Haldane, and Jackson; Dr. J. Matthews Duncan (for Diseases of Women).
Clinical Surgery (Royal Infirmary)—Dr. Gillespie.
Anatomy: Anatomical Demonstrations, Practical Anatomy—Dr. P. D. Handyside.
Medical Jurisprudence—Dr. Littlejohn.
Practice of Physic—Dr. Rutherford Haldane.
Practice of Physic—Dr. George W. Balfour.
General Pathology—Dr. Grainger Stewart.

SUMMER SESSION, 1867.

Classes open on Wednesday, May 1.

Materia Medica and Therapeutics—Dr. Scoresby-Jackson.
Pathological Anatomy and Histology—Dr. Grainger Stewart.
Midwifery—Dr. Keller.
Midwifery—Dr. J. Matthews Duncan.
Medical Jurisprudence—Dr. Littlejohn.
Royal Infirmary.
Clinical Medicine (Royal Infirmary)—Drs. Sanders, Haldane, and Jackson; Dr. J. Matthews Duncan (for Diseases of Women).
Clinical Surgery (Royal Infirmary)—Dr. Gillespie.
Anatomy: Elementary, Practical, and Microscopic; Demonstrations: Operative Surgery—Dr. P. D. Handyside.
Practical and Analytical Chemistry—Dr. Stevenson Macadam.
Practical and Analytical Chemistry—Dr. A. C. Brown.
By Order of the Royal College of Physicians,
D. R. HALDANE, Secretary.
By Order of the Royal College of Surgeons,
JAMES SIMSON, Secretary.

The INTRODUCTORY ADDRESS for Session 1866-7 will be delivered by Dr. P. H. WATSON, on WEDNESDAY, October 21, at Eleven o'clock.

EXTRA WINTER CLASS.

Vaccination (Six Weeks' Course)—Dr. Hubbard.

EXTRA SUMMER CLASSES.

Diseases of Children—Dr. Keller.
Histology—Dr. Sanders.
Military Surgery and Hygiene—Dr. P. H. Watson.
Surgical Appliances and Operative Surgery—Dr. Joseph Bell.
Surgical Pathology and Operative Surgery—Mr. Annandale.
Vaccination (Six Weeks' Course)—Dr. Hubbard.
Diseases of the Eye—Dr. Argyll Robertson.
Insanity—Dr. Skene.

The above Courses qualify for the Royal Colleges of Physicians and Surgeons, London and Edinburgh; the University of Edinburgh, and other Universities; and other Medical and Public Boards.

The minimum cost of the Education in the above School for the double qualification of Physician and Surgeon from the Royal Colleges of Physicians and Surgeons, including the Fees for the Joint-Examinations, is 50s. 4s., which is payable by yearly instalments during the period of study; whilst the minimum cost for the single qualification of either Physician or Surgeon, including Fee for Examination, is 50s.

NOTICE.—The Register at all Medical Schools is now required to be closed within *Eight days* after the commencement of each Session, except in cases of detention from illness or other unavoidable cause.

Preliminary Examinations in General Education by the Royal Colleges of Physicians and Surgeons of Edinburgh take place on October 27 and November 10, 1866, and on April 27 and July 27, 1867; and on each occasion the Examination will be continued on the succeeding Monday. Testimonials of proficiency granted by certain educational bodies will be accepted as sufficient evidence of General Education, and will exempt from the Preliminary Examination. Students who are in doubt as to the effect of the New Regulations regarding the Preliminary Examinations in General Education are requested to communicate with the Secretary to the School. STEVENSON MACADAM, Secretary to the Medical and Surgical School.

* * A Prospectus of the School will be forwarded on application to the Secretary to the School, who resides at the Surgeons' Hall, Edinburgh.

THE CHEMICAL LABORATORY, 30, GREAT MARLBOROUGH-STREET,

Is Open Daily from 10 to 5, for the Study of Chemistry, under the direction of

Mr. ARTHUR VACHER.

Terms, 15s. per Quarter, including Gas, Apparatus, Chemicals, &c.

EVENING CLASS, suitable to Gentlemen preparing for Examination, 1s. per Month, meets twice a week. Analyses of Waters, &c., executed.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.—THE SESSION WILL COMMENCE ON MONDAY, October 1, at 5 o'clock P.M., with an Introductory Address by Mr. Haynes Walton.

At this Hospital the Medical Appointments, including five House-Surgeons, the annual value of which exceeds as many Studentships of £54, each, and a Resident Registrarship at 100 per annum, are open to the Pupils without fee. It has Ophthalmic and Ophthalmic Departments, and a Children's Ward (in the new wing). The Clinical and Pathological Instruction is carefully organized.

For Prospectuses, Entry, and full Information as to Prizes, &c., apply to any of the Medical Officers and Lecturers, or to ERNEST HART, Dean of the School.

MEDICAL EDUCATION.—THE ADDRESSES

on MEDICAL EDUCATION delivered at ST. MARY'S HOSPITAL MEDICAL SCHOOL, Paddington, by the ARCHBISHOP of YORK (1864), Professor OWEN (1865), and Professor HUXLEY (1866), MAY BE OBTAINED, together with the Prospectus for the ensuing Winter Session, on application to ERNEST HART, Dean of the School.

ST. BARTHOLOMEW'S HOSPITAL, and MEDICAL COLLEGE.

The WINTER SESSION will COMMENCE on OCTOBER 1st, with an Introductory Address by Mr. SAVORY, at 5 o'clock P.M.

Consulting Physician—Dr. Burrows.

Physicians—Dr. Farre, Dr. Jeaffreson, Dr. Black, and Dr. Martin.

Consulting Surgeons—Mr. Skey and Mr. Lawrence.

Surgeons—Mr. Wormald, Mr. Facet, Mr. Coote, and Mr. Holden.

Assistant-Physicians—Dr. Edwards, Dr. Harris, Dr. Andrew, and Dr. Southey.

Assistant-Surgeons—Mr. Savory, Mr. Callender, Mr. T. Smith, and Mr. Willett.

Physician-Accoucheur—Dr. Greenhalgh.

LECTURES.

Medicine—Dr. Black.

Clinical Medicine—Dr. Farre, Dr. Black, and Dr. Martin.

Surgery—Mr. Facet and Mr. Coote.

Clinical Surgery—Mr. Skey, Mr. Facet, Mr. Coote, and Mr. Holden.

Anatomy—Mr. Holden and Mr. Callender.

Physiology and General Anatomy—Mr. Savory.

Chemistry—Dr. Odling.

Demonstrators of Anatomy—Mr. Smith and Mr. Baker.

Assistant Demonstrators of Anatomy—Mr. Vernon and Mr. Langton.

Demonstrator of Morbid Anatomy—Dr. Andrew.

Tutors—Dr. Duckworth, Mr. Baker, and Mr. Shepard.

SUMMER SESSION, commencing May 1st, 1867.

Materia Medica—Dr. Farre.

Botany—Rev. George Henslow.

Forensic Medicine—Dr. Edwards.

Midwifery—Dr. Greenhalgh.

Comparative Anatomy—Dr. Church.

Practical Chemistry—Dr. Odling.

Dental Surgery—Mr. Coleman.

Microscopic Demonstrations—Mr. Savory.

Demonstrators of Microscopic Anatomy—Dr. Southey and Mr. Vernon.

Demonstrators of Operative Surgery—Mr. Smith and Mr. Baker.

Vaccination—Mr. Wood.

The Hospital contains 650 beds—247 Medical and for the Diseases of Women; 322 Surgical and for Diseases of the Eye, and 81 for Syphilitic Cases. The number of patients exceeds 120,000 annually.

COLLEGIATE ESTABLISHMENT.—Students can reside within the Hospital walls, subject to the Collegiate regulations.

Some of the Teachers connected with the Hospital also receive Students to reside with them.

Seven Scholarships, varying in value from 20s. to 50s., are awarded annually.

The Clinical Clerks, the Midwifery Assistant, and the Clerks to the Assistant-Physicians are appointed from the most diligent Students.

In accordance with the regulations of the College of Surgeons, Students have charge of patients under the supervision of the Assistant-Surgeons.

All Students preparing for their examinations are specially examined by the Teachers of Anatomy or by the Tutor.

Further information may be obtained from Dr. Andrew, Mr. T. Smith, or Mr. Callender, at the Hospital.

QUEENWOOD COLLEGE,

near STOCKBRIDGE, HANTS.

The Course of Study embraces the ordinary English branches, Drawing, Land-Surveying, the Classical and Modern Languages.

The Natural Sciences and Practical Chemistry form a prominent feature, and instruction in them is very efficiently provided for.

For terms and further particulars, apply to CHARLES WILLMORE, Principal.

OWENS COLLEGE, MANCHESTER.

The Trustees are desirous of appointing an ASSISTANT LECTURER to aid the Professors of Classics and Mathematics in the instruction of their Junior Classes.

Information as to the Emoluments of the Office, and other particulars, may be obtained on application by letter, addressed to the Principal, at the College, Quay-street, Manchester, not later than the 15th September instant.

J. G. GREENWOOD, Principal.

JOHN P. ASTON, Secretary to the Trustees.

NEW VOLUME OF POEMS.

Now ready, in 1 vol. fcap. 8vo. 5s. bevelled boards,
THE QUADRILATERAL.
Some said, "John, print it!"
Others said, "Not so."
Some said, "It may do good."
Others said, "No!"

"There is much melodious writing and many graceful thoughts. The volume is decidedly above the average, and there is quite enough in it to make us hope we may hear more hereafter of the three active parties in 'The Quadrilateral.'"—*Union Review.*
"The Quadrilateral," with its quaint but telling title, and its trio of as yet unknown authors, deserves, and we are sure will receive, a warm welcome from all thoughtful and appreciative lovers of poetry."—*Churchman.*
"The poems are in good taste, and always graceful and pleasing."—*John Bull.*
"Contains some very good bits of modern poetry."—*Oxford Times.*

London: Saunders, Otley & Co. 66, Brook-street, W.

Now ready, price 6s.
AN INDEX to the PEDIGREES contained in the Printed Herald's Visitations. By GEORGE W. MARSHALL, LL.M.

"Compiled with evident care."—*Herald and Genealogist.*

"This valuable boon for consultation."—*Field.*
London: Robert Hardwicke, 192, Piccadilly.

This day is published, price 1s.; by post, 1s. stamps.
ON A NEW METHOD OF TREATING DEAFNESS, by applying Atomized Fluids to the Mucous Membrane of the Eustachian Passages, and Drums of the Ear. By EDWARD BISHOP, M.D. and M.B. &c., Surgeon to the Ear Infirmary, Saville-street.
John Churchill & Sons, New Burlington-street.

Second Edition, post 8vo. 6s. cloth,
SERMONS PREACHED at KING'S LYNN, by the late Rev. E. L. HULL, B.A.

"There is true genius in Mr. Hull: power of expressing striking thoughts in striking words; of laying hold on the central interest of a topic and carrying it with masterly force into the hearts of his hearers, and this with singularly good taste. We do not know where we have met with sermons in which fervid eloquence and sobriety of judgment were more happily united."
"The Sermons of the Rev. E. L. Hull, late Minister of Union Chapel, King's Lynn, strike us as in a very special degree thoughtful and original. As to sectarianism, we wish that one tenth of the sermons of the English Church were as free from it as these productions of the Nonconformist pulpit."
Full Mail Gazette.
London: James Nisbet & Co. 21, Berners-street, W.

This day, cloth limp, with Map, 5s.; by post, 5s. 3d.

CHASTELARD: a Tragedy. By A. C. SWINBURNE. In fcap. 8vo. cloth, price 7s.

ALGERNON CHARLES SWINBURNE.

THE QUEEN MOTHER, and ROSAMOND: Two Plays. By A. C. SWINBURNE. In fcap. 8vo. cloth, price 6s.

CHARLES LAMB.

A MEMOIR of CHARLES LAMB. By BARRY CORNWALL.

"Finally does Mr. Procter draw the moral of the tale he has written; would he could anticipate other such Lives of the Poets and Men of Letters of our century."—*Edinburgh*, July, 1866.
"Full of grace and sweet thought, and grave, glad memories and deep earnestness."—*Athenæum*.
"Very full, very clear, and very free from all the defects of modern biographies."—*Spectator*.
"Strength of simplicity, with fine perception of the truths of life, and delicate skill in expression, give a rare charm to this Memoir of Charles Lamb."—*Examiner*.
"It is tenderly and delicately written, enriched with excellent criticism."—*London Review*.
"As a memoir, as well as in its topographical excellencies, the book is perfect."—*Reader*.
In demy 8vo. profusely illustrated, price 12s.

SIR GEORGE YOUNG, BART. M.A.

A SELECTION from the WORKS of W. MACKWORTH PRÆD, M.P. Edited and Prefaced by Sir GEORGE YOUNG. Cloth bound, 5s.; ditto, gilt edges, 6s.; morocco gilt, 10s. 6d.
London: Edward Moxon & Co. Dover-street, W.

In crown 8vo. 4s. 6d. bound, with 200 newly-engraved Diagrams,
EUCLID'S ELEMENTS OF PLANE GEOMETRY, with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

By W. D. COOLEY, A.B.,
The Negroland of the Arabs, &c.
"This is the best edition of the Elements which has yet appeared. By the occasional use of algebraic symbols for words, the author has both shortened and simplified the reasoning."—*Athenæum*.

Uniform with the 'Elements,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or, a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 120 Propositions, deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.
"The propositions are demonstrated, in most instances, in the plainest and neatest manner; so that the work may justly claim, what it professes, to be a HELP TO TEACHERS."—*Scholastic Journal*.

New Edition—Fcap. 8vo. price 1s. 6d.

COOLEY'S FIGURES OF EUCLID; being the Diagrams illustrating the 'Elements,' with the Explanations printed separately for Use in the Classroom.
Whittaker & Co. Ave Maria-lane, London.

BRITISH ASSOCIATION.

ALLEN'S HANDBOOK TO NOTTINGHAM; to which is added, a Valuable Series of Essays on Subjects of Local Interest. 250 pages, 2s. cloth; gilt edges, 3s.

"The visitors to Nottingham also, and above all the excursionists, enjoyed a great advantage in the publication, just at the critical moment, by Mr. Allen, of what nominally is but a handbook, but in reality a condensed and admirably-written county history. By common consent it was pronounced a useful work." *Times*, Sept. 1st.

London: W. Kent & Co. Paternoster-row.
Nottingham: R. Allen & Son.

THE COMPLETION OF THE CAMBRIDGE SHAKESPEARE.

Just ready, 8vo. cloth, price 10s. 6d.

THE WORKS OF

WILLIAM SHAKESPEARE.

WILLIAM GEORGE CLARK, M.A.,
Fellow and Tutor of Trinity College, and Public Orator in
the University of Cambridge;

And WILLIAM ALDIS WRIGHT, M.A.,
Librarian of Trinity College, Cambridge.

VOL. IX. COMPLETING THE WORK.

Contents: Antony and Cleopatra—Cymbeline—Pericles—and
the Poems.

Macmillan & Co. London.

Just ready, 9 vols. 8vo. cloth, price 4l. 14s. 6d.

THE CAMBRIDGE SHAKESPEARE.

THE WORKS OF

WILLIAM SHAKESPEARE.

EDITED BY

WM. G. CLARK, M.A., and WILLIAM ALDIS
WRIGHT, M.A.

"We regard the appearance of the Cambridge Shakespeare as an epoch in editing the works of the foremost man in the dramatic world. Besides many positive virtues in this edition, the hitherto prevailing errors are avoided. The gross blunders and unauthorized fancies of generations of editors are banished from the text; the more tolerable or the less noxious conjectures are removed to the notes; space is allowed and justice is rendered to all former labourers in the editorial field. He who is indifferent to verbal criticism may read in peace an orthodox text; and he who is curious in such matters will find various readings supplied to him in full measure."—*Saturday Review*.

Macmillan & Co. London.

ALFRED BATE RICHARDS.

RELIGIO ANIMÆ, and other Poems.

By A. B. RICHARDS.

Elegant cloth, price 7s.

London: EDWARD MOXON & Co. Dover-street, W.

EGYPT: from the Conquest of Alexander the Great to Napoleon Bonaparte. An Historical Sketch. By Rev. G. TREVOR, M.A., Canon of York, Author of 'Ancient Egypt: its Antiquities, Religion, and History.' With a Map. Fcap. 8vo. 2s. cloth boards. [Just out.]

Religious Tract Society, 55, Paternoster-row, and 164, Piccadilly.

OUR AUSTRALIAN COLONIES; their Discovery, History, Resources, and Prospects. By SAMUEL MOSSMAN, Author of the Articles "Australia" and "Australia" in the 'Encyclopædia Britannica,' &c. With Maps. Fcap. 8vo. 3s. 6d. cloth boards. [September 1st.]

Religious Tract Society, 55, Paternoster-row, and 164, Piccadilly.

THE AWAKENING of ITALY and the CRISIS of ROME: being a Four Months' Tour of Observation in the Summer of 1864. By the Rev. J. A. WYLLIE, LL.D., Author of 'The Papacy,' &c. Crown 8vo. 5s. 6d. cloth boards. [Recent.]

Religious Tract Society, 55, Paternoster-row, and 164, Piccadilly.

AUTOBIOGRAPHY of a PROTESTANT, condemned to the Gallies for the Sake of his Religion. Translated from the French. [Nearly ready.]

"We do not hesitate to say that a more valuable contribution to the records of genuine martyrdom could hardly be found. The style of the narrative in its graphic simplicity reminds us of Defoe; but the well-authenticated facts which it relates are more interesting than fiction, and the incidents not less strange." *Quarterly Review*.

Religious Tract Society, 55, Paternoster-row, and 164, Piccadilly.

ANNOTATED EDITION of HYMNS, Ancient and Modern. Edited by Rev. L. C. BIGGS, Grendon, Northampton. With Latin and German Originals, and Translations in parallel columns with the Text of the Book. Scripture References, &c. Price, to Subscribers before Oct. 15th, 7s. 6d.; to Non-subscribers, 12s. 6d. A small reduction to the Trade subscribing. Prospectus free.

THE MONK. By MONK LEWIS.

Illustrated Octavo Edition of this Popular Work, 4s.; by post, 4s. 4d.

London: J. & H. PURKISS, Publishers, 60, Dean-street, Soho, W.

STANFORD'S TRAVELLING MAPS, 12 miles to the inch, showing the Roads, Railways, Canals, &c. suitable to the Tourist, the Traveller, the Counting-house, the Library, the Hotel, &c. ENGLAND and WALES, 3s. by 48 in. sheet, coloured, 8s.; in case, 10s. 6d.; roller, varnished, 15s.—SCOTLAND or IRELAND, each 2s. by 21 in. sheet, 8s. 6d.; case, 4s. 6d.; roller, varnished, 9s.

London: E. STANFORD, 6, Charing Cross, S.W.

FOR EVER AND EVER.

By FLORENCE MARRYAT,

(Daughter of the late Captain Marryat, R.N.)

Author of 'Love's Conflict' and 'Too Good for Him.'

RICHARD BENTLEY, New Burlington-street.

WORKS OF GENERAL INTEREST,

At all Libraries and Booksellers'.

SECOND EDITION of UP THE

COUNTRY. By the Hon. EMILY EDEN, Author of 'The Semi-Detached House' and 'The Semi-Attached Couple.' In 3 vols. crown 8vo. 21s.

From the Times.—"In cabinet pictures of domestic life in India Miss Eden's book is scarcely equalled. To those who have never seen the country it will be as full of interest and amusement as to the old Indian, for of all the letters here reprinted there is not one which is not full of life and humour. They contain by far the most picturesque and vivid descriptions of life in India which have been laid before the public for many years, and are as fresh and vigorous as if they had only come by the last overland mail."

From the Fortnightly Review.—"There is a delightful charm about these letters. Nothing can be more graphic than the manner in which Miss Eden describes life in India. The freshness, the humour, the feminine vivacity with which she narrates what she saw, did, and endured will attract readers of all classes. We do not read about India; we see it. There is not a dull letter in the volumes."

From the Saturday Review.—"Miss Eden has performed the astonishing feat of writing two volumes about life in India which are thoroughly amusing and readable, from the first page to the last. She never seems to go anywhere without bringing back some comical trait of character or life, which is described in the happiest style."

"Not a page too long."—*Full Mail Gazette.*

"Anything more refreshing, genial, and laughter-provoking than these letters, it would be difficult to find."—*Spectator.*

"One of the most seducing books one can get hold of."—*Reader.*

LIFE of the MARCHESA GIULIA

FALLETTI di BAROLO (Reformer of the Turin Prisons). By SILVIO PELLICO, Author of 'Le Mie Prigioni.' From the Original by Lady GEORGINA FULLERTON. 1 vol. post 8vo. 6s.

New Work by the Author of 'Mary Powell.'

The FAIRE GOSPELLER, Passages in the Life of MISTRESS ANNE ASKEW. By the Author of 'Mary Powell.' In 1 vol. crown 8vo. 10s. 6d.

WHICH SHALL IT BE? a Novel.

In 1 vol. post 8vo.

AFTER the STORM; or, Brother

Jonathan and his Neighbours in 1865-66. By J. E. HILARY SKINNER, Barrister-at-Law, Author of 'The Tale of Danish Heroism.' In 3 vols. post 8vo. 21s.

"As readable and thoroughly entertaining a book about American life and politics as any we have read for some time past. Mr. Skinner deserves emphatic praise for his sagacity in reading character, and the lightness and skill with which he tells a good story."—*Athenæum.*

THRICE HIS: a Novel. In 2 vols. post 8vo.

The NATURALIST in VANCOUVER

ISLAND and BRITISH COLUMBIA. By JOHN KEAST LORD, F.R.S., late Naturalist to the British North American Boundary Commission. 2 vols. crown 8vo. with many beautiful Illustrations. 34s.

"One of the very pleasantest works on natural history that has been our fortune to meet with. The author has a free and happy pencil, and in his descriptions bird, beast, fish, and insect live before us, until we seem to know them."—*Globe.*

"Mr. Lord is a frank hunter, a trustworthy describer, and a clear-headed naturalist. We expected great things from the publication of this book, and we have not been disappointed."—*Reader.*

The BANDOLERO: a Tale.

By Captain MAYNE REID. In 1 vol. post 8vo. with 10 Illustrations, price 6s.

RICHARD BENTLEY, New Burlington-street,
in Ordinary to Her Majesty.

BLACKIE & SON, 44, Paternoster-row.

LONDON, SATURDAY, SEPTEMBER 8, 1866.

LITERATURE

Ti-Ping Tien-Kwoh; the History of the Ti-Ping Revolution, including a Narrative of the Author's Personal Adventures. By Lin-Le. 2 vols. (Day & Son, Limited.)

MAN is intensely selfish; an infinitesimally small pain in his own body seems to the individual of more importance than the ruin of a far-off nation. The fall of a house in Holborn occasions more sensation in London than an earthquake at Bogota, and the murder of a single person in a railway-carriage near home excites vastly more interest and remark than the slaughter of a million Chinese. Of course! It cannot be expected that our sensations will be as vivid, when we merely hear the recital of what has happened in the dim distance, as those we experience in witnessing scenes of horror with our own eyes, or when they happen, as it were, within our own ken. This, however, does not sufficiently explain the extraordinary apathy of the British nation as to the late civil war in China—a war of such magnitude, and fraught with such results, that nothing that has ever happened in the world's history, save one event alone, can justly be declared more momentous. If we regard the numbers engaged in this stupendous conflict, can it be dwarfed by comparison with any previous struggle? A third of the whole human race is involved in an internecine contest; and seventy millions of reformers are in arms against three times their number who passively or actively support the tyranny of the Manchús. If we shudder at the sufferings of our fellow men, what that is told of the agonies of the Jewish nation in their fierce struggle with Rome,—what that we read of the devastating marches of Tímur and Jangiz, and the other scourges of the human race,—can surpass the horrid cruelties inflicted by the Imperialist Chinese on the Ti-pings! If the infamous Yeh alone slaughtered 70,000 men, women, and children in a single province, what should be the computation of the whole mass of victims! Undoubtedly, in saying a million of human beings were put to the sword by the Manchús we should be leaving a very broad margin, while a much greater number perished by famine. All this may be very true, the English reader will perhaps say, but what's Hecuba to us or we to Hecuba? All the world must die; a thousand millions, more or less, die every generation, and of these a goodly per-centage are cut down by violent deaths; what then? we cannot help it. Yes; but in this case, if there be a grain of truth in the book before us, a vast number of the deaths lie at our door! The struggle between the Manchús and the Ti-pings was almost at an end: it was English intervention that rekindled a flame which had almost died out; and to the English Government belongs the discredit of having caused more blood to flow than has been shed since the wars of the First Napoleon.

We regret that the author of this book did not give his name. It is impossible to read it without seeing that there is, at least, a good deal of truth in it; but when such grave charges are brought against men in authority, it would be better that the accuser should appear in person. We would like to see the vizor up before the lance is broken. Be that as it may, the narrative is full of interest. We believe it to be true, and it is, at all events, as entertaining as any novel.

But the importance of the work must be rated according to its accuracy as a guide in

solving the grave political question, "How far was the English Government justified in its interference in the Ti-ping war?" It would occupy too much space to argue this matter to an end, and we must content ourselves with mentioning the leading facts, on which argument must be based. It is a fact, then,—an incontrovertible one,—that the Manchús are a foreign tribe, insignificant in point of numbers, ruling over the vast Chinese nation; that their reign has lasted two centuries, not five, as Lord Palmerston hardly asserted; and that they are as much foreigners now to the people they govern as at the commencement of their usurpation. It is a fact that the government of the Manchús is one of the most despotic the world ever saw; that their laws are so ruthless and so odiously unjust that it would be incredible that they could ever be carried out, did not the blood of millions perishing by every kind of frightful death attest the fact of their being obeyed. It is a fact that the only religions tolerated by the Manchús are a mixture of hateful and debasing servility to man and idiotic superstition towards God. It is also certain that scarcely any circumstances can justify a Government in interfering in the civil wars of a foreign nation; that Lord Russell fully acknowledged this as regards powerful States, such as America, where danger was to be apprehended from a violation of the principle; and that even in reference to China he made a great pretence of adherence to the rule. Lastly, it is a fact, that while incessantly protesting that he would scrupulously maintain non-intervention, our Foreign Minister did sanction not only the enlistment of British officers and men in the service of the Manchús, the supply of arms and artillery to them, but also the attack and slaughter of the Ti-pings by the British army and fleet. None of these things can be denied; and impartial men in general will think, these broad facts being true, it is quite unnecessary to scrutinize details. If the Ti-pings were as bad as they have been represented to be, it would make little difference, for none but a packed jury would say they were as bad as the Manchús; and bad or good we had no right to interfere.

Certainly war is not attractive in any case, but few wars have more odious aspects than those we have engaged in with the Chinese. Our first war with that people was waged for the right to supply them with opium; our second ended with the almost universal suppression of Christianity in China for a time,—we say for a time, for the Ti-pings, though driven to the south, are not wholly subdued; and we may hope that a sect which first published the Scriptures in the Chinese tongue, abolished slavery, and gave equal rights to women, will yet recover Nankin. The Tátar tyranny has been patched up, but only for a brief moment. It is receiving shocks in other quarters: the Nyen-fai and the Mohammedans are detaching whole provinces from the rule of the Manchús. The end will come ere long; in the mean time, we do not envy those who, calling themselves reformers at home, have done their best to extinguish every spark of liberty and free thought among the millions of China.

But we must now turn to the author, who lands at Hong-Kong in the summer of 1859, and opens the book with the following story of what befell one of his friends in the harbour of that much-abused island:—

"At this moment, and while still a considerable way from his own vessel, which happened to be lying outside all the others in port, he was suddenly

struck with some heavy weapon by the man behind him, who was steering. Through a forward movement which he made, the blow luckily missed his head and struck him on the shoulder. Mellen very fortunately had a small revolver with him, and at the moment when the rest of the boatmen started from their seats and rushed to attack him, he turned and shot his first assailant, had just time to face them, firing again and wounding the foremost, when they were upon him, armed with formidable knives and the heavy thole-pins used to fasten the oars. In an instant he received several wounds, though providentially his assailants were too much in each other's way to use their murderous weapons effectively; but his revolver being self-acting, without a pause, he was enabled to shoot dead another, and severely wound a fourth. At this, seeing four of their number *hors de combat* almost within five seconds, two of the remaining robbers lost heart, and jumped overboard to swim for it; the last, a large, powerful fellow, closed with Mellen in a fierce and deadly struggle. My friend's revolver was empty; so, abandoning the weapon that had already rendered such good service, he grappled with his adversary, endeavouring to wrest away the knife with which he was armed. In the meanwhile, the reports of the pistol and the noise of the struggle had reached the wakeful ears of my friend's wife, who was by good chance on deck, waiting and watching for her husband's return. Piercing the darkness of the night with eager eyes, she faintly discerned a boat in the distance, outside all the other ships, and naturally concluded it must be bound for their vessel. In agony for her husband's safety, she aroused the crew, seized a pistol from the cabin, and set off in the gig to overhaul the boat which had attracted her attention. The gig's crew pulling fast, arrived at the scene of conflict not an instant too soon; for Mellen, being in weak health, was succumbing to the superior strength of his antagonist, who, with one hand grasping him by the throat, was making fierce efforts to release the other, and plunge the dagger it held into my friend's breast. Just at this critical moment, Mrs. Mellen and her boat's crew arrived alongside, and, seeing all the danger, she presented the pistol at the Chinaman and fired; the ball passed directly through his head and laid him lifeless at her husband's feet. This gallant act was but one of many instances in which that courageous woman had saved her husband's life, and in defending which she eventually lost her own—a fruitless though noble sacrifice."

An interval of some months spent in voyaging from Hong-Kong to Swatow, Amoy, Foo-chow, and Shanghai familiarized the author with the inhabitants of the seaboard. At last his vessel was ordered to Whampoa, and he there encountered a beautiful Portuguese girl from Macao, whose father wished to force her into a marriage she abhorred. Marie becomes the heroine of the story, and, after many strange adventures, marries the author, and is murdered by the Imperialists. Long before this happened, however, the narrator had entered the service of the Ti-pings, of whose dress and appearance he gives the following description:—

"One of the most remarkable contrasts between the Ti-pings and their enslaved countrymen, the Imperialists, and the first to attract the observation of foreigners, is their complete difference of appearance and costume. The Chinese are known as a comparatively stupid-looking, badly-dressed race; the disfigurement of the shaven head not a little causing this. One presents a type of the whole—a dull, apathetic countenance, without expression or intelligence, except what resembles the half-cunning, half-fearful manner of slaves; their energies seem bound, their hopes and spirits crushed by wrong and oppression. The Ti-pings, on the other hand, immediately impress an observer by their intelligence, continual inquisitiveness, and thirst for knowledge. It is, indeed, utterly impossible, judging from their different intellectual capacities, to come to the conclusion that they are both natives of the same country—a difference more marked cannot be conceived. The Ti-pings

are a clever, candid, and martial people, rendered peculiarly attractive by the indescribable air of freedom which they possess. Where you would see the servile Tartar-subdued Chinamen continually cringing, the Ti-pings exhibit, even in the face of death, nothing but the erect, stately carriage of free men. It is a singular fact that the handsomest men and women in China are to be seen in the Ti-ping array. This may possibly be partly the result of their difference of dress and of wearing the hair, but the main cause is undoubtedly the ennobling effect of their religion and freedom. The dress consists of very broad petticoat trousers, mostly of black silk, bound round the waist with a long sash, which also contains their sword and pistols; a short jacket, generally red, reaching just to the waist and fitting tight to the body, forms their upper garment. But it is the style in which they wear their hair that forms their principal ornament: they allow it to grow without cutting; it is then plaited into a queue at the back of the head, into which is worked a tail of red silk cord; and it is always worn wound round the head in the form of a turban, the end, a large tassel, hanging down on the left shoulder. Their shoes are of varied colour, with flowers and embroidery worked all over them (the boots of Imperialists are quite different, being not only slightly of another shape, but always plain). During my subsequent intercourse with the Ti-pings I found the above costume the summer one of the soldiers; the body-guards of the different chiefs wear their own particular colours, the edges of the jacket being always embroidered and braided with a different one, forming a regular uniform. In the cold weather they mostly wear fur-jackets, or other warm garments. The colours of their clothing vary much, in some cases the jacket being black silk and the trousers white, and in others blue, black, white, red, or yellow, according to their different corps. Yellow is the colour of only the highest chiefs, or of their king. The chiefs all wear long outside dresses, reaching to nearly the feet, of either blue, red, or yellow silk, according to their rank. On the head they wear a silk scarf, or hood, with a jewel fastened to the front as the badge of their position. In hot weather one and all wear large straw hats very prettily embroidered, the crown quite small, and the brim about a foot broad, which gives them a very gay and singular appearance. The great chiefs who are titled Wang (generalissimos, or governors of districts), have a much more costly and elaborate dress. Upon all occasions of importance they wear their state robes and coronets, and the appearance they present when so arrayed is really magnificent. Being almost invariably men of a very energetic and expressive mien, when attired in their long robes, covered with ancient Chinese designs, fabulous animals, or fancy patterns, all worked in gold, silver, and jewels, with their jewelled coronets, and with their gold-embroidered shoes, it would be utterly impossible to imagine a more splendid or effective costume. Many of the Ti-pings come from the province of Honan, and the Chinese say the natives of that part are the handsomest in China. The truth of this I fully believe, for having made it a particular point of inquiry to ascertain the native place of every Ti-ping I have met of more than ordinary appearance, I have invariably found the best-featured were either Honan men or came from the hilly parts of the Kiang-si province. Honan forms a central portion of China, and has long been remarkable for producing some of the best soldiers; but it is especially its *braves*, who man great numbers of the Mandarin gunboats which are used all through the inland waters, that are celebrated for their courage. The Honan people are easily distinguished by the lightness of their complexion; the shape of their nose, which is high and well-formed, like the European; the largeness, and little approximation to the oblique, of their eyes; and their superior stature. In a few cases I have met men not inferior to any race in the world for beauty, while it would be difficult to imagine a more picturesque bearing than they present with their dark massive hair wound around their heads by scarlet silken fillets, so as to form a shade for their expressive eyes and animated coun-

tenances. Some of these youthful Honan Ti-pings are as well featured and handsome as an Andalusian beauty, their black eyes and long lashes, olive complexion, and beardless faces rendering the resemblance more striking."

At Soo-chou-foo the author was introduced to one of the most remarkable of the Ti-ping leaders, the Chung-wang. Being already well affected to the Ti-ping cause, he was so impressed by this remarkable chief, that he determined to take service under him. Part of his duty was to visit Shanghai, and there procure supplies for the reformers in whose cause he had enlisted. This led him into many adventures, as the river between Nankin and Shanghai swarmed with pirates, the Imperialists themselves being at once the most barbarous and the most indiscriminating of the plunderers. At last he encountered a danger from which he escaped with the greatest difficulty, and which might well have induced him to abandon so dangerous a service. He had been detained at a mud fort by the Imperialists, and was endeavouring to get back to his vessel:—

"When the mandarin rolled on the beach, several of his officers seized him and dragged him up the bank, regardless of the struggles he made to return and attack me. Fortunately A-ling arrived upon the scene at this moment, and, going to the mandarin, told him that he would go on board and bring the money required. While the leader of the robbers was being brought to his fort, A-ling was taken on board our vessel, after receiving my assent, to procure the dollars from P—. Meanwhile the soldiers remained in the same position around myself, while I endeavoured to show them my indifference by producing a cigar and lighting it. After A-ling had paid the money into the coffers of the banditti, he came to me with two inferior officers, and, getting the soldiers to fall back, induced me to descend from my position of vantage, believing all danger was over. Although at first they seemed quiet enough and retired from the boat, I had no sooner reached some little distance from it than they crowded round me. Suddenly, and before I could use my revolver, I was seized from behind by many hands, and while every incident of my life rushed with supernatural rapidity and minuteness of detail through my mind, I was forced upon my knees, when one of the soldiers raised a long and heavy sword to behead me. The steel flashed as it was raised above me, and, commending myself to God, I shivered while for a fearful moment awaiting the blow. Again, however, I was saved from the very jaws of death. My would-be executioner was thrust aside, and I believe that I fainted for a second or two. I then found myself surrounded by a strange mandarin and his attendants, A-ling, my cook, and a few of the more kindly disposed among the robber band. A-ling informed me that the stranger was a 'civil' mandarin, who had just arrived from a neighbouring city; that he had happened to notice my gold band, and had opportunely rushed forward and rescued me. Thus for the first time the uniform had done me good. At first, after expressing my gratitude, I felt perfectly safe under the protection of the fresh arrival, for I knew that the rank and authority of a civil mandarin was far superior to that of a military one, like the commandant of the Mud Fort. However, upon the people around me moving a little away, I saw two soldiers on the ground, two dead and one severely wounded; for it appeared that P—, upon observing my seizure, had opened fire on the crowd. It was now evening, and the dusk was fast approaching, and it was evident that not a moment should be lost in getting away from the place. Two men had been killed, and their chief would undoubtedly endeavour to avenge their death. After giving the watch I wore as a memento to the mandarin who had so kindly saved me, and being supplied with a boat by him, I at last got safely on board with A-ling and the cook. My friend P— had barely gripped me by the hand and congratulated me upon my escape, when we were startled by the blowing of the war-horns on shore, and the clang of gongs. While we were

hard at work getting our vessel under weigh, the soldiers came rushing down to the beach again, waving their flags and arms about, planting their gingalls, and swearing vengeance for the death of their comrades. In a few minutes they opened a heavy fire among us, while a number of them ran along the bank in the direction of a creek where their gunboats were moored. The wind had fallen comparatively light, and we would not have been able to escape from the smaller vessels of the enemy, when, to our great joy, a steamer rounded the bend of the river below, and came into full view. At this moment the gunboats were just shoving off from the shore, but directly they observed the steamship only a few miles distant they pulled up the creek again, while the men along the beach ceased firing and ran into the fort, doubtless believing that the approaching vessel was the man-of-war I had told them about. When the steamer had arrived pretty near, I signaled her, and saw that she was one of the American river-boats. To my horror, when close alongside she hoisted the Imperialist flag, and I then knew her to be the *Williamette*, a vessel belonging to the Manchoo Government. When right abeam she stopped, and sent a boat to my vessel. Fortunately she was manned with an American crew, and in consideration of the sum of 300 dollars, her captain, whose name, singularly enough, happened to be Friend, Imperialist though he was, agreed to tow my vessel up to the Nankin forts. Before dark we had the satisfaction to bid adieu to the Mud Fort, as we ploughed up the fast-rolling yellow waters astern of the *Williamette*. To our sorrow, however, we were just able to discern on the beach the execution of our *leader*, who was dragged down and decapitated there before our eyes, while we were powerless to save the poor fellow."

The extracts we have given will suffice to show the stirring nature of the scenes recorded by Lin-Le.

The Glorious Gospel Unfolded. By Henry Webb. (Simpkin, Marshall & Co.)

THE object of this thick octavo volume is to exhibit those truths of salvation which are fundamental in their due relation to one another, and to record nothing but what is well authenticated by the Scriptures,—the standard commonly taken for verifying the doctrines of faith. It is therefore of the nature of a confession of faith, giving primary and secondary doctrines in detail, and attempting to show that divine revelation calls upon all to believe the former implicitly; while the latter form debatable ground on which there may be diversity of view without impairing the other. It is not the province of this journal to discuss theology or enter into the doctrines of revelation. We can only speak of the manner and spirit in which the book is written, the qualifications of the author for his work, and the style that characterizes it.

Mr. Webb has attempted a great task. To gather a body of divinity out of the Bible, establishing it by proof texts and passages,—to hold forth the doctrines essential to salvation and those that are not,—to elucidate the divine teachings to the satisfaction of inquiring students of Scripture, and so to promote the union of true Christians, requires unusual acquirements and an amount of self-reliance which many are too modest to assert. He has not succeeded in convincing us that he is able to do what he attempts. The book is a cumbersome system of theology, ill-written, often illogical, showing narrow conceptions of Biblical statements, a contracted mind, no learning or acquaintance with the original languages in which the sacred books were written, and complete ignorance of the recent helps which criticism has furnished towards the right understanding of the Bible. The author evidently lives in the old theology of Owen and like writers of his time; and has gone to the Sacred Book with

a dogmatic system already constructed in his mind, that he may support it. His system is Calvinistic. According to him, the Bible is Calvinistic, inculcating predestination, personal election from eternity, partial atonement, everlasting damnation, and all cognate particulars. In proof of these and their related subjects he is ready with texts in abundance, as well as with large quotations from writers who are by no means worth quoting.

There is nothing new in all this. Turretin, Stapfer and Maestricht did the same long ago. More recently Hill and Dick traversed the ground. Compared with the last two, and especially with Hill, Mr. Webb's production is immensely inferior; just as it is to Calvin's Institutes, that masterly compendium which will ever form the text-book of Calvinistic theology. Hence the present work was not needed. All that it contains and contends for had been previously stated in a much better form, and with a logical ability to which our author can lay no claim. Besides, the taste for this mode of presenting the Biblical teachings has greatly declined. The strong meat furnished by Calvin and his followers is not so palatable as it used to be, especially as it is often brought out of the Bible by processes which sound interpretation disapproves.

The book contains many erroneous interpretations of passages in the Bible. The twelfth chapter alone has not a few. "The angel of the Lord," in the Old Testament, should not be rendered *the angel Jehovah*, as the author says; and every Hebrew scholar rejects the assertion that Messiah is called in the Psalms "*Lord and Jehovah*."

We greatly doubt whether the creed of the author be that of the sacred writers. But it is very common to attribute our own views to others, be they ever so repugnant to reason and conscience. A few sentences will show the character of Mr. Webb's opinions and spirit:—

"All error, whether voluntary or involuntary, is condemned by God as sinful."—"It is out of character to address the unconverted as interesting spectacles of children refusing the kind offers of the Eternal Parent who dotes upon them, but cannot persuade them to do what he would have them. They are the despisers of his goodness, his goodness even in temporal things,—and therefore that is a point to be urged upon them. They should be addressed in their true character as rebels, reprov'd for their enmity towards him, their proud rejection of salvation, their love of their present ways as far as they minister to their lusts."—"The fall of mankind in their first father Adam was foreseen, and also their consequent just condemnation for guilt."—"All Christ's bodily sufferings were satisfactory."

It is very improbable that the book before us will be read throughout by any who wish to be instructed in the doctrines of the Bible and are able to judge of the value of evidence. Matter and manner are more likely to repel. The author has much to learn, much to unlearn also. Without the least glimpse, as far as we can see, of the great principle of development which is necessary to a right understanding of the Bible, he has issued a lumbering volume, conceived and executed in a confined atmosphere of thought—a little Goshen of his own. Men of learning and enlarged minds will not enter his Goshen, believing that there is more light outside it. Hey's Lectures on Divinity, though published some seventy years ago, are worth loads of the present production.

NEW NOVELS.

The Second Mrs. Tillotson: a Story. By Percy Fitzgerald, M.A. 3 vols. (Tinsley Brothers.) 'The Second Mrs. Tillotson' is full of perverse cleverness, and is as uncomfortable a story

as can be imagined. The characters are well drawn. The mere outward characteristics of men and things are touched with quick, graphic power; but they are destitute of real human nature. The author shows no sort of insight into the truth of things. The tale is vague, rambling, and entirely unsatisfactory. It needs close attention to catch the connexion of the different incidents. The author revels in his power over details until the proportion of the general structure of the work is lost, and the incidents which are important to the development of the story are stifled and overlaid by them. 'The Second Mrs. Tillotson' is a tale of fatal foolishness from the beginning to the end; and the reader is pained and distressed to see creatures represented as human beings acting so wildly and suffering so much. Real men and women commit weak and wicked actions; but a restraining power of common sense generally prevails, and, as a rule, rational beings are not the sport of a whole series of fatal accidents. Lovers are sometimes separated, and, if novels be any authority, they may be kept apart by the malice of evil tongues or the intrigues of those who wish them to marry somebody else; but if, when they are safely married,—meeting every morning over the same coffee-pot, exchanging sentiments over the House Book,—they should allow their happiness to be disturbed by the chance remark of some third party, or keep a train of suspicions in their bosoms, ready to be fired by any unconsidered trifle, and neither explain the matter nor quarrel it out, as the case may be, but brood over it in secret, taking their own fancies for ascertained facts,—a lunatic asylum ought to be their city of refuge. They are not people from whom entertainment can be derived.

The three volumes before us are built on this basis of foolishness, and the result is utterly and entirely unpleasant. Folly is bound up in every character in the book. The author has a singular power of graphic detail, but when he has to invent incidents, and set his characters in action, the story falls all to pieces. Mr. Tillotson, the husband of the first as well as of the second Mrs. Tillotson, is a middle-aged, mild-eyed, melancholy man, suffering under a chronic depression of spirits. He has committed some crime in an early period of life, which murders sleep in the present: in fact, he has a skeleton, and is without a cupboard in which to keep it, so it bears him permanent company. He is a man pursued by a fatality, and doomed to be unhappy; but there is no real connexion between the wild and wicked man we are told he had been in his youth and the very dull person presented in the novel; the character is not developed from any germ of human nature, it is simply patched together. Ross—who is the evil genius of the book, the man who spoils Mr. Tillotson's happiness with both his wives, breaks up his bank, ruins himself, and injures every one connected with him—is evidently a great favourite with the author, who, however, fails to give him a single redeeming trait. He is throughout a violent, headstrong fool. He is described as "a young man with great tossed brown hair, and a nose with a very high strong ridge, and an angry, if not habitually sulky, expression." This young man is a mere ruffian of the criminal type. He never says or does anything but what is violent, ungracious or brutal. He has committed atrocious acts of cruelty in India; and he is introduced to the reader as taking part with two others in beating a poor man, in rescuing whom Mr. Tillotson strikes Ross in self-defence, who thereupon vows to be revenged, and bears malice to the

end of the chapter. There is a young lady whom Ross bullies like a madman, and his intentions are doubtful even to himself, until he suspects Mr. Tillotson of wishing to marry her. Mr. Tilney is well described. He is a clever caricature of a jaunty old man about town; he is constantly referring to the "Dook," and the days when he had been accustomed to his bow-window and his newspaper, and his cut of Club mutton, and his two fingers of a royal "dook," with a "How d'ye do, Tilney?" as regular as a mutton-chop for breakfast. His talk, religiously garnished with allusions to the "all-seeing eye" and the "sparrow falling to the ground," is amusing for a time; but his continual chatter grows wearisome. He is, however, the best character in the book; the real kindness which underlies all his vanities and pretensions, and mixes with them, gives him a geniality which saves him from contempt. His daughters are social syrens, seeking young men with means, that they may marry them; their playful kittenish ways and sharp claws have often been seen and described before. Ada Milwood, the heroine, is a peculiarly exasperating young woman. Mr. Tilney is her guardian. She is enveloped in a haze of amiability, and her "golden hair" is counted as a supplementary virtue; it comes in on every occasion, till the reader is as much out of patience with it as the Misses Tilney were. She refuses Mr. Tillotson with the sweetest remorse and prayers for his forgiveness, hinting at a reason she dares not explain; Mr. Tillotson goes away home, captivates a young lady in the railway carriage, finds an old friend, Capt. Diamond, and has a nervous fever, on recovering from which he drifts into an engagement to the young lady of the railway, who is the Captain's niece. Capt. Diamond is a good-hearted, but utterly futile old man, who tells innocent falsehoods to save people from hearing unpleasant truths, and causes much mischief thereby. Poor Mr. Tilney, having got into economical complications, offends his tradespeople by the insult of sending to London for his provisions, for the sake of fresh credit (a touch which is excellently put in). Ruin comes upon him the day and hour of his great dinner. Ada Milwood, who has the heroine's mania for saving everybody and sacrificing herself, goes off to Mr. Tillotson, retracts her refusal, offers to marry him, and begs him to assist her guardian. Being the very eve of his marriage, this is naturally a great embarrassment, and grief comes of it, for Mr. Tillotson does his duty to his young wife. Ross hears something of the truth, and comes raving and raging to the house, and makes the little foolish wife jealous; a grim servant makes things worse; all manner of fatal mistakes and misunderstandings come on, everybody doing mischief, some with good, some with bad intent. Finally the little woman dies, before she has time to do better, leaving for a legacy a lawsuit with Ross, which has been going on all through the story, and which now of course makes him more bitter than ever. Mr. Tillotson being free to marry again, Ada becomes "the second Mrs. Tillotson," and the reader begins to hope for a little peace and comfort. But Ross is the rock ahead, on which everybody is doomed to make shipwreck. Ada pities him, and wants to save him, and makes foolish mysteries, though her husband is willing to help her. She gets into an entanglement, which the old grim servant aggravates; Ada does mischief and makes misery, and Ross is the torment of the reader. The mystery of Mr. Tillotson's life is brought to light at last; but it is so feebly managed, and belongs to such a mythical bygone period, that the reader d...

not care about it. Mr. Tillotson and his wife become reconciled, and love each other just when it is too late, for Mr. Tillotson dies from exposure to cold and agitation of mind. The story ceases, and the conclusion is even more unsatisfactory than the progress. The author should study the truth of things as well as their mere outward appearance, and then he would write a tale worth reading and remembering.

The Public School Latin Primer. (Longmans & Co.)

A Latin Grammar is not the most interesting book in the world, nor is the publication of a new one a rare event. Yet there are one or two circumstances in connexion with 'The Public School Latin Primer' which entitle it to more consideration than the common run of such books. The title-page states that it has been "edited with the sanction of the Head Masters of the public schools included in Her Majesty's commission." This gives it an importance which does not attach to other grammars, more especially if the "sanction of the Head Masters" implies an obligation or intention on their part to introduce it into the schools over which they preside. Based upon a Latin grammar extensively used for the last twenty years, it has been carefully revised and altered, both by the author of the former work and others, in deference to the diversified and conflicting suggestions of various scholars to whom a proof copy was sent. Hence it is a compound of materials from various sources, and partakes of the nature of a compromise. The editor, whose name does not appear, tells us "This primer must be viewed as the final result of much consultation, not as the spontaneous product of a single mind."

There are obvious advantages in securing the sanction and co-operation of eminent scholars; but a doubt has been expressed, and not without reason, whether head masters are so well qualified to furnish useful suggestions as those who are engaged in the daily use of such an elementary text-book with younger classes. It certainly seems desirable that, however many are invited to contribute in any way to the work, it should, in the end, be reduced to unity by one mind, which can hardly be said to have been done in this case, since the editor confesses "his own predilections have been often surrendered to the judgment of other scholars." While the wisdom of a multitude of counsellors is proverbial, there is another proverb about too many cooks, which also holds good; and perhaps the multiplicity of authorship may partly account for the occasional want of uniformity and consistency here observable. Thus, one excellent feature in this grammar is its exhibiting the stem, or crude form, of nouns and verbs; and yet this is not done consistently throughout, the flecional ending being sometimes separated from the rest of the word by a hyphen, and in other perfectly similar instances joined on to it without any mark of distinction. Again, on one page the pupil is told that "the nominative case, of which something is said, is called the subject"; and, twenty pages further on, that "a verb finite agrees with the nominative of its subject in number and person." It is scarcely correct to speak of any case as the subject; but waiving this point, we cannot see how a verb can agree with the nominative of its nominative case, as the second of the above statements implies, when taken in combination with the first.

One of the objections called forth by the proof copies of the work was its repulsive difficulty for young beginners; and notwithstanding all that has been done in the way of

revision and improvement, we cannot help thinking the book even now harder than is desirable or necessary. We have no faith in any attempts to make Latin grammar easy and amusing; but there is no reason why it should not be made as simple and intelligible as possible without any sacrifice of accuracy. It appears to us that the phraseology here employed—particularly in the English Memorial Syntax, translated from the Latin—is frequently awkward and needlessly obscure, without being always precisely correct. Technical terms are used without any explanation of their meaning before we get to the Notes on Syntax and Grammatical Glossary at the end of the book, which, it is only fair to observe, convey much valuable knowledge suited for more advanced students. The editor virtually confesses the difficulty of the book when he says, "Its memorial lessons need discreet guidance, careful explanation, and sound catechesis on the part of masters." To illustrate and justify our observations, we will make two or three quotations from a single page:—"The relative agrees with its antecedent in gender, number, and person; but in case belongs to its own clause."—"With a composite subject plural words agree."—"When the persons differ, the words agree with the prior."—"To things without life the neuter gender is often attributed." Again, on another page we meet with the following:—"For the absolute participle is often supplied another substantive, or an adjective."—"A genitive so stands that *nature, token, function, or duty* may be supplied." No doubt much of this awkwardness and obscurity of expression arises from the attempt to meet the wishes of two distinct classes, by giving both a Latin syntax and a close translation of it into English. Certainly it is not the language which a practised teacher of little boys would use to them, nor will it be fit for them to learn by heart without "careful explanation and sound catechesis on the part of masters."

It is scarcely necessary to observe, that this 'Public School Latin Primer' is an improvement upon most of the Latin grammars extant in the philological principles upon which it is founded, the classification of the nouns and verbs, and the logical arrangement of the syntactical rules. A work prepared under such auspices, and after so much combined consideration, could hardly fail to be distinguished by superior merits; and no doubt it will receive many improvements in later editions, after it has been some time in use. We would venture to suggest that the examples in the Syntax should all consist of extracts from classical writers, with the name of the author appended to each.

Life of Benjamin Silliman, M.D. LL.D.
Chiefly from his Manuscript Reminiscences,
Diaries, and Correspondence. By George P.
Fisher. 2 vols. (Low & Co.)

By birth, education, rank, and associations, Benjamin Silliman, late Professor in Yale College, belonged to the highest class of American society; his scientific labours, besides rendering him a man of mark amongst his own people, had raised the reputation of American science on this side the Atlantic, and made him an object of interest and respect in certain circles of European life; moreover, vigorous longevity strengthened his claim to general attention, for in the last days of his life, which closed in November, 1864, in the eighty-fifth year of his age, his clear memory could recall, and his pleasant voice could describe, stirring incidents in the first years of the republic, which he had either seen himself or had heard of from famous eye-witnesses. A connecting

link between the days of Lincoln and the days of Washington, he was born during the struggle for independence, and died during the war of secession. Yielding his last breath when the Government of the United States had proclaimed the extinction of negro slavery within the bounds of the Union, he could look back to a childhood spent in his native state, Connecticut, when he learnt his catechism and knelt at household prayers side by side with the children of his father's bondsmen, and when "there were house-slaves in the most respectable families, even in those of clergymen, in the now free States." Recalling the characteristics of the mild form of servitude which prevailed in the North during his boyish years, the aged Professor wrote in his autobiographic reminiscences, "Domestic slavery was extensively diffused through these colonies, in a mild form indeed—the men working on the farms, and the women generally in the house, more rarely on the land, especially during harvest-time and haying. The dairy was managed chiefly by the women, with occasional help from the men in milking. In general, the treatment was not severe; the lash was rarely used on human beings, and never on women. In general the slaves, especially on the farms, fared as to food as their masters did. Their indoor servants were often favourites with the family, and especially with the children. In the North slaves rarely became fugitives, and were never hunted by the gun and the blood-hound, and were never loaded with ball and chain, or with the iron collar; nor, in general, were they overtasked with labour." Still it was slavery, notwithstanding its mitigations; and the man who, less than two years since, could thus, from personal recollection, tell the story of the "peculiar institution," as it existed in the North, cannot have often looked in vain for listeners in the refined and philosophic coteries in which he closed his long life. But though the man was truly eminent, and his career well worthy of biographic illustration, his memoir is neither amusing nor very instructive. The texture is poor, the plan defective, the result unsatisfactory. Either to spare himself labour, or through excessive reverence for the materials put in his hands, Mr. Fisher has given us a compilation rather than a book, a collection of Professor Silliman's private papers rather than a narrative of his existence; and whilst, in many cases, the papers did not deserve preservation, not a twentieth part of them—certain parts of the correspondence between Professor Silliman and Dr. Mantell excepted—should have been transmitted to the printer.

An expert biographer could not without difficulty have given freshness and alluring vigour to a memoir of the Yale Professor, whose career—notwithstanding its length and the number of the important public affairs that occurred between the dates of its commencement and close—was not marked by many stirring incidents or a single dramatic adventure, so far as his purely personal history is concerned. A college teacher, working and living amongst college teachers, save when he was occasionally induced to address audiences from the platforms of public lecture-rooms, he lived much as eminent professors are wont to live, and the truest story of his experiences would, perhaps, be a summary of his lectures, writings, and opinions. Like most other men, he married and had children; like most students he made acquaintance with ill-health, and discovered that temperance is the best physician; and like all persons worthy of human affection, he annexed to himself companions to whom he was very dear. Here is the grand sum of his experiences, apart from scien-

ific labour and triumph; and it must be admitted, that so quiet, unobtrusive, commonplace a life is scarcely adapted to the purposes of a writer officially bound to render it in some degree heroic. The two most adventurous periods of this otherwise uneventful course were 1805 and 1851, when the Professor visited Europe, and became known to several of our most distinguished men of science. During his first visit to Great Britain—made at the direction of the President and Fellows of Yale College, who had commissioned him to purchase books and scientific apparatus in Europe for their use—he studied in London and Edinburgh, entering into the learned society of both capitals, and holding familiar intercourse with philosophers and public men, most of whom have, in the natural way of things, gone to their last account. He saw Piccadilly illuminated for the first time with gas; and amongst the various notabilities whose friendship he enjoyed, or whose acquaintance he formed at this time, were Sir Joseph Banks, Mr. Watt, Major Rennell, Dr. Wollaston, Dr. Tooke, Lord Macartney, Mr. Cavendish, Dalrymple the marine geographer, Windham of the House of Commons, Henry Brougham, Sir Humphry Davy, and Frederick Accum the practical chemist. Of Accum he told, in his old age, the following characteristic and suggestive story: "Coming to the laboratory one day, I found Accum laughing and in high glee on account of a good bargain he had made with Mr. Pitt, the Prime Minister, for Government. Mr. Pitt, he said, had ordered a large quantity of chemical apparatus for a place in my country. 'Ah,' I replied, 'what is the name of the place?'—'Pondicherry,' he replied.—'Pondicherry, indeed! That is not in my country: it is in India, at our antipodes; and, moreover, Mr. Pitt would not send apparatus to my country.'—'But no matter,' he said, 'I have taken this opportunity to sweep my garrets of all my old apparatus and odds and ends that had been accumulating for years, and have turned everything over to Government.' Well, thought I, Mr. Pitt is not here to look after his apparatus, and if he were present he would probably not be a very good judge; but I am here, and shall keep a sharp look-out for my own concerns." Accum introduced the American visitor to Prof. Davy, of the Royal Institution, concerning whom Dr. Silliman, towards the close of his life, thus wrote:—

"Just before leaving London, in November, 1805, I visited again the Royal Institution, under the introduction of Mr. Accum, who had formerly been assistant-operator to Prof. Davy. My principal object was to see that celebrated man, whom we found in his laboratory in the basement of the building (in Albemarle Street), beneath the lecture-room. He received me with ease and affability, his manners being perfectly polite and unassuming. In person he was above the middle size, with a genteel figure and an open countenance. In our brief interview, we conversed on chemical topics, and upon his late tour in Ireland, from which he had only recently returned, having been absent through the summer. He showed me an ingenious article of apparatus which he had lately invented. His appearance at the age of twenty-six (nearly my own age) was even more youthful than the years indicate. He inquired about Dr. Woodhouse, who was here in 1802. I have already mentioned that the obscure town of Penzance, in Cornwall, was his birthplace, and although without social position or university education, he had by his own efforts and talents, arisen to his present eminence among the most distinguished philosophers of Europe. I wrote at the time about him thus:—'He is now very much caressed by the great men of London, and by the fashionable world; and it is certainly no small proof of his merit that he has so early attained such favour, and can bear it without

intoxication.' It is not agreeable therefore to add, that after his elevation to the title and rank of an English baronet, and to the Presidency of the Royal Society, he became haughty, and his biographer and eulogist, Dr. Paris, records that he bore himself so loftily during a visit in Paris as to repel the advances of the Parisian philosophers, who were themselves so distinguished for unassuming courtesy of manners. I have been credibly informed, also, as I believe, by the late Dr. Mantell, of London, that when Faraday, then Davy's assistant, was with him in Paris, he was repressed by him, who was unwilling that he should appear in French society as his companion and equal, although he then gave promise of equalling if not surpassing the attainments, merit, and fame of his patron. Alas for human weakness! When, in July, 1851, I stood by the grave of Davy in the public cemetery of Geneva, I forgot his follies, and remembered only his virtues and his brilliant success and service to mankind. He was cut off at fifty-one and a half years of age, a little past the meridian of life. 'What shadows we are, and what shadows we pursue!'"

Dr. Mantell, whose friendship Prof. Silliman formed more than twenty years before he first saw him in 1851, does not appear to have been so amiable in respect to temper as he was unquestionably acute in intellect. The geologist of Lewes and the philosopher of Yale contracted a close alliance, and until Mantell's death in January, 1853, they were frequent correspondents, the Sussex Doctor seasoning his letters with pungent criticisms on events and men, that do not seem to have been distasteful to his American reader. Of course these rather acrid effusions are not republished without due thought having been given to the effect they may have on the writer's reputation; but giving Mr. Fisher full credit for goodness of intention, we think he has erred in judgment in putting forth some of the passages contained in Mantell's carping letters. "I write," observes Mantell, under date June 18, 1833, to his correspondent, whom he had not as yet seen, "on the anniversary of the battle of Waterloo. We are here in great consternation lest the Duke (of Wellington) should again get into power, for the Tories are making a tremendous struggle; if they do, your country will be the only asylum for us; the middling classes here have suffered greatly, and we had reason to hope the worst was over, for things began to wear a brighter aspect; but if that moral upas, the Duke, should again rule the ascendant, there will be no hope; despotism—military despotism, or a revolution—will be the result." The learned excavator of fossil bones seems to have cherished a violent animosity against "the Duke," of whom, notwithstanding certain defects of intellect and temper, all Englishmen of our own day are so justly proud. "Buckland," writes Mantell on another Waterloo anniversary, June 18, 1834, "is employed on his Bridgewater Essay (or, at least, will be, so soon as the Oxford fooleries are over;—think of the Duke of Wellington being the Chancellor of our first University!—there is no hope for mankind while the brute qualities of a mere soldier claim the highest rewards of learning!)." Thirteen years later he seizes occasion to announce to his personally unknown correspondent that Wellington had not gained admission into the Royal Society without receiving some black balls: "At the Royal Society, the only incident worth remark is the election of the Duke of Wellington, who was voted in, but with six balls against him. I am at a loss to guess the motive that induced the old veteran to wish to belong to the Royal Society." Sir Robert Peel's death drew from the Doctor an exclamation of genuine regret, which was not without an undertone of selfishness:—"I deplore

it exceedingly, both on public and private grounds. He was the only one of our public men who paid any respect to the aristocracy of talent; men of art and science always found a warm friend in Sir Robert Peel. To me he had for years shown much courtesy, inviting me to his table when any eminent foreigners were visiting him, and always making a point to notice me, in the most cordial manner, in every public society where we happened to meet. He always read my works as soon as they appeared, and had he again been in office, I am sure he would have recommended that the Queen should bestow some distinction on me for my unrewarded scientific labours." A rival geologist, who was so fortunate as to win "some distinction" from Her Majesty, is thus noticed:—"Mr. Murchison is now Sir Roderick, —the Queen having knighted him that he may wear the red sash, cross, and star of the orders the Emperor of Russia bestowed on him;" and five months later a sentiment akin to jealousy of his nearest competitors inspires him to write, "In the geological world Murchison and Lyell monopolize everything. Russia and America, roast, boiled, cold, hashed, and fricasseed, are the dishes set before us at Somerset House, till, like the poor Frenchman, we exclaim, 'Hélas! tous-jours perdrix!' And, I doubt not, the same viands will be the principal subjects at the meetings of the British Association of Science in the geological section." These are the choicest specimens of the Silliman-Mantell correspondence, which is the most entertaining, if not most profitable, portion of the biography, from which neither Prof. Silliman nor Mr. Fisher will derive a large accession of renown.

GUIDE-BOOKS.

Handbook for Travellers in Westmorland and Cumberland. With new Travelling Maps. (Murray.)

WITH more decision than politeness, Mr. Thackeray emphatically pronounced the man who should attempt to visit the three lakes of Killarney in one day to be "an ass." With more gravity, Prof. Wilson said of Lake Windermere, "Live by it fifty years, and by degrees you may come to know something worth telling of it." A lake district of surpassing beauty, like that through which this book guides, while it enlightens, the stranger, requires time for its appreciation. Even time will not suffice, if the beholder has not a mind attuned to the scene, eyes that can not only gaze but see, a heart that can not only be moved to quicker pulses, but stir the brain to sublimer thoughts. Wilson felt that it was not given to every one to drink in the pure delight to certain profit. After half a century of dwelling in lake-land, you "may come to something worth telling of it." There is a possibility of your understanding the charm, and what lessons it teaches; but to master the problem requires an ordinary lifetime, and you may not have got at the secret of the potent magic after all. Something akin to this difficulty is common to all that is sublime. After Betterton had passed fifty years in playing Hamlet (in a way, too, in which he has, probably, never been equalled), he used to say that he had not got to the depths of its philosophy even then. He had learnt something new from it year by year, and he had yearly acquired a new delight and imparted a full share of his acquisition to his audiences; but he felt that the mine was inexhaustible, and he found it the richer the deeper he went.

Some persons, standing in presence of the Madonna del Sisto, have not been favourably impressed by that marvel-work of the

painter. The impression has been one of disappointment; but at each renewed visit what was earthy about the picture seemed to glide from view, and daily the work grew stronger in its divine aspect, till that divine Child, who at first looked but an ordinary Italian baby, assumed the aspect of a god, whose eyes appeared as if they pierced the universe, and his arms embraced the whole created world in a sentiment of love.

As with painting, so has it often been with music that has sprung from the heart as well as the brain of the mightiest masters. It may descend upon the listener a perfect avalanche of harmonious delight; but its subtleties, its meanings, its philosophy, if we may so speak, are neither grasped at a first, nor unravelled at a second hearing. Through the ear to the heart pass successive strains, enchanting to both heart and ear. The feelings are satisfied before the judgment is enabled to analyze, distinguish, and approve on fixed grounds. Happy are the thousands who can simply enjoy true music; still happier the privileged few who can, after patient study, understand it. They possess a joy, and they know wherefore.

Whether we gaze at what is sublime in nature, look at its counterfeit presentment on canvas, or listen to that concord of sweet sounds to which only the rarest of masters can give life, there is a desire common to us all to know, not merely that we enjoy, but whence that enjoyment comes. It is not given to all to get at this knowledge. Some are overcome by the potential charm while aiming at the secret and the mystery. When Charles Lamb was on the loftiest of these Cumberland hills, he was struck with a sense of awe that was nothing less than painful. He had just come from what he called "the sweet security of London streets" (streets in which we slay three human beings daily, and mutilate a score), and up aloft, among those crags and peaks, he felt in a sort of glamour. To steady the brain that was unnaturally stimulated by the might and majesty amid which he found himself, Lamb did as those heroes and heroines of romance do in old story, where, while penetrating the passage to some mystery, they do not let go the thread which connects them with the outer world. Lamb, perched on the summit of Cumberland's loftiest peak, felt nearly annihilated by the oppression of the majestic Nature at which he gazed till his brain reeled; and in order to subdue it and bring his nerves generally to a healthy condition, he found nothing so effectual as directing his thoughts to the old ham-and-beef shop in St. Martin's Court.

To many thousands of Englishmen to whom the Swiss waters are familiar objects the Lake districts are totally unknown ground—more foreign than foreign lands. These tourists, indeed, will find in Westmorland and Cumberland manners and customs more strange than may be found in any part of Europe within the wide limit of the annual tourist; and the *patois* is occasionally a thing that may well induce them to doubt whether they be in England, or, as in many respects they are, among the Norsemen. These matters of local customs and dialect will undergo a change (which will be no improvement) as the crowd of visitors increase. This increase has been very great of late years, and we are not inclined to sympathize with those who affect to be shocked at the alleged vulgarizing of beautiful places by the increasing number of visitors resorting thither to enjoy the beauty. That beauty is not defaced because thousands look upon it with rapture. From the flame which leaps and plays a thousand torches in the air, and the flame itself

suffer no diminution. May it be at those shrines of beauty as it once was when Mephistopheles gaily remarked:

Es ist ein altes Buch zu blättern:
Vom Harz bis Hellas immer Vettern.

There is in this rich and rare district that which may suffice to satisfy a hundred various tastes. There is not merely the local beauty, ever varying as the traveller shifts his standpoint, but there are countless memories thick as the heather itself, and romantic as the spots where the heather is ever in blossom. The antiquary will find in this district wherewith to satisfy what is, indeed, said to be insatiable, an antiquary's appetite. What finer, at least what more striking ruin, or tale of ruin, can there be than that of the old house of Taillebois of Kendal? Its chiefs were of the old Anjou stock; older than the Conquistador, among whose levies some sons of the ancient race came to England and obtained a rich share of its soil. They failed, after long course of time, in the male line, but the line itself only died out the other day, in the person of a young pauper girl in Kendal workhouse. She bore the old name Emily Taillebois, and that was all she possessed of the baronial inheritance, the foundations of which were laid by her ancestor Ivo, and the increase of which was as marvellous as its decay.

To the beauties, memories and antiquities of the district there have been many guides, some of them of very great merit, especially one or two that were compiled or written by persons who had long dwelt among the scenes which they described; but, taken as a whole, we doubt whether a more perfect guide than the present has ever been prepared for the benefit of travellers in one of the most beautiful districts in England. It is, as such works should be, simple, intelligible, full in details where necessary, always saying enough, and never saying more than enough.

Elgin: and a Guide to Elgin Cathedral, once denominated the Lantern of the North. Together with some Pious and Religious Reflections within the Old Walls, evoked by the Resident Spirit of the Ruins. By the Old Cicerone of Elgin Cathedral. (Hotten.)

BETWEEN the Irish Dalraids who possessed themselves of Argyshire (ultimately annexing Scotland—the Old Cicerone to the contrary notwithstanding), and the English lasses who, according to Hoveden, overspread the whole of the Lowlands, there is really no longer any difficulty in settling the identity of the modern Scots, or accounting for their pre-eminence in strength, beauty and intellect, over all other countries, assuming that pre-eminence to exist, upon which all Scotsmen are agreed.

The Scots (that is, of course, the Irish element) may be Celts, and the Picts may be Goths, and the English lasses may be either British or Saxon; but the blood of all presents a fine example of the benefits of *miscegenation*, and this ranting, rollicking, old Cathedral Cicerone, "John Shanks," may fairly be proud of it.

The author, indeed, shows complete ignorance of the Irish character, denying it what are its great characteristics—cautiousness, thoughtfulness and seriousness. The Highlander, he says, weighs his words, "the Irishman never knows what words he has got until they are spoken,"—a remark which shows that he never saw an Irishman under examination or cross-examination.

John Shanks is naturally delighted that the kilt is again coming into fashion. We suspect some latent satire in what he says of it at Balmoral. He has evidently looked with amaze-

ment at the German princes who there don the "garb of old Gael,"—which it never was,—and get themselves photographed therein to the astonishment of beholders, who never look so astonished, however, as the kilted German Highnesses themselves. "The astounding results," says John Shanks, "that may accrue to the world from a fashion enforced by such august authority, it is impossible to conjecture."

There is one other truly Scottish matter much nearer to the skin than the kilt, which, Mr. Shanks suggests, is deserving of a greater amount of esteem than has hitherto been awarded to it. "Our friends, the French," he says, "call it *gale*, doubtless from its Gaelic origin." Shall this then be allowed to die when kilts are being revived? "The *itch* (for that is the plain English name) is not the insignificant vulgar disease that it is usually ascribed to be." Mr. Shanks upholds its antiquity, reverences the beautiful insect which causes it, respects the royal and noble persons who have enjoyed it, or the pleasant frictional process required by it, and adds, somewhat vain-gloriously perhaps, "I flatter myself that instead of being an obscure, abject, despicable disorder, superficially situated, and readily removable by butter and brimstone, the complaint is a well-descended disease," of "grave momentous importance," and of "unquestionable respectability." We believe it peculiarly favoured the almost exclusively Pictish people of Buchan, and perhaps it was for that reason, though Mr. Shanks does not see it, that the Buchanites have been famous for "a strong inclination to attend to their own business in preference to other people's."

Mr. Shanks has reasons of his own for deriving "Elgin" from *all* and *gin*. There has been a roystering reputation about the old burgh. In the sixteenth century it drank hard and sinned much. The town council, desirous to be just alike to the thirst and wickedness of the place, appointed eight ale-tasters and a couple of hangmen. Practice gave the latter increased ability, but it diminished that of the ale-tasters, who tipped so heartily that they became unable to distinguish between good ale and bad. Good drink was quite essential to the sanitary condition of a place whose popular heart had to be kept up when there was constant expectation of raids by lawless freebooters of respectable family. One of these was made in the fifteenth century under a son of the Lord of the Isles. They carried off everything; but, what was worse, they left their old garments behind them, taking new wherever they could find them. What they left in those old clothes was not to be counted, and need not be mentioned. They were, however, very fine of their sort, and the Elgin folk, with some vanity, learned to designate them as "Lord M'Donald's breed."

This silly vanity is hardly out of them yet; but we may let a Scottish artist draw his own portraits of Scottish lairds:—

"At the present day, in traversing the Highlands you will find the chieftains and Highland lairds variously endowed. You will meet with some who possess many of the qualities of the gentleman. They are well informed and polite, and the principal incongruous circumstance you observe is the enunciation of sensible remarks from an exterior of folly—the anomaly of hearing a sober, sensible sermon from the clown of Astley's Amphitheatre. The character of these men has been modified by a mixture of Scandinavian blood; and they have retained little that is Celtic, beyond their ludicrous and extravagant vanity, or love of approbation,—the evidence of the existence of which develops itself chiefly in a love for tawdry and ridiculous clothing, and amounts almost to a disease; and as the dullness of intellect and awkwardness of manner

which they affect are only artificial and assumed, one cannot help feeling contempt for such affectation. There are others, however, to be found who are no shams, and to whom, in consequence, such contempt will not apply; whose pure blood is innocent of adjection or commixture; whose brain is of the genuine Neanderthal type; and who command respect from the possession of real, honest, unaffected, primeval stupidity."

There is something of the Knickerbocker exaggeration in the above; and elsewhere the author slips from a certain sort of humour into a more certain sort of coarseness, which one would not expect to find in a cathedral *cicerone* who makes pious reflections. We are not, indeed, sure that familiarity with cathedral ruins has tended at all to bring out a high tone of morality or piety in John Shanks. The promise on his title-page is queerly fulfilled. Although satisfied with the history of remote antiquity by Moses, till something better offers, he has no faith that Adam and Eve were created in the likeness of their Maker; they were "queerer" and "scraggier," he says, than modern savages, "and it is pretty certain even that they were black." Then there are "Bible characters under ban," and he would very much like to know wherefore. Prayer is held by him "to be apt and expedient, inasmuch as it is premature to deny the power of prayer." Finally, there is an uncleanness of life, denounced by apostles and ecclesiastics as "the most heinous of sins." "We," says John Shanks, "boldly assert the contrary." There is "no positive moral goodness or virtue," he says, "in its much-lauded observance." This passage reminds us of the dedication of the book, "To Elgin Men throughout the World," in which the author reminds them how, in the days long ago, when he found them roystering too heedlessly in the cathedral precincts, he was wont to unceremoniously treat them "to ignominious but wholesome visitations of shoe-leather"; and we cannot help thinking that John Shanks himself lacked, in his own boyish days, a sufficiency of that salubrious process. It has not hurt his wit, for he has produced an amusing, but too flippant volume, not so exclusively about Elgin as one might expect; and something more of reverence in it would not have diminished its value.

A Descriptive Index to the Killarney Lakes, and surrounding Scenery; showing how all unnecessary expenditure may be avoided, and the leading objects of interest visited in one day. To which are appended Tours through Cork, Bantry, Glengarriff, Limerick, the Shannon, and other parts of the South of Ireland deserving the tourist's attention. With numerous Engravings, and a new and beautifully-executed Plan of the Lake District. By D. E. Heffernan. (Dublin, M'Glashan & Gill; London, Simpkin & Co.)

It has sometimes been said, and never but by Irishmen, that Ireland is a beautiful country to live out of! Mr. Heffernan's guide will, in some respects, help strangers to arrive at the same conclusion. It contains, indeed, some concise directions useful to travellers; but, on the whole, the title-page is the most complete portion of the book, most of which is devoted less to furthering the wayfarer than to stopping him in his course, and recommending him to go back. At starting for an exploration of Killarney, the author counsels the visitor to choose his own points, and thereby make himself "quite independent of all local inquiry"; the advantage held out is that you, the visitor, will be enabled "to use your own judgment without allowing yourself to be dictated to in your tastes." Among what he calls the "discouragements to

the visiting of the Gap of Dunloe" is "the important one of its being so far off"—from Dublin, probably, for it is near enough to Killarney. He hints that if you do attempt the Gap, you are pretty sure to be caught in the rain, under which the return journey to your inn is described as "most dreary, slavish, and, for delicate persons, a most dangerous one." But there is the Black Valley! "most sublime, but awfully dismal," says our monitor, who directs your notice to the Mulgrave *Police Barracks* as "giving an air of life and animation" to a scene which is really only marred by that very building! Some of the writer's phrases are more difficult to get through than the wildest thicket in the locality; at other times he is perfectly intelligible, as, for example, when he tells the public to "return" from a certain point "by the Queen's Road, a strictly private avenue." We advise the public not to try to force it, but to get to the ruins of Muckross Abbey by the usual way,—that is, if he be not checked by Mr. Heffernan's assurance that "on close inspection, there is nothing more than the usual gloomy and dismal old walls, which form the ruins of similar decayed establishments!" On the other hand, he recommends a walk to the Old Weir Bridge, which, he says, is "a very picturesque object in our illustration." It may be so, but Mr. Heffernan has not put it in his book.

Incidentally, we discover that the Irish who fought against the Cromwellian army were "endeavouring to regain their rights, which were sold to Henry the Second by the Pope,"—a fact which is new to us. Again, there is a delightful uncertainty about the ecclesiastical ruins on sweet Innisfallen, "said to have been erected by a person named Finian, who is described as a man of great learning, piety, &c., in recognition of which the Pope complimented him with the honorary title of 'Saint,' this being the usual order of knighthood conferred by that monarch." Oh, holy St. Finian! Oh, light of Aghadoo! You are, after all, only a "person named Finian," and your saintship is but an honorary scrap of ecclesiastical chivalry!

Well, we turn from sweet Innisfallen to contemplate Carranthal, and brace ourselves for the ascent; but Mr. Heffernan whispers us that the three quarters of a mile of ascent will "occupy twelve to fifteen hours," that mists and precipices mutually help each other, to the cost of the traveller, and that to the direction of a local guide, "the daring tourist must, in some measure, commit the safety of his life"; so we are averted from Carranthal, and take the rail from Mallow to Cork.

If Mr. Heffernan's book is a good guide to warn people from Ireland (though it is often useful to those who disregard such warnings), we must say that he is well assisted by the railway directors, English or Irish. The fare to Killarney and back is lower but by two or three shillings than that charged by the English and French lines from London to Switzerland and back, with facilities for seeing a world of wonders by the way, including Paris and Fontainebleau. A lowering of Anglo-Irish excursion fares would set hundreds going north-westward instead of the tens who are as yet tempted. When that good time comes, we advise tourists to buy "Heffernan" for amusement, and "Black" for use.

De l'Humanité. Par Le Docteur Bodichon.

2 vols. (Bruxelles, Verboeckhoven & C^{ie}.) If there be any faint-hearted wanderer in the groves of science who imagines that the study of cosmogony involves some doubt and difficulty,—that our knowledge of ethnology is not

yet quite complete,—and that anthropology is a tender strippling, scarcely out of leading-strings, let us hasten to dispel the painful illusion, for we have found a teacher who knows all—positively all—about these little matters! Dr. Bodichon tells us, in his Preface, that "if every one would say what he knows, and what he thinks, the truth would come to light more quickly." The aphorism must be accepted with some reservation; for "thoughts is free," as Mrs. Brown says, and some people think such very odd things! But this maxim affords a key to Dr. Bodichon's peculiar manner; and if we find here and there a few hardy assertions and startling speculations, we shall only conclude that the worthy *Docteur* is thinking.

We believe that the late Dr. Prichard, of Bristol, is not yet forgotten, and that there are many people who still respect his opinions as those of a courageous yet modest inquirer. The mention of his name takes us back in thought to the great Blumenbach, his venerable friend, whose views, he tells us, it was his first object to illustrate and extend. Now, at the very outset of Dr. Prichard's most important work, without any lengthened trouble or investigation, we come across the following passage: "The different races are not distinguished from each other by strongly-marked, uniform, and permanent distinctions, as are the several species belonging to any given tribe of animals. All the diversities which exist are variable, and pass into each other by insensible gradations; and there is, moreover, scarcely an instance in which the actual transition cannot be proved to have taken place." If these observations be correct, who shall say that it is impossible to believe all mankind to have sprung from one original stock? That the author whom we are quoting recognized no such impossibility, we may fairly conclude from another significant passage: "It seems to be the well-established result of inquiries into the various tribes of organized beings, that the perpetuation of hybrids, whether of plants or animals, so as to produce new and intermediate tribes, is impossible. Now, unless all these observations are erroneous, or capable of some explanation that has not yet been pointed out, they lead, with the strongest force of analogical reasoning, to the conclusion that a number of different tribes, such as the various races of men, must either be incapable of intermixing their stock, and thus always fated to remain separate from each other; or, if the contrary should be the fact, that all races to whom the remark applies are proved to belong to the same species." And if all belong to the same species, why may not all have descended from the same parents? Dr. Bodichon tells us that there are six grand divisions of men, so distinct in their physical conformation that they cannot have had a common origin. But he admits that there is a continual *croisement*, or fusion of races, by which the older types become amalgamated with the more recent, and are saved from being extinguished by their superior prowess and power. Does not he see that this admission destroys the force of his argument? Once admit that all Dr. Bodichon's six types may be fused into one individual, and we must admit also that they might have sprung from one individual. How they have come to diverge so much from the normal type, we do not undertake to say; we need only point out that even as to the extent of the divergence Dr. Bodichon is considerably in advance of the older anthropologists. But it is as clear as noonday that the *mêlé*, or mixed man, who is the ultimate heir of six types, might be the father of six types also. Thus, as far as *a priori* reasoning can go, it is no more than that the author's

anthropological theories cannot be supported, and that the mere variety of human races is not in itself a proof of their separate origin. Where, then, is the proof to be found? Certainly not in the book before us, which abounds with dogmatic statements, and does not condescend to adduce detailed evidence.

Dr. Bodichon deals with the past, the present, and the future, and his theory of cosmogony is plausible; but unfortunately it wants a few connecting links, as most such theories do. Lucretius taught that the earth was formed by falling atoms, which accidentally jostled one another in their course, and adhered, so as to form, by gradual accumulation, a compact and solid mass. He forgot, however, to inquire whence the atoms fell; whither they were falling; what power made them jostle one another instead of proceeding for ever in parallel lines, and what caused them to stick together when they touched. So Dr. Bodichon's readers will find that he does not tell them why a certain extinct sun tumbled to pieces, splashing into space huge masses of fiery liquid, which now form the earth and the planets. He traces the career of the earth from that early time when her mean temperature was 2,000° Cent., or 3,632° Fahr. One little sentence we must transcribe, as a specimen of the author's off-hand way of dealing with stupendous facts: "Then the earth, still in a liquid state, received two impulses, one circular round the sun, the other also circular round herself; these two movements flattened her at her two extremities, and caused her to swell out in the middle, so that she then took the form of a spheroid. She got cold by degrees." As the heat grew more moderate, various changes took place, among others the creation of plants and animals. At length the earth had assumed pretty nearly her present form and temperature, and the oldest type of man was created. It must not be supposed, however, that all this happened as rapidly as it is narrated. The period of cooling is divided into six epochs, each of which lasted some millions of years. The first men, it would seem, have entirely disappeared. They have no name, and are simply called "l'homme pré-humain." Six races, or types, however, now occupy the globe, having eaten their way to power by devouring pre-historic man, even as pre-historic man, in his time, had devoured "l'homme pré-humain." The six existing types are the Andaman, the Copper, the Black, the Yellow, the Brown or "Whitey-brown," and, lastly, the White or "Fair." It will be gratifying to our patriotic countrymen to hear that we belong almost entirely to the last and most perfect creation, which includes the Slavonian, Scandinavian, Celtic, and Germanic races. The French, on the other hand (together with the ancient Greeks and Romans, and the modern Italians and Iberians), are mainly descended from the Pelasgic race, who are included, together with the Hindus, Arabs, Jews, Turks, &c., in the fifth, or Whitey-brown type. We owe Dr. Bodichon many thanks for putting us in this lofty position; but we cannot help suspecting a little political undercurrent, when we find the Anglo-Americans exalted to the skies, and Napoleon the First described as "the eldest son of the children of demons."

The future (*l'avenir*) of the various races (perhaps we should rather say nations, for the rigid technical division is dropped for the nonce) is boldly sketched out; the Anglo-Americans, of course, standing first, and being destined to whip creation. "North America is really the Queen of the West," England, however, does not come off so well; she will be free from social evils, but her dysms (query,

strikes and panics!), and for many ages "she will lead the van of European civilization." But, alas! she will lose New Guinea! After all the *avenirs* are completed, the earth will gradually get too dry and cold to sustain life; and at last she will be whisked off somehow (most likely by a comet, but that is a little uncertain), and put in a pot with other old planets, nebulae, &c., to be melted down into a brand-new sun.

NEW POETRY.

Bertha Devereux. (Bentley.)

A Waif on the Stream. By S. M. Butchers. (Trübner & Co.)

Descriptive Poems. By John Askham. (Warne.)

Alpha and Omega. By Merlyn Castell. (Simpkin, Marshall & Co.)

Alboin, and other Poems. By A. Mariate. (Palmer.)

The Merry Bridal of Firthmain, &c. By J. Smith. (Edinburgh, Nimmo.)

A Bundle of Epigrams. By Dufferiah. (Mann Nephews.)

A nestful of bards, as various in plumage as the bindings of their books, presents itself here; how many more may yet be in the egg we know not. These sing differently, and with all their might; so that for one week's shell-chipping they will suffice. We write "bards" advisedly, notwithstanding that there are certain signs on the face of the anonymous '*Bertha Devereux*' which suggest it as the work of a lady of tender years and easily aroused susceptibilities. If this is not correct judgment, we apologize to the author, and, at any rate, give the book precedence here, with a quotation in point to illustrate the poet's views of the difference between man's and woman's work:—

Happy both for herself and others too
Is she who lives to woman's calling true,
Nor seeks man's rougher province to invade,
Avoids command, and tries but to persuade;
'Tis the most pleasing and effectual course,
For in her weakness lies a woman's force.
Thus *Bertha*, nor on reason did she call,
Her own sweet nature's prompting did it all;
On warrior's eagle eye ne'er hung a spell
Such as in her persuasive look would dwell.

Although a "*Bertha*" of this order is not to our taste, we endeavoured to follow her fortunes to the end. The heroine is of the mildest breed, so that when hearing legends of battle—

More than aught else with wonder did she mark
The moving history of Joan of Arc,
Amaz'd a female nature should be prone
To daring deeds, so foreign to her own.
But when that heroine's sad end she heard,
And learnt the bloody scenes that had occur'd
Before and after that event, she thought
Of all the suffering that the war had brought.

Thus informed of the damsel's tender nature, we went on through scenes too doleful to repeat, and finally shut our eyes with precipitation where the young lady, having gone to bed, or "retir'd to rest," as the author calls it, and prayed in vain for "sweet visions," got the reverse, and

With a scream
Woke up all trembling from the frightful dream.

Mr. Butchers is quite a different bard from the author whose verses we have quoted as the best excuse for not finishing their perusal. He is not a strong singer, but, so far as we have been able to discover, his book contains very little downright rubbish; nevertheless he has produced much that ought not to be read by adult human creatures. A monody on the grief of "Britannia" about the death of Lord Palmerston puts us in mind of one of those queer monuments in Westminster Abbey where allegories shed fictitious tears in marble upon sham urns and statues of forgotten heroes. On the other hand, there is much pathos in a poem styled 'Old Letters,' and describing with right

simplicity the destruction of such records of past feelings, with hope in their renewal. The author feels strongly, and, sometimes at least, expresses himself happily. No doubt he is as happy as the day, for he writes lugubriously, which is a certain sign of a jovial disposition in a bard. He writes carefully withal, and will surely please many readers.

Awful experience has convinced us how deeply planted in the human breast is the love of verse-writing; accordingly the batch of books above named did not daunt us by its bulk and varied themes. The critic who faces a new poet every day need not grumble if one or two in excess present their volumes at the week's end, and without ruth require examination for them. Mr. Askham says the present is his second appearance. We regret that his name is not familiar in our ears, and proceed to read his recent production, introduced as it is by a formidable list of subscribers, mostly resident in the valley of the Nene, where our author seems to have won esteem, if not profound admiration. His poem first in place here puts us in mind of Mr. Allingham,—a pleasant reminder in itself, and no doubt gratifying to the author of 'Lawrence Bloomfield'; it is not unworthy of the model. This likeness to Mr. Allingham strengthens as we go on, but does not improve our idea of Mr. Askham's verses, when, as is usual in such cases, no improvement is visible. This bard often writes for the pleasure of writing,—a pastime that is blameless when confined to the desk of the author, and not enjoyed in print; thus a tolerably well-made copy of verses styled 'The Spider' gives a deftly-drawn portrait of the animal, but does so to no discoverable purpose. It is likewise with 'The Summer Rain' and a host more of these 'Descriptive Poems' that are aptly enough entitled. Mr. Askham really ought to have acknowledged his obligations to Poe for the construction and no few of the images in 'The Bells'; other debts we might indicate, but are satisfied to conclude with saying that this bard has more feeling than power, weak gratitude or a short memory.

'Alpha and Omega' deals, according to the author's notions, which are sufficiently orthodox, with the great history of the Creator, Creation, Man, Woman, the Fall, Satan, and the offices of the angelic host. The first part explains, in verse somewhat inferior to that of Milton, the nature and objects of this ineffable subject. It is rather dull, devoid of colour, but carefully written to expound nothing that is new, although striving to illustrate the connexion of the Church with man and Maker. The second part of the book is very hard to read, so that our frequent exclamation is, "Blackmore is nothing to this for dullness." The third portion has more vitality than either of those that precede it, and shows the author to be possessed of a share of that power of picturing in his own mind as well as of imparting the impression thereof to others, which makes so much of the merit of poetry. It winds up with urgent counsel against supineness in faith, neglect of religion, and warnings of the effect of self-deceit in those matters. It is hardly possible to conceive a more "respectable" poem than this, or one with less originality of thought; invention there is none.

Mr. Mariate is a real poet, apt in the use of words, elegant in his modes of constructing verse, able with many metres, and spirited in dealing with all of them. He has thoughts and fancies to express, and knows how to express them. His longest poem, 'Alboin,' pleases us least of all in this pleasant book; others, and less lengthy poems, such as 'Redivarah,' are excellent, far beyond the average of good works

of their class; best of all we like the shorter verses. 'The Monk's Funeral Hymn' is highly poetical and pathetic. 'I have ceased to think upon Thee' is one of the most genuine works in a book which is pleasant, as well as profitable to read. The author writes like a young enthusiast for his own form of faith, and is a little feverish in his line of thought. We trust this exuberance may pass away, leaving only picturesque taste in expression and more sedate thoughts for another volume.

There is a good deal of spirit and some slang in Mr. James Smith's book, as is commonly the case. He writes on trivial subjects with better fortune than on graver themes; he employs the Scotch dialect with considerable dexterity, so that there is, at least, the sound of poetic metal in several verses, which would by no means bear translating into English. Of course no kind of provincialism in language will endow verse with poetry; still it is undeniable that the fancy or associations of the reader are called powerfully to aid when an author contrives something like "Doric" for his vehicle of thought. In more ambitious attempts than these the author is even less successful. His tremendous 'Scandinavian Legend of Brailvern' made us laugh. By far the best thing in the book is 'The Petition of an Edinburgh Printer,' in composing which the author displays noteworthy dexterity in adapting technical terms to verse, and some humour in their application to his subject.

We untied the 'Bundle of Epigrams,' and sighed over the prospect before us. Epigrams are commonly held to mean mere thimble-rigging; but Dufferin writes with terseness, if not with much precision of aim. The least bad thing of his own making is 'An Ode on a Close Inspection.'

OUR LIBRARY TABLE.

Two Lectures on the History and Antiquities of Stanford in the Vale, Berkshire. By the Rev. Lewin G. Maine. (Parker & Co.)

CLERGYMEN or laymen do a good work when they collect the scattered bits of local history connected with the neighbourhood in or near which they reside, and communicate them to hearers who are, doubtless, always willing. In such way local traditions may be preserved from dying out of memory. Stanford in the Vale of the White Horse deserves what has here been done for it. The martial and benevolent legends of the place are many, from the days of the dwellers by the water *Ock*, down to the recent time, when the Rev. G. Proctor went from Stanford to aid the wounded and to find honoured death himself in the Crimea. Then there is purer Anglo-Saxon spoken here than in any other part of England; and those persons who would fain know with what accent Saxon kings spoke in old time, have only to visit the Vale; they will come away astonished. There are tombs in Stanford Churchyard nearly 800 years old; and there is dust there which may have once quickened at the voice of Rufus or Beaulieu. Again, there were more yeomen farming their own land (small farms) in Berkshire at the beginning of this century than in any English county besides. Mr. Maine thinks the old "parlour" of the manor-house was not a sitting-room, but simply a conference room, because it had a bed in it. That proves it was a sitting-room. The state bed was its greatest ornament; the *lit de parade*, never used, may still be seen in the *salon* of an old French country house, relics of the times when princesses received company upon them, and left them, feathers, hangings and all, to their sons and daughters. The author is not so safe to follow when he gets upon general, as he is when he confines himself to local, history. It is not credible, for instance, that a boy, the Duke of Gloucester, stabbed at Tewkesbury Prince Edward, a boy of his own age, in cold blood. We believe the old tradition, that young Edward was killed honestly fighting, while retreating from that

fatal field. Into old popular amusements Mr. Maine has gone to good purpose, not trusting to books alone, but questioning men. The fun was not always of a violent sort: "On making inquiry of an aged labourer what was his former experience, he said that at Stone's farm he and the wench sat in opposite corners of the chimney and looked at one another."

Word-Paintings. (Chapman & Hall.)

THIS book opens with a political murder, which has nothing to do with the rest of the story, and is only introduced, we presume, in the character of a "word-painting." A more unpleasant painting it would be scarcely possible to conceive. Imagine a member of an Italian volunteer corps condemned to death as a spy and borne aloft by his triumphant comrades, who sing the 'Marseillaise' in fiendish glee while the life-blood of their victim slowly trickles down on the earth! The last important scene is also one of horrible death; a Jesuit being strangled in a church by an opium-eating maniac, who figures throughout the book under the name of "Medusa." This woman is possessed of some mysterious power, which, however, never accomplishes anything of the least importance; and her history is mixed up with that of a young English brother and sister, the Halthams, of Haltham Towers. Lewis Haltham (*alias* Vaughan) is called "Lewis Hoghton" during a portion of the narrative, for what reason we are unable to understand. He marries Lillian White (elsewhere called "Annie"), having "laid aside his besetting sin for ever"; but it does not appear what the besetting sin was. His sister Sibyl marries a gentleman who first appears at a *bal masqué* in a pilgrim's dress, and who is always mentioned as "the Pilgrim" on that account. Who he is, and how such a very correct young lady as Sibyl comes to make his acquaintance so easily, are mysteries to which the author affords us no clue. We are equally left in the dark as to certain "conditions" on which Sibyl is to inherit the Haltham property. All that we can make out as to these conditions is, that Sibyl is to consent to be a "substitute" for somebody who has done something; and as Medusa is always raving about a "substitute" also, we may presume that there is a mysterious link somewhere; but it is, in fact, so mysterious as to be unintelligible without the aid of lights which we do not possess.

Always in the Way: a Little Story. By Thomas Jeans. With Illustrations by K. J. F. (Edinburgh, Edmonston & Douglas.)

THIS "little story" is written in a pleasant, genial spirit. The hero Rummies is always trying to get out of everybody's way and is always getting into the wrong place. Anathematized in the first instance by the invaded victims, they end by becoming his firm friends, and to them he is always a benefactor in some shape or other.

M. V. Richon has produced two useful little books, *Elements of French Grammar*, and a *Manual of French Literature*—[*Manuel de Littérature Française*], (Whittaker).—The former is a succinct compendium of the essentials of the grammar, with easy exercises; the latter contains brief biographies of the principal French authors from the beginning of the sixteenth century to the present day, with some account of their works. *Chambers's Spelling Book, with numerous Exercises for Dictation*, by J. Currie, A.M. (Chambers), is a cheap and good manual. A portion of 'Chambers's Historical and Miscellaneous Questions' has been published separately, with the title, *Chambers's Questions in British History and the British Constitution*, by W. Chambers (Chambers).—An interesting and instructive little volume has been edited by Mr. J. S. Laurie, formerly H.M. Inspector of Schools. It is called a *Manual of English History Simplified*; or, *Our Country's Story*, told by a Lady (Simpkin). The latter part of the history is short, even out of all proportion with the rest of the work and the importance of the period.—Mr. W. H. Unger's *Short Cut to Reading: the Child's First Book of Lessons* (Kent), proceeds upon the principle of teaching reading by syllables, rather than by separate letters. We doubt the possibility of getting a child to read accurately in this way.—The

Educator's Guide, for Teachers, Parents, and Guardians, by R. H. Mair (Dean), treats of business matters in connexion with the scholastic profession.—Mr. D'Arcy W. Thompson's *Scale Nove*; or, *a Ladder to Latin* (Williams & Norgate), is a bulky, diffuse grammar, with enormously long exercises for translation from Latin into English and English into Latin, but without vocabularies or dictionary. Mr. Thompson thinks the ordinary manual dull, and offers this as more interesting. We can only say we pity both the teachers and the pupils who have to make their weary way through such an interminable mass of work.

LIST OF NEW BOOKS.

Aunt Louisa's London Gift-Book, coloured illust. 4to. 5. cl.
Barry's Over the Atlantic and Great Western Rail. 12mo. 1 s. bds.
Basil's Coming Wonders Expected between 1987—1875, 8 s. cl.
Collier's History of Greece, 12mo. 1 s. cl.
Collier's History of Rome, 12mo. 1 s. cl.
Field's History of the Atlantic Telegraph, post 8vo. 7 s. 6 cl.
Gardiner's Poems, Sonnets, and Lyrics, 12mo. 2 s. cl.
Godard's The Boy and the Constellations, illust. large sq. 8 s. cl.
Jackson (Lieut.-Gen.), Life of, by Hahnay, Vol. 2, post 8vo. 7 s. cl.
Kingston's Paul Gerard the Cabin Boy, 12mo. 3 s. cl.
Liber Monasterii Ilyda, ed. by Edwards, royal 8vo. 10 s. hf. bd.
Mather Parisiensis Historia Anglorum, Vols. 1 and 2, 10 s. each.
Newman's Handbook of Modern Arabic, cr. 8vo. 6 s. cl.
Novum Testamentum, Græcæ, ed. by Candy, post 8vo. 4 s. hf. bd.
Pridham's Notes and Reflections, 1 Corinthians, cr. 8vo. 5 s. cl.
Reid's The Bandolero, or a Marriage among the Mountains, 6 s. cl.
Sane Merel, by the Author of 'Guy Livingstone,' cr. 8vo. 6 s. cl.
Sewall's The Rose of Cheriton, a Ballad, fe. 8vo. 1 s. cl.
Shortrede's Traverse Tables to Five Places, super-royal 8vo. 2 s. cl.
Smith's Gospel Husbandry, or the Pilgrim in the Mission Field, 2 s. cl.
Tanner's Index of Diseases, and their Treatment, 12mo. 10 s. cl.
Year-Books of King Edward I., trans. by Horwood, roy. 8vo. 10 s.

KING THEODORUS OF ABYSSINIA.

THE name of this potentate has been repeatedly before the public of late, and we have had some taste of his quality in his acts towards those unhappy individuals of whom we are accustomed to speak generally as the "Abyssinian captives." Beyond this name and this sample of his method of governing, very little is known of the look, bearing, morals, and manners of the Christian King, Theodorus.

We are enabled, however, through the Parliamentary papers referring to the case of the above captives, which have been recently published by order, to get a fuller view of this extraordinary man than has hitherto been vouchsafed to us. Among the papers in question is a Report from Mr. Plowden (consul at Gondar) to the Earl of Clarendon. This report is, indeed, now, eleven years old, but it presents such a perfect picture of the man, mentally and bodily, that it is as good as if it were drawn yesterday.

Just before the period named, Northern Abyssinia (independently of Shoa) was under three chiefs; and, as they were in permanent hostility with each other, the people between them were ground to the dust. Now, there was a sympathizing and patriotic youth, at that time bearing the cacophonous name of Dejazmatch Kasai. He resolved to be the benefactor of Abyssinia, by improving his own fortunes. A chief himself, he had followers, well disciplined and faithful. With these he assailed and overcame the Queen Mother's troops; thrashed those of her son, Ras Ali, at disadvantages of one against five, and professed all the time to be their Highnesses' humble servant. He was loyal and disloyal as it suited his purpose; but there was a sort of fascination about him which seemed to secure his personal safety, and even those who had him in their power feared to molest him. Dejazmatch was troubled by no such scruples. He bided his time, accumulated troops and guns, called his Lord God to witness that he meant no harm, but was dreadfully afraid of being attacked by wicked enemies, and then, when they least expected it, he fell upon those enemies one after another, destroyed them right and left, hip and thigh, gained with his victory treasures far beyond what Golconda could ever boast of, and having no more enemies within his reach he had himself crowned King of Abyssinia, by the grace of God, and the significant name of Theodorus.

"King of Kings of Ethiopia," that was his proper style, and woe to the man who for a moment forgot what was meant by it! Heathens and Mohammedans he swept from his path by the exterminating breath of war. Captive rebel chiefs he turned to account in moments of clemency and calculation by mulcting them in handsome ransoms.

Since then, he can say, like Selkirk, "I am monarch of all I survey."

There is some light, but a good deal of shade, in his character. Let us get over the unpleasant part first. His wrath is terrible: it is deadly; yet not that of a madman, for he has it under control. He is merciless in punishment, fanatically religious, intolerable in his pride—pride of fierce ignorance,—and arrogantly assuming himself to be first of kings, not only in Ethiopia, but in the world.

With all this, he has really been the liberator of his country. At least, he has given it one tyrant in place of a score, and he once dreamed, perhaps still dreams, of being the founder of an Ethiopian empire, or rather restorer of the old one, which shall include within its frontiers even that ancient mother of nations, Egypt itself! He is brave, possesses manly beauty, has great decision of character, and is as punctilious in returning the salute of an inferior as Louis the Fourteenth was in acknowledging the courtesy of a housemaid. He has effected as many reforms in social affairs as ever the Czar Peter did in Russia. In matters of commerce, civil and criminal law, and home policy, the reforms he has accomplished are many and beneficial. He has established a post-office. In proclaiming laws, he does not merely decree,—he sets an example. His lady, the Queen, finds in him the most faithful of husbands, and conjugal loyalty is gently urged on all masters of households as a fashion good in itself, and not to be neglected without peril to life. Wives have their rights as well as their privileges. Theodorus has suppressed the slave trade, and proclaimed his detestation of Popery. The latter has been insolent in Abyssinia, ignoring the Church, with its rag of Christianity to make it respectable, and the pictures of English hunters in scarlet coats and top-boots in the cathedral, which indicates some supposed proclivities towards Protestantism!

"His faith is signal," writes Mr. Plowden. "Without Christ," he says, "I am nothing. If He has destined me to purify and reform this distracted kingdom, with His aid, who shall stay me?" Theodorus would not consent to receive Mr. Plowden as Consul; but he expressed a condescending sort of regard for Queen Victoria. Since that time, he has had some severe lessons, and some triumphs. He still holds himself independent of and superior to all the world. Interfering in what did not concern them brought the late captives to grief, and the insulting neglect and contemptuous indifference which our red tapists fully paid out to him for his official courtesy, aggravated their condition. Mr. Plowden, nevertheless, told those obstinate red tapists, eleven years ago, that Theodorus was a man who had saved from helpless anarchy the most fertile empire in Africa; an empire which might fall again into anarchy at the great reformer and conqueror's death, but that meanwhile "Abyssinia, with a seaport of its own, a settled boundary, and a king with civilized ideas, would be worth treating with on something like equal terms." We treated him as if he were a savage, always in his war-paint, dancing his war-dance, and with no ideas belonging to civilization. The King of Kings of Ethiopia has taught Downing Street to acknowledge his power, and England has been brought to sing before him the unpleasant song, "Peccavi," with its melancholy burden of "Mea maxima culpa."

LIFE IN SPAIN.

Almansa.

THIS "very loyal" but architecturally shabby "city of Almansa" is known to fame as the scene of a great and sanguinary battle between the Spaniards, commanded by "Berwick," and the Anglo-Portuguese army, of which "Galway and Das Minas" were generals, and who fought for Carlos and his bride, the Princess of Brunswick Wolfenbüttel, in the war of succession. The latter were shamefully beaten by the said Duke of Berwick and his Spaniards. Philip created Berwick a Grande of Spain, Duke of Liria and Xerica. There is a very fair mixture of British blood in the blue article so highly prized in Spain; but, in spite of a bull, I must allow that it is

nearly all Irish. Almansa is a city no one would visit save for business or for profit. It is now railroadically of importance, as the junction of the Madrid and Alicante line with that of Valencia. For strategic reasons, known only to the directing powers, the trains from Valencia to Almansa reach their destination just in time to be too late for the service between Almansa and Alicante; so that if you wish to visit Alicante you must rest the night at Almansa, and take the morning train for that chalky, cheerless port. In due course, we leave Valencia, and travel through groves of orange-trees, "whose branches kiss the tawny ground." The blossom of to-day hangs like a bridal wreath on the same branch with the luscious, juicy fruit, which cries "come, eat me!"

"Naranja" blossom scents the air around.

While orange-laden branches kiss the ground.

The rich, juicy, tawny brown of the earth contrasts exquisitely with the shining green of the leaf,—sunshine and shadow dancing over the leaves as the lazy breeze rocks the heavily-laden branches to and fro, suffocating you with delicious perfume.

As you approach Almansa the scene changes, and nitrous dust becomes the order of the day. The high-street of Almansa is as full of holes as a colander; but neither the donkeys nor the people seem inconvenienced. The gradation is admirably preserved; first you climb a hillock, then you plunge into an abyss, and plough through two feet of fine nitrous powder, filling mouth, nose and ears, and spoiling your temper as well as your clothes; but, as the barber who shaved me observed, if all the province was one Paradise, like Elche, no one would pay for the drawing of souls from Purgatory, and then "El Cura would shave himself." This was an unanswerable argument, and a lesson to be thankful for the "oasis," although you might be at the same time camping out in the desert. There is a "buffet" at the station, very decently served with food; but cleanliness is at a premium. The *fonda* or hotel joins the station, and was, on my visit, apparently just completed. After supper a more than semi-nude varlet, with a rushlight in a horn lantern, which only made darkness visible, acted as guide. He plunged over hillocks and into dusty depths, expecting me to follow him with equal alacrity. I mounted the first hillock, and had passed the intervening valley, when, on the second hillock, my guide having disappeared into the depths beyond, I performed an undignified spread eagle, upon which my guide came rushing back, and, after beating and shaking the worst of the nitrous dust from my tourist's suit, we travelled side by side the remaining distance. A "son of Mars," a "son of lucre," a friend, and myself, all sought the shelter of the *fonda* for the night. The "General" and "Milord" had secured, through the intervention of their courier, two rooms on the ground floor, the said courier, on our arrival, being busy placing "toilet elegancies" on the dressing-table, and an india-rubber bath upon the floor. "Tia Maria," shouts the varlet; "two Englishmen want beds."—"Bien! No. 5, upstairs!" shouts Tia Maria in reply. I ask for separate rooms, but Tia Maria looks puzzled. "Why there are two beds in the room!"—"Yes, but we prefer separate rooms." The "General," "Milord" and the "Courier" have secured three, and only one remains unoccupied. The key is inserted, and No. 5 is opened, the walls streaming with water, the plaster being soft and fresh. Tia Maria is grief and desolation to the tips of her fingers. "Would we like the window open?"—"Yes!" We discover that there are shutters, but no window. Tia Maria is all grief and desolation again. We agree that we cannot be so rude as to swear at a lady, so we smile and dismiss her with "buenas noches." "Damp sheets and rheumatism," cries my friend. My advice is 'Off with the sheets; so much for Almansa!'—agreed; and then we roll ourselves in the blankets, and doze fitfully; trains passing, trains stopping, trains shunting—engines shrieking, the "shrieks floating double, shriek and echo"—thus passes the night. We wake sneezing, and find the sun shining full and steadily into the room. "In for a cold and the rheumatiz," cries my friend. "Hope not," say I, "if so we will put all to Tia Maria's account." We open the door, clap our

hands sharply, and the lady's "Ya, Va" rises from the patio. "Hot water, if you please; damp beds: we shall die, Tia Maria, of cold and rheumatism." Tia Maria prays her namesake we are mistaken, and we are; for on the morrow all the evil effects had passed away.

In the fresh, crisp, early morning air we leave Almansa by train for Alicante, and reach our destination in due course. Alicante is a hole; but you tolerate it, as you do an ugly, crusty, cantankerous husband for the sake of his elegant, charming and amiable wife. Elche, the City of Palms, is the lady, and chalky Alicante, of course, the gentleman. "No cows' milk, waiter!"—"No, Señor! only that of goats."—"What, no cows' milk in a place all chalk?"—"Cows can't live upon chalk, Señor." We assure him that London cows are proverbially reported to consume chalk; at any rate, history relates that an analysis of London milk gives a residuum of chalk; our waiter shrugs his shoulders, and supposes there are *cocos de Inglaterra* as there are *cocos de España*. The wine is very inferior. "Come, waiter, tell us how and of what it is made?" Waiter smiles, and replies, "Quien tiene tejado de vidrio no tire piedras al de su vecino," which means that "those who live in glass houses," &c.—"Yes, very true," we reply, "but"—"Quiero hacer del ladrón fiel, fíate de él!"—"If you would make a thief honest, trust him."—"So, waiter, please, a bottle of your best."

Before the railway connecting Madrid and Paris was working, Alicante was the great landing-port for both passengers and merchandise conveyed by sea in good, comfortable, fast steamers to and from Marseilles; here also you find steamers plying eastward and westward on the blue waters of the Mediterranean. Alicante itself presents no object of interest beyond an old castle on the heights falling into decay; but it is a convenient spot from which to visit that lovely "oasis in the desert," Elche, an African city in miniature, and surrounded by a grove of fine palm-trees, a green spot in a chalky, arid desert. It never rains in Alicante. Much of the verdure arises from judicious irrigation, the work, of course, of the despised heretic Moriscos whom Philip the Second banished from the seaboard, and his successor completely crushed out because he feared they were not real orthodox Christians. Truly the good these Molesms did lives after them. We kill the time until a steamer sails for Malaga. The sea is like a lake. The treacherous Mediterranean is merciful, and bears us gently on her bosom to the harbour of Malaga.

F. W. C.

OUR WEEKLY GOSSIP.

Mr. Dickens's arrangements with Mr. Arthur Chappell are now complete. A series of readings will be given, which will include at least six at St. James's Hall, where the first (probably 'The Christmas Carol') will be given on "Boxing night."

It may be fittingly noted, by the way, that two men of letters, holding superior appointments in the Post Office, are, so to speak, running novels at the same time: Mr. Anthony Trollope, 'The Claverings,' in the *Cornhill*; and Mr. Edmund Yates, 'Black Sheep,' in *All the Year Round*.

'Napoleon III. and the Rhine' is the title of a political brochure by Mr. Pope Hennessy, which is announced for publication by Mr. Hardwicke.

The author of 'George Geith,' Mrs. Riddell, has been, through severe illness, forbidden all literary labour, and through observance of the prohibition is slowly recovering.

Dr. John Brown, whose name will ever be associated with 'Rab and his Friends,' is, we regret to say, in the worst condition of health in which his friends could fear to see him.

The artists are all gone to fresh fields and pastures new. Messrs. Phillip and O'Neil are in Inverness; Mr. Millais is in their vicinity; and Mr. Ansdell is "at his shooting-box" in North Britain. Messrs. Calderon, Marks, Yeames, with some others are at home in Kentish castles; and Mr. Frith is the guest of Sir William Ferguson, near Edinburgh.—As for the authors, their respect-

tire whereabouts are as widely apart. Among them, Mr. Wilkie Collins is afloat, with a tendency southward; and Mr. Edmund Yates is in the north, the guest of the Earl of Fife, at The Lodge, near Braemar.

Full of years, of modest but well-merited honours, and of energy, zeal, industry and intelligence to the last spark of his fourscore years and four, the Queen's Ancient Serjeant has passed away to his rest. The columns of the *Athenæum* have frequently been adorned by the pen of Mr. Serjeant Manning, who in literary labour found relaxation from heavier duties. Besides his serjeantry, the late eminent lawyer was Judge of the Whitechapel County Court, and Recorder of Banbury and of Sudbury. Mr. Bacon, Q.C., succeeds him in the dignity and duties of Ancient Serjeant.

One of those invaluable men whom their employers come to cheerfully designate as friends as well as servants will be missed by those who have business at "Murray's in Albemarle Street." Mr. Dundas had been confidential clerk in that well-known house for nearly half a century, and his face was a familiar face to many an author. Four days' illness terminated his labour and his life, and the gentleman who had the advantage of his service joins in the testimony that his friend and clerk was beloved and is regretted.

The grandson of a gentleman-farmer (the latter emigrating from Scotland to Ireland in the last century, when the landed inheritance of his family had become so subdivided as to be of little value), died recently in the person of the Rev. Dr. Edgar, the head of the Irish Presbyterian Church. Dr. Edgar was the representative of a noble Scottish family of baronial rank, the Edgars of Wedderlie, Berwickshire. The *Dublin Evening Mail* states that they held that "manor with its fortalice and tower, in a male descent, from Edgar, Earl of Dunbar, in the twelfth century, down to the year 1724, when their ancestors' estate passed by sale into the hands of the Lord Blantyre of that day."

Last Saturday, after three weeks of being grappled with and slipping away, the Great Eastern not only seized, held and raised the old Atlantic Cable, but brought the bight on board, and retained it. On Sunday, "Canning," from on board, "had much pleasure in speaking to Glass," in Ireland, through the 1865 cable. The Albany first grappled and raised the cable on the 10th of August; but the sea took its own again, and then the Great Eastern, the Albany, and the Medway, alternately caught and lost it, till finally the first-named vessel secured the prize. Never was there three weeks of such sport, nor a 1st of September of such triumph for the sportsmen.

Some persons are asking if the little vessel "Red, White and Blue" is the property of Barnum. It is known to have left New York and to have been again seen off the Star; but there seems some doubt whether between those wide points she sailed or was carried. Such a feat as ocean navigation by a very small vessel is not unprecedented. Seven years since, three Cornish fishermen, in an open Cornish boat of small tonnage, sailed from the little port of Newlyn, Penzance, and safely traversed the Atlantic to the Cape of Good Hope, and the Indian Ocean to Melbourne, where they arrived "all well"!

A strange story (which had its fellow a year ago) has been going the usual round, to the effect that, in a field adjoining the turnpike-road between Alton and Farnham, the property of Mr. J. Glendenning, of East Oakley Vale, some remains have been discovered which are described as of archaeological interest. These are said to comprise ten human skeletons, several brass and iron ornaments, the ribs and head of a horse, iron arrow-heads, four swords with cross-hilts, one of which is broken; also that rather rare article, a monile, or horse-necklace, consisting of one hundred and twenty beads of glass, which is described as "opalized." Other details are given, topographical included, which only serve to mar the story. Any one who attempts to visit the place indicated must not trust to the distances laid down; and as for getting to the spot, the traveller may as well be warned that "East Oakley Vale" and "Mr. Glendenning" are

less likely to be found "adjoining the turnpike-road between Alton and Farnham" than "in Nubibus."

Each Wednesday in July last, Mr. H. R. Mackeson, of Hythe, Kent, assembled from one hundred to two hundred listeners and companions for "penny rambles." The party visited the most interesting localities in the neighbourhood, these embracing Saltwood Castle, the Deens, quarries, Military Canal, and the like. In the course of their perambulations, historical, geological and botanical disquisitions were, for the benefit of all who chose to come, given in a popular, concise and untechnical manner. Mr. Mackeson has been ably accompanied in this kindly and pleasant task by the Rev. T. Wiltshire, the Rev. R. C. Jenkins, and others who take an interest in the rational pleasures of the people.

The curious magnetic polarization of H.M.S. Northumberland, arising from her having been built north and south, has been destroyed by reversing that position and then de-magnetizing her by means of two of Grove's batteries.

Important antiquarian discoveries have been made on the site of the Roman Silchester, near Basingstoke. The main street and a street running from it have been laid open, and two large Roman houses, with tessellated pavements, have been discovered. It has also been ascertained that the walls round Silchester were three miles in circumference.

Objection has been made to including among traders noblemen whose revenue is derived in whole or in part from the produce of their estates, such as iron, slate, coal, &c. As, however, they can in certain cases become bankrupts, so may they be described in such cases as traders. A noble lord was in the *Gazette* the other day as a tobaccoist. In Scotland there was no disparagement through trading. When the second Earl of Bute refused to pay the annuity to his father's widow, which the first Earl had charged on his estate (A.D. 1710), among the pleas of the Dowager Countess for legal succour was that "she had nothing as the product of any trade she drove, except two or three ells of *alamode*." The latter was a thin silk fabric, much in fashion at the time. The Countess probably purchased wholesale, and sold, to country ladies, retail. A noble silk-mercer!

The world-renowned well of St. Keyne, near Liskeard, famous for its alleged power to confer superiority on that one of a newly-married couple who first drinks of its waters, is in a sad state of neglect; the channel which supplies the marvellous waters is stopped, the bed of the fountain filled with dry stones. Of the five trees—an oak, three ashes, and an elm—that were so strangely rooted together above the roof of the fount, but two remain: these are the elm and one of the ashes. The sacred water is still procurable at a neighbouring cottage, from the original spring. The fountain itself is, we are glad to learn, about to be restored to its recent character, so far as it is possible to do so.

The pastoral literature of the French episcopacy is being narrowly watched by the *Journal des Débats*. In an address just published by the Archbishop of Paris, in reference to the Festival of the Assumption, the prelate styles the Virgin as "the most perfect of creatures," "our sister, born in Adam as we are born," "but now in heaven, to which men may attain by two means, Grace and Liberty." The *Débats* looks upon this as a disavowal of the dogma of the Immaculate Conception.

A new proposition for the union of the churches has been made by a French writer, M. Rodriguez, in a work which the enthusiastic ex-merchant has entitled 'The Three Daughters of the Bible.' These daughters are Judaism, Christianity and Mohammedanism, all of which have sprung from the same source, have had their respective missions, and should now unite in expressing one universal and definite belief, the only one worthy of being offered to men as "modern religion." M. Rodriguez sees no difficulties in the way, if nations will only accept him as the modern prophet!

During the popular effervescence created by the cholera last year, Luisa Colet, the French writer, was exposed to danger in the island of Ischia. The ignorant multitude regarded her as one of the agents employed in sowing the seeds of the prevalent disease, and the local force was found insufficient to protect her. Since then she has been residing at Santa Leucio, near Caserta, and the results of her literary labours will see the light shortly in the form of a romance, entitled 'Cibele et les Derniers Abbés.' The scenes of the romance are selected in Terra di Lavoro, Monte Casino, and Monte Vergine, sites full of romantic interest.

Our readers will be glad to learn that the Benedictine Monastery of Monte Casino is to be preserved in its present state as a national monument, and that the archives, library and monuments will remain intact.

News has been received from the United States scientific exploring party, which was sent out last year, by the Western Union Telegraph Company, to make explorations in Russian America, with a view to the construction of a line which shall connect the American system of telegraphs, crossing Behring's Strait, with the Russian system on the Asiatic continent. The party comprises a palaeontologist, botanist, naturalist, and general collectors, who combine their scientific researches with the service they render to the telegraph company. Their last year's work consisted, for the most part, in mapping out the operations for the present season, and in placing men and outfits where they would be likely to be most useful. They had, however, made numerous marine collections from the surface, and by soundings in the North Pacific and in the Strait, and among the islands on the American and the Asiatic shores. At Ounga Island they examined the lignite, or brown-coal beds, and brought away such a series of fossils as will, it is thought, determine their age. By the end of the present season the several members of the party, from Sitka, St. Michael's, and the lower Youkon district, Norton Sound, will be reassembled, bringing the results of their year of exploration, which cannot fail to be interesting and instructive. It is understood that, with certain restrictions, the collections obtained will be in the hands of Prof. Baird, of the Smithsonian Institution. A better disposition of them could not be made, for the institution will not fail to publish all that is valuable from among them, and distribute freely to the scientific men of all countries.

Writing, some weeks since, about a picture in the National Portrait Exhibition, No. 300, the property of Mr. F. V. Wentworth, and ascribed to Sir A. More, we, on the strength of the owner's statement, accepted it as a portrait of Sir Philip Sydney. There is some sort of likeness in the features to those in the well-authenticated pictures of the Knight of Zutphen, which were placed nearly opposite to it, and in such noble company as that of his mother and sister, of whom Spenser wrote the golden lines—

Urania, sister unto Astrophel,
In whose brave mind, as in a golden cofer,
All heavenly gifts and riches locked are:
More rich than pearls of Ynde, or gold of Opher,
And in her sex most wonderfull and rare.

There is obvious suggestiveness in the union of arts and arms, as ascribed in this work. The subject stands before a table that is loaded with books, and holds a sword which, if the portrait be rightly named, would be the sword of the "starry Paladin" himself: such we took it to be,—a plain, long, strong weapon, with a basket-hilt. The books on the table are not unapt to Sydney, one, lying open on the top of the pile, is—so nearly as we can make out as we stand on the floor in front of the painting—part of a Theocritus in Greek, also a Lucretius, which, as if to make sure of the owner's taste, is labelled separately, the title being on the front. Besides these, there is a bulky Guicciardini, inscribed. The table bearing these is placed in front of an open window, in the centre of which is a painted shield of arms, that supplies stronger grounds for challenging the work as a likeness of Sir Philip Sydney than any dissimilarity of features, which, after all, differ from those in unchallengeable portraits of the subject in a less degree than many pictures of

individuals by divers hands, and nowhere, which we should not think of challenging. The arms of Sydney are, or a pheon *azure*, as shown in No. 304, at the Portrait Exhibition, 'Sir Henry Sydney,' father of Sir Philip, those in the window of No. 300 are *argent*, two bars *gules*, each charged with three bezants. These pertain to the family of Martin of Yorkshire, also to Martyn of Gloucestershire. The picture is certainly a very fine one, in need of careful varnishing by competent hands, and in style suggests more of the best Dutch execution than More's education in Italy permitted.

MR. MORRIS'S COLLECTION OF MODERN HIGH-CLASS PICTURES IS ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt—J. Phillip, R.A.—T. Faed, R.A.—J. Lewis, R.A.—Eggs, R.A.—Frith, R.A.—Ross Bonner—Goodall, R.A.—Cooke, R.A.—Crawford, R.A.—Pickersgill, R.A.—Calderson, A.R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Ansdell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—P. Nasmyth—Linnell, sen.—Dobson, A.R.A.—Cooper, A.R.A.—Gale—Marks—F. Hardy—John Fred.—Frère—Ruipers—Brillouin—Lidderdale—George Smith—Durrerger, &c.—Admission on presentation of address card.

ROYAL POLYTECHNIC.—George Buckland's Musical Entertainment, entitled 'The Castaway; or, the Unlucky Cruiser, commonly called "Crucio." The Kaleidoscope and Pepper and Tobin's Wonderful Illusions—The Cherubs floating in the Air—The Modern Delight Oracle, and Shakespeare and his Creations, with Recitals by F. Damer Cape, Esq.—Exhibition of the Prussian Needle-Gun and other Breech-Loaders, and Lecture by J. L. King, Esq.—Dugwar's Indian Fests, &c.—Open from 12 till 5, and 7 till 10. Admission, 1s.

FRIDAY.

Report of the Committee on Electrical Standards, by Mr. FLEEMING JENKYN.

'On a Nomenclature for Large Multiples and Sub-multiples, designed to render the Use of Absolute Standards convenient in Practice, and on the Fundamental Unit of Mass,' by Mr. J. G. STONEY.

'On Earth Currents,' in French, by Prof. MATTEUCCI, read by Mr. Grove (President).

Extract of a Letter on Magnetic Disturbances, from Senhor Capello, of the Observatory, Lisbon, to Balfour Stewart, of the Kew Observatory.—The author sent three tables, representing graphically the most important results deduced from the curves of our magnetograph for the year 1864. He had followed the plan of General Sabine in separating the greatest disturbances of the three elements. Thus he had considered as a disturbance of the declination every ordinate which differed from the monthly mean by 2'3" or upwards, while the separating value for the horizontal force was '0011 of the whole horizontal force, and that for the vertical force '00032 of the whole vertical force. The instruments were at work during the whole of the year 1864; and of the 8,760 hourly observations of each instrument, the observers only failed in measuring 97 for the declination, 139 for the horizontal force, and 159 for the vertical force instrument. The number of disturbances have been, for the declination, 1,043; for the horizontal force, 810; for the vertical force, 982. From a diagram exhibited, giving the hourly variations yearly and half-yearly of the three elements, it was seen that the progress of the declination for each period is very regular. The mean daily range of declination during the six months from April to September, when the sun is north of the equator, is 9'20"; while during the six months from October to March, when the sun is south of the equator, this range is less, being barely 6". For the dip the corresponding curves are much disturbed from 6 P.M. to midnight, especially for the six months when the sun is north of the equator. The total force gives a well-pronounced minimum at 11 A.M. during the six summer months, and 11:30 A.M. during the six winter months. The daily range is greatest for the six summer months, and least for the six winter months. The diagram of disturbances given for the declination a maximum of the westerly disturbances at about 8 A.M. and a minimum about 10 in the evening. For the horizontal force, the maximum of the easterly disturbances is at 10 in the evening,

and the minimum about 6 in the morning. The curves for the horizontal force disturbances are irregular. The maximum of disturbances tending to increase the horizontal force takes place about noon, while the minimum is about 1 A.M. But here one is much struck with the great disproportion between the disturbances tending to increase, and those tending to diminish, the horizontal force, the latter being both the most numerous, and the greatest in amount. The maximum and minimum of these latter disturbances take place a little later than the maximum and minimum of the disturbances tending to increase the force. With respect to the vertical force, the curve of disturbances tending to increase the element resembles, to some extent, the curve of easterly disturbances, or disturbances tending to diminish the westerly declination. In this same diagram, blue and red curves were made to represent the whole effects of the perturbations, or the quantities which it is necessary to apply to the line of no disturbance, reckoned a straight line, in order to reconstruct the curves with the perturbations. Thus, the effect of disturbances upon the declination is to cause the needle to deviate towards the west during the hours of the day, but towards the east during the hours of the night. The effect of disturbances upon the vertical force is of a reverse kind, tending to diminish the element during the hours of the day, but to increase it during those of the night. With regard to the horizontal force, it appears that the disturbances tend to diminish this element almost during the whole of the twenty-four hours. A third diagram represented the mean hourly movements of the north pole of the freely-suspended needle, in a plane perpendicular to the direction of such a needle, both for the whole year, and also for the winter and summer seasons.

'On the Electrical and Mechanical Properties of Mr. Hooper's India-rubber Insulated Wire,' by Mr. W. HOOPER.—The author has, at a previous meeting, described the method by which he secures the durability of india-rubber. Mr. Hooper confirmed the durability of his wire by reference to experiments made by Sir Charles Bright on a length which, after being exposed to most trying conditions for three years, had increased about 33 per cent. in insulation. He supplied to Capt. Mallock, for further experiments in India, a length made in 1862, which had been in use on his factory for two years, exposed to the sun and weather. This length, notwithstanding its early date of manufacture, is at 75° F., three times better than the very best gutta-percha. Mr. Latimer Clark, the Government engineer, has considered it unnecessary to ship Mr. Hooper's cables in water-tanks, and the Ceylon cable, now en route, is coiled dry. Such practice would be highly dangerous with gutta-percha cables. Diagrams representing the effects of pressure and immersion were shown, from which it was seen that pressure improves the insulation of his wire in the same way as is observed with gutta-percha. The result of carefully-conducted experiments, extending over three years, proves that the absorption of water is so small that the most refined electrical tests failed to discover it. Its low induction offers the following points of commercial interest: first, it would be possible to construct an Atlantic core, giving precisely the same speed as the present gutta-percha cable for 75,000l. less; secondly, by using similar proportions, the yearly income arising from an Atlantic cable may be increased about 200,000l., and that for every increase made in the rate of transmission through the present gutta-percha cable, a corresponding increase can be attained with Mr. Hooper's core without any further cost. Thus, if the Atlantic Company adopted any means which, with a gutta-percha cable, could double the present rate of sending messages, Mr. Hooper's cable, with similar appliances, would produce an increase of 400,000l. per annum. Mr. Varley has shown that a cable made of gutta-percha, if only just able to pay the working expenses, would, if replaced with Mr. Hooper's core, pay a dividend equal to 37 per cent. of the working expenses, and points to the advantages which would arise from its adoption for the Red Sea should this line of telegraph be again attempted.

'On a Fluid possessing Opposite Rotatory Power for Rays at Opposite Ends of the Spectrum,' by Prof. JELLETT.—The existence of this fluid was discovered in conducting a series of experiments with a new saccharometer, which the author had formerly described to the Royal Irish Academy, and which he now exhibited to the Section. In making use of this instrument, it became necessary to compare the rotatory powers of the two well-known species of oil of turpentine, namely: 1, the American oil of turpentine, which is obtained from the *Pinus australis* of North Carolina; and 2, the French oil of turpentine, obtained from the *Pinus maritima* of Bordeaux. As these fluids, which are opposites in their rotatory powers, are chemically identical, and very slightly different in their refractive and dispersive powers, it was natural to expect that no difficulty would be found in determining the relative lengths of two columns of these fluids respectively, which should perfectly compensate each other. Two columns of fluid are said to compensate each other when a ray of polarized light, transmitted successively through these columns, emerges from the second column in the same state in which it entered the first. The actual result, however, was wholly different from this anticipation. When the relative lengths were so determined that the intensity of the light transmitted respectively by the two parts of the analyzer was the same, the colours of these two spectra were wholly different. In reasoning on the difference of colour, the author was enabled to perceive that the American oil of turpentine was much more highly dispersive of the planes of polarization of the elementary rays than the French oil. It is plain, therefore, that if the lengths of the columns be so proportioned that the rotation may be the same for the mean ray, the more dispersive (in the sense just defined) fluid will turn the plane of polarization of the red ray through a less angle, and that of the violet ray through a greater angle than the less dispersive fluid. Hence, remembering that French oil of turpentine is left-handed, and American oil of turpentine right-handed, it is plain that if a red ray be transmitted through two columns, whose lengths are so proportioned, the total effect will be left-handed rotation; whereas, if a violet or blue ray be so transmitted, the effect will be right-handed rotation. As these fluids, being identical in composition, could scarcely act chemically on each other, the same effects might be expected from a single fluid produced by mixing these two columns. This the author found to be, in fact, the case. The rotating fluid was formed by mixing the two oils in the following proportion: American oil of turpentine, 67; French ditto, 33. When a column of this fluid, whose length was four inches, was traversed successively by a solar ray, which had been previously transmitted through plates of red and blue glass, the rotation produced in the plane of polarization of this, which is the extreme red ray, was found to be $-1^{\circ} 35'$. Again, when the same column was traversed by a ray which had been previously transmitted through a solution of ammoniacal sulphate of copper, the rotation was found to be $+2^{\circ}$. This phenomenon is best shown with solar light, but it may be shown, though with less distinctness, with the electric or oxyacetylene light. The proportion of oils given above must be understood to refer only to the particular specimens of the oils which were used in making these experiments. The rotatory power of commercial oil of turpentine, more especially that of the American oil, is very variable.

'Remarks on the Variable Star lately discovered in Corona Borealis,' by Mr. J. R. HIND.—Early in June last the author received a letter from Mr. W. Barker, of the Customs Department, London, Canada West, stating that the remarkable variable star in Corona Borealis, which was seen in Europe on May 13, had been discovered by him on the 4th of that month. He thus describes its variations: "I first observed it on the 4th of May at 9 P.M., when it was somewhat brighter than Epsilon Corona; it rapidly increased until the 10th, when it was fully as bright as Alphacca (Alpha Corona); it was at its maximum. On the 14th it had decreased to the third magnitude, on the 18th to the 5th. On the 19th I could just discern it, and on the

20th I could see it no longer with unaided vision. On the 20th I observed it through my telescope (one of Cooke's 5 feet 4 inch object-glasses). With a power of 133, it showed a beautiful clear disk, and was exceedingly brilliant, and had a ruddy tinge. I still see it as a telescopic star; its light about equal to the companion of Polaris." As far as the author was at present informed, Mr. Barker did not make a public announcement of his discovery until the 16th of May, when he communicated a paragraph to the *London Free Press*, and forwarded copies of the paper to various astronomers in this country. It runs thus: "Astronomers will be interested to learn that a new star has made its appearance in the constellation of Corona Borealis. It is of the third magnitude, and is situated about one degree S.E. by E. of Epsilon Corona, and three degrees from Pi Ophiuchi, in a direct line between the two. It also forms the apex of an equilateral triangle with Beta and Zeta Herculis. Hour of observation, 9 P.M., 14th May, at London, C.W." It will be remarked that in this communication no reference is made to any observation of the star previous to the 14th of May, probably because Mr. Barker merely intended his notice to refer to its appearance at the date of his letter. But these observations are of historical and scientific value; and the author has not failed to press for any further particulars or corroborative facts which it may be in Mr. Barker's power to furnish. Several European astronomers, ignorant of Mr. Barker's observations, have conjectured that the star must have burst forth with astonishing suddenness. Mr. Schmidt, of Athens, a practised observer, thought it could not have been so bright as a star of the fifth magnitude on the 12th of May, early in the evening, or he must have perceived it; and M. Courbaisse, at La Rochelle, was convinced it was invisible to the naked eye on the 11th; yet at this date it must have shone, according to Mr. Barker's observations, as a star of the second magnitude. This is by no means a solitary instance in proof of the little value which attaches in many cases of a similar kind to merely negative evidence. In his own astronomical practice the author had met with startling instances, and striking ones may be found in the history of these phenomena of variable stars. Tycho Brahe thought the celebrated new star of 1572, which he detected on returning home from his laboratory, and which was then shining as a star of the first magnitude, could not have been visible an hour or so previously, and yet, keen observer as he was, he is well known to have been preceded by several days in the discovery of that wonderful object. Astronomers generally, however, may not be disposed to attach so little weight to negative evidence in a case of this kind, as from his own experience Mr. Hind was inclined to do, and it will be most desirable to possess every particular relating to Mr. Barker's observations between the 4th and 14th of May, which it may be in his power to furnish. Mr. Barker thinks he saw this star one or two years earlier, when the constellation was in the S.E., about 9 P.M., and Sir John Herschel announces his having recorded a star in this very position in one of his revisions of the heavens. The apparition of this star will be memorable as having afforded an opportunity of applying the spectrum analysis to one of this class of objects. The valuable and highly interesting observations by Mr. W. Huggins and others are the results.

'On a New Geometrical Theorem relative to the

Theory of Reflexion and Refraction of Polarized Light (Isotropic Media),' by M. A. CORNU.—The direction of the luminous vibration relatively to the plane of polarization of a ray has not been yet stated in a way which is quite incontestable. Fresnel, in his admirable memoir 'On the Mechanical Theory of the Reflexion and Refraction of Polarized Light,' concludes that the vibration is perpendicular to the plane of polarization. M'Cullagh and Neumann have found again the same formula, but by supposing, on the contrary, that the vibration is within the plane of polarization. It seems that no middle term might exist between both these theories, and that the three rays have necessarily their vibration in the identical position compared with their respective plane of polarization. However, there is a third method, or, in other words, a third theory, extremely simple,—the author would not say extremely plausible,—which will lead us to the opinion of Fresnel respecting the refracted ray, and to the opinion of M'Cullagh respecting both the others. The only principle to be admitted, besides the exact transversality of the vibrations, is the following—the refracted vibration is perpendicular to the incident and reflected vibrations. We have, indeed, no theoretical ground for admitting, *a priori*, this principle; but if the consequence of it agree with the results of the other theories, it will merit to attract the attention of the theorists of optics, and, in fact, it will constitute a new theorem. With the help of this principle, it is easy to determine the position of the reflected and refracted vibrations, if the position of the incident vibration is given. The resulting formula is—

$$\frac{\tan \alpha}{\cos(i-r)} = \frac{\tan \beta}{\cos(i+r)} = \cotang \gamma$$

in which α , β , γ are the angles of the incident, reflected and refracted vibrations with the plane of incidence, i and r the angles of incidence and refraction. Seeing that the vibrations are besides transversal, the above formula determines them completely. But if this theory is exact, that formula is nothing else than the analytical translation of the law of the rotation of the planes of polarization of the three rays—a law first stated by Fresnel, and which, according to the same notations, may be written—

$$\frac{\cotang \alpha}{\cos(i-r)} = \frac{\cotang \beta}{\cos(i+r)} = \cotang \gamma$$

α , β , γ being the angle of the vibration with the plane of incidence. M'Cullagh arrives, on the contrary, at the expression—

$$\frac{\tan \alpha}{\cos(i-r)} = \frac{\tan \beta}{\cos(i+r)} = \tan \gamma$$

It is obvious that our formula agrees with the formula of Fresnel for the refracted ray, and with the formula of M'Cullagh according to the incident and reflected rays. It is easy to conclude, from this theory, that under the normal incidence the luminous vibration rotates a right angle when the ray penetrates in the second medium. It would be interesting to look for a direct verification of that conclusion; but it seems difficult to realize an experiment in which the surfaces limiting the medium do not produce an even number of those rotations, so that the vibration does not come again to its first direction. The author could have exposed that property of polarized light under a more modest form,—that is to say, as a simple corollary of known theorems; but he fancied that it was more useful, in the actual state of optics, to erect it as a new theory, in order to show, first, that the geometrical simplicity of the principles does not constitute the most plausible theories: thus it is prudent to conclude that the greater geometrical simplicity of the M'Cullagh theory is no sufficient ground to reject the theory of Fresnel, though more complicated. Besides, the proposal of a new principle, very little obvious *a priori*, is a good occasion to remember the feeble degree of evidence of the principles used in the other theories. After a further examination, it will appear that it is neither more nor less difficult to admit that the refracted vibration is perpendicular to both the others, than to admit, for the luminous ether, the same density in all the media like Fresnel, or the same density like M'Cullagh,

'On the Hyperelliptic Functions, Göpel and Weierstrass Systems,' by Mr. W. H. L. RUSSELL.—The author of these papers gave an explanation of the methods discovered by Göpel and Rosenhain, for the comparison of the hyperelliptic functions. After pointing out their enormous complication, he stated that a simpler method had been discovered by Dr. Weierstrass, which he illustrated by showing how Abel's theorem had been employed by that mathematician in deducing the periods of elliptic and hyperelliptic functions.

'On Practical Hypsometry,' by Mr. J. A. ELLIS.—The object of this paper was to furnish a rule by which heights might be calculated from observations of the barometer and thermometer, with the same accuracy as by Laplace's complete formula (of which it is a mathematical transformation), but without any tables whatever, and therefore without the use of logarithms. The following local example will best illustrate the rule. On Wednesday last, August 22, an aneroid barometer at the towing-path, Station Side, Nottingham, stood at 30.02, and at Mount Vernon at 29.82; the sum of these numbers is 59.84, and their difference 0.20; multiplying this difference by 52,400, we obtain 10,480.00, which, divided by the sum, or 59.84, gives the quotient 175, which requires to be corrected for temperature. The thermometer at each station was 65°; the sum of 65, 65 (the two temperatures), and 836, is 966, and this divided by 900 gives 1.073. Multiplying 175 by 1.073 to the nearest unit, we find 188, the number of feet in the difference of level. If a mercurial barometer had been used, we must have diminished this result by two and one-third times the difference of the temperature of the mercury. This rule gives accurate results for all British heights, and, if only aneroid barometers are used, may be employed for all heights under 3,000 feet all over the world. Greater heights must be calculated in sections of about 3,000 feet each.

'On Plane Stigmatics,' by Mr. A. J. ELLIS.—In analytical geometry, and in modern higher geometry, inexplicable results are perpetually occurring, well known as "imaginary" points, lines, circles, and so on. The object of this paper was to point out the extremely simple theory by which the writer has been able, not only to explain all these, but to show that all the "real," as well as the "imaginary" results, are but particular cases of one general conception, which he has termed "stigmatics," or the correspondence of points (stigmata). Two series of points, termed for distinction "indices" and "stigmata," and situated anywhere upon a plane, are supposed to be so related by some known law that the position of a point in one set determines the positions of a known number of points in the other set. If the index and stigma be the two extremities of an ordinate in Cartesian geometry, this conception explains every case of "imaginary" intersection, &c., by supposing the index to be anywhere on the plane, and not confined to one straight line, and the ordinate to have any inclination, and not to be always parallel to one straight line,—restrictions which are not noticed in the corresponding equations. If the index and stigma be two homologous points in an homography or involution, the imaginary double points, and, afterwards, imaginary double rays are readily explained.—A series of diagrams illustrated some of the simplest cases, and showed that the writer had for the first time completely solved the problem of the geometrical signification of imaginaries in plane geometry.

SECTION B.—CHEMICAL SCIENCE.

MONDAY.

'On the Magnesium Lamp,' by Mr. H. LARKIN.—On Thursday evening two of the magnesium lamps had been exhibited at the *conversations* of the Association, when the light was much admired. From the paper it appeared that the distinguishing peculiarity of these lamps is that they burn magnesium in the form of powder, instead of riband or wire, and do not depend on clockwork or any similar extraneous motive power for their action. The stream of the metal powder is mixed with a small portion of gas and fine sand in its progress through the tube; they escape together at its

mouth, where they are ignited, and continue burning with a brilliant flame. The author of the paper stated that the present price of the light was 1 $\frac{1}{2}$ per hour.

'On the Olefines in Relation to the Isomerism of Vinic Alcohols,' by Mr. E. T. CHAPMAN and Mr. W. THORP.

'On the Refraction and Dispersion Equivalents of Chlorine, Bromine, and Iodine,' by Dr. GLADSTONE.

'On the Chemical Action of Medicines,' by Dr. BENICE JONES.

'On the Sources of the Fat of the Animal Body,' by Mr. J. B. LAWES and Mr. J. H. GILBERT.

'On the Accumulation of the Nitrogen of Manure in the Soil,' by Mr. J. B. LAWES and Mr. J. H. GILBERT.

TUESDAY.

Report on Isomeric Alcohols, by Mr. J. A. WANKLYN.

Report on the Synthesis of certain Organic Acids, by Mr. A. R. CATTON.

'On the Action of Chlorine on Amyline,' by Dr. BAUER.

'On some Phenomena connected with the Melting and Solidifying of Wax,' by Mr. C. TOMLINSON.

Dr. JANSSEN then read two papers to the Section in French, the subject of the first being, 'Sur le Spectre de l'Atmosphère Terrestre et celui de la Vapeur d'Eau,' and 'Sur une Spectroscopie à Vision Directe.'

'On the Origin of Muscular Force in Animals,' by Dr. LYON PLAYFAIR.

'On the Nature and Properties of Ozone and Antozone demonstrated experimentally,' by Prof. J. M'GAULEY.—The Chairman (Dr. Miller), after Prof. M'Gauley had occupied nearly half an hour, intimated to him that he must bring his paper to a close in five minutes.—Mr. M'Gauley begged to be allowed to complete his statement; but Dr. Miller insisted on his bringing his remarks to a close, as there was another paper to read, and it was now past three o'clock.—Prof. M'Gauley submitted.

'On the Purification of Terrestrial Drinking Waters by Neutral Sulphate of Alumina,' by Mr. A. BIRD.

SECTION C.—GEOLOGY.

SATURDAY.

'On the Lower Greensand of Bedfordshire,' by Mr. J. F. WALKER.—The value of the paper, it appeared from the subsequent remarks of Mr. ETHERIDGE and Dr. FOSTER, was that it proved the occurrence of Wealden fossils in the greensand deposits, thus showing unconformability in those beds, and also that it added to previous knowledge as to the extension of those beds northwards, which was of value, as the phosphoric deposits are being used in the manufacture of artificial manure.

'On a Case of Gradual Change of Form and Position of Land at the South End of the Isle of Walney,' by Mr. R. A. PEACOCK.—The object of the writer was to get those at the head of the Ordnance Survey to procure some record of the great changes going on upon the coast, which in many cases had already made the published maps misleading.

In the course of a discussion which followed, the PRESIDENT (Prof. Ramsay) doubted if the Ordnance Department would engrave the old lines upon the plates of new maps, Sir Henry James, the head of the Staff, being afraid of asking for more money.—Dr. FOSTER, Mr. KING, and Mr. PENGELLY gave instances of the destructive action going on around our coasts, owing to the action of the sea upon the land; houses and even villages being destroyed, and towns compelled to migrate.—Mr. PATTERSON reminded the Section, however, that there was also a process of compensation going on in the formation of new land by silting, &c., at various points.—Mr. J. WYATT instanced the recovery of land in this way in Lincolnshire, where a company had been formed for the purpose.—The PRESIDENT remarked that the permanent source of compensation was the deposits of that kind, but the elevation of the land below, which was also known to be going on, was made allusion

to the connexion which existed, long geological ages ago, between the British Isles and the Continent, he said that this connexion probably existed about the time of the glacial epoch. A vast plain appeared to have been the connecting link, across which, no doubt, had travelled those animals of huge size and reptiles whose remains were found in the British islands, having migrated thither from the East. The connexion between England and Ireland had probably been severed at an earlier period than that between England and France, and to this circumstance and to the comparatively limited number of reptiles which had reached Ireland before the separation, he was disposed to attribute the present freedom of the country from those intruders, an exception proverbially attributed to the influence of St. Patrick. As to the mode of severance, he was disposed to look for it more in a gradual wasting away than in any sudden submersion. A compensating system, however, existed in that gradual upheaval taking place at different parts of the coast of which he had already spoken. Arguments were put forward in support of the assertion that since the Roman period parts of the Scotch coast had risen as much as 25 feet. Unquestionably remains of whales and submerged canoes had been found at a level above the present high-water mark, which it was difficult to suppose they could have reached except on the theory thus propounded.

MONDAY.

'On the Occurrence of Felis Lynx as a British Fossil,' by Dr. W. H. RANSOM.

Prof. PHILLIPS said the discovery of this fossil (which has been made in a cave in Pleasley Vale) made a positive addition to the list of pleistocene fossils, and was also of value as evidence of the distribution of temperature in past times. He added, that he thought they would have to widen their ideas as to the range of quadrupeds in past times.

'On the Discovery of Ancient Trees below the Surface of the Land, at the Western Dock, now being constructed at Hull,' by Mr. J. OLDHAM.

'On the Occurrence of Rhætic Beds, &c. near Gainsborough,' by Mr. F. M. BURTON.

'On the various Tracts of England and Wales in which no productive Beds of Coal can reasonably be looked for,' by Sir R. I. MURCHISON.—Sir Roderick combated (with qualifications and reservations) the views put forward by Mr. Godwin-Austen as to the probable existence of coal-measures underneath London and the south-eastern counties of England. Sir Roderick stated that his own view was that productive coal-measures could not be looked for in Essex, Kent, Sussex, Middlesex, Hants, Bucks, Oxfordshire, Suffolk, Norfolk, &c. The paper proceeded to give detailed reasons for believing that the coal formations of France and Belgium did not extend in any quantity underneath the Channel.

Prof. PHILLIPS expressed an opinion that the Leicestershire coal-field would yet be considerably extended.—Sir W. G. ARMSTRONG said he was not able to speak on the geological question, and in reference to that of the extent of the supply his lips were sealed by his being a member of the Royal Commission appointed to inquire into the matter judicially.—After remarks by Mr. PENGELLY, Mr. G. MAW, Dr. DAGLISH, Prof. HARNESSE, and Dr. SOPWITH, Mr. W. F. WEBB, of Newstead Abbey, gave some particulars of an experiment he is making in sinking for coal in the North Riding of Yorkshire, the locality being considered very unpromising by Sir R. Murchison. If he did not meet with coal, he remarked, he should at least prove its non-existence there, and so add to geological information.

'Eight Years' Researches in Asia Minor,' by Mons. PIERRE DE TCHIHATCHOFF.

'On some Characters of the Brain and Skull in Plesiosaurus,' by Mr. H. G. SEELEY.

'On the Aspect and Habits of the Cambridge Pterodactyle,' by Mr. H. G. SEELEY.

'On the Miocene Flora of North Greenland,' by Prof. O. HEER.

TUESDAY.

'On a Curious Lode or Mineral Vein at New Rosewarne Mine, Gwinear, Cornwall,' by Dr. C.

LE NEVE FOSTER.—Dr. Foster observed, that it was chiefly remarkable as being a brecciated lode, containing rounded pebbles. The lode or vein ran east and west, and dipped south, the average dip being about 85 degrees. The surrounding rock was the ordinary "killas," or a hard shale, for which the name of clay-slate was not appropriate. The lode, which had an average width of about 8 feet, contained on the north side mainly tin, and on the south copper ore. The "tinny," or stanniferous part, some 6 feet wide, consisted of fragments of killas, elvan, and killas—breccia, cemented mainly by quartz, tinestone, inispickel, and chlorite. The fragments were mostly angular, but some of the pieces of killas and elvan were rounded—in many cases sufficiently so to be called true pebbles. The whole history of the formation of the lode described by Dr. Foster implied an enormous lapse of time.

'On the Drift Deposit of the Weaver Hills,' by Mr. E. BROWN.

'On the Characters of Dolichosaurus, a Lizard-like Serpent of the Chalk,' by Mr. H. G. SEELEY.

'On the Sinking of Annesley Colliery,' by Mr. E. HEDLEY.

'On a Peculiar Denudation of a Coal-Seam in Coates' Park Colliery,' by Mr. J. OAKES.

'On the Relations of the Upper and Lower Crags near Norwich,' by Mr. J. F. TAYLOR.

'On the Island of St. John, in the Red Sea (the Ophiodes of Strabo),' by Dr. BEKE.—Dr. Beke gave an account of his visit to the Island of St. John, in the Red Sea, which he described as an up-raised coral reef, with a sharp volcanic peak in the centre. It afforded neither water nor vegetable productions, but was quite barren. There was evidence along both coasts of the Red Sea of the land uprising. The Doctor exhibited a number of geological specimens collected on the island.

The PRESIDENT said the pieces of rock were all igneous, and there was a serpentine coating on some of them.—Mr. ETHERIDGE thought the fossils were of the ordinary Indian Ocean species.

'On the Miocene Flora of North Greenland,' by Prof. O. HEER.

'Observations on, and Additions to, the List of Fossils found in the Boulder Clay of Caithness, N.B.,' by Mr. C. W. PEACH.

'On the Occurrence of Flint Implements near Thetford, on the Little Ouse,' by Mr. H. BELL.

'On the Anglo-Belgian Basin of the Forest-bed of Norfolk and Suffolk, and the Union of England with the Continent during the Glacial Period,' by the Rev. J. GURN.—A question of the greatest importance had been raised by Mr. Godwin-Austen with reference to the extension of the Belgian coal-measures to this country. It was evident that in the mesozoic period, the continuous ranges of chalk in Belgium, France, and England formed a basin, in which tertiary were deposited. The writer of the paper, after researches carried on upwards of thirty years, had come to the conclusion that the forest-bed was the estuarine deposit of some great river or rivers flowing westward, closed on the south by a ridge of chalk-hills, and open to the sea on the north; and that such ancient river or rivers were now represented by the several rivers flowing into the German Ocean between the mouths of the Scheldt and the Rhine. Thus there might be said to be on the English coast the remains of an estuary without a river, and on the Belgian side of a river or rivers without an estuary. The rev. gentleman followed up a description of the deposits by a remark that he strongly suspected the disruption of this country from the Continent took place at a more recent period than was assigned to it by the geologists generally. His impression was that the forest-bed and the crag-series which preceded it could only be studied to advantage in connexion with and as part of the corresponding beds of the Continent.

A very animated and rather lengthy discussion arose upon the questions raised in this paper.—The PRESIDENT said he began to strongly suspect that even the valley of the Thames might be filled with glacial drift, showing that it was submerged during the glacial period.

SCOTTON D.—BIOLOGY.

MONDAY.

'On a New Molluscoid Animal allied to *Peloniaia* (Forbes and Goodsir),' by Dr. C. M'INTOSH.—The specimen was found on the beach at St. Andrews, after a severe storm, in 1861, measured $1\frac{1}{2}$ inch in length, in shape like an elongated Florence flask with the bottom a little produced and the neck much elongated. Its test is constructed like sand-paper, the particles forming essential constituents of the mass; and at the wide end there is a series of hairs formed by prolongations of the basis structure, with sand particles and mud attached. Within this test lies a series of interlaced muscular fibres, which cross each other at right angles, and which muscular coat can be readily separated from the internal (and somewhat fibrous) surface of the test. The branchial sac is elongated, has its meshes of a square or slightly oblong form, ciliated at the edges, and is continued along the narrow part of the animal to the terminal apertures, the oral one of which has no tentacular fringes. Its structure, so far as the specimen was preserved, was detailed, and it was mentioned that its digestive system agreed in general with *Peloniaia*. In conclusion, the species differs from *Peloniaia*, as described by Forbes and Goodsir, in the extreme production of the portion sustaining the apertures; and in the structure of the test, which in *P. glabra* is thin and diaphanous, like parchment, and in *P. corrugata* thick, cartilaginous and transversely wrinkled, while here it is like sand-paper. The shell or transverse ridge in the interior of the mantle, as shown in the figure of *P. glabra*, is absent. It differs also very characteristically from the *Boltonia*.—The same author communicated some remarks on the *Turbellaria* and *Annelida* of North Uist, of which he had found about 110 species, including many rare and some new examples. He also exhibited numerous coloured drawings of new and rare marine animals recently got in the Hebrides and St. Andrews Bay.

A short discussion followed this paper, relative to the ectoparasitic nature of the *Polynoina*. Dr. P. WRIGHT had observed *Polynoë scolopendrina* in a tube formed by itself.—Dr. M'INTOSH and Mr. LANKESTER had met with many *Polynoina* in the tubes of other worms, on which they fed.

'On the Power which some Rotifers have of attaching themselves by means of a Thread,' by Mr. R. GARNER.

'On Variations in the great Arterial Blood Vessels,' by Dr. G. D. GIBBS.

'On Reversed Sexual Characters in a Butterfly, and their Interpretation on the Theory of Modifications and Adaptive Mimicry (illustrated by specimens),' by Mr. A. R. WALLACE.—In this paper the author, who is an independent originator of the theory advanced by Darwin, gave the result of some of his own and Mr. Bates's observations on the origin of species in *Lepidoptera*. The *Heliconide*, a group of butterflies with a powerful odour, such as to cause birds to avoid eating them, were simulated by the females of another group, which had no smell, and might otherwise fall ready victims to birds. By their great resemblance to the obnoxious butterflies, the scentless females were enabled to escape pursuit, and deposit their eggs. In different regions there were different species, thus imitating and being imitated. Mr. Wallace conceived that this case was a crucial test of the truth of the Darwinian doctrine. The females least like the *Heliconide* had always been more subject to destruction, and consequently by this process of natural selection the present state of very close resemblance had resulted.

Prof. HUXLEY cautioned Mr. Wallace against considering this as a decisive case. It was explained quite as completely by the teleological doctrine of the late Dr. Paley.—Mr. HERBERT SPENCER thought he could show that the case described by Mr. Wallace could not be satisfactorily explained by Dr. Paley's teaching. He understood Mr. Wallace that the imitation was not complete, and varied in different individuals. This incompleteness was not to be explained were we to assume that the one butterfly was made in imitation of the other by the

Creator; but it was readily accounted for by the law of evolution.

'Notes on the Structure of the *Echinoidea regularia*, with special Reference to their Classification,' by Mr. C. STEWART.

'On the Asexual Reproduction and Anatomy of *Chetogaster vermicularis* (Müll.),' by Mr. E. RAY LANKESTER.—The *Chetogaster* is a minute worm, one-eighth of an inch long, parasitic on the common water-snail. Its most remarkable peculiarities are, the presence of oral bristles differing from those of the body, the very small number of segments (five) composing it, and the total absence of cilia and reproductive organs. The author described its anatomy minutely, and its mode of reproducing by budding.

'On some Points in the Structure of *Limulus*, Recent and Fossil,' by Mr. H. WOODWARD.

'On the Crustacea, Echinodermata, Polyzoa, and Coelenterata of the Hebrides,' by the Rev. A. M. NORMAN.

Report on the Ostracoda dredged amongst the Hebrides, by Mr. G. S. BRADY.

'On the Structure and Growth of the Ovarian Ovum in the *Gasterosteus Leirurus*,' by Dr. RANSOM.

TUESDAY.

'On *Comatula rosacea*, *C. cellica*, and other Marine Animals from the Hebrides,' by Dr. CARPENTER.

'Notes on *Lithosia Caniola*, with reference to its Origin as a Species,' by Prof. E. P. WRIGHT.

'On the Probable Cause of the Existence of a North European Flora in the West of Ireland, as referred to by the late Prof. E. Forbes,' by Mr. H. HENNESSY.

'On the Ballast Flora of the Coasts of Durham and Northumberland,' by Mr. J. HOGG.

'On Colour and Chromula,' by Mr. J. J. CHESTER.

'On the Occurrence of *Lemna arrhiza* in Epping Forest,' by Mr. W. MOGGIDGE.

'On the Zones of the Conifers from the Mediterranean to the Crest of the Maritime Alps,' by Mr. W. MOGGIDGE.

'On the Scientific Cultivation of a Salmon River,' by Mr. F. BUCKLAND.

Report on Oyster Cultivation, by Mr. F. BUCKLAND.—The author began by explaining that it was difficult to give, in a few minutes, the result of a whole year's information. He would confine his remarks principally to the history of the living spat of the oyster, the chemical analysis of the meat and the mother liquor of the oyster, to the adhesions of the various substances to which they loved to adhere, and to the marketable value of the oysters as tested by weight. He proceeded to describe the exceedingly interesting action and movements displayed by the young oyster when first emitted from its mother's shell, giving the reason why they sometimes floated on the surface of the water, and sometimes sank to the bottom, the use to which the young oyster places its cilia, expressing it as his opinion that these organs never dropped off, but were absorbed after the young oyster became fixed. He then exhibited a great variety of substances to which the oysters seemed to have a natural preference for adhering. Among these were several curiosities, such as a "plague pipe," to which an oyster had fixed itself, an ordinary pipe, presented to him by Sir Walter Trevelyan, in the bowl of which no less than three oysters had taken up their position; also some old-fashioned wine or spirit bottles, from the North Sea and Loch Ryan, presented by Sir William Wallace. He then proceeded to describe the result of the chemical analysis which he had instituted in conjunction with A. Pythian Turner, Esq., giving the amounts of mineral matter, the animal and also the fatty matter. The results obtained showed that the phosphates were more important in the composition of the meat of the oyster than any other of the ingredients, and hence their great practical use for invalids and in sea-sickness. He also gave practical deductions as to choice of proper places where oysters should be laid in order to obtain a good supply of these phosphates. He then described the process of the growth of the oyster-shell, and detailed the manner in which the oyster formed the shell from the mother-liquor, the mode

also by which the little oysters were enabled to form their shell inside the mother-shell. His observations enabled him to come to the conclusion as to the possible way in which the young oyster was enabled to attach itself to various articles. He had been enabled to collect samples of oysters from almost every part of the United Kingdom. These have been accurately weighed, and he gave a table showing the relative value (commercially speaking) of oysters from oyster-beds, or proposed oyster-beds of England, Ireland, Scotland, and Wales. He stated that he was still carrying on his experiments at Herne Bay; and he was happy to be enabled to report that the French system of oyster-culture had been successfully carried out in a creek near Havant, not far from Portsmouth; and, although he had not yet seen the results of the experiments himself, he could not help congratulating the managers upon their well-deserved success. Determined that England should be well represented, and that her oyster-fisheries should not be entirely ignored by our neighbours in France, he had at this moment one set of specimens at the Fish-Culture Exhibition at Arcachon, in the south, and another at a similar exhibition at Boulogne, in the north of that country, as well as his own collection at the Horticultural Gardens, South Kensington, where he trusted to make a complete series illustrative of the culture of oysters, as well as that of salmon.

'On the Indians of Vancouver Island,' by Mr. J. K. LORD.—The author gave a clear and able description of the customs of the Indians, their weapons, domestic animals, together with other most interesting peculiarities. He began by showing that the numbers of these Indians were steadily decreasing; he described their personal appearance as being strangely modified by the habit the coast tribes have of sitting continuously in their canoes and in their lodges. Especial reference was made to the curious fact that the teeth of most of the inland Indians are ground down to the gum by the sand which is drifted on to the salmon when exposed for drying in the sun; for it is upon this dried fish the savages subsist entirely during the winter months. The lecturer exhibited an under-jaw, in which the teeth were thus worn away. He then went on to point out the curious fashion this curious people have of altering the form of the skull during infancy, either making it flat or conical, by means of pressure. Engravings of these skulls, &c. are given in Mr. Lord's 'Naturalist in Vancouver Island.' A deformity humorously shown was a fashion and mark of beauty in riper years. The curious ideas relative to the disposal of the dead and the rites of burial were also mentioned. Mr. Lord then gave many most valuable particulars relative to the native dogs, and the probability of a dog having been imported from Japan which had a long, silky coat; and the natives used to shear these animals as we shear sheep, using the coat for the manufacture of rugs; but since the introduction of blankets by the Hudson's Bay Company, the dog has disappeared from want of protection, and become extinct. He showed that the art of weaving was known to these tribes at a very early period of their history. The religion of these people is very remarkable, and they entertain curious beliefs in sacred days and periods and sacrifices to the sun; they believe in witchcraft and in deities representing good and evil. Animals, plants which are eatable, fish and birds, were believed to have been at one time human. The remarkable custom of obtaining the "medicine," to guard them through life, called *tomanawax*, was ably described. They measure their sequence of the seasons by the ripening of berries and opening of flowers, the arrival of the crane and wild goose, spawning of fish, &c. Copious vocabularies of the different languages, and the jargon called Chinook, as spoken by the different tribes west of the Rocky Mountains, were submitted to the meeting. The names and words seemed to be harsh, and decidedly unmusical. He then explained a valuable collection of stone weapons dug by himself from the ancient river-gravels of the upper Columbia river; these were intermixed with stone beads, shells of the *Ventaliod*, the parasitic barnacles found on the skin of the

whale, buttons made from sea-shells, human skulls and bones. These relics were buried at a great depth, and no trade exists at present betwixt the Indians there resident at the present time with those dwelling on the sea-coast; the distance from the sea is nearly a thousand miles. The lecturer drew new and important conclusions from these facts. Lastly, the lodges and canoes were described, and these, it appears, vary among the different tribes, each tribe to a great extent having a form of canoe peculiar to itself. A wonderful "medicine," called a "copper," was exhibited, from Fort Rupert, painted on its surface with brilliant colours, depicting quaint heraldic devices; also, a large slate dish, most exquisitely and elaborately sculptured by the Haida Indians living on Queen Charlotte Island. Many other curious and rare things were exhibited, and lucidly described; numerous photographs also served to make the paper exceedingly valuable and entertaining. Mr. Lord brought home a large collection of natural objects, to which frequent reference was made. These are now deposited in the British Museum.

'On the Application of the Greek and Latin Languages to Scientific Nomenclature,' by Mr. T. BROWN.

'Botanical Notes of a Tour in the Islands of Arran, West of Ireland,' by Dr. E. P. WRIGHT.
'The Poor Man's Garden,' by Mr. N. B. WARD.

SECTION D.—DEPARTMENT OF PHYSIOLOGY. MONDAY.

Letter communicating the Result of an Application to the General Medical Council as to a Grant for Investigating the Physiological Action of Remedies, from Dr. ACLAND.—The application had been refused, on the ground that such investigation was not within the sphere of the Council's duties.

'On the Movements, Structure and Sounds of the Heart,' by Dr. SIBSON.

'On the Effects of the Pollution of Rivers,' by Col. Sir J. E. ALEXANDER.

Report on Amyle, by Dr. W. B. RICHARDSON.

'On the Action of Carbonic Oxide on the Blood,' by Dr. A. GAMGEE.—When carbonic oxide is passed through venous blood, it acquires a persistently florid colour, which was first pointed out by Claude Bernard, and the colouring-matter, although it possesses a spectrum identical with that of ordinary blood, is distinguished from it by not yielding, when treated with reducing agents, the spectrum first described by Stokes as that of reduced or purple cuorine. This property of carbonic oxide blood was first published by Hoppe. As a result of his own investigations, Dr. Gamgee has found:—First, that the peculiar compound of carbonic oxide and blood colouring-matter is formed even when the latter has been reduced, and is still in the presence of a large excess of a reducing solution. Secondly, that when the compound of carbonic oxide and colouring-matter is treated with acetic acid, whilst hæmatine is formed, carbonic oxide is disengaged. Thirdly, that carbonic oxide, besides modifying the optical properties of the colouring-matter of blood, affects in a remarkable manner the point at which it coagulates, so that, under its influence, an almost perfect separation of the hæmatoglobulin (using the term to express the normal colouring-matter of the blood) from the albumen may be effected. Normal ox's blood, when diluted with nine times its volume of water, becomes turbid at 145° Fahr., and when the temperature has reached 172° Fahr. its colour is completely destroyed. If such a blood solution have been treated with carbonic oxide, whilst, when the temperature has been raised to 172°, the albumen has separated in flakes, the blood colouring-matter remains wholly unchanged. It is only when the temperature is raised to about 185° that the colouring matter commences to coagulate. The conglobin which is obtained on further heating is of a reddish colour, unlike that of normal blood. Fourthly, if blood be saturated with CO₂ and evaporated to dryness at a temperature below that at which the colouring matter coagulates, the dry residue yields

and the solution presents all the optical properties of carbonic oxide blood. When this solution is boiled, the compound with the colouring-matter yields carbonic oxide gas. Fifthly, poisoning by pure carbonic oxide, or by the fumes of charcoal, invariably leads, before death occurs, to those changes which are characteristic of carbonic oxide blood; becoming quite irreducible. Sorby's micro-spectroscope answers admirably for these investigations; and the solution which Dr. Gamgee recommends for this special process is one containing tin, in preference either to sulphide of ammonium or protoxide of iron. Sixthly, whilst it results from Dr. Gamgee's researches that no gas or poisonous agent exerts the peculiar action on blood colouring-matter, which is produced by CO, it is specially to be noticed that prussic acid and laughing gas, which have the power of rendering blood florid, do not prevent its being reduced. Thus, the question which Claude Bernard suggested some years ago, as to whether prussic acid exerts on blood a similar action to that of carbonic oxide, is answered in the negative.

TUESDAY.

'Supplementary Report of Experiments with Entozoa,' by Dr. COBBOLD.

'Physiological Demonstrations of Local Insensibility,' by Dr. RICHARDSON.—Dr. Richardson submitted the arm of Mr. Grove, the President of the Association, to his process for producing local anaesthesia, and then proved the result by sticking needles into Mr. Grove's arm, which seemed a proceeding rather pleasing than otherwise to the learned President.

'On Muscular Irritability, and the Relations which exist between Muscle, Nerve, and Blood,' by Dr. NORRIS.

'On a Peculiar Change of Colour in a Mulatto,' by Dr. FOSTER.

'On the Normal Existence of Quinine as an Animal Principle,' by Mr. W. L. SCOTT.

WEDNESDAY.

'On the Comparative Vitality of the Jewish and Christian Races,' by Dr. RICHARDSON.—The author quoted a number of interesting statistics bearing upon this question, showing that the Jewish race has a vitality considerably greater than that of the Christian races amongst which it is dispersed. This he attributed to the temperance, faithfulness, and prudence of the race.

An interesting discussion followed the paper, in which many remarkable examples among Jews of immunity from infectious diseases were mentioned, and variously explained.

'Note on an Addition to the Sphygmograph,' by Dr. FOSTER.

'On the Presence of Ammonia and its Homologues in the Blood,' by Mr. W. L. SCOTT.

SECTION D.—DEPARTMENT OF ANTHROPOLOGY. MONDAY.

'On the Stature and Bulk of the Irish, and on Degeneration of Race,' by Dr. J. BEDDOE.

'On Skulls from Round Barrows in Dorsetshire,' by Mr. C. C. BLAKE.

'Anthropology of Caracas,' by Mr. A. ERNST.

'On the Habits and Manners of the Marwar Tribes of India,' by Dr. J. SHORTT.

'On the Fishing Indians of Vancouver Island,' by Mr. E. B. BOGG.

'Papers from Lahore,' by Prof. LEITCH.

TUESDAY.

'Researches into the Anthropology of Lower Brittany,' by Dr. P. BROCA.

'Remarks on two Extreme Forms of Human Crania,' by Prof. HUXLEY.—One of these skulls was that of a Tartar, an exceedingly round one, being nearly equal in breadth and length (977 : 1000). The other was probably that of an Australian, and represented the very extreme of the narrow type of skull, the cephalic index, or proportion of breadth to length, being the smallest on record (629 : 1000). Prof. Huxley then proceeded to show how far the relative characters of these skulls might be lost sight of in the ordinary method of measurement. He insisted on the necessity of due care being taken to compare sections of skulls by super-position of the basio-cranial axes.

'On the Cranial Measurements, &c., of Modern Norwegians,' by Dr. J. HUNT.

Exhibition of a Slate Armlet, by Mr. A. H. W. INGRAM.

'Notice of a Kjskkenmødding in the Island of Herm,' by Mr. J. W. FLOWER.

'On Human Remains from Poole's Cavern,' by Mr. J. PLANT.

'On the Mental and Moral Characteristics of the Zulu Kafirs of Natal,' by Dr. MANN.

'On the Stone Implements of the Esquimaux,' by Sir E. BELCHER.

WEDNESDAY.

'On the Power of Rearing Children among Savage Tribes,' by Mr. S. P. DAY.

'On the Saracens in France,' by M. G. LAGNEAU.

'On the Traces of an Irish Lake-Dwelling found by Capt. L'Estrange,' by Mr. J. W. TENNANT.

In the discussion on this paper, Mr. EVANS remarked that the poet Spenser mentions the lake-dwellings of Ireland, whilst Mr. TYLOR considered it certain that they were in existence as late as the time of Cromwell.

'On Flint Implements from the Drift of the Little Ouse Valley,' by Mr. H. PRIGG.

'On Ancient Engravings on Stone from South-eastern Peru,' by Mr. W. BOLLHAERT.

The remarks printed in our last (p. 278) after Mr. Tylor's paper read on Friday should have been accredited to that of Dr. Hunt, which followed it. Mr. Tylor's paper related to the valuable explanations of ancient and modern superstitions and customs, to be obtained from a study of the traditions and manners of modern savage tribes.

SECTION E.—GEOGRAPHY AND ETHNOLOGY.

FRIDAY.

'On the Migration of Cultivated Plants with reference to Ethnology,' by Mr. J. CRAWFORD.—The earliest vegetable food of man, according to the author, must have been wild fruits, seeds and roots, the species necessarily varying with climate. Some races of man are still confined to these primitive articles of food. The most important of these food-plants are those which can be made into bread, such as the cereals. With the exception of rice, not one of the cereals can be traced with undoubted certainty, nor can we state their parent countries: this must be received as evidence of the vast antiquity of their cultivation. Wheat and barley must have been well known to the Egyptians before the earliest of the pyramids was built, for a people feeding on roots and fruits could not have possessed the power or the skill indispensable to the construction of those stupendous monuments. With regard to legumes, several of the cultivated kinds can be traced to their wild originals. Language often throws light on the birth-place and migration of cultivated plants, and the result of this line of investigation, with regard to the cereals, has been to show that they originated at many separate points. The influence of the various food-plants on the character and civilization of the races of man was dilated upon by the author, who concluded that no people ever attained a tolerable degree of cultivation without the possession of the higher cereals. Had the food of the Britons some 2,000 years ago been confined to the potato, Julius Caesar would unquestionably have found our ancestors far greater barbarians than he describes them to have been.

A discussion followed, in which Mr. NASH pointed out the influence which other articles of food had upon the character of the ancient Britons and Irish, who possessed abundant herds of cows, and were a milk and cheese-eating people.—Mr. C. R. MARKHAM mentioned the ancient Peruvians of the basin of Lake Titicaca, who lived, as far as vegetable food was concerned, on roots, chiefly of *oxalis* and *quinua*; he argued that too much stress ought not to be laid on wheat-eating as promoting civilization.

'On the Aleppy Mud Bank,' by Mr. C. R. MARKHAM.—On the south-western coast of the Indian peninsula there exists a system of backwaters which forms a continuous natural line of communication from Travenderim to the Madras Railway, with the exception of one barrier of

land. At no very distant date the sea appears to have washed the base of the ghauts; alluvial deposits gradually encroached upon the sea, checked by the waves of the monsoon, and eventually a belt of land was formed, leaving, within, a line of backwaters, and becoming densely covered with cocoa-nut groves. This belt at one point forms the Aleppy mud bank, and the whole roadstead near it has a remarkably soft, muddy bottom. It is curious that this muddy bottom moves up and down the coast for about three miles, the cycle of movement occupying a period of several years. During the height of the monsoon the waters of the backwater are four feet higher than those of the ocean, and an enormous hydraulic pressure must thus be caused. In the same season, at low water, a series of mud volcanoes are observed to form on the beach, which eventually burst and disgorge quantities of vegetable matter mixed with mud. Boring instruments on the belt of land are found to penetrate through alluvial deposit into a great depth of moving soft mud. It appears, therefore, that there is a subterranean communication between the backwater and the sea, and that the tremendous pressure from the backwater, when it is higher than the sea, forces an immense mass of mud by the subterranean passage into the roadstead. Various schemes had been proposed for cutting through the Wurkally barrier, and thus completing the backwater communication; the plan of Mr. Barton was thought the most feasible, and will necessitate a cutting of fifty feet.

'On North and South Arabia,' by Mr. W. G. PALGRAVE.—The subject discoursed upon by Mr. Palgrave was the division of Arabia into two distinct regions, marked by peculiarities in physical conditions and modifications in the character of their inhabitants. The more northerly division included the highlands of Nejed, the seat of Wahabee domination, the more southerly the district of Oman. The population of the two regions is about equal. The two divisions are typified by their national colours, white for the northern and red for the southern; and wherever Arabs are found, two factions exist, who adopt these colours as their symbols,—violent factional feeling often existing amongst people who have lost all knowledge of the original cause of difference. The northern Arabs were a fine, intelligent, courteous race, with a cast of features like the typical Ishmaelite. In the southern Arabs the type was different, the skin was darker, the features were no longer Semitic, but more nearly resembling the Coptic. The institutions of the southern people were more progressive than those of the northern. The language in the north was the pure Arabic of books; in the south there were great differences both in words and turns of expression,—these peculiarities not being accidental, but due to an original difference in language. It was the opinion of the most learned German philologists that the peculiarities in the idiom of southern Arabia indicated a connexion with Ethiopia, and must have originated on the east coast of Africa. The Wahabee country was surrounded by deserts, and could never be of practical importance to the English nation. It is different with Oman, which is a rich and beautiful region, similar to the district of Bombay, and will soon become much more important to us, politically and commercially, than it is at present.

'On the Physical Geography of the Eastern Part of the Crimea and the Peninsula of Taman,' by Prof. ANSTED.—The peninsula of Taman stretches out west beyond the whole range of the Caucasus, but it would only be a delta of the Kuban were it not for the very remarkable phenomena due to recent volcanic agency which it exhibits. These consist in a series of conical hills of mud, ranging for many miles, and connecting the volcanic district of Tiflis with the Putrid Sea, which constantly emits sulphurous fumes. The physical condition of this part of Europe is quite exceptional; the phenomena extending for a distance of 1,000 miles. The conical hills of Taman are about 250 feet high, and extend for about thirty miles. There is a constant shifting of the actual point of eruption. The physical geography of the north-eastern shores of the Black Sea and its dependencies is certainly modified by these curious phenomena.

They produce hills where we should otherwise have a dead flat, and the land is for the most part barren and unprofitable. Continuous, but very slow, subterranean action along this line is consistent with what we know concerning the axis of elevation that has for a very long geological period affected the land of the eastern hemisphere. All that part of the world has been elevated, and parts of it have been depressed in the later periods. The great plains of Europe and Asia were covered by the sea during a time comparatively recent, and the elevation has been on a line parallel with that of the mud volcanoes and eruption of hydrocarbon vapours and fluids.

'On the Physical Geography and Climate of Natal,' by Dr. R. J. MANN.—Natal has a sea-coast of 150 miles, and is separated from the drier region of the interior by a range of mountains, or rather the ledge of the interior table-land, which lies at a distance of from 100 to 140 miles from the coast. The average summit of the ledge is from 5,000 to 6,000 feet high, isolated peaks rising to between 7,000 and 9,500 feet. The climate is sub-tropical, modified and softened by the effects of its peculiar configuration. In area Natal is equal to about two-thirds of England. From the frontier mountain ledge a subordinate ridge stretches across the middle of the colony, and from this again numerous short spurs branch off, between which flow the streams, about fifty in number, which flow through the land to the sea. As the mountains rapidly increase in height towards the frontier ridge, the general gradient of the land, from the sea upwards, is one in seventy; as a natural consequence, the colony possesses no navigable river, and the streams are liable to sudden floods, which greatly impede transit. Much of the excellence of the climate, however, depends on this gradual elevation. In the central region there is a perennial rainfall, and the valleys are filled with plantations of sugar, coffee, arrowroot, oranges, pine-apples, and bananas, whilst the hills are covered with cattle, horses, sheep, and grain-crops. The northern part of the colony lies in the basin of one considerable river. In the southern parts the mouths of the numerous rivers are closed by sandbanks, which are broken through in the seasons of flood, and closed up again at the end of the rainfall. The general surface of the land is composed of an endless succession of hills and valleys, the uplands being bare pasture, the sides clothed with evergreen trees, and the rapid rivers often leap from ridges two or three hundred feet in height. The prevailing winds are from the Indian Ocean, and are heavily laden with moisture, which is discharged over the land daily in the hot season, the cool, moist air rushing in as soon as the air over the land has been heated in the morning by the almost vertical sun. In Maritzburg, 2,000 feet high and forty miles from the sea, there are thunderstorms nearly every third day during the six months' hot season. Summer heat in Natal is, therefore, remarkably tempered by the cloud-screen and the frequent showers. Almost every day in summer the sky gets cloudy soon after noon; and the mean of the month never rises to 72° Fahr. The mean temperature for the six summer months is 69·5°, the night temperature rarely descends to 52°. In the winter months the sun shines with much less intensity upon the land, and the monsoon air-currents are therefore less violent. Comparatively unbroken sunshine reigns at this season, and the temperature rises to between 70° and 80° in the day, descending on rare occasions in the night to below the freezing-point; the mean winter temperature is 59·9°. In summer, the vicissitude of temperature lies between day and day; in winter, between day and night. The mean of the annual rainfall at Maritzburg, for eight years, gives 30·11 inches. The author exhibited a series of tables and diagrams in illustration of the meteorological phenomena of the country as observed by himself during an eight years' residence.

SATURDAY.

'Notes on Eastern Persia and Western Beloochistan,' by Col. F. J. GOLDSMID.—This memoir gave the principal results of journeys into little-known countries undertaken by the author (in 1864-66) in surveying a line for the Indian telegraph. The most important portion of his travels

was that between Sabristan, S.E. of Kirman, and Chou, on the coast of Beloochistan, *viâ* Bampur and the Pass of Fanooh. The author found that the city of Kirman lies very much more to the eastward and less to the southward of Yezd than it is supposed. In the march from Regan to Bampur Col. Goldsmid passed along a track different from that marked on Pottinger's map; and between Bampur and the sea the road lay entirely through new country. He believed that the laying of telegraph wires through Mekran and the upper regions of Beloochistan would be productive of good results in our relations with those little-known countries—results quite as important as rapid communication between England and the East.

'Notes on the Physical Geography of the Lower Indus,' by Col. TREMENER, R.E.—The immense plain of Sind presents a remarkable peculiarity throughout—1, in the entire absence of channels for natural drainage; 2, in its almost uniform slope, both towards the sea and away from the river banks; 3, in its mineral character. The slope of the valley in a direct line to the sea, 330 miles, is 9·3 inches per mile, and the lateral slopes on either side of the river are in many parts quite as much. The river, in fact, passes along a ridge. For 540 miles the surface slope of the Indus during the inundation is 5·7 inches per mile. The soil consists entirely of a very fine siliceous deposit mixed with argillaceous matter and mica; not a grain of sand is to be found as large as a pin's head. The solid matter in the water of the Indus during its inundation amounts to 43·6 parts in 10,000 by weight. The mean discharge of water being 200,000 cubic feet, and the mean solid matter 25 in 10,000; it results that 217½ millions of cubic yards of solid matter is carried annually to the sea, which is sufficient to cover seventy square miles of area with deposit one yard in thickness. The author investigated the various old channels of the river, and came to the conclusion that the stream has gradually worked to the westward. He also concluded that the larger the body of water in rivers flowing through such plains, and the less the surface-slope of the plain, the more direct will be the course of the river; and, on the contrary, the sharpness of the bends of a large river will indicate the existence of a considerable slope. The longer, therefore, a river becomes by extending its delta into the sea, the greater tendency will there be to assume a more direct course. The author also carefully examined the delta of the Indus, and gave in detail the result of his observations.

'On the Various Theories of Man's Past and Present Condition,' by Mr. J. REDDIE.

'On the Progress of the Russo-American Telegraph Expedition *cid* Behring's Straits,' by Mr. F. WHYMPER.—The author, after exploring parts of Vancouver's Island, attached himself, in the capacity of artist, to the expedition which proceeded last year from San Francisco to survey the line for the proposed Siberian and American telegraph. There exists already a line to New Westminster, Fraser River, from which point the new line is to commence. Five vessels started with the exploring parties in July, 1865; one of them proceeded to Plover Bay, in Siberia, whilst the others were to meet at Sitka, in Russian America. The vessel in which Mr. Whympere sailed proceeded through the Aleutian Archipelago to Norton Sound, in Behring Sea, and thence crossed to the river Anadyr, in Siberia. A small screw steamer, brought on board one of the larger vessels, took an important section of the party, under Major Kennicott, to explore the Kirchpak river. The average depth of Behring's Straits between 61° and 66° N. lat. did not exceed twenty fathoms. Mr. Whympere returned to San Francisco in November; the fleet having deposited the various exploring parties in their winter quarters on the coasts of America and Siberia. The preparations for 1866 were on a more extended scale, and by the end of the year it was supposed that about 1,500 miles of the line would be laid northward of Fraser river.

'On some New Facts in Celtic Ethnology,' by Mr. H. H. HOWORTH.—The author endeavoured to show that the so-called Turanian race extended to Britain. Starting with the facts collected by Lhuys, he showed, by means of the comparison of

vocabularies and grammatical forms, that a large element in Celtic whose relations have been previously unassigned is to be referred to an Iberic source. This element was found to be much more marked in Irish than in Welsh, and explained the differentia of the former tongue. The Gascon dialects were held to be links connecting Breton with the corrupted Basque of the French provinces; and this connexion was shown to extend to Cornish. Where Welsh differs from the other Celtic tongues, it was shown to be chiefly in an approximation to Low German forms. To the Pictish Lowlanders were assigned the Welsh peculiarities of Scotch Gaelic; to the Irish invaders of Anglesea and the Cornish borderers of the Severn, the dialectic idiosyncrasies of North and South Wales. Cornish was held to show a mixture of types, in which the Breton predominated; while aberrant forms connect it with Irish. These facts were considered to support the traditional connexion of Ireland with Spain, or perhaps with Aquitania, by proving Irish to be a Celt-Iberic tongue. Breton, corrupted by Belgic contact, was held to represent the language of the purely Celtic area of Caesar—a contact exemplified in Britain where the Cornish or Lloegrian Celtic is found bordering on Welsh. The dual elements of Welsh point to its being the language of the German and Celtic Marches or frontiers—a condition fulfilled by identifying the Welsh with the Belgæ of Caesar. Lastly, the presence of this Iberic element in early British ethnology was considered by the author to explain much that is obscure in its oldest archaeology, and to throw considerable light on the traditions of Western Europe.

MONDAY.

'Explorations from Leh, in Cashmere, to Khotan, in Chinese Tartary,' by Mr. W. H. JOHNSON.—This memoir was read to the Section by Sir A. S. Waugh, late Surveyor-General of India, and prefaced by some remarks of his own. Mr. Johnson is a civil assistant in the Great Trigonometrical Survey of India, and the exploration which he describes originated in an invitation which he received when at Leh from the Khan Bédshah of Khotan to visit him at Ilchi, his capital. Mr. Johnson accepted the invitation, and carrying his instruments with him, was enabled to make a good general survey of a tract of country which was previously almost entirely unknown. His memoir was of considerable length and full of interesting details. Between the Karakorum and the Kium Lun ranges Mr. Johnson crossed a series of extensive table-lands from 16,700 to 17,300 feet above the sea-level, which are so free from ruggedness that a horse may be galloped over them anywhere. One of the plains bears traces of having been the bed of a large lake, and at present contains two lakes covering areas of sixteen and sixty square miles respectively. He struck the Karakash river (of Tartary) in lat. 35° 53' and long. 79° 23', at a point where it was 15,500 feet above the sea-level. It took him sixteen days to march from the Karakash to Ilchi. The whole country of Khotan is an immense plain, sloping downward to Aksu (fifteen long marches north of Ilchi), and watered by numerous streams, which all fall into the Argol river, and thence into the Lob Nur lake. Six miles north-east of Ilchi begins the great desert of Gobi, with its shifting sands that move along in vast billows overpowering everything. It is said to have once buried 360 towns in 24 hours. Fine dust from the desert was seen by Mr. Johnson to fill the air so densely that he was obliged to use a candle at midday to read large print, although the air was perfectly calm at the time. The country is very fertile, and equal to Cashmere in this respect. Ilchi is a great manufacturing city. The chief articles are silks, felts, carpets, and coarse cotton cloths. Its population is about 40,000, and that of the whole country of Khotan about 250,000. Ilchi lies 4,320 feet above the sea level. The people of Khotan had recently shaken off the Chinese yoke. The Khan had an army of 6,000 infantry and 5,000 cavalry. Mr. Johnson was warned that his object in inviting a British official to his capital was to solicit the alliance of the English, and he ran some danger of being detected as a spy. He experienced great difficulties, and

in taking observations of the sun and pole-star for determining the latitude of Ilchi. After a stay of sixteen days, he returned by way of Zilgiá and the Karakash river to Cashmere.

'A Visit to the ruined Temples of Cambodia,' by Mr. J. THOMSON.—The author, in the month of January of the present year, arrived at Bangkok, the capital of Siam, with the purpose of visiting the ruined temples of Cambodia, making plans and photographing them. He proceeded easterly from that place through Sunsep and Kanap to Kabin, the position of which town he determined by astronomical observation to be in N. lat. 13° 56' and E. long. 101° 55' 15". He arrived at the vast temple of Ongou on the 16th of February. The buildings form a rectangle 1,100 × 1,080 yards, surrounded by a ditch 250 yards wide. From its great extent, the building appears to have been the work of generations; but from its perfect symmetry and unity, the product of a single genius, with the resources of a vast empire at his disposal. The road to it is by a path through a luxuriant tropical forest. A causeway conducts to a gallery or outer entrance 200 yards long. Ascending the worn steps of this, a colossal statue of a lion, half buried in the sand, guarded the entrance. The western gallery is supported by massive square pillars. The pillared galleries of the temple rise tier above tier, terminating in a great tower. The galleries have all sculptured stone roofs; the staircases, colonnades and corridors are also all of sculptured stone, and the courts paved. The ancient city of Ongou Thom, situated a little north of the temple, is of superior antiquity to the temple, and exhibits more grotesque sculptures. But the architecture of the temple is more classical, the pillars have all finely sculptured capitals and bases. There is the same advance shown in the bas-reliefs of the two ruins; the chief of these are nearly 100 yards long, filled with figures of warriors, elephants, horses and chariots. The inscriptions, copied by the author, are of three periods, the first of which are not now intelligible, but the last can be read by any Cambodian priest; these last, however, have no reference to the origin of the ruins. The present inhabitants have no tradition even of their origin, but believe they were built by supernatural hands in a single night. In the courts are the remains of reservoirs, which, as they lie at a great elevation above the surrounding country, imply that the ancient Cambodians possessed a knowledge of hydraulics. The stone of which the ruins are built must have been brought from the Lynchie mountains, forty miles distant. The great lake of Cambodia, *Tale-sap*, lying a few miles south of Ongou, offers the rare phenomenon of a large backwater to a river; it is filled only when the river Mekong is in flood. An outlet from the lake unites with the Mekong, a few miles distant from the lake itself, and the waters of the river flow backwards up this channel to fill the lake, the natural current being driven back. The depth of the Tale-sap is thus raised from four feet to forty-four feet. The lake is then 100 miles long and sixty or seventy broad, and the water is not liberated until the end of the rainy season. The author exhibited to the Section a large series of photographic views, copies of inscriptions and ground-plans.

'On Priority in Discovery of the Madeira Group,' by Mr. R. H. MAJOR.—The author showed, first, that the Portuguese historian, De Barros, exceeded the authority of the ancient chronicler, Azurara, when he stated that the respective names of the islands were given by the Portuguese in 1418-20, thereby diffusing the erroneous belief that the group was first discovered by the Portuguese. The inaccuracy was shown by an extract from a map dated 1351 in the Laurentian Library at Florence, in which the group is laid down with its present names, excepting Madeira, there called Legname, of which Madeira is simply a translation. Secondly, the truth of the romantic, accidental discovery by the Englishman, Machin, in the fourteenth century, was established by a combination of arguments, in which the author availed himself of an extract from a Portuguese MS. at Munich, never yet printed, and earlier by half a century than the earliest printed

account. Thirdly, he presented arguments based on the evidence of the map of 1351, in combination with other historical facts, to show that the group was discovered by Genoese in the service of Portugal, in the first half of the fourteenth century.

The lucid manner in which this subject was handled and rendered interesting was the subject of comment by the President and other speakers. 'On the Kaffirs of Natal,' by Dr. R. J. MANN.—The number of black people in Natal, subjects of the Queen, is 200,000. The most powerful tribe are the Zulus, who became greatly augmented under their chief Chaka, in the early part of the present century. This great chief pursued a career of conquest until, from a very small clan, the Zulus acquired a territory 500 miles in length,—the conquered tribes being absorbed or driven into the interior wilderness. The settlement of the colony by the English put an end to the tide of conquest, and a large number of Kaffirs placed themselves under British protection. The Natal Kaffirs are scattered throughout the colony, living in kraals and kraals, having their chiefs, but subject to British authority. In the main, they are savages still. The question arises, what is to become of them? It is clear they show no signs of melting away before the pale faces, as other tribes have done; for they have increased in number twenty fold in thirty years. But they are gradually resolving themselves into a labouring class in the colony. They take readily to labour in sugar-plantations; they are also capital managers of oxen, and make very useful in-door servants. It is difficult, however, to retain them long in one place. Some labourers work for six months, and then retire with their wages to their kraals; but they have acquired a taste for earning money, and almost always return to service. Wherever there is a white settlement near, to furnish them with a market, or a sugar-mill, there is to be found an orderly and prosperous Kaffir community, growing up with great promise of steady advance. At one place there is a school for teaching English, to which the Kaffirs voluntarily contribute 70*l.* a year; two of the black men here possess property amounting to 2,000*l.*, and many own a few hundreds each. Many other facts were cited by Dr. Mann, all tending to encourage hopes of the ultimate civilization of the Kaffirs, which he maintained ought to precede attempts to christianize them.

'On the Trans-Vaal District of South Africa,' by Mr. R. W. PAYNE.

'On the Lake Kurá of Arabian Geographers and Cartographers,' by Dr. BEKE.—In Lelewel's 'Géographie du Moyen Age,' there is a map, said to be taken from an Arabian work A.D. 883, in which a lake, named Kura-Kavar, is found, situated on the equator, and giving rise to the Nile. This has been adduced as a proof that the Arabians 1,000 years ago possessed a more accurate knowledge of the upper waters of the Nile than geographers of the present century previous to the recent discoveries. The author of the present paper argued that Lake Kurá did not represent the equatorial waters discovered by Burton, Speke and Baker, but the lakes or marshes in 9° north latitude. Ancient geographers placed all the lakes connected with the Nile of which they had heard much to far south, an error caused by an imperfect computation of itineraries.

'On the Voguls,' by Dr. H. RÓNAT.—The Voguls are a tribe of Northern Asia, residing on the river Vogul. They call themselves "Mancsi." The name of Vogul was given to them by the Szirján merchants, who, in their mercantile pursuits beyond the Ural Mountains, called those living on the river Vogul, "Voguls," and those on the river Ob (in the Mancsi language "Aaz"), Ostjaks. The Voguls are of a dark complexion, small in stature, closely allied to the Finnish type. Their principal occupations are fishing, hunting and bird-catching. Agriculture is only known towards the south, in the vicinity of Pelim and Losva. Their food is very simple, air-dried or smoked fish and meat; they scarcely ever use salt; bread is only known in the south. They are good-natured, cheerful, talkative, but extremely superstitious, idle and indolent. Women are considered inferior beings. The girl, when of age, is given in marriage by her

father to the highest bidder in reindeer. Polygamy is allowed, but at present very rarely met with. Their dwellings are built of the bark of trees or solid wood, of which a few are called a village, scarcely ever more than seven. They acknowledge a supreme heavenly being, called "Nuni-Tarom" (High-time), the ruler of the earth, to whom, according to their belief, it would be useless to pray, for he never departs from his rule, and grants happiness to men as they deserve it; consequently it will be of no avail to pray to him. However, they have their family idols, to whom they pray in necessity, whose assistance they implore with gifts and sacrifices. It is only of late years, since 1848, that Christianity has made any progress, though it is more than a century since Greek priests were sent to them. For the dead they have great reverence, and keep generally a figure of the departed in their houses for nearly a year. Their language belongs to the "Altai group," of which the principal are the Fin, Turkish, Mongol and Mandso, and amongst these it belongs to "Ugor sub-group," to which may be referred the Szirján, Votják, Mordvin, Hungarian, Oztják and Vogul (Manaci). In 1844, on a territory of 3,780 square miles, their number amounted to about 6,342. Under the new rule they are rapidly decreasing in number, and we are greatly indebted to Antony Regul, a Hungarian traveller, who, since 1843, spent several years amongst the Voguls, collecting from their oral tradition their sacred legends and ancient history preserved only in songs.

SECTION F.—ECONOMIC SCIENCE AND STATISTICS.

MONDAY.

'On the Subjects required in the Classical Tripos Examination and in the Trinity College Fellowship Examination at Cambridge,' by Mr. J. HEYWOOD. —He contended that a wider range of subjects in the triposes or examinations for honours at Cambridge and in the fellowship examinations would raise the standard of qualifications for schoolmasters, who are often selected from the classes of honour-men and college fellows at the University. Royal Commissioners, who regulated public schools and academical studies in the reigns of the Tudor sovereigns, no doubt acted conscientiously according to the ideas and enlightenment of the sixteenth century; they followed in the same line with their Roman Catholic predecessors, deeming Latin and Greek learning the only sure basis of the higher education of the country. And a modern instance of the supremacy of Roman and Grecian studies might be seen in the papers which were every year set to the candidates for fellowships at Trinity College, Cambridge. Of nine papers appointed at this fellowship examination, six were classical, two mathematical, and one comprised mental and moral philosophy.

'Statistics as to the Number of Graduates in Arts and Medicine at Oxford for the last Two Centuries,' by Dr. DAUBENT.—Dr. Daubent furnished some statistics as to the number of graduates in arts and medicine for the last two centuries. Medical men taking honours or graduating at Oxford formed a very small proportion of the entire number, and was in a still further diminishing ratio.

Sir J. BOWRING said, the true test of education was its application to the duties of life. The importance of language was seen from the fact that there were twelve thousand millions of the human race. Prof. Porson said a street-sweeper in Athens knew more of his language than many educated at the University. This was owing to the system of teaching, which did not lead them to think in the languages which they learned. Scientific knowledge was not to be found in the ancient languages. There were more than fifty modern languages not studied, and if any young man wished to make money let him study them. When he was in China, among four hundred million people there were only six persons through whom he could hold intercourse with the Chinese. He illustrated the importance of learning modern languages by several anecdotes, both as regarded himself in Japan and Lord Raglan in the Crimea.

'On the Influence of Science Classes in Mechanics Institutes,' by Mr. E. RENALS.—Mr.

Renals supported the science classes with great earnestness.

A discussion followed, in the course of which it was mentioned by Mr. FELKIN that since 1780 no less than 660 patents for inventions connected with the manufacture of lace had been taken out, of which all but some half-dozen were the discoveries of working men; while in the last fourteen years alone machinery to the value of 2,000,000*l.* had been laid aside as no longer required for the attainment of the object in view. Mr. Babbage, on the occasion of his visiting Nottingham, sat for two hours looking at a particular machine, by which some surprising results were accomplished, and in reply to a question addressed to him, gave the reason for his narrow inspection of the machine, which was, that, although effectual for its purpose, it had been contrived and put together by a man whose contrivances showed that he was no mechanic at all, but merely felt his way from stage to stage. In machines now in use in Nottingham the same mesh which used to require sixty motions could now be made with six. What an enormous saving of time, money, and labour would have been effected if the inventors who patiently found their way from one improvement to the other had known beforehand the principles by which it was necessary to be guided!—Mr. PAYNE suggested that the matter should be allowed to drop with the present discussion, but that a Committee should be formed to consider the best mode of introducing the teaching of science into schools.—Mr. J. P. HEYWOOD seconded this suggestion; and a resolution inviting the attention of the Council of the Association to the subject was eventually adopted.—Mr. G. SENIOR thought a very great point would be gained if it were possible to spread among the working classes something like correct notions on the subject of wages, the value of labour, and the value of provisions. Men who might never rise to the height of understanding biology or physiology would doubtless be interested by the subject of wages.—Dr. FARR said it ought to be known, for the credit of the town of Nottingham, that at the People's College elementary teaching in science was given to boys and girls.

'On Hindrances to Success of Popular Education,' by the Rev. C. SEWELL.

TUESDAY.

'On the Charitable and Educational Institutions of India,' by Col. SYKES.—The Colonel gave an outline of those establishments which had been founded during the last five years by the native gentry, in which Jews, Parsees, Mohammedans, and Hindoos have equally distinguished themselves. He then read a list of donations from official sources towards founding institutions, which, in some instances, amounted to 10,000*l.* for single charities, and the contributions of one individual reached the enormous sum of half-a-million during his life. There was scarcely an object for their relief and education to which the natives did not contribute, without regard to sect or country.

'On the Intoxicating Liquors consumed by the People of the United Kingdom in 1865,' by Mr. WILKINSON.—Of gin and whisky, 20,811,155 gallons were consumed, and of rum and brandy, 6,732,217 gallons. The wines charged with duty were 11,993,760 gallons, whilst the malt returned for brewing was 47,249,093 bushels, which gave an average of 24½ gallons per head in the year from the youngest to the oldest. The total value of this was 88,619,876*l.* This sum exceeded by nearly twenty-three millions the gross expenditure of the United Kingdom in 1865.

The Rev. W. CAINE said, he knew working men earning 30*s.* a week who spent 7*s.* 6*d.* a week in drink, and when out of work a week or two they were compelled to apply to the parish.—Mr. WILSON said, there was little inducement for the working classes to save, because when out of work they had no relief afforded until their previous savings were exhausted.—Mr. A. HILL observed, that in Birmingham he had adopted a plan of paying wages on the Wednesday, instead of Saturday, and found it answer well; he also got the men to allow the women to receive the money, for it was safe in their hands.

'On the Lace and Hosiery Trades of Nottingham,'

by Mr. FELKIN.—It was computed that about 135,000 females were employed in the lace trade of Nottingham in 1865. The materials worked up cost about 1,715,000*l.*; the wages and profits amounted to 3,415,000*l.* or thereabouts; and the net returns may be stated at 5,130,000*l.* The Nottingham hosiery business is now believed to be giving employment to about 17,000 males and 44,000 females—together 61,000 workpeople. The estimated returns amounted in 1865 to about 3,000,000*l.* The two staple trades of Nottingham, therefore, distributed in returns an amount somewhat more than 8,000,000*l.* sterling last year, and furnished, in the aggregate, employment to nearly 200,000 workpeople.

'On the Unequal Proportion between the Male and Female Population of some Manufacturing Towns,' by the Rev. A. S. WORTHINGTON.—The population of England appears by the census of 1861 to be divided in the proportion of 105 women to 100 men, although 105 males are born to every 100 females. But this proportion is not equally distributed through the country. The nature of employment differs in different towns and districts; and as men or women find most ready employment, one or the other predominate in number. In Nottingham and Radford together there were in 1861, 48,424 men and 57,820 women, an extraordinary excess of nearly 10,000 women. This excess is most marked between the ages of fifteen and thirty. This is also the case in seaport towns, e.g. Plymouth, Yarmouth, King's Lynn, Hull and Bristol; while in Liverpool there are far more women than men between the ages of fifteen and forty-five. This attraction of female labour to manufacturing towns is not likely to diminish, but will rather increase, owing to the comparative cheapness of female labour. But it seems to be attended with considerable evils.

The Rev. W. CAINE said, in the cotton famine they had fewer deaths of children, because the working classes had less to spend in drink, and they should bear in mind that the children killed were generally overlaid by parents on Saturday and Sunday nights.

'On the Diminution of Accidents in Coal-Mines since the appointment of Inspectors,' by Mr. G. SENIOR.—Mr. Senior showed that the saving of life from gas explosions in pits amounted to nearly fifty per cent., and from accidents in the shafts to forty-six per cent. In raising ninety million tons of coal the loss of life in 1864 amounted to one in 354 persons employed, and to one for each 110,000 tons produced.

SECTION G.—MECHANICAL SCIENCE.

FRIDAY.

Prof. MACQUORN-RANKINE read a paper 'On the Theory of the Influence of Friction upon the Mechanical Efficiency of Steam.'—The results arrived at by the author of this paper are based on the following principle. Let W be the indicated work of a given quantity of steam, without deducting loss by friction, and H the mechanical equivalent of the expenditure of heat required in order to do that work; so that $W \div H$ is the efficiency of the steam without friction. Let F be the quantity of work lost through friction in the cylinder; and let the heat produced by that friction be wholly taken up by the steam. Then the work done is diminished to $W - F$; and the heat expended is diminished to $H - F$; so that the efficiency becomes $\frac{W - F}{H - F}$. The special way in

which the friction takes effect in ordinary steam-engines is by diminishing the expenditure of heat required for the prevention of liquefaction in the cylinder.

Capt. NOBLE, R.A., read a very elaborate paper 'On the Penetration of Shots and the Resistance of Iron-Clad Defences.'—The author, as an Associate Member of the Ordnance Select Committee, has lately carried out a series of experiments under the direction of the Committee, for the purpose of determining various points connected with the resistance of iron plates, and the paper read forms part of a Report which he has submitted to the Committee, and which the Secretary-at-War gave him permission to communicate to the British Association. The above series of experiments were

instituted for the purpose of determining the following points:—1st. To determine the relative penetrating effects of two steel shot on an iron plate, provided they strike with the same "work," or mechanical effect, notwithstanding the one may be heavy with a low velocity, and the other light with a high velocity. 2nd. To determine the relative resistances of a plate to penetration by two steel shot of similar form of head, and striking with "work" proportional to their respective diameters. In order to determine the first point, the Committee fired a number of hemispherical-headed steel shot from a muzzle-loading gun of 6·3-inch calibre at $4\frac{1}{2}$ and $5\frac{1}{2}$ inch plates, the weights of the shot being different, viz., 35 lb., 70 lb., 106 lb., and the diameters the same, viz., 6·22 inches. The charges with which these projectiles were fired were arranged so that the "work" was the same in each case, that is to say, the velocity on impact of the light shot was much greater than that of the heavy shot, while the expression Wv^2 , or weight of shot multiplied by the square of its velocity, was constant. The results of these experiments were very interesting, and are fully detailed in the tables which accompany Capt. Noble's Report. The conclusions which have been drawn from these results will be given when the second point has been considered. To determine this question, viz., the relative resistances of a plate to penetration by two steel shot of similar form of head, and striking with "work" proportional to their respective diameters, the Committee fired a series of steel hemispherical-headed shot of various weights and diameters at $4\frac{1}{2}$ and $5\frac{1}{2}$ inch unbacked wrought-iron plates, the velocities being so arranged that each projectile struck with a "work" proportional to its diameter. Thus, suppose the comparison to be made between a 7-inch shot animated with a "work" represented by 1000, and a 9-inch projectile, the latter should strike with a "work" represented by 1296, or in the proportion of 9 to 7. After entering into the details of these experiments, Capt. Noble proceeded to consider the effects of shot striking a plate obliquely or at an angle. A small number of experiments have lately been made in connexion with this part of the subject, and, although further trials are necessary, the general results go to prove that the power of perforation possessed by the shot is diminished in the proportion of the sine of the angle of incidence to unity. The subject of cast-iron projectiles next claimed attention, and Capt. Noble explained the difference between the effects of cast iron and steel shot. With the former much of the total "work" is expended in breaking up the projectile on striking, and hurling the pieces in different directions, whereas, when the shot are carefully manufactured of the very best steel, very little "work" is done on the projectile, and in some instances the material of the shot has been so perfect, that its alteration of form after penetrating the plate has been almost inappreciable. From this subject Capt. Noble passed to the consideration of the proper form and material of projectiles to be used for the penetration of iron-clad defences. It has been clearly demonstrated by numerous experiments, that ordinary cast iron is almost useless as a material for the manufacture of such projectiles. Steel is an excellent material for shot, but it is also most expensive; and, as recent experiments have shown that Palliser's chilled iron is almost, if not quite, as good as steel, we shall probably use this material for solid shot, and employ steel for shells alone. Various forms of head have been proposed for steel projectiles. Thus we have had the flat head, relied on by Mr. Whitworth, the round head, elliptical head, &c. The flat head has gained a great reputation from being the shape used by Mr. Whitworth in his first experiments against the Warrior target. Of all these forms, however, Capt. Noble prefers the pointed, or ogival, head, and he described, by means of a diagram, the difference in effect between the pointed and the blunt form. The blunt, that is, flat-headed or round-headed shot, on striking an iron-clad structure, such, for instance, as the Warrior, punches a piece of armour out of the plate and drives it into the backing: the shot, however, has no means of ridding itself of this piece of plate, and consequently has to push it in front of it

through the backing. It is needless to remark that this piece of jagged armour plate must greatly increase the resistance which the shot meets in passing through the backing. When, however, the shot is of the form of a pointed ogival, the results of its actions are far different; this projectile cuts or rather tears through the armour plate, and the pieces of broken plate are bent back and forced into the backing round the edge of the hole; the shot then passes through without carrying any jagged armour in front of it. Capt. Noble then proceeded to give a short detail of some late experiments with pointed shot, which go to prove that this form is much superior to any hitherto tried. The subject of iron-clad ships was then entered on, and a summary given of the experiments against targets representing actual vessels. From the consideration of all these experiments, Capt. Noble draws the following conclusions: 1st. When it is required to perforate an iron plate, the projectile should be of a hard material, such as steel or chilled iron. 2nd. The form of head best suited for the perforation of iron plates is the pointed ogival. 3rd. The best form of steel shell is that in which the powder can act in a forward direction, and which is furnished with a solid steel head in the form of a pointed ogival. 4th. When Palliser's chilled iron can be made of the best quality, it is almost, if not quite, as effective as steel for solid shot; and where the projectile can perforate with ease, the chilled shot is more formidable than steel, as it enters the ship broken up, and would act as grape. 5th. To attack well-built iron-clads effectively the guns should be, if possible, not under twelve tons weight and nine inches calibre, firing an elongated projectile of 250 lb., with about 40 lb. of powder. 6th. When the projectiles are of a hard material, such as steel, the perforation or power of penetration is directly proportional to the "work" in the shot, and inversely proportional to the diameter of the projectile, and it is immaterial whether this "work" be made up of velocity or weight within the usual limits which occur in practice. 7th. The resistance of wrought-iron plates to perforation by steel projectiles varies as the square of their thickness. 8th. Hitting a plate at an angle diminished the effect as regards power of penetration in the proportion of the sine of the angle of incidence to unity. 9th. The resistance of wrought-iron plates to perforation by steel shot is not much, if at all, increased by backing simply of wood; it is, however, much increased by a rigid backing either of iron combined with wood, or of granite, iron, brick, &c. 10th. Iron-built ships, in which the backing is composed of compact oak or teak, offer much more resistance than similarly clad wooden ships. 11th. The best form of backing seems to be that in which wood is combined with horizontal plates of iron, as in the Chalmers, Bellerophon, and Hercules targets. 12th. An inner iron skin is of the greatest possible advantage. It not only has the effect of rendering the backing more compact, but it prevents the passage of many splinters which would otherwise find their way into the ship. No iron-clad, whether iron-built or wooden-converted, should be without an inner iron skin. 13th. The bolts known as "Palliser bolts" are the best for securing armour plates. Capt. Noble's paper concludes with a series of tables, in which he has detailed the results of almost every important round fired in connexion with iron-plate experiments up to the present date. These tables furnish an amount of information from which many most important deductions may be drawn.

This paper was followed by one by Capt. D. GALTON, R.E., 'On the Chalmers Target.'—The target may be understood by looking upon it as a beam in which the top flange is the front plate, the bottom flange a thinner plate behind, these two flanges being kept apart by means of a web of plates at right angles to the flanges. These intermediate plates are supported laterally by layers of wood to prevent their breaking. The author stated that the results of the experiments made by the Iron Plate Committee had been most successful, and showed that the principle was correct.

A discussion followed the reading of these two papers. The MARQUIS OF LORN, responding to the appeal of the President, stated that he had an

opportunity of examining the American ship, *Dor-derberg*, during her construction, and found her a very formidable vessel. She was a broadside ship, completely protected both above and below her water-line. Her plates were solid, five inches thick. She had only one fighting deck; and in consequence of the peculiar form of her build, her broadside was on an inclined plane.—General LEFROY took the opportunity of expressing his entire dissent from the sentiments contained in the opening address of the President of the Section with regard to the state of our vessels of war, our guns, and our fortifications. He had had some opportunities of ascertaining for himself the position in which we stood with regard to our national defences, and he had come to the conclusion that they were in a most satisfactory condition. The President said that our ships would neither float in shallow waters nor fight in deep waters; but he could affirm that they were not surpassed by the ships of any other countries in the world. Our fortifications, which the President said were set down where nobody would land, were the result of the most careful study, and were the admiration of every foreign military engineer, and in design and execution would successfully compete with any foreign works of the kind. Capt. Noble had shown them that we possessed the powerful rifled guns, whereas the Americans had only enormous smooth bores, which, with their round shot impelled by low charges, were of comparatively little use. With regard to the American turret ship which has just paid us a visit, he might mention that her 11-inch turret armour was composed of eleven one-inch plates laid over one another, and thus was only equal to a solid plate six inches in thickness, whereas the turrets of all our vessels were defended by solid armour plates.—Sir W. ARMSTRONG, in referring to the late naval engagement between the Austrians and the Italians off Lissa, said that he had had no precise information as to the description of guns used by either party on the occasion, although he could say that, with the exception of two 150-pounders on board the ship that was blown up, and of two 300-pounders on board the *Affondatore*, the whole of the fleet was either unarmed or armed only with a few smooth bores. The Austrian fleet was in no better condition, and therefore no sound conclusions respecting the resistance of armour plates can be drawn from the results of the battle, owing to the hurry in which the fleet left the fort. The 300-pounders on board the *Affondatore* were not completely fitted with carriages, nor had she all her ammunition on board, and in consequence it was found impossible to fire more than three or four rounds from them. The projectiles passed through the wooden ships against which they were fired without doing much material damage. The paper which had been read by Capt. Noble was a most valuable one, being the most complete and distinct exposition of the subject that had yet been submitted to the public. He thought the amount of "work" performed by a shot depended rather more upon its shape than Capt. Noble supposed, as a long, poker-shaped shot would only crumple up without injuring that plate against which it was fired, whereas a flatter shot would penetrate the plate. If the dimensions of the shot were given it was easy to calculate its penetrative force. He might further remark that it was impossible to rely upon the accounts they received as to the performances of foreign guns, as they were not informed of the exact conditions under which the experiments were made, and therefore they must not be alarmed when they heard that a shot had penetrated a plate so many inches thick, as it may have been composed of a number of thin layers, or it may have been entirely unsupported with backing. The difference between the resisting powers of solid and laminated armour was enormous, as the resistance of the former increased in proportion to the square of the thickness, whereas that of laminated armour only increased in proportion to the thickness. The chief point they had to attain was to produce a gun which would stand the necessary charge and give full effect to the shot, the shape of the shot and the description of the rifling being but a secondary consideration.—

Col. SYKES, M.P., thought that the millions which had been expended upon our fortifications had been entirely thrown away because we had not men enough in England to man them.—Admiral Sir E. BELCHER said that he had advocated the system adopted in the Chalmers target some two or three years since.—Mr. W. FAIRBAIRN thought the vessels should be constructed so as to be seaworthy as well as impenetrable. The Iron Plate Committee, of which he had been a member, had undertaken a long series of experiments to ascertain the resistance of cannon-plates to different kinds of shot. They found that the Chalmers target offered the greatest resistance to shot, and they had improved upon that system in the Bellerophon and the Hercules. Above all things it was of the greatest importance that our ships should possess considerable speed, as it would enable them to attack or retreat at pleasure. In reply to a question from Col. SYKES, he said it did not appear to him that the American Monitor was calculated for long voyages on account of the deficiency in ventilation. Such vessels must be most uncomfortable places to live in, and he thought they would be easily run down by one of our own iron-clads.—Sir E. BELCHER said they could hardly be worse than were the cock-pits of the old-fashioned men of war, in which the air was often so foul that candles would not burn. The crew, however, were never more healthy than they were in those old times, and no complaint was ever heard of the want of ventilation.—Mr. VIGNOLES thought the Chalmers target was the best, as offering the greatest resistance with the least amount of material.—Major PALLISER gave an account of the experiments which had led him to discover the efficiency of chilled iron shot against armour plates.—Prof. RANKINE thought that the object to be attained in making ship's armour was to distribute as widely as possible the force of the blow. By this means the energy of the shot would be expended without greatly injuring the plates.—The PRESIDENT said that some endeavour should be made to give us a number of effective vessels, instead of time and money being wasted in vain endeavours to build a ship which would be impenetrable to every gun, and to obtain a gun which would penetrate every vessel. If we had 200 or 300 heavily-armed vessels of great speed, and of but little draft, we might bid defiance to any hostile fleet.

Mr. J. B. FELL read a paper 'On Locomotive Engines and Carriages on the Central Rail System for working Steep Gradients and Sharp Curves, as employed on the Mont Cenis.'—It appeared that this work is proceeding most satisfactorily, and that it will probably be completed by the end of the year, and will be opened about May next. When this is done, the line of rail will be unbroken between Paris and Brindisi, on the Adriatic, from which port the Italian Government are running a line of steamers to Alexandria. Should our Government adopt this route for our Indian mails, as it is expected will be the case, instead of that of Marseilles, a saving of something like forty hours will be effected in their transmission between London and Alexandria. The works at Mont Cenis could be executed for 1,000*l.* per mile for the railway, and 250*l.* per mile for permanent way; the stations would amount to another 1,000*l.* per mile, the rolling stock amounting to 750*l.* per mile, the total cost being 300,000*l.* The tolls were high, being double those charged on an ordinary railway. Locomotive power for conveying passengers and goods over the mountain cost 1*s.* 4*d.* per passenger, and 4*s.* 8*d.* for each ton of goods. The total revenue was estimated to amount to 100,000*l.* per annum. Assuming the traffic to increase at the rate of 10 per cent., the whole of the capital would be repaid within four years. The cost of this line would be only one-third that of a tunnel line. The working expenses would amount to 2 per cent. of the ordinary expenses. There would be no probability that the line would be choked with snow. About eight or nine miles of the line would be constructed in galleries, some of masonry and some of wood.

M. BRÉGERON, the manager of the Swiss Western Railways, described 'A System of Pneumatic Propulsion,' which he proposes for adoption as

adapted for surmounting steep gradients and sharp curves. His proposition is to propel the carriages through a tube by means of a column of air, and not to use exhaustion. This column of air he derives from the gradual sinking of a large bell, or succession of bells, after the manner of a gasholder. The raising of the bells will be effected by means of the direct action of hydraulic power from an elevated head, where such is available, and in any case the power, whether water or steam, used for raising the bell is only auxiliary, as the ascending carriages will drive the air before them, and thus raise the bell a certain portion of the necessary elevation. M. Bergeron is about to construct a short line on this system at Lausanne for connecting that town with the terminus of the present railway there. The tube is to be constructed of concrete, the materials for which can be obtained at a low cost.

FINE ARTS

NEW BUILDINGS AT SOUTH KENSINGTON.

A copy of correspondence between the Treasury and the Art-Department has lately been published, with reference to the new buildings at the South Kensington Museum, together with a plan of the structures as proposed to be completed. The Art-Department, by Mr. Bruce, addresses the Treasury, and states that the Committee of Council on Education, having obtained knowledge of its requirements as to space and character of the buildings in question, have caused plans to be made for the consideration of the Treasury and Parliament. This is followed by a description and history of former structures placed on the same spot since 1856, comprising the "boilers" which cost 15,000*l.*, as voted by the House of Commons, besides a considerable sum which was devoted to the purpose by the "1851 Commissioners." 10,000*l.* was voted by the former for removal from Marlborough House of the offices once placed there. The Sheepshanks Gift, 1857, required a fire-proof gallery, which was erected at South Kensington at a cost of 3,500*l.*; this is of permanent character, "but did not form any part of a general design." In 1858-59 the Turner and Vernon pictures were removed to this place, it having been found more convenient and cheaper to erect fire-proof galleries there than to adapt the Riding School at Carlton Ride; so says Mr. Bruce. These buildings cost 8,198*l.*; and, subsequently, 4,000*l.* was expended on a "long fire-proof gallery." Thus, before 1860 and any general plan was matured, 40,689*l.* was expended on buildings so far partaking of a temporary character that they were not designed as any part of a general scheme. Portions have since been worked into it. A Committee of the Commons, in 1860, recommended a further expenditure of 44,000*l.* for buildings, part of a defined plan, and did not specifically recommend that plan, which was submitted by the Department. The plan submitted by the late Capt. Fowke was estimated by him, roughly, to cost 214,000*l.*, and to give 6,500,000 cubic feet of buildings at the respective cost for various portions of 3*d.*, 4*d.*, 6*d.*, and 1*s.* per cubic foot for the whole. Generally on this plan two large courts, with surrounding cloisters, five picture-galleries (rooms?), two art-schools, four official residences having architectural pretensions, workshops, offices, &c.; in total, 3,292,936 cubic feet, or rather more than half the space proposed in 1860, have been erected at a cost of 92,987*l.*, or 6*d.* and a fraction per cubic foot, being lower than the average of the before-mentioned cost per class. It should be added here, however, we think, that the "decorated" part of the structures is in great proportion yet to be built. This will, probably, considerably alter the average of the estimate. Of the part remaining to be constructed, 777,581 cubic feet are in progress, nearly finished, comprising lecture theatre, refreshment-rooms and corridors, forming the central block of the ground plan, and connecting those which are already in existence. Of this nearly complete portion the cost is reckoned at one shilling per cubic foot, making 38,879*l.* To provide for the growing wants of the Art and Education divisions of the Museum,

Libraries, School of Naval Architecture, Laboratories, &c., it is proposed to add 9,001,959 cubic feet of space to the amount already erected; thus making a total of 18,072,476 cubic feet, instead of 6,500,000, as proposed in 1860. The total cost of the erected and proposed buildings is estimated at 481,072*l.*, including decorations, inside and outside, but not pictures, mosaics, bronze-work, and the like, which it may be expedient to insert from time to time. Mr. Bruce then proceeds to compare this estimated cost with that of the British Museum, which exceeded 1,100,000*l.*, for a smaller area than that at South Kensington, being 1*s.* 6*d.* a cubic foot; the Royal Exchange cost 11*d.* a cubic foot; the Houses of Parliament between 2*s.* and 3*s.* a cubic foot. We presume, however, that the three examples later cited included cost of all decorations, as is undoubtedly the case in the last: an estimate which, moreover, is said to have been hugely enhanced for lack of a defined plan of operations, and by means of repeated extensions beyond the boundaries of the original plan.—In reply to this statement of Mr. Bruce, Mr. W. Cowper, and Mr. Bruce himself in another capacity, report to the Treasury and recommend that certain specified portions of "an amended plan" as not of immediate necessity, should be delayed in execution and others proceeded with; these, including others already in existence, and having cost 119,000*l.*, will cost 195,000*l.* (in all, as at present contemplated, 314,000*l.*). These gentlemen further recommended that the additional sum should be expended in four years. To this the Treasury replied, approving the outlay of 195,000*l.*, but declining to consent to that expenditure in a shorter period than six years.

FINE-ART GOSSIP.

Mr. Sydney Smirke, R.A., has been unanimously chosen architect of the new Royal Academy to be erected at the back of Burlington House, the latter being retained as the façade of the building. A Building Committee has been appointed, of Messrs. Cope, Crosswick, Marshall, Weekes, Hardwick, Scott, and the officers of the institution. Mr. Smirke was the originator of the very excellent plan which is to be followed.

Mr. Foley's fine statue of Lord Herbert of Lea, which is soon to be placed in front of the War Office, Pall Mall, has been successfully cast in bronze.

The 'New National Gallery Act' has been published, and states that 67,000*l.* has been agreed for the price of the workhouse, which is to be occupied as now until October, 1868.

Mr. Weekes's monument of Archbishop Sumner, not long since exhibited in model at the Royal Academy, has been placed in Canterbury Cathedral. The effigy is recumbent, in full canonicals, the hands folded over the chest and an open Bible; it is placed on a richly-carved altar-tomb, bearing the arms of the sees of Chester and Canterbury. With no great pretension in Art, this work is not only in good keeping with the architecture by which it is surrounded, but significant of the faith and offices of the deceased, and infinitely superior in its sterling qualities to anything of the sort lately placed in our cathedrals.

It is proposed to erect a temporary building for the exhibition of the designs sent in competition for the new Law Courts.—It has been agreed that it is desirable to have a carriage thoroughfare through Great Turnstile into Lincoln's Inn Fields; the site is to be surveyed.—Mr. Gibson, one of the architects appointed to compete for the Law Courts, has resigned his chance; his place will not be filled up.

Mr. W. Bennett, a photographer and artists' colourman, carrying on business in the Brompton Road, and his neighbour, Mr. E. J. Forberg, have been—on the application of Mr. Graves, printseller and proprietor of copyright in Sir E. Landseer's picture, 'A Pair of Nutcrackers,' and a work of popular pretensions—fined by Mr. Selfe in the full penalties of 10*l.* and costs, for four acts of piracy.

Some needful restorations are being effected in the church of Plympton St. Maurice, Devonshire,

near Plymouth, so interesting as the church which Reynolds attended in youth. Here it was, as our readers will remember, intended to place a Reynolds memorial-window. Some funds for the last-named purpose were collected by the Rev. Percy Nicholas, perpetual curate of the church, and are to be, we believe, devoted to the end in view, under the charge of his successor, who will, no doubt, endeavour to increase them by a further appeal to the public. It is proposed to place the stained glass in the window at the east end of the north aisle of the church, which faces the pews occupied, by right, by the boys of Plympton Grammar School, to which Reynolds, as everybody knows, was once attached. This will be obviously best fitted for the purpose. The restorations of this church are remarkable for the great taste and judgment that have been displayed by Mr. Gullet, a local stonemason, whose artistic ability is beyond challenge by those who, like ourselves, have seen the excellently designed and executed sedilia he has placed on the south side of the altar, comprising marble shafts, with carved stone caps, and very good bases,—the caps being exceedingly well conceived and wrought. Mr. Offord, a local Art-teacher, has furnished the design for the tiles that are being placed in front of the altar: these are good in every way. It is proposed to establish at Plympton St. Maurice a collection of books, essays, and other matters that refer to Reynolds. The Rev. George Patey, master of the school, successor to Reynolds's father, is the fittest recipient of contributions to this end. We are enabled to state that he will cheerfully take charge of such memorials as donors may intrust to him.

The Louvre has had added to its treasures a museum of stained glass, comprising 105 ancient pieces. These specimens are principally of dates so late as the fifteenth and sixteenth centuries, as is most commonly the case, and of Flemish, German, Dutch and French manufacture.—The collection of works in stained glass at the South Kensington Museum is much richer than many persons think. It comprises many excellent specimens of early work, noteworthy among which is the fine, although restored, window that is now in one of the openings to the west cloister of the North Court. It was originally in Winchester College, and, after a sojourn of several years at Shrewsbury, where it decorated a church, was sold to the Art-Department for less than 70*l.*—one of the best bargains we know; infinitely better worth making than that which procured for the same establishment a wretched modern transparency in glass representing the Virgin and Child. The Winchester window represents St. John and another saint, with Solomon. Our stained-glass treasures will soon, we hope, be better shown than is now practicable. Among the most recent additions to the Museum are, on the north-west side of the South Court, three cases filled with Lowestoft china,—a ware which has hitherto been but little known to amateurs. Mr. Chaffers, who, at considerable pains, has made this collection, chiefly from private houses in and near Lowestoft and Yarmouth, promises a little volume about the manufacture; the kilns employed for it are still to be seen in the district which was once famous for it.

M. Mueseler, a well-known Belgian engineer and inventor, died recently,—too soon for the presentation of a testimonial that had been procured for him.

MUSIC AND THE DRAMA

DRURY LANE.—"Old Drury" is really an "institution." For more than two centuries has its stage been established, and the house called "Theatre Royal" for distinction, His Majesty's servants alone playing there, and taking rank as gentlemen of the king's household. The autumn time, too, has always been the period (with few exceptions) at which the public has been most interested in what was to take place when its curtain was drawn. Two hundred years ago, although the great September calamity suspended acting for awhile, there was a splendid company to chal-

lenge the favour of the town. Mohun and Hart ("We have our Roscius and Æropus," said Evelyn of them, "both on the stage together"), with Mrs. Marshal and Eleanor Gwyn, enthralled all London. Betterton and Harris, with Mary Davies, varied the enchantment at the Duke's House, in Lincoln's Inn Fields. Nell Gwyn left us her history, and, through her royal son, the line of Dukes of St. Albans, Mary Davies, the fame of her power of singing "My lodging is on the cold ground," and a line of descendants (through her royal daughter) in the Lords Petre. The company at Old Drury had not deteriorated a hundred years later, for in 1766, Garrick was at its head, surrounded by a brotherhood of players, men and women, such as has rarely been equalled. And now, at the end of another hundred years, Old Drury is about to open its doors, as of yore, in the autumnal time, with a company which has undergone some change since last year, and much improvement. Mr. Chatterton will begin (on the 22nd inst.) with a Shakespearian night, the pieces being 'King John,' and the 'Comedy of Errors.' The 'King' is among Mr. Phelps's most effective characters. *Faulconbridge*, in the hands of Mr. Barry Sullivan, will escape, we trust, those coarse passages which Mr. Anderson seemed to deliver as if he was well pleased to utter what many in the house were shocked to hear. Mrs. Vezin assumes *Lady Constance*, the part in which Miss Anderson ranted so loudly during the last season. Besides these changes, Miss Helen Faucit will appear for twelve nights in *Imogen*, *Rosalind*, *Julia*, and *Pauline*; Mr. H. Talbot will make his *débüt* in London, as *Macbeth*, in October; and Mr. T. Pourie, an eminent Scotch actor, will appear in *Rob Roy*. The musical arrangements include Goethe's 'Faust,' arranged for stage representation by Mr. Bayle Bernard, with Mr. Phelps for *Mephistopheles* (a part admirably suited to his peculiar powers), and new and elaborate scenery by Mr. Beverley. A new drama, by Mr. Boucicault, will be produced on Easter Monday.

ADELPHI.—Mr. Toole performed the character of *Paul Pry* last week. This exceptional character depends as much on costume and a property-umbrella as on the talent of the actor. Liston brought to it a special tact and a peculiar expression of countenance, the last a gift of nature, and the former the result of long practised art, and these in combination made such an impression on the public mind that the image of *Paul Pry* was multiplied in every material and in every direction. Wright had also some specialities which aided him in the assumption of the part. Mr. Toole, on the contrary, has nothing but his genius and his skill to give such an interpretation of the character as shall be original, and yet answerable to the conception already formed of it by the regular playgoer. Mr. Toole, accordingly, takes a moral view of the character, and then provides it with its fitting embodiment. The result is a wholly artistic portrait; a clever impersonation, in which reflexion is made to resemble spontaneity. His *Paul Pry*, accordingly, is chargeable with a certain amount of self-esteem and busy importance, qualities rather belonging to an official, or officious person, than to a private individual, however naturally curious. The acting of Mr. Toole, too, is sometimes so intense and serious, that poor *Paul* becomes a semi-tragic character, and interests us somewhat too painfully. Throughout, however, it is wonderfully ingenious in its outline, and plentifully filled up with striking details.—Mr. Toole has also appeared in a new farce, entitled 'Keep your Door Locked,' freely translated from the French by Mr. Arthur Mathieson. It is one of those pieces in which bustle is substituted for legitimate action and absurdity for character.

MUSICAL AND DRAMATIC GOSSIP.

THE other day, for the opening of the Industrial Exhibition at Islington, a *Cantata* was executed by the Tonic Sol-Fa singers, headed by Madame Louisa Vinning and Mr. Weiss, written by Mr. Plummer, and composed by Dr. Spark, of Leeds. While speaking of one Yorkshire professor, we may

mention the death of another who, with better education, might have done good things in music.—this was Mr. Jackson, of Masham. It is understood that a subscription will be opened for the benefit of his widow.

Mr. Mellon announces the appearance of Signor Botteanini at his concert, for a few nights, beginning on Monday next. Mdlle. Carlotta Patti has been exhibiting there her singular vocal agility, to the great delight of the public. Mr. Henry Corri, who has been withdrawn from his profession for awhile by illness, has been singing, as also Madame Patey-Whytock and Mr. Patey. Besides these, among star attractions have been the playing of the M^{lle}. Sauret, and the remarkable performances on the pianoforte of Mdlle. Marie Krebs.

There is to be a new Dramatic College, headed by Mr. Henry Leslie,—not (to avoid mistake) the director of the capital choir,—the prospectus of which promises, on moderate terms, every manner of training for those who intend to appear on the stage. Such a school is wanted.

An entertainment has been opened by Mr. Boxley Heath and Mr. Suchet Champion, under the title of 'The Very Limited Liability of Two.'

Il *Trovatore* talks of an opera by a new writer, Signor Strigelli, entitled 'I Figli di Borgia,' with which the autumn season of La Scala may be opened. But who will care for credit the talk of *Il Trovatore* that reads such a paragraph as the following?—"They write," says the journalist, "from London, that a certain *Trois-fifth* intends to give grand Italian operas and ballets during the coming autumn and Carnival, at Drury Lane." The same journal announces that Mdlle. Tati, a *contralto*, who sang in Signor Verdi's 'Un Ballo,' has been retained for next year's London season.—The *Gazzetta dei Teatri* gives an account of a performance of 'Le Precauzione,' by Signor Petrella, at the Santa Radegonda theatre at Milan, and states that Madame Carlotta Grisi (for this, we imagine, read *Giulia*) is about to sing at some grand orchestral concerts given by Mr. Gye at Covent Garden Theatre, in place of opera in English.

M. Auber's 'Haydée' has been revived at the Opéra Comique, with Mdlle. Dupuy and M. Achard in the principal parts. This was the three hundredth representation of the opera.

Signor Verdi's 'Don Carlos' has given trouble in the theatre for which it has been written, M. Belval, of the Grand Opéra, having "gone into court," to defend his refusal of the part of the Grand Inquisitor, which he conceives not sufficiently important. M. Ambroise Thomas has been appointed as arbiter. When will artists know their own interests? Lablache was never greater than when he led the chorus in the first act of 'Lucrezia Borgia,' or than in his sublime moment of the curse in 'Otello.' *Valentine*, in M. Gounod's 'Faust,' was, so to say, as a character pale and overlooked, till Mr. Santley took it in hand. Surely it is not by the number of notes that an actor or singer can assert himself.

M. Carvalho has revived 'Richard Cœur de Lion,' to bring out Mdlle. Adelaide Cornelis, who played and pleased in the part of Antonio.

A new Mass, for four voices and organ, by M. Elwart, is to be sung to-day at St.-Cloud, by the choral society Amand-Chévé.

The French summer southern musical Festival has this year come off in the pleasant town of La Rochelle. For the first day's performance, 'The Mount of Olives' and the 'First Walpurgis Night' were selected. The second concert was "profane," and, among other items, the programme included a 'Tarantella' for flute and clarinet, by M. Saint-Saëns, which we happen to know is a famous Tarantella, let never so many have been written, by never such good men and true.

The Baroness Vigier (Mdlle. Cruvelli that was) has been singing at a concert given for the benefit of the wounded in the late German war at Bielefeld.

Alfred de Musset's 'Fantasio,' one of his most extravagant dramatic pieces, has been produced at the Théâtre Français. The acting of Mdlle. Favart and M. Delaunay is said to be excellent.

M. Roger de Beauvoir, the dramatist who some

ears ago figured—not very advantageously—in a court of law, as defendant in a matrimonial quarrel, is dead.

The name of M. Walckiers, whose instrument was the flute, for which his compositions are many, must be added to the month's obituary.

MISCELLANEA

The Execution of Charlotte Corday.—A Correspondent in Paris sends us the following account as given in the *Moniteur* of the 30th of July, 1793) of the outrage inflicted by one of the aides in the head of the victim:—"En allant à l'échafaud Marie Corday n'a entendu sur son passage que des applaudissements et des bravos. Le sourire et le seul signe par lequel elle a manifesté ses sensations. Montée sur le théâtre de son supplice, on vit encore la fraîcheur et le coloris d'une femme satisfaite; le fatal couteau a tranché sa tête. Un homme nommé Legros, après l'avoir aisé pour la montrer au peuple, lui a donné plusieurs soufflets. Cet acte de lâcheté a fait murmurer le peuple, et a été puni par le tribunal de police."—*Moniteur*, 30 Juillet, 1793. K.

Reading in Milton.—Johnson's Dictionary Quarto edit., 2 vols., 1824), under the word "Sympathize," gives the following from Milton:

The thing of courage,
As rous'd with rage, with rage doth sympathize.

Can any of your Correspondents say where the passage occurs, and explain, moreover, whether we are to understand that we can "sympathize with" an action or passion ("rage" in the instance referred to), as well as with an actor or sufferer; or whether we are to read "with rage" merely in the sense of "ragingly"? If the first reading is to be adopted, what other authority can be quoted? L. B.

The 'Tempest.'—Mr. J. Wetherell, of Melgate House, Slingsby, York, writes to us to the effect that "the following emendation of the text of Shakspeare's 'Tempest' may be sufficiently obvious to merit a niche in your columns. In act i. sc. 2, Prospero, telling his wrongs to his daughter Miranda, and speaking of his brother, says:—

He being thus lorded,
Not only with what my revenues yielded,
But what my power might else exact,—like one
Who having into truth, by telling of it,
Made such a sinner of his memory,
To credit his own lie,—he did believe
He was the duke; out of the substitution, &c.

The *into* of the folios was changed to 'unto' by Warburton; and Mr. Collier's annotator makes a still further alteration, viz.:—

Who having to untruth, &c.

This emendation even Mr. Staunton treats with respect. I now propose another reading, which may be pretty certain Shakspeare wrote:—

Who having sinn'd to truth, by telling of it,
Made such a sinner of his memory,
To credit his own lie, &c."

The Mole.—The Lincolnshire Farmer, whose interesting letter on the mole appeared in the *Athenæum* of June 23, goes far with the modern school of farmers who think it wiser, like the modern doctors, to watch and assist Nature, than to dragoon her. He will be only too glad, then, to hear the following reasons for revoking his sentence against the mole, of "death without mercy," for causing inundations by boring through dams. The facts and arguments are derived from a pamphlet by the late Dr. Gloger, of Berlin, than whom no one, perhaps, ever possessed a more intimate knowledge of the habits of the mole. The mole pleads "not guilty," and his earned counsel declares such borings to be the work of water-rats and brown rats (which by no means live exclusively in buildings, but love the open country and the waterside), and of many of the smaller kinds of mouse, all of whom, as they are obliged to be constantly going in and out for food, leave the entrances to their holes open. But it would be altogether adverse to the mole's interests to tunnel through dams and leave the entrances open. He has so little occasion or inclination to come to the surface, that he rarely does so, even in the dark. Any drafts along his passages or in

his parlour are, moreover, so extremely disagreeable to him that he keeps them carefully stopped up with earth on all sides; and if they are broken into, he stops them up again without delay. Those burrows which are found open are always forsaken ones, which have either been laid open by human hands in the act of destroying mole-hills, or scratched open by some other animal in order to take possession of the dwelling. For good reasons the mole scarcely ever digs or tunnels either in banks, or in the closely-packed soil of artificial dams. In the first place he would clearly be giving himself more trouble to reap less profit, since fewer noxious insects exist in dams than in level and looser soil; and, in the second place, by running tunnels through dams, he would subject himself to the annoyance of soon seeing daylight and reaching the outer air again, which of all things he would wish to avoid. The accusation, sometimes brought against him, that at any rate he is in league with the rats and mice, and labours for their benefit, is met by the fact that, when these mischievous animals occasionally take possession of his hole, or fly thither for refuge, he not unfrequently kills them on the spot. As for mice, he eats all he meets with without much ado, especially the young ones, whether he runs against them in his own passages and private apartments, or stumbles on their nests when he is burrowing: thus he would amply compensate even for the supposed damage of making tunnels for them. His teeth are, indeed, evidently designed to do him good service in a fight with them; for it is only in the back teeth that he resembles other insect-eaters, such as the hedgehog and the shrew-mouse; his front teeth, on the contrary, and still more his long eye-teeth, are quite those of a thorough little beast of prey. These teeth are scarcely so sharp in the weasel, that most deadly enemy of mice, as they are in the mole. As for the other charge, that "he runs his burrows beneath shallow under-drains, and lets the tiles drop down, thus stopping the course of the water," it is only the old story that two of a trade don't often agree. The mole is a "drainer" by nature, without assistance from either potter or brickmaker or agricultural tutor. Whatever needs to be done, he does it himself. In the drains he makes, the rain-water remains after dry weather to fertilize the soil; and, on the contrary, when the season is too wet, the superfluous water, which would otherwise be injurious, flows off through them. This advantage is still further enhanced when "runs" which he has forsaken have been opened in raking the mole-hills, or by the digging of some other animal. Clearly the air can thus penetrate more easily and with more beneficial effect than through any amount of draining-tiles. The burrows are often several hundred feet long, with branch lines in all directions, and as his unexampled appetite obliges him constantly to keep moving, his "works" necessarily extend far and wide. That a "Lincolnshire Farmer" should think they render under-draining quite superfluous is hardly to be expected. There is another qualification which renders the mole a good farm-servant, if people only avail themselves of his help, namely, his thorough style of ploughing. True he makes no orderly-looking furrows, but the "heaps" he throws up, if raked or harrowed over at the right time, will be no hindrance to the mowers at hay-harvest, and are valuable as protecting with fine-crumbled soil the upper roots which have been exposed by driving rains or frost. Only idle farmers let the "heaps" lie and go to waste, till it becomes a difficult matter to remove them; and even if the soil is sometimes "dead," when first thrown up from a considerable depth, it is well known that exposure to the air will soon render it productive. E. M. C.

To CORRESPONDENTS.—T. A.—A. M.—C. M.—M. A. B.—J. W. W.—B. L.—received.

* * * To Correspondents who continue to write on the subject of Literary Parallels it may be noticed that, in the first edition of 'Dora,' Mr. Tennyson acknowledged the source from which he drew his subject, and nothing more.

Errata.—P. 274, col. 1, line 6, for "single" read simple; col. 2, line 3, for "cool" read coal.

SAMPSON LOW & CO.'S LIST OF NEW BOOKS.

DESCRIPTION of the NEW ROB
ROY CANOE, built for a VOYAGE through NORWAY, SWEDEN, and the BALTIC. With illustrations. Dedicated to the Canoe Club, by the Captain. Price 1s. [This day.]

A THOUSAND MILES in the ROB
ROY CANOE on the DANUBE, MOSELLE, RHINE, REUSS, AAR, MARNE, THAMES, MAINE, SEINE, MEUSE, and the LAKES of CONSTANCE and LUGERNE. &c. By J. MACGREGOR, Trin. Coll. Cambridge, Barrister-at-Law. With illustrations. Small post 8vo. with a Map, price 6s. [New Edition next week.]

The ELEMENTS of INTER-
NATIONAL LAW. By HENRY WHEATON, LL.D. An entirely New and Revised Edition, by R. H. DANA, Esq. Royal 8vo. cloth, price 30s. [This day.]

AFTER the WAR. A Southern Tour,
extending from May, 1865, to May, 1866. By WHITLAW REID, Librarian to the House of Representatives. Illustrated. Post 8vo. price 10s. 6d. [This day.]

THIRTY YEARS of ARMY LIFE
on the BORDER. Comprising Descriptions of the Indian Nomads of the Plains; Explorations of New Territory; A Trip across the Rocky Mountains in the Winter; Descriptions of the Habits of different Animals found in the West, and the Methods of Hunting them; with Incidents in the Life of Different Frontier Men. &c. By Colonel R. B. MARCY, U.S.A., Author of 'The Prairie Traveller.' With numerous illustrations. 8vo. price 12s. [This day.]

FAMILIAR WORDS: an Index Ver-
borum, or Quotation Handbook. Affording an immediate Reference to Phrases and Sentences that have become embedded in the English Language. Crown 8vo. printed in Elzevir on toned paper, handsomely bound. Second and Enlarged Edition, with Copious Index, price 6s.

The PRISON LIFE of JEFFERSON
DAVIS; embracing Details and Incidents in his Captivity, together with Conversations on Topics of great Public Interest. By JOHN J. CRAVEN, M.D., Physician of the Prisoner during his Confinement. 1 vol. post 8vo. price 8s.

The PROFITS of PANICS: and
other Revelations of a City Man. A New Book for the Million. By the Author of 'Bubbles of Finance.' In popular form, price 1s.

A HISTORY of SAVINGS' BANKS;
with an Account of the Origin and Progress of the Government Financial Measures for Post-office Banks, Annuities, and Life Insurance. By WILLIAM LEWINS, Author of 'Her Majesty's Maids.' 8vo. price 16s.

The LIFE and CORRESPONDENCE
of BENJAMIN SILLIMAN, M.D. LL.D., late Professor of Chemistry, Mineralogy, and Geology in Yale College, U.S.A. Chiefly from his own MSS. and Diary. By GEORGE FISHER. With Portrait. 2 vols. post 8vo. price 34s.

The LIFE of the late Dr. MOUN-
TAIN, Bishop of Quebec. 8vo. cloth, price 10s. 6d.

SOUTH AUSTRALIA: its Progress
and Prospects. By A. FOSTER, Esq., late Member of the Legislative Council of Adelaide. With Map, Demy 8vo. cloth, price 15s.

TRAVELLING in SPAIN in the
PRESENT DAY; being an Account of the Journey of a Party of Ladies and Gentlemen who lately Visited its Principal Cities. By HENRY BLACKBURN. With numerous illustrations, from Photographs and Drawings from Life, by John Philip, R.A., E. Lundgren, Walter Severn, and the Author. Also, an Appendix of Routes, Fares, &c., the Expenses of the Journey, and a New Map of Spain. Price 16s.

LETTERS on ENGLAND. By Louis
BLANC. Translated under the Author's Revision. 2 vols. post 8vo. price 16s.

NEW NOVELS, Now Ready.

The JOURNAL of a WAITING GENTLE-
WOMAN. Edited by BEATRICE A. JOURDAN. Post 8vo. price 8s. [This day.]

TOILERS of the SEA. By Victor Hugo.
Third Edition. 3 vols. post 8vo. price 24s.

The STORY of KENNETT. By Bayard
TAYLOR. 2 vols. 16s.

A CASUAL ACQUAINTANCE. By Mrs.
DUFFUS HARDY. 2 vols. 16s.

MATTINS and MUTTON'S. By Cuthbert
BEDE. 2 vols. 16s.

The WHITE FAVOUR. By Henry Holl.
3 vols. 24s.

London: SAMPSON LOW, SON & MARSTON,
Milton House, Ludgate-hill.

This day is published, post 8vo. 7s. 6d. cloth,

THE SECOND AND CONCLUDING VOLUME OF THE LIFE OF LIEUT.-GENERAL THOMAS J. JACKSON,

("Stonewall" Jackson).

By Professor R. L. DABNEY, D.D., of Richmond, Virginia.

The Manuscript of this Volume has been specially revised by General ROBERT E. LEE.

London: JAMES NISBET & Co. 21, Berners-street, W.

Now ready, a CHEAPER EDITION, price 6s. cloth illustrated,

MISS MACKENZIE.

By ANTHONY TROLLOPE.

"Mr. Trollope has written many Novels which are far more attractive, which compel the attention more eagerly, which it is difficult not to go on with when once we have begun to read them, and yet perhaps he has written no Novel which is more to his credit than this one of 'Miss Mackenzie.'"—*Times*.

Also, by the same Author, price 2s., picture boards,

DOCTOR THORNE. | RACHEL RAY. THE MACDERMOTS OF BALLYCLORAN.

CHAPMAN & HALL, 193, Piccadilly.

FRITH'S LARGE-SIZED PHOTOGRAPHS OF

GREAT BRITAIN, SWITZERLAND, ITALY, NORMANDY, &c.

Size, 8½ by 6½ inches, on Mounts 14½ by 11½ inches.

The scale of prices is very low; whilst in artistic beauty, and as specimens of the Art, the series is certainly unequalled.

About 500 sample Subjects may be seen at 31, Cornhill—BECK & BECK; and 180, Strand—W. ROUGH & Co.;
or, address the Publisher,

F. FRITH, Brightlands, Reigate, Surrey.

On 1st September, price 2s.

Vice-Master—E. R. HORTON, M.A. Fellow of St. Peter's College, Cambridge.

HENRY MALDEN, M.A., Professor of Greek in the College, in charge of the highest Greek Class.

THE SCHOOL will RE-OPEN on TUESDAY, September 25th, at 9 o'clock, at 930 A.M. All the Boys must appear in their full attendance on Wednesday, the 26th September, at 9.30. The hours of attendance are from 8.30 to 3.45. Of this time one hour is allowed for recreation and dinner. The play-ground is spacious, and contains a Gymnasium and Five Courts. The subjects taught are Reading, Writing, the English, Latin, Greek, French, and German Languages, Ancient and English History, Geography (Physical and Political), Arithmetic, and Book-keeping, Mathematics, Chemistry, Natural Philosophy, Social Science, and Drawing. The School Session is divided into three Terms. Fee 7l. per term. Gymnastics and Fencing extra.

JUNIOR DEPARTMENT.

CLASSES FOR YOUNG BEGINNERS.

These Classes are for Pupils between the ages of Seven and Nine, who are kept wholly apart from the older Boys. They have the use of the play-ground, but the hours of lessons and recreation are so arranged as to differ from those of the older Boys. Fee for each term 6l., and 2s. 6d. for Stationery.
Hours of attendance are from 9.30 to 3.30, in which time two hours altogether are allowed for recreation and dinner.

Discipline is maintained without corporal punishment. A faithful Report of the progress and conduct of each Pupil is sent to his parent or guardian.
The School is very near the Gower-street Station of the Metropolitan Railway, and within a few minutes' walk of other railways.

The Session of the Faculty of Medicine will commence on Monday, October 1st.
The Session of the Faculty of Arts and Laws will commence on Monday, October 8th.
Prospectuses and further particulars may be obtained at the Office of the College.
CHAS. C. ATKINSON, Secretary to the Council.
August 21st, 1866.

THE LONDON COLLEGE OF THE INTER- NATIONAL EDUCATION SOCIETY (Limited).

CHAPMAN & HALL'S NEW BOOKS.

NEW STORY.—Just published, post 8vo. 8s.

AUNT MARGARET'S TROUBLE.

By a NEW WRITER.

"After wading through the ordinary novels of the season, after learning to what depths of dullness and folly the human intellect can descend, and wondering at the hideous pictures of vice or inanity which men and women can paint as representations of human life, it is positive mental refreshment to come across such a book as 'Aunt Margaret's Trouble,' which for pathos and idyllic tenderness may compete with even the best novel of the day. It has nothing of the grandeur of high art about it; it has nothing of heroic tragedy nor of stately romance, still less of sensationalism; it is absolutely free from all deadly crimes, from all monstrous vices, from all maddening mysteries; being just a quiet story of selfishness on the one hand, and of love betrayed on the other, with the retribution sure to follow upon wrong as the moral justice done at the end. Yet it is a charming book, and worth half a hundred fictions of the more ambitious and elaborate kind.—In the first work of a new and young writer we have to consider, not only the ability it displays or more remotely indicates, but also the cast of mind shown in the work. Thus, if a new book is all about illicit love and the slangy talk of fast men, . . . we know at once what manner of author we have to deal with. But if the book be sweet and modest, as is this, we know then that, whatever may be the strength or weakness of the future, we shall never be revolted by licentiousness, or shocked by coarseness, . . . we shall at least have pure work and decent, and sorrow gently touched, and sinfulness dealt with as sinfulness should be dealt with in life—tenderly and yet abhorrently."—*Saturday Review*, Sept. 1, 1866.

NEW NOVEL BY THE AUTHOR OF 'CLARA VAUGHAN.'

This day, 3 vols. post 8vo.

MR. BENTLEY'S LIST.

New Story by Florence Marryat.

FOR EVER and EVER: a Novel.
By FLORENCE MARRYAT, Author of 'Love's Conflict' and 'Too Good for Him.' 3 vols. post 8vo. [Just ready.]

SECOND EDITION of UP THE COUNTRY. By the Hon. EMILY EDEN, Author of 'The Semi-Detached House' and 'The Semi-Attached Couple.' 2 vols. crown 8vo. 21s.

From the Times.—"In cabinet pictures of domestic life in India Miss Eden's book is scarcely equalled. To those who have never seen the country they will be as full of interest and amusement as to the old Indian, for of all the letters here reprinted there is not one which is not full of life and humour. They contain by far the most picturesque and vivid descriptions of life in India which have been laid before the public for many years, and are as fresh and vivacious as if they had only come by the last overland mail."

"There is a delightful charm about these letters. Nothing can be more graphic than the manner in which Miss Eden describes life in India. The freshness, the humour, the feminine vivacity with which she narrates what she did, saw, and endured will attract readers of all classes. We do not read about India; we see it. There is not a dull letter in the volumes, nor one from which it would be difficult to take a delightful passage."—*Fortnightly Review.*

AFTER THE STORM; or, Brother Jonathan and his Neighbours in 1865-66. By J. E. HILARY SKINNER, Barrister-at-Law, Author of 'The Tale of Danish Heroism.' In 3 vols. post 8vo. 21s.

WHICH SHALL IT BE? a Novel.
In 3 vols. post 8vo.

"A novel of far more than ordinary merit. The plot is well conceived, and is worked out with much spirit and care. The interest it creates is much enhanced by the admirable character-drawing in the book."—*Morning Star.*

LITERATURE

Reminiscences of a Bengal Civilian. By William Edwards, Esq., Judge of Her Majesty's High Court of Agra. (Smith, Elder & Co.)

THE middle portion of this book, from page 143 to page 304, was published in 1858, under the title 'Personal Adventures during the Indian Rebellion in Rohilcund, Futtehghur, and Oude,' and in July of that year was reviewed in the *Athenæum*. We then expressed the belief that the thrilling incidents of Mr. Edwards's flight and final escape would awaken the interest of a sympathizing public; and so it has proved. Few works relating to the mutiny have been so widely read, and it passed through several editions. In taking it up, however, in its new form, we were afraid we should find the common mistake had been committed of pressing a success too far. We thought it not improbable that a volume of really interesting matter had been swelled out by reminiscences of less eventful times, and reflections, judicious perhaps, but not remarkable for originality; for on such a subject as the Indian Mutiny, after so much has been written, how great is the difficulty of being original! But it had been Mr. Edwards's fortune to take part in many stirring scenes before the great Rebellion of 1857, and his reflections on the rebellion, which form the last portion of his present work, supply some ideas as novel as they are striking and important.

Let us, then, notice, in the first place, that part of the narrative which is altogether new, and then, briefly referring to the chapters which formed the first publication, proceed to examine the lessons which, on the strength of his experience, the author reads to us for our future guidance. At the very outset of his career Mr. Edwards began his adventures. Instead of shipping himself, *more majorum*, round the Cape, he started on the 3rd of May, 1837, to make trial of the Overland Route. Alexandria was soon reached, and there what may be called the experimental mail, brought by the war-steamer Fire-fly, was committed by the Consul-General to the charge of Mr. Edwards for transmission to Bombay. This mail consisted of two small boxes, a very different freight from that which now loads the steamers of the Company with the two long names so happily abbreviated. A wretched *bagla* of 40 tons received Mr. Edwards at Suez, and, after all but foundering in the Gulf of Akaba, crawled on from reef to reef till it reached Mocha. Here the author escaped with his mail-boxes into the brig-of-war *Palinurus*, and reached Bombay harbour with unparalleled rapidity, in two months and a few days after leaving England! So the spell was broken; in 1839 Aden was purchased and possessed, and the era of the Overland Route commenced.

We next find the author associated with those who formed the prominent figures in the great tableau of the Afghan war. As assistant secretary to the Government of Agra, he was brought into contact with Mr., now Sir George Clerk, who even in September, 1841, expressed his fears "that the calm then prevailing in Afghanistan was unnatural, and merely the prelude to the storm." So impressed was he with the coming danger, that he rode through a pestilential jungle to communicate with the Governor of Agra, then on his way to the hills, and being benighted in the forest, contracted a fever which it took years to shake off. The blow came; but Mr. Edwards testifies that, had

the energetic measures urged by Sir G. Clerk been agreed to, the great massacre of Kabul would, in all probability, never have occurred. But the timidity of Lord Auckland was no less fatal than his rashness, and he prevented reinforcements from advancing on Peshawar and Jalálábád till too late.

During the disastrous months of December, 1841, and January and February, 1842, it was Mr. Edwards's duty to open the despatches that came in from the frontier, and, after submitting them to the Governor of Agra, send them on to the Governor-General, at Calcutta. Lord Ellenborough now succeeded Lord Auckland, and Mr. Edwards was transferred from Agra to attend on the Governor-General as Under-Secretary. One of his first duties was to ride out to meet Dost Mahmed, who was to replace Shah Shuja on the throne of Kabul. His next state visit was to the heir of Ranjit Singh; he was present at the triumphal return of Generals Pollock and Nott, and he presented the last Nazar, or offering of gold coins, which the Governor-General made to the last of the Moghal emperors. He was present at the battle of Mahárájpur, which decided the fate of Sindhia's army, and he traversed the fields of Mudki and Firozshahr while the ground was yet strewn with the dead. The sight is thus described:—

"Thinking that we had now no further need of the large escort of Puttialah horse, I dismissed them, and with a few troopers of the body-guard pushed on rapidly for our camp. While galloping through the low jungle, my horse shied violently on passing a bush; on looking down I saw a bare-headed European soldier lying under it, as I thought, asleep. I pulled up, and saw that it was the dead body of a soldier of the 31st Regiment, who had been shot through the chest. Shortly after we came upon many bodies of Sikhs, Hindustani sepoys and European soldiers lying about among the bushes, and we found that we were traversing the scene of the late battle of Moodkee. The dead bodies were strewn here and there all along the road until we reached the scene of the action of Ferozeshuhur. That battle-field presented an awful scene of havoc and slaughter. Neither side had been able to take efficient measures for the burial or removal of the dead, who lay just as they had fallen some three weeks before. Vultures and other birds of prey were collected in numbers, and so gorged that they scarcely noticed us or moved out of our way. It was easy to trace by the heaps of dead men and horses where the struggle had been most severe. The centre of the Sikhs' entrenched position was heaped up with bodies of our soldiers and of the enemy, mixed up with the carcasses of animals and fragments of tents and gun-carriages. The scene was one calculated to impress the mind most deeply with the horrors of war. In the afternoon I joined the Governor-General in his camp at Sobraon, and reported my proceedings at Puttialah, which were approved by his lordship. In the evening Lord Hardinge gave me a most interesting account of the battle of Ferozeshuhur. The fire was even more terrible, he said, than that at Albuera, for the Sikhs had guns in position of treble the calibre ever used in European warfare. As soon as darkness had closed in on the evening of the 21st, and the firing on both sides had ceased, the wearied soldiery lay down to sleep; his lordship then, as he informed me, went from regiment to regiment, lying down on the ground for a short time with each, 'to feel their pulse,' as he said. Finding the men all in good heart, notwithstanding the terrible struggle in which they had been engaged and the heavy losses sustained, Lord Hardinge made up his mind to retain his position, and re-commence the action on the following morning, rejecting the many suggestions made to him to retreat on Ferozapore. While lying down along with the men of one regiment, a solitary heavy gun from the enemy was every now and then fired from their entrenchment directly in front. His

lordship, annoyed at the repeated discharges, sprang up, saying, 'My men, this won't do, we must silence that gun; it won't allow me to get any sleep,' and ordered the regiment to form up to attack it. The regiment happened to be the 1st Bengal Fusiliers, which instantly sprang up to obey the order; but the Governor-General, thinking them too weak for the duty, thinned as their ranks had been by the day's battle, in which they had suffered most severely, called on the next regiment to charge and silence the gun. This happened to be the 80th, of which his own nephew and military secretary, Colonel, now General Wood, was lieutenant-colonel. This regiment, with the Fusiliers in support, advanced straight on the gun, took, spiked, and overthrew it, returning in a few minutes with the greatest order to their position, where the men lay down to rest as before. The 80th had several men killed and wounded in the operation; among the latter was Col. Wood, who was severely wounded in the thigh. Lord Hardinge told me he considered that this brilliant and successful attack, made in the middle of the night and in darkness, was the turning-point of this battle. From that moment the Sikhs, he thought, began to lose heart, and commenced abandoning their position, thinking it useless to continue a struggle with soldiers so brave and so highly disciplined as the English. Next morning, when our troops were about to re-commence the attack, it was found that the Sikhs had in a great measure abandoned the field, and were retreating to Sobraon, on the left bank of the Sutlej, where a large body of fresh troops was assembled, but who, happily for us, had not advanced to reinforce their brethren at Ferozeshuhur. Had they advanced during the night, the result must have been very disastrous to us, as our European regiments were much reduced in numbers, and our ammunition, both for artillery and small arms, almost expended. It was inexplicable at the time to us why this fresh army had failed to advance and reinforce their comrades. Subsequently, at Lahore, however, I was informed that their leaders had restrained the men on the pretext that the day was inauspicious for a battle, it by no means being the intention of the regency that their troops should be successful, but, on the contrary, be destroyed by the British, so as to get rid of them for ever."

After the Sikh war, Mr. Edwards was appointed Superintendent of the Hill States, with the delightful station of Simlah as his head-quarters. He here initiated several good works, and foremost among them the education of the Hill men, "a rude and ignorant people, who were perfectly apathetic on the subject of the instruction of their children." The system he adopted worked so well, that it was afterwards introduced by Mr. Thomason, the Governor of Agra, into the provinces under his rule. He was also the first to lay out a road to Simlah practicable for wheel-carriages. In 1852 he returned to England, and shortly after his return to India, in 1854, he was appointed magistrate and collector of Budann, in Rohilkhand. Some idea of the salubrity of the climate of this district may be formed from the following passage:—

"On asking a villager what was his age, he said, 'I am somewhat above 150 years old.' On my expressing my doubts, several old men with snow-white beards, among the villagers, a crowd of whom had by this time assembled, came forward, assuring me that it was so, and that when they were children they regarded this man even then as of great age, and the patriarch of the village. By this time the carriages had come up, and the villagers begged that the old man might be permitted to take my little child in his arms to bless her. I of course consented, and on my placing her in his arms, he very solemnly said, 'May your years be more than mine,' and returned her to me. I then entered into conversation with this, perhaps, the oldest man upon the face of the earth, asking him what he had seen, and the chief events he remembered during his long pilgrimage. He told me he had been born

and lived in the village, and never had gone much beyond it; that he remembered well when the country was all jungle, and when the inhabitants could not stir as far from the village as we were then standing without the dread of 'Kuzzacks'—mounted robbers—coming upon them; and the villagers in these times had to carry their weapons to their fields, ready to fight in their own defence. 'Now,' he said, 'look around you; nothing is to be seen but one garden of cultivation, and all is peace.' The country was not long to remain so, however, for in a very few months this patriarch, if he survived, might have seen the scenes of his early years acted over again; for this village lay just in the track of the bands of rebels, as they passed from the Doab into Rohilcund. The other patriarch of 125 was bed-ridden, but much more intelligent than his older friend, whose extreme old age he confirmed by saying, that when he was quite a child, 'Mahomed Khan'—which was his name—was a full-grown man, and had married a second time. I begged this man, whose name was 'Ahmed Khan,' to give me the history of his life, which I caused to be taken down in writing as he narrated it. He stated he was 125 years old, and had been born in this village in the reign of the Emperor Mahomed Shah, in whose army his father held a post. He was seven years old when Nadir Shah sacked Delhi, and he well remembered having been taken over the city by his father when Nadir left with his army, and all he remembered seeing alive was a cat. 'Nadir's visit to Hindosthan,' he said, 'occurred in this way: Some time before that event, an Afghan officer employed in the Deccan came to Delhi to pay his respects to the Emperor. He happened to have a long red beard, and the courtiers, on his entering the hall of audience, began jeering him, saying, "What next—here we have now a red-haired baboon come to durbar!" The officer, greatly exasperated, answered, "I will tell you what next—that before a year is over I will fill Delhi itself, as well as the palace, with red-faced baboons like me." He then left the durbar in great wrath, and sent off a messenger to Nadir Shah with a letter, stating, "You are wanted here, for all are old women now in Delhi." Nadir answered the summons, and on his arrival massacred the people and plundered the city, for no one had strength to resist him.' Ahmed Khan further went on to tell me that, on his father's death, he had succeeded to his post in the imperial army, and was, when about thirty years of age, present at the battle of Panseput, where he was wounded,—that great battle where the Mahrattas were completely defeated by the Emperor. The battle, he said, first began with artillery and musketry, but soon the two armies closed with each other and fought with swords, spears and daggers, and at last they chased the Mahrattas as far as Muttra. He had seen, he said, 'the empire of the Affghans, of the Mahrattas, that of Delhi, and that of the Sikhs pass away, and now the British reigned supreme.' In a few months the old soldier, if he survived, might have seen that power also shaken, and the temporary restoration of the empire whose servant he had been 'in his hot and ardent youth,' as he called it. I have no reason to doubt the truth of these men's statements: my meeting with them was quite casual, in a remote part of a remote district, and their stories were quite unpremeditated. I found, on going to my tent that morning, and consulting Elphinstone's History, that Ahmed Khan's assertion of his extreme age was apparently quite correct; for as the sack of Delhi occurred in 1738, and he was, according to his statement, seven years old then, he must have been fully 125 in 1857, when I met him. His description of the battle of Panseput also exactly corresponded with that recorded in Elphinstone. His statement of his age was further corroborated by his assertion that he was about thirty years old at that battle, which, having been fought in 1761, would just make him 125 years old, or a little more, in 1857. At the request of Lord Dalhousie, to whom I mentioned the circumstance, the evidence of all the oldest inhabitants of the neighbourhood was taken, who confirmed the fact of the extreme old age of these individuals. These two men, who had thus attained to so extreme an old age, had, I dis-

covered, spent their lives very differently. Mahomed Khan, the elder, had always been an agriculturist,—had never drunk any spirits or wine, but lived chiefly on milk and vegetable diet, seldom tasting flesh, and had never smoked either opium or tobacco. Ahmed Khan, the younger of the two, on the other hand, had, until old age, been in courts and camps, and had lived freely and luxuriously, eating flesh, and drinking all sorts of liquor, and smoking tobacco."

In this fortunate region, however, our author's troubles were to begin. The narrative of his adventures during the mutinies here commences, which, having been already reviewed in these columns, requires now only a brief notice. We have already said that nothing can surpass the interest of the story; but on reading it a second time we have some doubts whether it would not have been better to have spoken of all the incidents in the past time. As it is, there seems to be a slight confusion of past and present in numberless passages; but we are not sure, though it may be faulty if measured by strict rules, that it does not bring the scene more vividly before the eye.

We come now to the concluding chapter, "Reflections on the Rebellion." There is one remark here which we do not remember to have met with in any other book, and which strikes out a new and very important idea. Mr. Edwards says: "Indeed, no one who has had the opportunities I have possessed of judging of the real sentiments of the natives, can doubt that a feeling of *nationality* has sprung up in India." Apropos of this, Indian officers will remember that one of the English words which could not be translated into Hindustani, except by a periphrasis, was "patriotism," while the nearest approach to an equivalent for "nationality" was *kaumiyat*, "being of the same tribe." It will be a strange result of foreign conquest if the natives of India, so long divided into hostile tribes and sects, should be fused by it into one nation. But Mr. Edwards reasons well on the subject, and we are inclined to think he is right. A century ago, a Rájput chieftain in Central India, or a Mohammedan Nawáb on the left bank of the Ganges, cared little what happened to a principality in the far south; but now all eyes are fixed on Mysore. The terror of the Firingi has made all classes one.

As to the effect which the annexation of Oudh had in accelerating the outbreak, Mr. Edwards's opinion is decided. He says, "There is not the slightest doubt that this act was regarded by the native army as one of rude and unjustifiable spoliation, and I believe that they would have resented it at first, had they not been under the conviction that the home authorities would annul the decision of the Governor-General, and restore Oudh to the King."

On the question of the employment of the native troops of Hindustán in other colonies, there will be many dissentients from the policy propounded by Mr. Edwards. But on this head, as on all subjects connected with India, his long and varied experience, and his intimate knowledge of native character, entitle him to a respectful hearing, and we feel bound to commend his 'Reflections' to the careful consideration of all who are interested in the continuation of our empire in the East.

An Essay on Pantheism. By the Rev. John Hunt. (Longmans & Co.)

THE subject of this book is one which must always interest thinkers, whether they be philosophers or divines. In all ages profound intellects have tried to solve the problem of Being.

But the problem is still obscure. What is infinite? What is meant by *I*? What are ideas? What is nature? What is substance? These are the questions which present difficulties to puzzle the metaphysician and tax his reflective powers to the utmost. Mr. Hunt gives a sufficient proof, in the volume before us, that he has read much on the subject, and spared no pains to apprehend its bearings. He has traversed a wide field, scattering his materials over it with a liberal hand. He writes with considerable vigour, and with tolerable clearness considering the mystical aspects of the question he discusses. None can peruse a treatise without being struck with the honest purpose of the author to deal fairly with the men of whom he speaks, and not to misrepresent their opinions. As an introduction to the study of Pantheism we believe the book to be valuable. A person wishing to know what the word means, and what exponents the idea of a system it expresses has had, will find it useful as an elementary guide. It will hardly satisfy those who have already studied philosophy and theology, because it is unsystematic and its materials are loosely arranged. This defect seems to have arisen from the way in which the writer proceeded to investigate and write about his subject. He read and made extracts from a great variety of works, but began to write before he had thoroughly sifted his extracts, or wrought their ideas into his own mind, and made them his own by independent reflection. Accordingly, he has the appearance of one who read himself into the topics discussed, and undertook to discourse of them too soon. Had he spent a few years in mental rumination, after completing his reading and his extracts, he would have produced a better book.

The ground which the respected author occupies is vast, and parts of it, perhaps, might have been omitted. Yet it has a connexion with the subject proper, though sometimes remote. The whole volume, indeed, is a measure introductory to the final chapter, "What is Pantheism?"—Brahmanism and Buddhism, the Persian, Egyptian and Greek religions, the Greek philosophy, the philosophy of the Jews, the Church, the Gnostics, Manichæism, Scholasticism, the Italian revival, the German, French and English mystics, Sufism, Des Cartes, Spinoza, Malebranche, Leibnitz, the German transcendental philosophers, and the Pantheism of the poets, all come under review before the author arrives at his proper theme. Amid such a multiplicity of philosophers and their theories the reader will find himself occasionally perplexed, and be apt to suppose that he is reading a number of digests. The inaccuracies are comparatively few, arising from the fact that our author has not always known the best sources; his inferior authorities not guiding him to the exact ideas which it was necessary to present. It is curious to see the mixture of worthless and valuable books, at the end of the last chapter in particular, and of the rest in a less degree, which have been consulted for materials.

The best part of the book is that on Spinoza, whose works Mr. Hunt has carefully studied. The chapter on the Philosophy of the Jews is the least satisfactory. Philo is inadequately represented, since Dahn appears to have been the main source from which the view given of Philo is drawn. Gfrörer, who is a better authority, is unnoticed. The mystics and their theology are also imperfectly treated, apparently because inferior sources have been consulted and used along with good ones. The Fathers of the Church are also discussed in a manner far from that which they deserve, and

night have obtained had they been sufficiently studied. Though Dörner's book is admirable in many respects, it cannot be trusted so implicitly as Mr. Hunt has relied upon it.

Excluding material *Pantheism*, or, in other words, *Atheism*, from the view, the author treats of *spiritual Pantheism*, which, as he rightly supposes, enters into all religions and philosophies worthy of the name. There is a sense in which the most religious men and the profoundest metaphysicians are Pantheists,—in which both St. John and St. Paul have been called so. Mr. Hunt's mind sympathizes with this. He feels that the more it is studied the more it brings a man into that close union with the Infinite which the human soul longs for in its highest moods. But he is aware that the word has been employed as a symbol of the grossest heresy and impiety,—that it has been fastened upon others by their opponents as a sign of opprobrium,—and that the odour of it has been thoroughly bad among the ignorant or bigoted. Indeed, men of opposite opinions and feelings have been termed Pantheists—the levout Bunsen and the strong-minded Carlyle, the poet Wordsworth no less than Shelley. In his interests of charity as well as of truth it is a duty to ascribe only spiritual Pantheism to men like Spinoza and Malebranche, unless their own writings show clearly that they meant otherwise.

The following extract will give some idea of our author's spirit and reasoning:—

"Pantheism is, on all hands, acknowledged to be the theology of reason—of reason it may be in its impotence, but still of such reason as man is gifted with in this present life. It is the philosophy of religion—the philosophy of all religions. It is the goal of Rationalism, of Protestantism, and of Catholicism, for it is the goal of thought. There is no resting-place but by ceasing to think or reason as God and things divine. Individuals may stop at the symbol, Churches and sects may strive to make resting-places on the way by appealing to the authority of a Church, to the letter of the Sacred Writings, or by trying to fix the 'limits' of religious thought, when God Himself has not fixed them. But the reason of man in its inevitable development and its divine love of freedom will break all such bonds and cast away all such cords. They are but the inventions of men, and the human soul in its progress onwards will hold them in derision. It knows that God is infinite, and only as the Infinite will it acknowledge Him to be God. But what is Pantheism? Substantially and primarily, Pantheism is the effort of man to know God as Being, infinite and absolute. It is ontological Theism—another, a necessary and an implied form of rational Theism. The argument from teleology proves a God at work; the argument from ontology proves a God infinite. We cannot take the one without the other, whatever may be our difficulties in reconciling the conclusions to which each leads us. The difficulties rise from the vastness of the subject; and, though we cannot see further than we do see, that is no reason for shutting our eyes to what is manifest."

We commend the volume to the favourable attention of the reader as one deserving his perusal. With all its minor defects and errors, it attempts to grapple with a great problem with considerable success. The author is earnest and devout. He shows that he is an orthodox churchman as well as a man of reading and reflection. Though he is neither very acute nor very metaphysical, he can comprehend abstract problems, detect their weaknesses, and perceive their bearing. Though his mind is scarcely subtle enough to grasp the philosophy of Hegel in its entirety as Erdmann has done, or his learning sufficiently copious and exact to give a view of the Greek philosophy like that of Zeller, he has fairly mastered their outlines. As a learner in the school of philosophical

theologians, he is worthy of an honourable place, and is capable of producing other works of a higher order. If we cannot indorse all his statements, thus much may be said with truth, that he is no commonplace writer; and that his book is well fitted to stimulate and enlighten the minds of those who, all but ignorant of Pantheism and its phases, are desirous to study its nature and tendencies, and to be introduced into the illustrious company of thinkers who have pondered over the profound problem of Being reverently if not wisely, with daring or humble spirit according to their mental idiosyncrasies.

The Oberland and its Glaciers, explained and illustrated with Ice-Axe and Camera. By H. B. George, M.A. With Twenty-eight Photographic Illustrations by Ernest Edwards, and a Map of the Oberland. (Bennett.)

It is well that the beautiful photographs in this volume were taken in a more favourable season than the present one for such work. The writer of this notice has been during two months in the Alps, and half that period has been either rainy or cloudy; in July, indeed, some brilliant days were propitious for the High Alps,—and the opinion of many Swiss mountaineers is that recently July has been far more favourable than August, in which latter month, according to established custom, the great crowd of English throng the Oberland and the chief resorts in the Pennine Alps. Last year September was fine throughout; this year it threatens to be just the reverse. Such are the annual uncertainties in that adjunct which is of the greatest moment to Alpine tourists.

In this volume Mr. George, who is the Editor of the *Alpine Journal*, has presented an agreeable and handsomely-embellished drawing-room book. The photographs, though small, are excellent. Glacier scenery, indeed, is peculiarly suited for photographic representation, as it displays no great variety of colours, and the contrasts of light and shade are strong on tolerably fine days. Still, all the play of colours which brilliant sunlight produces on the ice must necessarily be lost, together with numberless tints and untransferable beauties. The operator on glaciers has the advantage of being perfectly quiet and undisturbed; but then he often gains and maintains his position with difficulty, as he literally always stands in slippery places. Two of the photographs open before us, entitled the *Active and Extinct Moulins* (that is, streams, or waterfalls, penetrating the glaciers), were not obtained without some risk. In taking the former, the artist was let down into the bed of the glacier stream with the possibility of being stunned by any loose boulder which might tumble upon him; while in securing the latter, he was held by his coat-tails in an opening cut in the ice both for himself and his camera. The pursuit of photography under difficulties cannot be more aptly exemplified. Of the other photographs it need only be observed that they are all creditable, while some, such as that of the Oberland Mountains from the Torrenthorn, are particularly good.

In the text Mr. George has consulted the tastes of two very different classes of readers. "For the experienced Alpine climber there are narratives of two or three ascents of some difficulty and considerable interest. For the less ambitious traveller there are accounts of a few expeditions of slighter calibre, which do not seem to be well known, and some hints which may perhaps be of service in enabling them to see sights and enjoy pleasures usually regarded as the exclusive property of mountaineers. There is a *lec non scripta* on such matters,

more or less completely understood by the initiated, but entirely concealed from the general public, if one may judge from the unfounded ideas usually current." It is to the less ambitious traveller that this volume will be most acceptable. The older Alpine man will, naturally enough, find little that is new to him in such a publication, although he will, of course, be interested in all that aptly illustrates his favourite walking-ground and his familiar haunts.

We shall pass over the author's narrative of his party's excursions, with the simple remark, that it is pleasantly and plainly told, but might have remained untold without great loss to the Alpine community. In his exposition of the phenomena of glaciers he is an implicit and avowed follower of Dr. Tyndall, who had previously expounded his own views in a much abler manner. In the chapter, however, on Panoramic Summits the author awakens a more general interest, as all of these summits may, under ordinary favourable conditions of weather and personal health, be attained by tolerable walkers. As Mr. George well observes, "One of the greatest charms of the Oberland consists in the number of easily accessible heights belonging to it, whence may be obtained extensive and interesting views—on one side, of the giant mountains and their glaciers, which are seen sufficiently near at hand for their grandeur to be fully appreciated; on the other, of a wide expanse of lower country or distant peaks. Even those who are least inclined to glorify the Oberland will admit that its minor mountains, taken as a class, cannot be equalled elsewhere; and they have, besides, the great advantages of being accessible quickly, easily, and from thoroughly good quarters, and of lying so near together that the chain of memory and observation is not broken in passing from one to another."

The author's description of these several panoramic summits, and their respective merits as points of view, is clear and discriminating, and mainly in accordance with our own recollections. He commences with the Schilthorn, whereon the unfortunate young English bride was killed by lightning, in June, 1865, and whose untimely death is now commemorated by a cairn and marble cross, erected on the spot where she perished. Too little is said on the grandeur of the view from this peak, which, we think, is not surpassed, if equalled, by any other of the secondary panoramic summits in its vicinity, or perhaps elsewhere. The Faulhorn and the Sidelhorn find more favour, and are more fully characterized; as also is the Eggischhorn, so well known for its excellent mountain inn. So attentive is its landlord to the English that Germans are jealous, and we lately met in a German Alpine work with a most unpolite and silly sneer at the said landlord for his Anglican courtesies. To the Bell Alp and its neighbourhood, Mr. George devotes an entire chapter, commending both the prospect and the inn. Of the grandeur of the view, even from the close proximity of the inn, there can be no question; but of the little inn itself very different opinions may be warrantably held. For ourselves, we never spent a more wretched day and night than in that same hostelry, last June. Half-starved, half-frozen, and in utter discomfort, we descended with the determination to caution all tourists from going up to the Bell Alp inn so early in the season as to be alone there, without adequate provisions and without the ordinary necessities even of mountain resorts. At the same time, it was especially provoking to read the commendations which some travellers have recorded in the visitor's book of the varied and exquisite cuisine

which they had enjoyed at this identical place. Such, however, was our hard fate, and the one sprat, for which we were charged as trout, was a fitter subject for microscopic inspection than a mountaineer's digestion.

We heartily concur in the author's special praise of the Torrenthorn, a summit above Leukerbad of 9,679 feet in height, and near the Gemmi Pass. It is very strange that this easily accessible and admirable point of view is not more frequently ascended. "It is not the fault of the inhabitants" (of the Baths of Leuk), says Mr. George, "that no greater notice is taken of the Torrenthorn, for an excellent horse-path has been made to the very top, and engravings of the panorama are to be seen in all the hotels. Yet so little seems to be known of this marvellous point of view, which our whole party agreed in pronouncing the finest of all the panoramic summits, that even Mr. Ball's admirable guide-book is at fault respecting it." Mr. Wills first drew our own attention to this fine prospect, and it is but our duty to draw the attention of others to the same scene. Three or four years since we described in some detail in this journal a neighbouring panoramic point of view, viz, the Bella Tola, high above the Val d'Annivers. It is equally fine with that from the Torrenthorn, and has, indeed, some advantages over it; but it demands greater labour and a much longer time to reach its summit.

To describe the chief characteristics of those panoramic points which are within the compass of all vigorous walkers, and, in several instances, of healthy ladies, is very useful for a large and yearly increasing number of tourists. The highest peaks must ever be left to the hardest climbers; but it is well that it should be more widely known, and even the most aspiring mountaineers are now ready to acknowledge, that for the sole purpose of obtaining a view, the second-rate heights, such as those from seven to ten thousand feet, are in truth more favourable than the loftiest. From the latter, if you see the views well, the distant mountains are too much dwarfed, so that what you gain in altitude, you lose in distinctness, and what you gain in extent you lose in grandeur. Add to this, the greater the height the greater the toil in attaining it, and consequently the less your vigour and capacity for enjoyment of scenery. Some men are faint, and some fall asleep just when they have placed their foot on the iced mountain top. Finally, the longer the time occupied in the ascent, the less time remains for the details of the prospect, so that oftentimes half an hour on the topmost point is the only reward for six or seven hours of arduous climbing, and if that precious half-hour should be marred by mist, the whole object of the exhausting labour is lost.

The attainment of moderate elevations, such as demand some four hours walking up and some two or three hours in descent, is the just medium between the grovelling incapacity of those who maintain that all mountaineering is rashness and folly, and the superabundant energy of those choice spirits who, having strength enough and to spare, attempt the most laborious ascents, and exclaim, "Labor ipse voluptas." For schoolboys and young collegians who are restless and uncontrollable, there is no better discipline than the well-planned ascent of a lofty mountain. Twelve hours on ice and snow, with axe and alpenstock in continual play, will tame the wildest madcap of Oxford or Cambridge. The treadmill of a rough or widely crevassed glacier will make the fastest man deliberate and manageable. In this way the wildest oats of England may be

harmlessly sown in the wildest Alpine ice-fields.

A kindred topic, upon which Mr. George makes some sensible observations, is Over-Fatigue, and its Causes and Cure. Plain as precautions against this appear on paper, they are really little understood or little adopted. The whole secret lies in the economical management of your strength, which is your sole pedestrian capital. You cannot spend this and retain it. An injudicious expenditure of it at the commencement of an Alpine tour may cripple you for the whole journey. We are only too sure of this, and too deeply impressed with the importance of physical economy, from recent personal experience. The exhausting effects of one day's hard work under a brilliant and burning sky in Italy remained with us for several weeks. Our author's advice to lady climbers is, "Never walk where you can ride." This is, doubtless, a good rule where mules and money are plentiful. To say further, "Take it easy, stop frequently, start early," is simple and sagacious enough; but to get ladies early abroad is not so easy as to "take it easy" when abroad. In fact, all such matters must be left to the common sense and habits of tourists. One remark only may be added—strength is much slower in returning than in departing; and yet one maxim more—look to your boots; their condition and aptitude are of more importance than other minor accompaniment, if, indeed, boots can be deemed of minor consequence.

The late fatal accident on Mont Blanc has again revived public interest in Alpine dangers. With those who roundly condemn all such expeditions, no argument can be held. With more sensible persons who have a mountaineering spirit associated with prudence and soberness and foresight, argument may be held fairly and calmly. At present, however, we shall not enter into details upon this question, as it demands space and scope by itself. Let us only observe that people who, like the three Youngs, ascend Mont Blanc without guides, one or more of their party being very young, do really court calamity, and do knowingly confront disaster. People, again, who rashly attempt the Matterhorn are subject to the same charge. Almost all, or at least many, of the fatal accidents on the High Alps, can be traced to rashness or obvious imprudence. The same causes will bring calamity in any perilous position—on the top of St. Paul's, on the Monument, or any lofty or slippery elevation. On the other hand, if the Alpine adventurer possesses knowledge, or hires the best guides and implicitly obeys their instructions, and if he ensures all reasonable preliminaries and adopts all reasonable precautions, he is certainly justified in indulging his pedestrian passion. "The impulse which urges men to the High Alps," says our author, "is, in fact, ambition translated into physical action. The mountaineer is a more perfect type of the ambitious man than even the fox-hunter, laudably zealous to be in at the death; and he has the further advantage that his end, when attained, is worth having." True without question; and there will be many mountaineers every fine summer in the Oberland and other High Alps. No denunciations will prevent them from climbing, and they will obstinately take their "grand courses." It is to more moderate, less ambitious, less restless, less practised, but equally spirited climbers that cautions and advice are needful and acceptable, and to such persons principally will Mr. George's agreeable and elegant production be heartily welcome.

The Commercial Letter Writer: a Series of Modern and Practical Letters of Business, Trade Circulars, Forms, &c., selected from Actual Mercantile Correspondence. By P. L. Simmonds. (Routledge & Sons.)

ALTHOUGH the title of this book is not alluring to general readers, we can vouch for its affording much amusement to a select circle. The lovers of sensation, indeed, will not find anything stirring in its pages; for its only romances turn on damaged sugar and the fortunes of "your Mr. Levy." But those who want to be men of the world, to know what is done in all circles, what is received as gospel, and what is held up to admiration, will not despise the insight into the world of commerce afforded by this volume. They will value its precepts less for their style than their meaning, less for their elegance than their practical soundness.

At the same time, we do not know that the letters given by Mr. Simmonds will answer their purpose as models to future business correspondents. The object of letter-writers generally is to furnish people with the right material, and to put that material in a serviceable shape. If a man wants to write a begging letter, or to get off from an engagement of marriage, or to tell his father that he has eloped with an heiress, he finds forms ready to his hand; and he can vary them if the heiress has no money, or the banns have already been published. But it is no help to a man who wants to know the mode of boiling down tallow if he is referred to a letter asking for details about the culture of cotton. "Inquiries from a colonial company as to the commercial value of certain barks" are of very slight use to a man who wants to trade with the Bight of Benin. In cases where a man has anything to say, and his correspondents do not require delicacy, one would think mere straightforwardness was all that was necessary. But perhaps we are mistaken. Perhaps there is a business etiquette which cannot be learnt without due study. Perhaps no one would talk naturally of esteemed orders and receipt of favours, and having had this pleasure yesterday. It is well for us to know how such things are said by great firms, so that if to-morrow we should become a company (limited), we should not need to shrink from our responsibilities.

Suppose that we had ordered some article of some party, and it had not come duly to hand. With our ignorance of commercial principles, we might write savagely on the subject. How differently is such neglect viewed by business men!—"I suppose I may give up all hope of getting the cask of naphtha ordered from you two months ago," is the sole complaint that passes one man's pen. The grievance is left to speak for itself, and it impresses us the more strongly. Another time, indeed, we see injured nature taxed beyond forbearance, and the man breaks out with "It is strange that while you promise the completion of work by a certain date, you never fulfil your promises." Here it is plain that the writer is hasty, for he never reflects that if they did not promise there would be no promise to fulfil. Yet even his haste does not rob him of his affability; and he signs himself Yours truly. In like manner, when it is necessary to inform a house that they have effected an insurance against your orders, and that you hold them responsible, you sweeten the dose by addressing them as "Dear Sirs." As Sir Lucius O'Trigger told Acres, "Do the thing decently and like a Christian." Even if you are vexed at having contributed to the Portuguese Exhibition, and getting nothing by it, there is no need to say more than, "As I learn that the Portuguese Exhibition has been

financially and commercially a failure, it is quite enough to be saddled with the outward and homeward freights to Oporto, without any honorary or business results from our exhibits." Even if you have to apply for money, there is no need for doing it uncivilly. How simple it is to say, "Our collector will have the pleasure of calling upon you on Friday morning next for settlement of our account," and to add in a postscript, "If absent from home, please leave instructions to pay our collector, as it is a long way to call for so small an amount." If the money is not forthcoming, and your collector has the pleasure of calling for it without any corresponding pleasure being shown, you remind your debtor that "our accounts are balanced every twelve months, and your default prevents us from closing our books for the date alluded to." Such a hint must surely be taken. If not, you place the matter in your solicitor's hands, or you place the account for collection in the hands of the Society for the Protection of Traders. We can hardly think that Mr. Simmonds holds up as a model for imitation the letter which runs, "Enclosed I beg to hand you bill for acceptance, which I shall feel obliged by your returning me, in course of post, with the needful"; or the one which exclaims angrily, "After renewing your bill to oblige you, you then fail to meet it, and only send me 20*l.* on account; thus giving me the trouble of writing half-a-dozen letters for the paltry balance of 8*l.* 13*s.*" But when money is at stake, Christianity as well as civility is often at a discount.

Nor is it less aggravating to write letters which remain unanswered, and to have claims disputed. "It seems," writes one man, "that I am not likely to be more fortunate with your house in Leeds in obtaining an answer than I have been with your London branch." Another declares that it is quite contrary to his usual practice to allow for cases, but makes an exception this time: which is also another's reason for making certain allowances, "to save us both a troublesome correspondence."

But the knowledge of the world conveyed in these letters is even more valuable than the glimpses given into the ways of business. Thus we find that soap is comparatively neglected at the Cape; and it is hoped this statement will not be deemed either impertinent or trivial. Although business in Tahiti is stagnant, a merchant there gives instructions to be kept more fully supplied with soaps, perfumes, and fashionable toilet articles. A London manufacturer sends his correspondents in Boston "a quarter of a gross of Prince of Wales Bouquet, as per enclosed label, as I think it likely there will be a run for that article on account of the forthcoming visit of the Prince of Wales to the States." Passing from perfumery to something of a rather opposite tendency, we read, "Gentlemen,—Having obtained the sole agency in Kent for the sale of your concentrated fecal manure, we have much pleasure (!) in presenting our report." It is hard to realize the amount of zeal that must have inspired such a sentence.

Politics are duly represented among the trade circulars, and the mixture of Continental politics with tallow and of American politics with cotton has very often a comic effect. There were speculations about the course likely to be taken by the Continental Powers during the past May, and some few leading articles were written on the subject. Now, in this book we have a genuine political prophecy, which did not, indeed, come true as to the main basis on which it was founded, but was probably verified in the minor deduction. "On dit that if Prussia attack Austria, Russia will

side with the latter; and if this statement be correct, which is most probable, it offers a guarantee that no impediment will present itself in the ensuing months to the usual and regular influx of tallow from Russia." We hope the guarantee was more satisfactory than many of its namesakes. But though in other respects we trace the effect of great occurrences by the sudden fall of prices, there are occasional instances of a still further reaction, and of a general shock being given to all established principles. The Liverpool Cotton Circular notes as the result of the interview between President Lincoln and the Southern Commissioners that "fair Egyptians were sold as low as eighteen pence." Nothing could well be more significant of the attachment of Liverpool to the cause of slavery. The news of negotiations between North and South had an inappreciable effect on the fate of these captives; they were led away at once by purchasers at a low figure to make room for the expected cargoes of negroes. Nor does Manchester seem to be much more moral than Liverpool. There, too, we read of a decline in prices within the past month: "7-8ths printers have declined 3*d.* to 1*s.* per piece; 9-8ths printers, 3*d.* to 1*s.*; and domestics are ½*d.* to ¾*d.* per yard lower." Perhaps, as authors, we may be thought indifferent to the wrongs of printers, and we must own to a shameful ignorance as to the distinction between 7-8ths and 9-8ths. But what will Jeames say to domestics being sold by the yard? Their price has generally gone in an increasing ratio with the number of their feet, and allowance has also been made for the graceful line of their calves. We must say that if such notions are suffered to prevail at Manchester and Liverpool, the sooner the world comes to an end the better. If in the one we are to have companion pictures to the Eastern slave-mart, and in the other that grand creature, the British flunkey, is to be quoted at per yard, there will be a revolution in English ideas more serious than could be produced by a Reform Bill, and more fatal than a war without tallow.

NEW NOVELS.

The Wild Flower of Ravensworth. 3 vols. (Hurst & Blackett.)

WHATEVER other qualities may be discoverable in these volumes, we have found them three of the most wearisome which it has been our duty to wade through for a long time; and we are constrained to add, moreover, with as much surprise as disappointment, that after reading them through very carefully we are unable to find anything by way of compensation. We are quite alive to the responsibility that a critic incurs in pronouncing such a judgment on the last new novel by the author of 'John and I' and 'Doctor Jacob.' In both those works she established a reputation for good writing and common sense which even the least enthusiastic among her admirers were willing to admit ranked her above the ordinary run of recent novelists. In this last production of her fancy we can find absolutely nothing in the shape either of clever delineation or striking thought; but very much that deserves more than such negative dispraise. Its sketches of character are hasty, indefinite and incomplete; its story is almost as uninteresting as it is unreal; and its pages are continually weighted by an alternation of small talk and truisms, which keep on suggesting the simile of an ugly doll padded with sawdust.

The story itself strikes one as a sign of curious inconsistency on the part of a lady who takes no pains to conceal her sympathy

with that modern type of womanhood to which has been given the not necessarily disrespectful name, "strong-minded." Holding, as Miss Edwards does, very strongly to at least a mitigated form of the theory about "woman's rights"; selecting for one of her least feeble and most unnatural characters a young woman perpetually poring over Greek literature and philosophy; believing, apparently, in Platonic love between men and women to an extent which keeps the reader in a constant state of fidgeting anxiety; and taking pains throughout (if we can interpret her meaning at all) to degrade conventionalities, to preach the grandeur of disinterested affection, to

Ring out the false, ring in the new,

all the world over; it can hardly fail to occur to one's mind as a little singular that the whole plot of this tale should hinge on the "Wild Flower's" father having been a knave, and the "Wild Flower's" husband's difficulty in disproving that crushing fact and establishing his wife's descent from a baronet. Persons or far less lofty ideas than either the author or the "Wild Flower's" husband have adopted the notion, before now, that a man only marries his wife, and not his wife's belongings; and that he may keep his self-respect even though the latter are not respectable. Miss Edwards not only seems to hold this proposition to be untenable, but exaggerates the opposite view to such an extent that she seems to consider the crowning glory of her heroine's life is when she runs away from her husband (when having "married Lucius under false pretences," she concludes that she has therefore no right to be his wife), and when she lives in dangerous ecstasies of love with an old admirer, rather than believe it possible that her spouse should remain faithful after the discovery of her disgrace. We have already used the phrase—"if we can interpret the writer's meaning at all"; if we are right, this is the whole moral of the story; if we are wrong, we are bound to admit we do not understand it in the least degree. It is, at all events, the one solitary speck in Esther Penwarden's character which can be possibly intended to appeal either to sympathy or admiration; and no single word countenances the idea that the author means to blame and not to praise. In all other respects the "Wild Flower" is simply a gushing, innocent, and exceedingly silly country girl, who apparently ought to have married an equally gushing, innocent, and silly rustic prodigy; but who married somebody else and was very happy. And the rustic prodigy "ought to have been a ruler of men or of circumstances, a Wesley or a Stevenson," but unluckily wasn't; rather, on the other hand, a very undecided character and a very decided fool.

The Shadows of Destiny: a Romance. By Capt. Colomb. 2 vols. (Chapman & Hall.)

If "Romance" signifies something that is quite unintelligible, 'The Shadows of Destiny' fulfils its mission. The story begins with an old lady who lives in a haunted manor-house. She goes to bed by the light of an expiring candle, and leaves all her clothes, which are described minutely, thrown on the floor, on a hard winter's night, with a storm blowing round the house and rumbling down the chimneys. "The shadows of the agitated branches crossed and flitted strangely on the faded satin coverlet and pillow and on the tired and careworn face; suddenly a dark picture painted on a panel, sliding noiselessly aside, disclosed the head and bust of a female, fantastically attired in the head-dress, ruff and garb of the days of the Stuarts."

After singing a little song and looking fixedly at the face of the sleeper, she draws back her head and disappears, and the picture, "a Dutch landscape, returned to its place." The sleeping lady meanwhile dreams a wonderful dream, that she sees an "appearance" which divides, as housemaids say, "into two halves, one of which turns into a luminous griffin, which carries off her niece Maude; whilst the other half, in the shape of an eagle, swoops down on her other niece Edith, and carries her off in its claws; and the building where they were all three sitting falls down with a great crash. These are the "shadows of destiny." The two nieces go up to London, and one of them runs away with Gerald Griffin; and the other marries a Lord Eaglescliffe, or rather does not marry him, but lives and dies mysteriously, with suspicion of being murdered, at last returning, in the shape of a headless lady, to haunt the walls of the ancient manor-house where the old lady dreamed her portentous dream. The book then takes a leap forward for a hundred years; and then more and more mystery grows up. Eaglescliffes and Griffins become fatally mixed up in each other's concerns, but which is which and who is the other will be a puzzle to the enterprising reader. There is a mysterious Lady Eaglescliffe, with a face like a sphynx, and she has a son; and there is another young man in whom she takes a mysterious interest; and there is a Gerald Griffin, who pursues a young lady who lives with her father in the haunted manor-house, and there are false friends and foul play, and dishonourable intentions; and the young man leaves the young lady to lament his absence, and when he comes back penitent, and sings under her window, he finds her gone, and he sees something dreadful,—but whether the lady is dead or drowned or murdered or kept in captivity, the author himself does not reveal, for fear of casting a slur on her memory. Gerald Griffin goes mad, and is kept in a lunatic asylum, which is in a state we recommend to the notice of the Commissioners; whilst as regards the wicked Lady Eaglescliffe, and the mysterious young man, we are promised further revelations at a future time. The future tale can scarcely be worse than the present.

The Three Louisas: a Novel. By H. Sutherland-Edwards. 3 vols. (Tinsley Brothers.)

It may be doubted, by experience, how far Art is a subject for works of art. Pictures about painters have been too often flabby, uninteresting works, dependent mainly on the lay model. The music written to illustrate music is somewhat better: witness four works so widely different as Gluck's 'Orfeo,' and Handel's 'Cecilian Ode,' and Spohr's 'Power of Sound' Symphony, and M. Auber's 'Ambasadrice.' But numerous as Art-novels have been, we cannot, at the instant, call to mind a good story of which a painter's fortunes are the principal theme, still less one devoted to the career of a musician. It is true that a certain interest was excited by 'Charles Auchester,' incorrect as were all the technical portions of the novel; but this partly was excited by the titillations of amiable (we must not say scandalous) curiosity. It was so "nice" to read in print all about Mendelssohn and Mdlle. Jenny Lind!—though, as should have been foreseen, the fictitious presentation of these celebrated persons and of their private life was as far from the reality as is the child's notion, scrawled on his slate, from the features and the attitudes of a Napoleon or a Cleopatra. Then, too, there was that serviceable thing, a temporary mystery as to the authorship. This is a "sure card," as Mrs. Gore found out when she played it so

dextrously on behalf of her 'Cecil'; as Lord Lytton proved when putting his 'New Timon' forth. Of an attempt on Beethoven's life, not long ago made by a German romancer, we have here spoken. Among Madame George Sand's tales, that lady's 'Lucrezia Floriani,' devoted, it has been said, to a "showing up" of her favourite and protégé, Chopin, after a quarrel, is, perhaps, her worst and least moral story (which is saying much). To be just, however, her 'Consuelo' and its sequel—both spoilt by her resolute determination to preach the gospel of a refined and elastic Christianity—may be pointed to as an exception which proves the rule of what has been said regarding musical novels. Nothing can be livelier than her scenes in the Venice music-school and opera-house,—than her characters of the heroine, Anzoletto, Porpora, La Corilla, the ridiculous amateur Baron von Hoditz, the despotic, flute-playing Frederick of Prussia,—hero so dear to Mr. Carlyle!—than her group of theatrical intriguers at Vienna, whose underhand propensities were fostered by the meddling King Maria Theresa, and the *petit maître* minister, Kaunitz. But 'Consuelo' stands alone. Madame d'Agout's (*Daniel Stern*) 'Nelida,' written with the activity of spite against Dr. Liszt, is, as all works of spite and vengeance should be, a failure. While rambling through stories about musicians, Poushkin's short dramatic scene, founded on the apocryphal story of Mozart having been poisoned by Salieri, is not to be forgotten. As an accessory figure, that fascinating "syren of the stage," who tempts true lovers from their allegiance, to their ruin, the *prima donna*, has been worked on the average with more effect; never better worked than by Maturin in his 'Woman; or, Pour et Contre,'—a novel, we take leave to say, unjustly forgotten. But, inasmuch as no overture should be too long-drawn, we will introduce (as the composers say) no more themes, however many there be that press on us, but at once draw up the curtain on 'The Three Louisas.'

Mr. H. Sutherland-Edwards has elsewhere shown a fair amount of reading on musical subjects, and (in an altogether different department of literary effort) readiness of observation and lightness of hand, as one who sketches national manners and peculiarities, and takes note of events as they pass. But as a novel-writer his experience and craft appear for the moment to have forsaken him. His 'Three Louisas,' the story of one and the same Louisa, the daughter of a retired singer, who is driven by want on music, and changes her name thrice, is neither like truth nor fiction. The tale of the girl's struggles with a hard lot,—how she publishes songs of no value, the publication being liberally paid for by a *Romeo* behind the curtain,—how she innocently falls into the worst possible hands, those of one of the patronizing *Don Juans* who haunt theatres, and who lays deliberate siege to her, from which he retires after the fashion of *Pamela's* Mr. B.,—how she becomes a great *prima donna*, and remains stainless throughout her greatness, in order that at last she may be re-united to the high-born *Romeo* who had first befriended her (not without wry faces on the part of his family):—these things, we say, are told neither wisely nor well. The verisimilitude of the scenes and characters with which Mr. Sutherland-Edwards can hardly fail to be conversant, as here painted, is no greater than that of similar combinations in an astounding novel published many years ago, called 'Realities,' which we remember because of a wondrous orgie at Richmond, where the charming and virtuous heroine actress was saluted, under the stare of passing diners, by her managerial *Don Juan*.

There is no need, for sensation's sake, to peel the wrong side of the tapestry, though it may be need, from time to time, to intimate that the same has its existence. But whatever be the manners, whatever be the scenes,—be they better be they worse,—if they are as brought before us, the verdict must be, as here, that the artist fails in outline, in colour, in grouping. Mr. Sutherland-Edwards will do, as soon as possible, not too soon (according to the fatally facile fashion of our tale-tellers, who lay stories as eggs are laid), to take his revenge by giving us a novel to admire.

Days of Yore. By Sarah Tyler. 2 vols. (Strahan.)

In 'Days of Yore' we are introduced to domestic scenes in Holland, England, Ireland, and Scotland, but principally in the latter, which afford ample materials for the little and perchance homely, details which fill up the comprehensive outline of the historical novel. The former without the latter would be connexion; while the latter, standing by itself, would be little better than the heading of a chapter. In short, one is the complement of the other. The first tale, or rather sketch, carries us back, in a very interesting manner, to a period of Scottish history concerning which we know but little that is authentic. The memory of Saint Margaret, however, "with her sweet eyes, her auburn hair, her learning, her sorrows, her fasts and vigils, and her widely love," still lives in the traditions of her adopted country; while to us Saxons, the record of the romantic life of the sister of Edgar Atheling cannot be read without interest. The victory of Hastings forced Edgar, his mother, and three sisters, after many adventures, to seek for refuge from the fierce conqueror, in the widow's native land of Hungary. Stress of weather compelled the hapless fugitives to put in near Dunfermline. The crown of Scotland was then worn by that Malcolm who, if forgotten by historians, will yet live in the pages of Shakspeare as the avenger of his father's death and the vanquisher of Macbeth. In the previous year the unfortunated Malcolm had been an unsuccessful suitor for the hand of the beautiful and accomplished ornament of the English Court. Now the wheel of fortune had turned, and the exiled Princess proceeded on foot, unattended save by some monks, to sue for hospitality at the hand of her rejected lover. It speaks well for the generous nature of the King of Scotland that Margaret could venture to solicit aid from one on whose self-love she had inflicted so severe a wound. And well did he justify the confidence placed in him. Instead of purchasing the goodwill of his powerful neighbour by giving up to him such important personages, he at once renewed to the wayworn exile the offer of his hand and crown,—coupling with it, however, no conditions in case of a second rejection,—which but a year ago had been successfully made to the highly-placed Princess. His constancy received meet reward, and for the rest of his life an angel called him husband. Notwithstanding, however, her numerous charms and virtues, Margaret had one defect: she was not uncommon in any age with women; she allowed herself to be too much led by the priests. This not unnaturally produced alienation between the hitherto happy pair; and eventually her daily resort to a neighbouring cave gave rise to grave suspicions in her husband's mind. At length, maddened by doubts which he could not repress, Malcolm dogged his wife's footsteps, and found her, not listening to a rival, but earnestly praying that her own sins might be forgiven her, and her husband's heart avail-

ened to a truer perception of the means of salvation. Stricken with remorse, Malcolm hurried home, and, when next his queen quitted Dunfermline for Edinburgh, he caused the cave to be converted into a chapel, which long continued to be the admiration of travellers from every part of Europe.

Among other Scottish sketches one will be read with particular interest, for the insight it gives into the manner in which marriages were arranged in Edinburgh, towards the end of the last century. We can hardly in these days realize to ourselves that, at a time so little removed from our own,—living men may still be found who remember it,—a young lady could be kept locked up in a dark sleeping-closet, her only fare bread and water, till she consented to wed the bridegroom her mother had selected. Almost as difficult to picture to ourselves is the sight of the fashionable Edinburgh beauty being brought to her new home in Lauderdale, seated behind her husband, who carried pistols at his saddle-bow. In this story, besides the wooing and wedding, we are presented with what we doubt not is a faithful representation of the interior of a Border laird's house, which shows emphatically how much the railway has done to annihilate the difference in luxury and refinement which must then have existed between provincial Scotland and the South of England.

Perhaps the most attractive of all the tales which compose this book is that called 'The Shadow of the Ancient Mariner.' The ancient mariner is no other than that Alexander Selkirk, or rather Sealchraig, whose romantic adventures suggested to Defoe the inimitable 'Robinson Crusoe.' Alexander Sealchraig was a native of Largo, and when rescued from his uninhabited island, he returned to the place of his birth, and spent several years there ere he again wandered forth into those solitudes for which he seems to have acquired a positive liking. He is described as a gloomy, silent, disagreeable man, who avoided the society of men, and generally quarrelled with those with whom he came in contact. The author makes him, for all his moroseness, not insensible to the attractions of a pretty face, and weaves from thence a love story, which, in its character, harmonizes well with the untamed, impetuous spirit of the wooer. Eventually Sealchraig, unsuccessful in his suit and pining for the freedom of a savage life, left Scotland for South America, and was never heard of more.

For the remainder of these short tales, including a very pleasing description of Rotterdam and its great annual fair a hundred years ago, we must refer the reader to the book itself.

Eastern Mails: Copy of Report from Capt. Tyler, R.E., to Her Majesty's Postmaster General, of his recent inspection of the Railways and Ports of Italy, with Reference to the Use of the Italian Route for the Conveyance of the Eastern Mails. (Ordered by the House of Commons to be Printed.)

The question considered in this able report so immediately concerns a large section of the world of writers as well as persons who have commercial interests in any of our eastern dependencies, that it claims from literary journals a measure of attention which we do not usually bestow on Parliamentary papers. Hitherto our fast mails from London to the East have passed through France *via* Macon or Marseilles, and thence by sea to Egypt, through which country any line of rapid communication between Great Britain and her oriental dependencies must under existing circumstances necessarily pass. By the arrange-

ments still in force, the transit of letters from Macon to Alexandria consumes 162 hours 43 minutes, thus apportioned—10 hours 43 minutes to the journey from Macon to Marseilles, 2 hours to the transfer of mails at Marseilles, and 150 hours to the voyage from Marseilles to Alexandria, a portion of the route that covers 1,460 nautical miles and includes 4 hours' detention at Malta. From London to Macon, and from Alexandria eastwards, it is not at present proposed to change the postal track to India; but the railway down the east coast of Italy, which has been at work since the May of last year, has placed it in our power to send our letters from Macon to Alexandria in 127 hours 28 minutes, instead of the 162 hours 43 minutes required by the Marseilles route. This preferable line of passage runs from Macon to St. Michel, from St. Michel over Mont Cenis to Susa, from Susa to Bologna, from Bologna to Brindisi, from which port to Alexandria the distance does not exceed 822 nautical miles. In this diminution of the passage by sea appears the chief recommendation of the Brindisi route; for in actual length the way by Marseilles is about as short as any that can be adopted, its disadvantages being due to the unavoidable slowness of locomotion on the sea, and the risk of delay from stress of weather to which that mode of progression is exposed. "Inasmuch, therefore," Capt. Tyler observes, "as it is practicable to travel more than twice as fast on land, where good railways are available, as by sea, and with less risk of delay from stress of weather, it becomes advantageous to decrease the sea passage as far as possible, when this can be done without too heavy a cost, in order to effect a saving of time." As the Italian Government would convey our mails on "terms which are very considerably less in proportion to the distance than is paid by Her Majesty's Government for the passage of the mails through France," the chief argument in favour of the contemplated alteration is supported by considerations of cost. Hence it appears that as matters stand Capt. Tyler has made out a strong case for the Brindisi route; but there is reason for confidence that before many months have passed its advantages over the Marseilles line will be even greater. Under existing circumstances the service of our Eastern mails from St. Michel over Mont Cenis to Susa would be performed by horses and mules; but on the opening of the Summit Railway over Mont Cenis—a line of railway that will probably be completed during the May of next year—the time required for the fast journey from Macon *via* Brindisi to Alexandria will be reduced from 127 hours 28 minutes to 123 hours 8 minutes. Again, on the completion of the Grand Tunnel Line, which Capt. Tyler hopes to see at work in the course of five or six years, the route from St. Michel to Susa would consume still less time. "There will, therefore," says the reporter, "be an advantage of 35½ hours in favour of the Brindisi route previous to the construction of the Mont Cenis Summit Railway; of 39½ hours after the construction of that railway; and of 42½ hours after the completion of the permanent tunnel line from St. Michel to Susa." In conclusion, Capt. Tyler observes, with regard to another change of route that will most likely be effected at no very great distance of time, "As I have intimated at the commencement of this Report, the question to be now solved is solely that of communication through Europe to the East. I would ask your Grace's permission to touch also upon the still more important saving of time and distance that may be obtained hereafter, by avoiding the passage of the Red Sea,

when a railway shall be constructed from the coast of the Mediterranean along the Euphrates Valley to the Persian Gulf. By this route many hundred miles of distance, and many days of time, might be saved between London and Bombay, which will become within the next two years (when the railways to Madras and Calcutta are completed) the principal port of India. The navigation by the Persian Gulf to Bombay will be far preferable to that *via* Suez and the Red Sea to Bombay; and even that amount of navigation may ultimately be avoided by the connexion together of Bagdad and Bombay by railway. But in the mean time the Euphrates Valley scheme has been for many years almost in abeyance. The mere guarantee of the Turkish Government has not been found sufficient even to render the construction of the first portion from the coast to Aleppo practicable; and the financial state of that empire renders progress now almost impossible. But I have so strong a conviction of the important bearing that the construction of such a railway would have, commercially and strategically, upon the British Empire, that I could not but take this opportunity of recommending the subject to the serious consideration of Her Majesty's Government." Whether the time has come for action in accordance with Capt. Tyler's suggestion we offer no opinion; but it will not be questioned that the project deserves the serious consideration thus solicited for it.

A Chronicle of the Church of St. Martin, in Leicester, during the Reigns of Henry VIII., Edward VI., Mary and Elizabeth; with some Account of its Minor Altar and Ancient Guilds. Compiled from Original and Contemporaneous Documents. By Thomas North. (London, Bell & Daldy; Leicester, Crossley & Clarke.)

We are always rejoiced to find an antiquary and a scholar building up local history out of local records. The latter have become so rare that gentlemen render excellent service when they thus turn them to useful purpose ere they disappear or perish. Parish records, it might be supposed, being under lock and key, and these under more than single guardianship, would be safe from any despoiler; but, perhaps, it was because several guardians had as many keys that the stewardship became a failure.

When Thoresby and when Nichols wrote their respective Leicestershire histories, masses of local records of the pre-Reformation period were in the parish chests of the churches in Leicester, inaccessible to students and historians. Of these important documents, in which so much of the religious and social history of the early times was to be found, many have nearly altogether disappeared. Ignorance of their value, and carelessness, even when their value was known, have caused some, but not the greater portion, of this loss. Documents have been lent which have never been restored. To us this seems the same as if they were stolen. Mr. North, with polite and delicate euphuism, says of documents fraudulently detained and after a time sold, that "something very like the opposite of strict honesty has led to their not being restored." Very like indeed. The euphuism reminds us of the delicacy of Nicholas St. Antlings, who would not *steal* his master's chain because of the literal prohibition in the Decalogue; but when Pyebord asks, "Wilt thou *nim* it from him?" the puritan thief answers, "That I will!"

The ancient Leicester records disappeared soon after the publication of Nichols's and Thoresby's histories of the town; but some of them, and heaps of other deeds, turned up many

years after. "A curious collection of ancient writings," says a Leicester paper, some six-and-thirty years ago, "was sold last week by auction in Pall Mall, being deeds relating to Brokesbye, Great Bowden, Kirby, Coton, Bosworth, Barton, Lubbenham, Huncote, and St. Mary's Church, Leicester. This collection was considerable, being deposited in five boxes." All these, surreptitiously detained from their rightful possessors, have disappeared. Occasionally a portion may come to light, as in the case of a large volume of churchwardens' accounts, beginning A.D. 1554, relating to the parish of St. Martin, Leicester. Mr. North purchased it from a person in whose possession it had been for half a century. This very volume, to which Thoresby had made reference in his history, had been previously bought at a book-stall, the buyer preserving it simply on account of its local character.

Mr. North has worked up this material into his history with great skill. It is worthy of remark, as illustrating the good old religious feeling—even if it were a formality, yet one not to be scoffed at—that the churchwardens' accounts in the ancient days were headed with the sacred initials J. H. S. Sometimes the word "Jesus" is at the head, as a monition to the wardens to be honest in their reckonings. Mr. North says, that "the accounts of the Chamberlains of the Borough of Leicester for the year 1578-9, and several subsequent years, are headed 'Emanuel.'" And he aptly refers to a passage in 'Henry the Sixth' to show that Shakspeare had not forgotten the custom:—

Jack Cade. What is thy name?

Clerk. Emmanuel.

Dick. They used to write it on the top of letters.

Through similar religious sentiment a man's last will used to fittingly begin with "In the name of God"; and the warrants of master mariners, down to a very late period (perhaps the seemingly custom has not quite died out), commenced with a humble reference to the Almighty, most appropriate to be kept before the eye of those whose home was often on the stormy waters. Mr. North's volume is not only ably compiled, but handsomely got up. Its especial public may be within the *shire* of Leicester, but there is matter in it that may interest antiquaries beyond those limits.

The Story of the American War, 1861-65. By Henry Stacke. With a Map illustrating the Battle-Fields. (Warne & Co.)

ANOTHER superficial and inaccurate sketch of the great struggle concerning which there has been an excess of erroneous speech and writing during the last five years. This 'Story of the American War' cannot be recommended on any ground. By his unfair reticence, no less than by his wrong statements and ungenerous suggestions, the author's bias in favour of the South is made apparent from the first to the last page of his book. He has not the hardihood to claim triumphal honours for Mr. Jefferson Davis; but he has the imprudence to tell his story in such a fashion that the conclusion is totally irreconcilable with the tenor of the narrative. "The author," Mr. Stacke observes in his Preface, "is aware that he may be accused of what some persons consider 'inconsistency.' He can sympathize with the cause of the Abolitionists of the North, and yet admire the valour and fortitude of the Confederates;" and in his last page, modifying this profession of anti-slavery opinions, he remarks: "It has been my object to do justice to the conduct of the South, while expressing some sympathy with the cause of the North." By those who give him credit for virtue, of which

the body of his book contains no sufficient evidence, it will be regretted that, while taking so much care to express his admiration of Southern patriotism and valour, he should have altogether neglected to do justice to the men whose policy is said to command his approval. To fan the last embers of a dying fire, he reprints four stanzas of the lyrical appeal which entreated "Maryland, my Maryland," to spurn the Northern scum, and avenge the patriotic gore that stained the streets of Baltimore; and not content with thus reproducing the invitation he informs us that the song was "written in language which will survive as long as the memory of the war lasts,"—a doubtful compliment that may be applied to the poet or the English tongue, according to the reader's taste. After the fashion of many other champions, Mr. Stacke creates confusion, and has probably confused himself by an ambiguous use of the word "rights." Having frankly acknowledged that the Southern States rebelled to perpetuate slavery, he speaks of them as having seceded to maintain their independence. In one place we read, "As long as the anti-slavery party were in such a minority that they could not affect the course of legislation, the planters of the South regarded their hysterical declamations with quiet contempt; but when fresh accessions, gained from immigration and diffusion of English ideas throughout the North, swelled the numbers of the Abolitionists into a formidable faction, the slave-owners became alarmed, and banded themselves together to resist any infringement of their rights." Elsewhere the author assures us that "year after year the Confederates had striven and toiled and fought for their rights as an independent people." Speaking of the means by which the Southern States struggled for their rights, Mr. Stacke observes, "Year after year it needed a greater strain to find soldiers to meet the ever-increasing armies of the North. Successful management and complete railway communication enabled Jefferson Davis, in 1861 and 1862, to bring something like equal numbers to oppose the enemy at different points of attack." The natural inference from this statement is, that in the earlier battle-fields and engagements of the war the superiority of numbers was invariably on the side of the North; that by fortunate combinations of circumstances and by strenuous efforts the South occasionally managed "to bring something like equal numbers to oppose the enemy at different points of attack," but that she never contrived to do more. Of course the writer intended to convey this very erroneous impression; and it cannot be pleaded in his defence that the misleading words are attributable to ignorance, for in describing some of the earlier encounters he exhibits an amount of knowledge that shuts out any such apology for disingenuousness. For instance, with exceptional candour he expressly states, that at Wilson's Creek "the Confederates outnumbered their opponents." This mode of dealing with numbers is characteristic of the book, which abounds in self-contradiction. Notwithstanding its extravagant admiration for the South, it contains many passages which, taken apart from the context, might be used as evidence that the writer wished to tell the truth of both sides, or even that his bias was in favour of the North. But, far from indicating a conscientious determination to be fair to both parties, these passages appear to have been dictated by caution rather than justice, and they are powerless to conceal or turn attention from the partiality which is conspicuous in every chapter.

The Birds of Middlesex. A Contribution to the Natural History of the County. By James Edmund Harting. (Van Voorst.)

THE three celebrated poets who were at issue as to whether the crop they were passing by was wheat, oats or barley, and who were told by a wondering rustic that it was rye, if they were ashamed of their ignorance, at least found a friend in need. There is many a man in the capital of Middlesex who would be utterly incapable of distinguishing one tree from another by their names; for such persons, too, there is help at hand. "Other some," as the phrase goes, who may walk over a Middlesex meadow and who would not know "a hawk from a heronshaw," may now study Mr. Harting's book, and learn more about birds than the famous individual in the *Spectator*.

As there are unhappy persons so ignorant as to speak of foxhounds as "dogs," a vulgar error which settles the snobbism of the speaker with huntsmen and whips, so there are others who do not know how to designate flocks of winged game. Those luckless individuals are hereby informed that they must say, a *brood* of grouse and a *berry* of quails (we have carried the last word from the field into the drawing-room, where may be seen a bevy of fair dames); a *covey* of partridges, but a *covert* of coots; a *dropping* of sheldrake and a *flight* of woodcocks; a *gaggle* of geese (when they are at rest), but a *herd* of swans, a *nid* of pheasants, a *skin* of geese (when on the wing), a *spring* of teal, and a *sege* of herons; a *team* of wild ducks, and a *trip* of dotterels; a *wing* of plovers, and a *scrip* of snipes. Mr. Harting says he is not a scientific ornithologist, and neither understands nor interests himself in the endless and complicated *subgenera*, but in proper, popular, English names, he is quite a scholar; and indeed as a scientific ornithologist his merit is greater than his modesty suspects.

One would not expect to meet partridges, pheasants, or herons, on the wing, in Charing Cross, St. Martin's Lane, St. Giles's in the Fields, Tottenham Court Road, Aldersgate Street, or other street-ways leading to Islington, Hampstead, Highgate, and Hornsey Park. Henry the Eighth, however, forbade, on penalty of imprisonment, that such birds should be disturbed in the localities which now bear the names above mentioned. Macaulay tells us of somebody having, not so long ago, shot snipe or woodcock in Conduit Street; and even now a winged stranger makes his appearance in or near our crowded thoroughfares, where we should least expect to see him. By living man, the golden eagle has been detected within a few miles of the London smoke. Only the other day a shore lark, an inhabitant of the northern parts of Europe, Asia and America, was caught on Hackney Marshes. A few years since, a gamekeeper, in the Strand, (for the first time in his life,) saw a snipe on the wing, and wondered what he did in this wicked London. Purple herons have sailed near enough to the metropolitan vapour to feel it was no atmosphere for them; and the rare bittern, which, as well as the heron, used to be eaten at City feasts, has recently condescended to be shot in the vicinity of Hammersmith. We should not expect to see the shy coot upon the Serpentine, but that inhabitant of preserved streams has been seen on that Lake of Cockeyne. Even the redbreasted goose has come all the way from Siberia to be brought down in the metropolitan county. Nay, the little grebe, with its small power of flight, and its reluctance to trust itself abroad, has been known to descend on the Round Pond, in Kensington Gardens, "without an atom of cover in or near it, and sur-

rounded by many miles of brick and mortar." So rare a bird as the little gull of Eastern Europe has glided over the Thames at Blackwall, in its mature spring plumage, never to return. Most wonderful of all, a storm petrel was encountered, in 1857, in Edgware Road, and was inhospitably knocked down with a stick. "It was a wet, windy night, and the bird was much exhausted. It was supposed to have strayed up the river from the coast." This coming to, or near, London has a curious effect, at least on the singing birds. "Many true British residents are true migrants as to London, and all the true migrants come into song later near London than elsewhere throughout the land."

If these ornithological incidents be amusing, there are others that partake of an opposite quality. A few strange birds come over to Middlesex, but our most welcome sojourners are being decimated, and our native birds are disappearing faster than the others come. Mr. Harting speaks of a quondam keeper who rented a cottage at 10l. a year, and more than paid his rent by capturing or killing and selling nightingales. Fifteen dozen at eighteen shillings a dozen was a "good nightingale season." Once he "caught no less than nineteen nightingales before breakfast, in the grounds of one gentleman, and in sight of the windows; for which, as I told him, he ought to have been transported." Again, some keepers kill the beautiful and useful nightjar, which has so unfairly got the name of "the goat-sucker." It merely captures and devours the insects that fly about the feet and stomach of goats and other animals. One man proudly showed to Mr. Harting "six of these beautiful birds hanging upon an oak, in company with some sparrowhawks, jays, magpies, and stoats." Mr. Harting fruitlessly pointed to the bill, and proved that it was not shaped for tearing flesh, like that of a hawk. The answer received was, "You may depend upon it, Sir, they're reg'lar varmint, like all the rest of 'em; and I always kills 'em whenever I gets a sight on 'em."

Some birds locate themselves in places from which they might expect to be ejected. A fly-catcher's nest, with five eggs that had been sat upon, was found in the crown on the top of a lamp in a London street. Other birds sagaciously accept due notices to quit. A lot of rooks had their homes in a certain clump of elms, some of which, being old, were felled yearly, young trees being planted in their places. The condemned elms were marked by stripping off a bit of the bark. The intelligent rooks required no other intimation. As soon as they observed the symbol, the whole family removed to another tree.

Again, there are other birds which, with their homes, are sacred. Nobody knows whence the Guildhall pigeons come, but they and all the City pigeons are as sacred as the storks in Holland; and this privileged immunity is extended to the pigeons at the Royal Exchange, the terminus of the South-Eastern Railway at London Bridge, and at the British Museum. It is to be lamented that the country birds are less tenderly regarded. The hobby has almost entirely disappeared; and Mr. Harting names among the birds that are becoming scarce, by being indiscriminately shot down, and nailed against a tree or barn to rot, "crows, magpies, jays, and even woodpeckers." He might have added, among the handsomest of our British birds, the kingfisher, which has been shot by thousands, in order to place the most brilliant part of the plumage in the saucy hats lately worn by modest young ladies.

Sense of danger is acutely exhibited by most birds, but not always acted on according to

natural impulse. A heron, suddenly come upon, has been known to crouch down into the water instead of to fly, and refuse to rise till a stone had been thrown at it. Snipes also, in like circumstances, will crouch in similar fashion, "immersing the bill, and keeping the head and back as flat as possible." The moorhen has a still more interesting process to avoid impending peril:—

"If surprised in a small pool where there is little cover, the Moorhen, instead of taking wing, dives, and, coming towards the surface in the vicinity of some water-plant, remains entirely submerged, with the exception of the bill, which it just protrudes above the surface to enable it to breathe. From what I have observed, I believe that a Moorhen cannot remain in this position without some assistance from a reed, water-lily, or other plant. In other words, it brings itself to anchor by means of its long toes, with which it grasps the stalk of a plant, and thus keeps its body below the surface while its bill only is above. Sometimes, in shallow water, the feet touch the ground, and the toes are then inserted in the mud or gravel. On one occasion, while walking along the Brent, I surprised a Moorhen in a shallow. The bird must have seen me before I observed it; for I first became aware of its presence by noticing the bright red forehead on the surface of the water. As the brook at that particular spot was too shallow to admit of the bird's diving, and as there was no friendly cover near at hand, it continued submerged for several minutes, until I threw in a stone, when, with one motion, it rose from the water into the air and flew. While it remained in the water I was not more than three yards from it, and was easily able to see that it touched the bottom of the shallow. On another occasion I suddenly disturbed a Moorhen in a small isolated pond with plenty of cover at a short distance from the brink, but none near enough to reach quickly without flying. An elm-tree had fallen half-way across the pond, and at several feet from the bank it overhung the water for some distance without touching it. The Moorhen first dived and re-appeared two or three times, and then, as if inspired with a sudden thought, dived again and came up under the fallen tree, but showing only the head and keeping the rest of the body entirely submerged. All my efforts to drive it from thence were unavailing, and it then occurred to me that, by crawling out along the tree, I might possibly be able to seize the bird unawares. Accordingly, handing my coat to a friend who stood on the bank to tell me when I should be directly over the spot, I crawled on hands and knees along the tree, until, at my friend's signal, I knew that I was immediately above the Moorhen. I then quietly put my hand in the water, about two feet behind it, and groped gently along until I could feel the legs. There were several small branches growing laterally from the tree, and many of these were under water. I soon discovered that the Moorhen's feet passed round and under one of these, and that by this means the body was kept submerged. I had little time then for reflection, fearing lest the bird might escape; so, seizing the legs, I drew it out of the water and brought it safe to land."

Not less interesting is this home scene. It refers to the stonechat (*Saxicola rubicola*):—

"One day in May I found a nest of this species, being attracted to the spot by the actions of the old birds. It was built in an old stone wall, but at such a distance from the hole or crevice by which the birds entered, that I was unable to see whether there were eggs or young. As I approached the wall, the old birds retired to a little distance, the male uttering an angry note; but no sooner had I discovered the nest, and commenced trying to dislodge a stone to obtain a better view, than the hen bird immediately returned, flew up against me, threw herself on the ground at my feet with all her feathers ruffled, at the same time uttering a peculiar angry note. I once thought to catch her, but she eluded my grasp, although continuing near me, and expostulating as before. I was so pleased with this show of affection that I at once desisted from examining the nest, and retired to some distance

to watch the birds further. After some time, they both perched on the wall, close to the nest, and the hen, after some hesitation, at length found courage to enter. In a few seconds she issued from the crevice, and was then apparently satisfied, for she uttered quite a different kind of note, and joined the male bird in a short flight, returning again to perch upon the wall, where I then left them. How delighted Gilbert White would have been with such a display of 'στροφή,' as he has termed this natural love of animals for their young."

Mr. Harting has much curious information touching the sparrows at home, and alludes to the rarity of white sparrows in Middlesex. During the years 1852 and 3, we remember one whose home was in the ivy on the west side of Cambridge House, in Piccadilly. He was quite at his ease in the middle of the street, and was an object of great interest to all passers by.

In domestic arrangements, some male birds exhibit more consideration for their mates than others. There is the reed warbler, an agreeable fellow with a taste for singing. He will go abroad with his lady in search of materials for the nest, but he makes her carry them all home, and he will not assist in building. The Jack snipe is more industrious, though with a selfish motive. He will, indeed, "pick up a worm from the surface, but he prefers boring for one, and drawing it from a sod." The epicure then passes it through his bill, pinching it the while, to make it more succulent and tender, and swallows his game whole. There may be too much of epicurean alacrity in a bird. Mr. Harting speaks of a heron at Kingsbury reservoir who was found "firmly held by a fishing-line, the hook fixed in its throat, and the line twisted round its legs. It had swallowed a bait set for pike." The heron had not been sufficiently acute; and he is not the only bird that suffers for want of looking about him. The author tells a story of a kestrel swooping on a mouse, and being himself pounced upon by a cat, whom he had not observed watching the mouse for her own profit. There are times, moreover, when the seeker of provender is foiled, without being personally injured. A hungry thrush tries to get at a snail by dashing the shell on a stone. Occasionally he chips the shell, without being able to extract the snail. He leaves his intended victim in disgust; and the snail quietly repairs the part chipped out of the shell, by a secretion from itself, which gradually hardens on exposure to the air.

With these glances at Mr. Harting's book, we may consign it to the general public. A pleasanter and, in its way, a more instructive work has seldom been offered to those who are interested in the winged children of song.

OUR LIBRARY TABLE.

English History, from the Earliest Period to our own Times. With an Appendix containing a Table of Battles, Sieges, Treaties, Biographies, Colonies, and Contemporary Sovereigns. Expressly designed to assist Students preparing for Examination. By W. M. Lupton. (Longmans & Co.)

WE acknowledge the industry and good intentions of the compiler of this volume; but though it may have its uses as a book of reference, and may refresh the memory of those to whom English history is familiar, it may also be forced into the brains of those for whom it is intended,—those who are cramming,—without their being a bit the wiser touching the real history of England and of the personal motives of which historical action is but the consequence. Moreover, as we glance at the pages, we dissent from many of the details. Mr. Lupton says, awkwardly enough, "The Druids are believed to have originated in Britain;" and we ask, on what authority? Again, "Ethelred created his brother Alfred an Earl, who was the first to bear that title

in England." Alfred, we should say, was created an Earlman. *Come, or Earl*, as we now understand that name, was a Norman title. Then Mr. Lupton says correctly: "Land that was the absolute property of the owner, and for which, under the feudal system, he was not required to do knight's service, was called *allodial*." Very true: but suppose the young gentleman under examination is asked the meaning of *allodial*. If he be, he will probably wish that Mr. Lupton had explained the word in a note. It would not have taken half the space he has occupied in his suppositions on Richard Cœur de Lion, which a young fellow, being crammed, will find useless. Sometimes the said young fellow will be altogether misinformed, as in the case where Mr. Lupton tells him that on the 12th February, 1554, Elizabeth "was seized at Ashbridge," which, as regards the locality, is entirely new to us. In another way the compiler is incorrect. Speaking of the Thistlewood gang, he says that they "met in a loft in Cato Street"; he should have added, "which is now called Homer Street." We might point out other defects, but there is so much of evident hard, and, in some cases, useful work in the book that we will not press our judgment too adversely.

Arnold of Brescia: a Dramatic Poem. By Sophia Skelton. (Simpkin, Marshall & Co.)

THERE is a convenient opening for the display of patriotic feeling in the subject of this drama, for luckily, at the time of the unfortunate Arnold of Brescia (who expiated the crime of preaching Reform by a fiery death in the Piazza del Popolo), the sovereign Pontiff was, for the first and last time, an Englishman. Miss Skelton has ingeniously given us an interest in Adrian the Fourth (Nicholas Breakspere) by picturing the cold, hard, mediæval prelate as softened by the influence of Arnold's rigid virtue, and visiting him in disguise by night in the hope of converting him and saving him from a dreadful death. Then, with a wonderful prescience, the pious enthusiast foretells the liberation of Italy, the reign of Victor Emmanuel, and the glories of Magenta and Solferino. Thoroughly melted at last, the compassionate pontiff exclaims, with striking originality, "Were I not Adrian, I would Arnold be!" With all this the "amber-haired" Saxons are somehow mixed up, though a candid Englishman must needs confess that, except in the way of writing "leaders," the British public has done but little to aid the cause of Italian nationality. The execution of the poem is scarcely on a par with its conception, and the muse of Trajedy (so the author spells the word derived from *τραγῳδία*) would hardly be satisfied with such lines as these:—

My husband, fast comes down the darkening night,
Tis time our worthy guests retire; a fright
You've given me.

—Or with the following:—

The interdict is taken from the city,
And that mistaken man, whose fate I pity,—

—Or with,—

The war of many interests and the power
St. Peter's representative claims as dower.

And it may be doubted whether England was "courteous, gay, and free" in the twelfth century, and whether "gendarmes" would have rushed forward spontaneously to protect a Zingari maiden on the banks of "Lake Zurich" at that enlightened period. A chorus of choristers (singular alliteration!) takes part in the opening of the drama, and the volume concludes with a couple of fiery odes, in one of which a group of Italian warriors of the present day thunders forth, "Then vengeance, vengeance, vengeance, let vengeance be the cry." Napoleon the Third, Garibaldi, and the Archangel Gabriel figure conspicuously in these supplementary effusions; but England, of course, contrives to creep in edgewise.

The Eldest Miss Simpson, her Haps and Mishaps; her Offers and Engagements; her grandest Success and most woeful Failure. By C. H. Ross. (Ward, Lock & Tyler.)

WHAT a screaming farce is to one of Shakespeare's plays 'The Eldest Miss Simpson' is to the best novels at the "Limited Libraries." It is rapid, sensational, absurd, having neither rhyme nor

reason, but with that exaggerated drawing of character and dealing out of fun which belong to most of the shilling series of tales, and which, doubtless, best suit shilling readers. It is illustrated by the author in the same style in which he writes,—the caricature style prevailing, and a general exaggeration of nature, human and animal. The pictorial sketches, though weak and often incorrect, display some promise; and the literary part of the book, though weak too, and a little vulgar, induces us to think the author might do better things.

The Story of a Sister; Family Recollections—(Récit d'une Sœur; Souvenirs de Famille). By Mrs. Augustus Craven, born a La Ferronnays. Vol. I. Second Edition. (Paris, Didier & Co.)

WE cannot see the veil drawn back which hides from the world the hopes and the fears, the struggles of Conscience, the sacrifices, great in proportion to their modesty, of truthful, delicate, devout persons, who lived up to their sense of duty for Virtue's sake, never counting earthly gains or losses, without feeling that the sanctity of unobtrusive virtue is in some degree desecrated, be the motive of those who offer such revelations never so good, or the hand of the narrator never so implicitly guided by affectionate remembrance, and the desire to do service to mankind by setting forth goodly examples for coming men and women to follow. Mrs. Craven has felt no such misgiving or reserve in tracing the life and character of her sister-in-law. Her reason for so doing is not hard to divine. It does not lie in a vain, vulgar fancy to exalt a family circle by exhibiting the high-mindedness and religion of its members, as some might be disposed to conceive. The spirit of prose-lytism, which shows itself so fearlessly enthusiastic and active among earnest female Roman Catholics, has driven Mrs. Craven into print. Her sister-in-law, a gracious, gentle creature, rich in all the charms of heart and soul which make life a blessing to those on whom they are shed, was incomplete, till the bitterness of her sorrow, in seeing a beloved husband fading away, impelled her to embrace his faith by his deathbed. Let the touch be never so tender which is laid on events such as this, there is no escaping from, nor disguising, the fact, that they illustrate the immodesty of infallibility with a painful force. The story of "Conversions" is a favourite one in every world of religionists. Mrs. Craven, no doubt, would feel outraged were her book—in many of its passages touching—classed with those coarser records of more lowly-born persons, which the world of multi-form Dissent furnishes by the thousand. Yet there is none of the tales of "judgments," "warnings," and the like,—from which the reverent and humble-minded shrink,—more instinct with overweening superstition than this. The argument of it is graced, and scented, and decorated, no doubt, as it should be, coming from the hands of a woman as earnest in her adherence to a picturesque and easy faith as she has been delicately nurtured. But that there is the arrogance of Authority in the record must be plainly told; and as a contributor to the literature of "holy living and dying," Mrs. Craven can only rank with such Protestant women as "Charlotte Elizabeth," who shook the hand of denunciation at "the Mass House," in St. George's Fields, when she was taken forth from London to her deathbed.

Paris to Boulogne. (Hachette & Co.)

Norman France—[France Normande]. (Hachette & Co.)

THE new volumes of their "General Itinerary of France" which Messrs. Hachette & Co. have lately published are in most respects excellent samples of handbooks. The historical information is ample, and there are all needful maps and illustrations. For instance, the route from Paris to Boulogne—an ungrateful journey, in most parts, to the lover of the picturesque—every little town or village is noted, with its distance from Paris, Amiens and Boulogne. From St. Denis (where every pin's-point of interest is caught, from the tombs of kings to the "traditional *matelotes*,") to Étapes (which the English burned on the morrow

of Crécy) and Pont de Briques, where it is still the fond belief of Boulogne visitors that there is fair fishing to be had, no *chef lieu*, no battle-field, or birthplace of an illustrious man is forgotten. The cab and omnibus fares, the hotels, the local industries, are never neglected, so that the commercial traveller is as satisfactorily informed as the antiquary. 'Norman France' affords ample material for the ambitious guide-book compiler. The subject has tempted many, and not a few have unsatisfactorily dealt with it. The volume of "The General Itinerary of France" before us is a stout, closely-printed book of more than 500 pages. In addition to the illustrations, there are seven full-coloured maps and four plans. It is preceded by a series of model itineraries for excursions of eight or fifteen days. The preliminary advice to tourists is carefully set forth. There is, moreover, a rich catalogue of the works which have been written on Normandy. In short, the store of facts is surprising. If there be a fault in this guide it is one that is common to all the *Guides Joanne*. There is no personal observation. The artist element is wanting. The compiler never suggests a point of beauty, nor wakes the enthusiasm of the tourist. The facts lie in their nakedness. We should be glad to have a picture realized. A description of the view any from the ruins of Arques, would be refreshing. The approach to Rouen by railway is worth word-painting. Occasionally we find ludicrous comparisons, or places made ridiculous by reference to Paris. Thus, the poor little Café de Rouen is called the Tortoni of Dieppe. Dieppe itself, with the picturesque Bollet, is a good subject for amusing and instructive description,—with its cigarettes, ivory carving, and its abandonment of herring-curing for the lucrative exactions of lodging-letting in the season. But, the shortcomings at which we have hinted apart, these guide-books are in all respects admirable. No foreigners who started on the *Tour de France* with M. Hachette's "General Itinerary" could possibly find themselves at a loss on the road, could lose their way, or could, if they followed the sagacious Joanne, miss an object of real interest.

We have on our table the following Pamphlets:—*Land Tenure in Ireland: a Plea for the Celtic Race*, by Isaac Butt (Dublin, Fowler),—*Union Rating, Ireland*, Speech of Mr. Serjeant Barry, M.P., delivered in the House of Commons, on Wednesday, June 13, 1866, on moving the Second Reading of the Poor Law (Ireland) Amendment Bill, with Notes, Statistical and otherwise, by J. Fisher (Longmans),—*Reply to a Letter addressed to Malcolm Ross, Esq., President of the Manchester Chamber of Commerce*, by John Dickinson, jun., Esq., on the Subject of the Manchester Conference, Jan. 24, 1866, by Robert Knight (Johnson),—*On Cesar's Account of Britain and its Inhabitants in reference to Ethnology*, by John Crawford, Esq., (Spottiswoode & Co.),—*Operations of the War in 1866*, Sketch Maps and Notes, by Major F. Miller, R.A., No. I.—*Invasion of Bohemia* (Stanford),—*Sugar-Making in the West India. Why should not the Products of the Sugar-Cane be imported into this Country as a Sirup?* by Alexander W. Anderson (Rider),—*The Herne Bay, Hampton, and Reculver Oyster Fishery Company: Evidence taken on Oath in the Committee of the House of Lords, April 19 and 20, 1866, on the Bills promoted by the Whitstable, and the Herne Bay, &c., Fishery Companies, with an Explanatory Introduction and Notes contributed to by several Hands* (Wilson),—*Local Courts and Tribunals of Commerce*, by R. M. Pankhurst (Manchester, Simms),—*My Own Philology*, by A. Tudor (Trübner),—*Remarks upon English Education in the Nineteenth Century*, by the Rev. William Ponnud, M.A. (Livingtons),—*The Alleged Conversion of the Irish Bishops to the Reformed Religion at the Accession of Queen Elizabeth, and the assumed Descent of the present established Hierarchy in Ireland from the Ancient Irish Church, disproved*, by W. Maziere Brady, D.D. (Longmans), and *The Crusade of Charity: a Sermon preached by Arthur Penrhyn Stanley, D.D., at the First Annual Service for the Bishop of London's Fund, held in Westminster Abbey on June 6, 1866* (Parker).

LIST OF NEW BOOKS.

Bennett's History of Old Church of St. John of Fremes, 12mo. 3/6
Co-Helms (The), by Author of 'Charley Nugent,' 3 vols. 31/6 cl.
Dalton's Lost among the Wild Men, cr. 8vo. 6/6 cl.
Jacobson's Revelations of a Police-Court Interpreter, 12mo. 5/ cl.
Maxwell's Atonement, 12mo. 1/6 cl.
Miller's Our Hymns, their Authors and Origin, cr. 8vo. 6/6 cl.
Our Own Hymn-Book, compiled by Spurgeon, 32mo. 3/6 cl.
Richardson's Religio Anima, and other Poems, 12mo. 7/ cl.
River Reeds (Poems), 10. 8vo. 2/6 cl.
Ross's The Bluest Miss Simpson and her Mishaps, cr. 8vo. 1/ swd.
Scutledge's Every Boy's Annual, 1867, 8vo. 6/ cl.
Selections, New and Old, Preface by Bishop of Oxford, 12mo. 4/6
Stavely's British Spiders, part 8vo. 10/6 cl.
Sunday Magazine, Volume for 1866, royal 8vo. 8/6 cl.
Telegraph Secrets, by a Station-Master, 12mo. 1/ swd.
Tutlett's Through the Clouds, 12mo. 3/ cl.
Winnall's Coal-Dealer's Ready Reckoner, oblong, 1/ swd.

POLARIZATION OF THE NORTHUMBERLAND.

September 12, 1866.

In the *Athenæum* of last week the following announcement appears: "The curious magnetic polarization of H.M.S. Northumberland, arising from her having been built north and south, has been destroyed by reversing that position and then de-magnetizing her by means of two of Grove's batteries." It may be inferred from this statement, in connexion with one of a similar nature made to the British Association, at Nottingham, in a paper by Mr. Evan Hopkins, C.E., 'On the Depolarization of Iron Ships to Prevent the Deviation of the Compass,' that, by the process alluded to, the magnetism acquired by an iron ship in building was, in the case of the Northumberland, so destroyed as to render the compasses on board that ship free, or nearly so, from error.

As everything connected with the correction of the deviation of the compass is not only of scientific interest, but of vital practical importance to the mercantile as well as the royal marine, it is incumbent on those whose duties enable them to speak with certainty not to allow erroneous statements on this subject to pass without correction.

The Northumberland having been built with her head nearly north, the compasses in the after-part of the ship had originally very large deviations. When the ship was taken to the Victoria Docks, she was, on the submission of this Department, placed in an opposite direction, or with her head nearly to the south, so as to decrease as far as possible the original deviations acquired in building. By careful observations made on the 21st of April last, immediately after she was placed in the docks, the maximum semi-circular deviation of two compasses, one on the front of the poop and the other on the quarter-deck, were respectively $54\frac{1}{2}^{\circ}$ and 51° ; by equally careful observations made on the 10th of August, these deviations were $55\frac{1}{2}^{\circ}$ and $46\frac{1}{2}^{\circ}$.

The operations of Mr. Evan Hopkins having been performed on the 4th of August, the above results show that, whatever local effect these operations may have had,—as to which I have no evidence,—no appreciable general effect was produced, and that the Northumberland has in no sense of the word been "depolarized."

FERD. JNO. EVANS, Staff-Commander R.N.,
in charge of Admiralty Magnetic
Department.

THE EMPEROR TEÓDROS (THEODORE) OF
ABYSSINIA.

Bekesbourne, Sept. 12, 1866.

It is on many accounts to be regretted that the late Consul Plowden's Reports, addressed to the Earl of Clarendon in the years 1854 and 1855, should have been allowed to remain until now buried in the archives of the Foreign Office.

The interesting and most valuable "sketch of the laws, customs, government and position of Abyssinia, with a short account of its neighbours," does, indeed, "present such a perfect picture . . . that it is as good as if it were drawn yesterday." But Mr. Plowden's portraiture of the extraordinary man, who for some time past has held, though he scarcely holds any longer, the destinies of Abyssinia in his hand, was, it is to be feared, too flatteringly painted, and it certainly no longer represents the Theodore of the present day. Before proceeding further, I wish to make a remark on the names and title of the Emperor Theodore. His original name was *Kassai*, and he became Dedj-Azmaj—contracted into *Dedjatj*—that is to say, Duke, or

rather Grand-Duke, or yet more literally, Duke-Palatine, of the province of Kwara. On his accession to the throne he assumed the name and title of *Teódros*, the King of Kings of Ethiopia; this name being the Abyssinian rendering of the Greek Θεόδωρος (with the accent on the antepenultimate), in English, Theodore. He now preferred to be called "King of Kings," without any qualification, his aspirations extending far beyond "Ethiopia."

Europeans who knew Dedjatj *Kassai* before he came to his greatness were far from speaking of him in such unqualified terms of praise as his friend and admirer Mr. Plowden; and several Abyssinians who were in my service twelve years ago (see *Athen.* No. 1398, August 12, 1854, p. 994) gave me almost as bad an account of his personal character as that which I received from Abyssinia only three years since. "Can the Ethiopian change his skin, or the leopard his spots?"

I would request you to give publication to the following extract from my correspondent's letter:—"Abyssinia, I regret to say, has not improved since my last visit. The King who, in the beginning of his reign, gave great promise that he would introduce a new era of peace and prosperity to this long-distracted and misgoverned empire, has grievously disappointed the general expectation. Infatuated with the idea that he was the chosen instrument of Heaven to perform exploits that would elicit the world's applause, he led the life of a saint in the camp, and displayed the daring of a hero in battle. As long as success attended his varied enterprises, all was *couleur de rose*; but no sooner did he discover treacheries among his governors, and wide-spreading conspiracies among the troops, than he abandoned the false character he had assumed, and descended to the common level of all former Abyssinian monarchs. Since his defeat of Agau Negúsyé, the Tigré rebel, who expiated the crime of his ambition by a cruel death, the despot has wasted part of the Wollo-Galla country; and, during the last year, all his forces have been applied to subjugate to obedience the province of Godjam. Tádela Gwalu, who is the leader of the rebels, to forestall any reverse, has entrenched himself on the Ambas Djebella, Mitera and Tsamara, where, it is said, a sufficient quantity of provisions is stored up to last him and his numerous army upwards of fourteen years.

"The persevering resistance of this pretender to the throne has exasperated Theodore to a pitch almost bordering on frenzy. Damot, Agaumider, and part of Dembea, which were suspected of disaffection, have already experienced the severe doom of traitors; and it is said that a similar fate awaits other districts and provinces. The cruel and licentious soldiery, too delighted with the royal licence to plunder, have perpetrated the most revolting deeds of cruelty. Confiscation and rapine have been the lot of the patient and submissive; but wherever any remonstrance was offered, blows, and in scores of instances death, became the punishment. Even churches, which were hitherto considered inviolable, did not escape the devastating storm.

"This unprecedented mode of intimidation has awakened horror and detestation among friends and foes, and it will take years, if the despot so long maintains his power, till the impression of the late proceedings is effaced. Just now he is encamped in Maitaba, south of Lake Tsana; but I question whether his vast army will not prove dangerous to himself in an impoverished and hostile country. The peasantry are all weary of this unsettled state of the empire, and secretly sigh for a change of government. I do not think that Egypt needs to be oppressed with the apprehension of troubles from Abyssinia. King Theodore is fully conscious of his weakness, and unless his insatiable ambition degenerates into aberration of intellect, he will do well to subdue his internal enemies before he plunges into a foreign war."

This was written from Southern Abyssinia in 1863. When I was in the northern portion of the empire, in the beginning of the present year, I heard everything thus stated fully confirmed, and more than confirmed. Like the children of Israel, the Abyssinians sigh by reason of their bondage under a sovereign whom they do not scruple to

style, "Pharaoh, King of Egypt," and they look anxiously, yet hopefully, for a day when a deliverer shall arise, like Moses, to free them from their oppressor.

In spite of all his failings, Theodore might have been the restorer of the ancient empire, had not circumstances turned out so fatally against him. His first and greatest calamity was the loss of his English friends, Consul Plowden and Mr. Bell, both killed, in the beginning of 1860, by the troops of Dedjatj Negúsyé, whom the French Government had recognized as the independent sovereign of Tigré, in consideration of the cession to France of the sea-coast at Zulla (Adulis) and the island of Dissee opposite.

Deprived of his tried friends and counsellors, and with no Englishmen to replace them, he took up with others less trustworthy, or else abandoned himself to his uncontrolled passions, and, losing his prestige, he became subjected to repeated reverses. In addition to the "rebel" Tádela Gwalu, who still defies him in Godjam, the King of Shoa has escaped from prison, and re-established himself as an independent sovereign; whilst in the northern portion of the empire there now exists a pretender to the throne in the person of the Waag-shum Góbazyé, the prince of greatest rank in the empire, and in every respect more formidable than the defeated and slaughtered Negúsyé. Góbazyé is to reign by the name of *Hiskias* (Hesekiah), and, in fulfilment of the native prophecy, will be the precursor of the true *Teódros*.

Mr. Plowden truly said that "Abyssinia, with a seaport of its own, a settled boundary, and a king with civilized ideas, would be worth treating with on something like equal terms."

How the British Government have treated the Emperor Theodore is a subject which cannot be discussed in the columns of the *Athenæum*; but I am preparing for the press a second edition of 'The British Captives in Abyssinia,' in which it will be fully gone into. I may, however, be allowed to remark here that, as regards Abyssinia itself, that christian country has recently been deprived of all chance of acquiring a seaport of its own through the transfer, made by weak Turkey to powerful Egypt, of the whole of the western shores of the Red Sea; which, as the Porte has for several centuries past claimed Abyssinia by right of conquest, is virtually a transfer of the entire country. This right to Abyssinia is not merely nominal, though whilst the Porte held Massowah it was little more than a matter of form. Mr. Plowden relates that, "as the Pasha of Massowah must give some account of the twenty provinces supposed to be submitted to his authority, every few months he procures the signature of a number of people in Massowah to a paper setting forth that perfect order and tranquillity reign everywhere in the Sultan's extensive possessions in this part of the world. In a manner hitherto believed to be peculiarly Chinese, this despatch is always sent when the neighbourhood is most disturbed and when marked disorders have occurred in the town."

But this is now all altered. The Egyptian Government, since the transfer (which was carried out only at the end of last April), have not merely placed a strong garrison in the island of Massowah and along the coast, but they have assembled large bodies of troops along the northern frontiers of Abyssinia, with a view to take possession of a portion, at least, of the twenty provinces supposed to be submitted to their authority.

England cannot disavow complicity in these aggressions of Egypt on Abyssinia; for Consul Cameron was strongly blamed by Earl Russell for interfering on behalf of the frontier district, and the late British Ambassador at Constantinople, Sir Henry Bulwer, was mainly instrumental in the transfer from Turkey to Egypt of the Abyssinian seaboard.

The object of this transfer is understood to have been the exclusion of the French from the shores of the Red Sea. But, unluckily, it did not take place till after the French had acquired possession of Obokh, which settlement, as Consul Cameron wrote home to Earl Russell on the 31st of October, 1862, is merely intended for a base of operations against Abyssinia; and the King of Shoa has

already been in communication with the agents of France with a view to the introduction of warlike implements from the coast (see the *Times* of the 18th of October, 1865). But it is not in the south of Abyssinia alone that the French have acquired a footing, and thus out-manceuvred England. In the north-eastern portion of the empire, which, only a few years since, was treated by them as an independent kingdom, a Roman Catholic mission, supported chiefly, if not entirely, by France, has existed for twenty-eight years, and has each year gone on extending the field of its labours and intrigues; so that, as I was assured when last in Abyssinia, its proselytes now number 60,000 souls. On the other hand, the Protestant missions, mainly supported by England, have been more than once expelled, and are now entirely withdrawn; the poor missionaries, however, remaining in captivity! In my pamphlet, 'The French and English in the Red Sea,' published in 1862, I called attention to "the interested but, at the same time, enlightened views of France, which she will continue to carry out by all the means in her power, and (as is manifest) without being over-scrupulous as to the character of those means." And I was forced to add, "England, on the other hand, after intermeddling most needlessly and mischievously in the affairs of Abyssinia, appears now to be simply drifting with the current of events, which she knows not how to stem. Circumstances will, however, be sooner or later such as to force her to intervene with an armed hand, and (as she usually does) atone for past incapacity and neglect by the sacrifice of millions of treasure and tens of thousands of human lives." CHARLES BEKE.

NOTES FROM NAPLES.

Naples, Sept. 7, 1866.

THE cholera of this season has deprived us of one of two gentlemen well known to the artistic world of Naples. The landscape-painter, D'Auria, and Taddei, the well-known actor. D'Auria, who produced several paintings of considerable merit, died last Saturday. Taddei was taken away still later, but by apoplexy. For many years he has made the fortune of the Teatro de' Fiorentini, and was an admirable interpreter of the works of Goldoni. His loss is very deeply felt.

There is little or nothing to report of dramatic interest just now, for the theatres are abandoned, and all who can have left Naples. Amongst the principal artists engaged for the coming season at San Carlo, Signore Bendazzi and Palmieri are mentioned as *prime donne*, Stigelli and Bertolini as tenors, Colonnese and Pandolfini as baritones, whilst Boschetti is to reappear as *prima ballerina*. Some exception, however, is taken to the tenors and to the *ballerina*. It appears to be decided to open the season at San Carlo with the 'Trovatore.' The new opera of Pacini will be given to the public towards the end of November, and if report speaks truly, Pacini has offered another work to the Direzione. This opera, set to another *libretto*, under the name of 'Carmelita,' is said to be the same as the 'Don Giovanni di Marana' of Alexandre Dumas. It has not, therefore, the merit of novelty, and though Pacini prefers it to his other opera, it is feared that it will attract little at San Carlo.

The state of the Lago d'Azunano has lately awakened much anxiety in consequence of the pestilential smells arising from it. You are doubtless aware that the work of draining it was commenced last winter, with the intention of restoring the redeemed ground to cultivation. During the summer, of course, all operations have been suspended; but the exhalations arising from it have lately called forth public attention. After a minute examination of the bed of the lake, the official report states that on the northern bank a large quantity of vegetable matter, in a state of putrefaction, and thousands of fish, dying or dead, have been found. The cause of the mortality of the fish is supposed to be the development of sulphuric gas and carbonic acid gas under this volcanic soil. The dead fish have been buried, and the ground covered with a stratum of lime. The works of draining will be continued as the season advances. H.W.

LIFE IN SPAIN.

Alicante.

THAT prince of polite letter-writers, James Howell, Esq., evidently understood Spain and the Spaniards well; he was in Madrid when Baby Charles and Buckingham on a certain night knocked up Lord Bristol out of his first sleep,—England's royal prince having ridden post-haste all the way from London to judge for himself touching a certain young lady, of whom Howell says, "She is rather of a Flemish complexion than Spanish, fair hair'd and carrieth a most pure mixture of red and white in her face; she is full and big lipp'd; she now goes upon sixteen, and is of a tallness agreeable to those years." On the 27th day of March, A.D. 1621, Howell dates an epistle from Alicante to one Christopher Jones, Esq., at Grayes Inne, and says:—"I am now come to Alicante, the chief Rendezvous I say'd at in Spain, for I am to send hence a commodity call'd Barilla to Sir Robert Mansell for making of Crystal Glasse; and I have treated with Signor Andriotti, a Genoa Merchant, for a good round parcel of it to the value of 2000 pound. The Venetians have it hence." Further on, he addresses a letter to this same Sir Robert Mansell, the barilla-merchant, as Vice-Admiral of England. The speculation may have proved profitable to the Vice-Admiral, but poor Howell was soon afterwards an inhabitant of a very different Fleet. Of Alicante he writes, "I have bin here this three months, and most of my food hath bin Grapes and Bread with other roots, which have made me so fat that I think if you saw me you would hardly know me, such nouriture this deep sanguine Alican grape gives." And again, "If you come to Alicante commend me to Francisco Marco, my landlord; he is a merry drole." You may look in vain for a statue of this Alicantine Mark Tapley. Our landlord of to-day is a most respectable and obliging person; but if he be a "merry drole," he does all his hilarity in private. His dining-room is like a barn set out for a Harvest Home, barren of furniture and not overdone with clean table-linen.

I have said that Alicante has its castle, and it wasn't built yesterday; it has also its Plaza de Toros, which was; and it is as ugly as the sport it was built for. The Alicantinos enjoy the sight, and flock to the "Funciones." I suppose that civilization will some day stamp out this last remnant of a "*morituri te salutant*" school of amusement,—but it draws better than instructive lectures; and if numbers in the auditorium be an index of popularity, bull-fighting is popular in Alicante. Poetry has done her best to idealize this brutal and senseless exhibition. Viewed from a common-sense point of view, it is a barbarous, prosaic business; and as the public now demands that history and pictures should be true transcripts by eye-witnesses, here is a proxy notion of a bull-fight I witnessed in the Plaza de Toros of Alicante.—

A strong and savage Bull, by salt and torture madden'd,—Smart "Chulos" in their salmon silks and lights,—Some Picadors on bags of bones call'd horses mounted, More fit for catmeat than for fights.

The Picadors are lifted to their seats,
Their legs encased in armour made of tin;
Their so-called Pics are lengthy drovers' goads,
Just tipped with steel the hide to enter in.

Some melancholy swells called Alguazils,
Like undertakers' men, all clothed in black,
To see fair play for horse and man. Poor Bull,
Bos, shall be slain, but not for steaks, alas!

The door flies ope, the brute bounds madly forth,
The Chulos with their red cloaks armed;
Bos charges close a bony, blinded hack—
Both horse and man bite dust!—and Alicante's charmed.

Bravo! Toro! Chulos shake their red rags now
Before the bloodshot eyes of fierce and madden'd Bull;
The Picador is borne away—the hack well kicked,
To wake him up; he's stiff, and lame, and dull.

The horses shamble round the ring, are lame,—
A bag of equine bones beneath a horse's hide;
The knackers farm these staggering steeds;
Silk handkerchiefs before their eyes are tied.

The Alcalde (Mayor) now takes his honoured seat,
To view the sport Young Alicante loves;
The trumpet sounds—some speech—the fight begins—
N.B. the Alguazils wear white kid gloves.

The flourish o'er, the audience take their seats,
"Fulano, Tal," screws his "papillito" tighter,
Plies the fusee, and lo! the weed's alight;
Now woe to every clumsy Bull beef fighter!

The Bull they've lashed to savage, foaming rage,
While penn'd within his darkened cell;
Mayhap they've rubbed his hide with salt,
To make him lively, and do the fighting well.

Act one the Pic, Act two the Cloak, Act three the Squibs—
The last to raise the flagging buttings of the brute;
Act four Espada, with his slender sword;
Killed at one blow—applause! missed—groans, éternelle!

The quivering corse is dragged around the ring,
Three mules withdraw it from the public sight;
Some sawdust strewn, another Bull as fierce
As last, and then all o'er again the brutal fight.

Cesar, "those about to die salute thee!"
Man fights with man, and takes the gladiator's chance:
Poor Bos, foredoomed to die, makes Spanish sport—
Mantillas, fans, and sparkling eyes, Romance.

Either there are no ladies in Alicante, or they do not grace the Bull-ring; the majority of the *Señoritas* are probably *employées* of the tobacco factory here: some are of the most magnificent type of beauty Spain produces—the semi-Moorish, —familiar to the Englishman's eye on Phillip's canvases. These ravishing beauties seemed to enjoy the sport immensely, and have their favourite Chulos or Picadores in the ring. The men, as a rule, are less handsome, more dried up, but wonderfully light and active. The Guide-books sum up the beauties of this dusty city thus:—"The environs are denuded, and the soil salinuous." The export of the commodity James Howell, Esq. dealt in has declined seventy-five per cent.; the Spaniards adulterated it, and artificial soda supersedes it; and so "cheating never thrives."

As you sail into the port, Alicante looks much more attractive than a closer acquaintance proves it to be. The houses are low and picturesque; the chain of mountains in the background very beautiful, the blazing sun lighting up every inequality and crevice; while the peculiar purple of the Mediterranean, smooth as a lake, fills in the foreground of the picture. F. W. C.

SUPPLEMENT TO THE BUDGET OF PARADOXES.
(No. VII.)

The Cottle Church (No. 25). Had I chanced to light upon it at the time of writing, I should certainly have given the following. A printed letter to the *Western Times*, by Mr. Robert Cottle, was accompanied by a manuscript letter from Mrs. Cottle, apparently a circular. The date was Nov^r 1853, and the subject was the procedure against Mr. Maurice at King's College for doubting that God would punish human sins by an existence of torture lasting through years numbered by millions of millions of millions of millions (repeat the word *millions* without end), &c. The memory of Mr. Cottle has, I think, a right to the quotation: he seems to have been no participator in the notions of his wife.—

"The clergy of the Established Church, taken at the round number of 20,000, may, in their first estate, be likened to 20,000 gold blanks, destined to become sovereigns, in succession,—they are placed between the matrix of the Mint, when, by the pressure of the screw, they receive that impress that fits them to become part of the current coin of the realm. In a way somewhat analogous this great body of clergy have each passed through the crucible of Oxford and Cambridge,—have been assayed by the Bishop's chaplain, touching the health of their souls, and the validity of their call by the Divine Spirit, and then the gentle pressure of a prelate's hand upon their heads; and the words—'Receive the Holy Ghost,' have, in a brief space of time, wrought a change in them, much akin to the miracle of transubstantiation—the priests are completed, and they become the current ecclesiastical coin of our country. The whole body of the clergy, here spoken of, have undergone the preliminary induction of baptism and confirmation; and all have been duly ordained, *professing* to hold one faith, and to believe in the selfsame doctrines! In short, to be as identical as the 20,000 sovereigns, if compared one with the other. But mind is not malleable and ductile, like gold; and all the preparations of tests, creeds, and catechisms will not insure uniformity of belief. No stamp of orthodoxy will produce the same impress on the minds of different men. Variety is manifest, and patent, upon everything mental and material. The Almighty has not created, nor man fashioned, two things alike! How futile, then, is the attempt to shape and mould man's apprehension of divine truth by one fallible standard of man's invention! If proof of this be required, an appeal might be made to history and the experience of eighteen hundred years."

This is an argument of force against the reasonableness of expecting tens of thousands of educated readers of the New Testament to find the doctrine above described in it. The lady's argument against the doctrine itself is very striking. Speaking of an outcry on this matter among the Dissenters against

one of their body, who was the son of "the White Stone (Rev. ii. 17), or the Roman cement-maker," she says—

"If the doctrine for which they so wickedly fight were true, what would become of the black gentlemen for whose redemption I have been sacrificed from April 8, 1839."

There are certainly very curious points about this revelation. There have been many surmises about the final restoration of the infernal spirits, from the earliest ages of Christianity until our own day: a collection of them would be worth making. On reading this in proof, I see a possibility that by "black gentlemen" may be meant the clergy. I suppose my first interpretation must have been suggested by context: I leave the point to the reader's sagacity.

(Nos. 15, 2 and 28). A Correspondent, who is evidently fully master of details, which he has given at length, informs me that the Moon hoax appeared first in the *New York Sun*, of which R. A. Locke was editor. It so much resembled a story then recently published by Edgar A. Poe in a Southern paper, 'Adventures of Hans Pfaal,' that some New York journals published the two side by side. Mr. Locke, when he left the *New York Sun*, started another paper, and discovered the manuscript of Mungo Park; but this did not deceive. The *Sun*, however, continued its career, and had a great success in an account of a balloon voyage from England to America, in seventy-five hours, by Mr. Monck Mason, Mr. Harrison Ainsworth, and others. I have no doubt that M. Nicolle was the author of the Moon hoax, written in a way which marks the practised Observatory astronomer beyond all doubt, and by evidence seen in the most minute details. Nicolle had an eye to Europe. I suspect that he took Poe's story, and made it a basis for his own. Mr. Locke, it would seem, when he attempted a fabrication for himself, did not succeed.

(No. 28). The author of 'An Essay on the Constitution of the Earth,' published in 1844, demanded of the *Athenæum*, as an act of fairness, that a letter from him should be published, proving that he had as much right to be "impaled" as Capt. Drayson. He holds, on speculative grounds, what the other claims to have proved by measurement, namely, that the earth is growing; and he believes that in time—a good long time, not our time—the earth and other planets may grow into suns, with systems of their own.

This gentleman sent me a copy of his work, after the commencement of my Budget; but I have no recollection of having received it, and I cannot find it on the (nursery? quarantine?) shelves on which I keep my unestablished discoveries. Had I known of this work in time, (see the introduction) I should, of course, have impaled it (heraldically) with the other work; but the two are very different. Capt. Drayson professes to prove his point by results of observation; and I think he does not succeed. The author before me only speculates; and a speculator can get any conclusion into his premises, if he will only build or hire them of shape and size to suit. It reminds me of a statement I heard years ago, that a score of persons, or near it, were to dine inside the skull of one of the aboriginal animals, dear little creatures! Whereat I wondered vastly, nothing doubting; facts being stubborn and not easy drove, as Mrs. Gamp said. But I soon learned that the skull was not a real one, but artificially constructed by the methods—methods which have had striking verifications, too—which enable zoologists to go the whole hog by help of a toe or a bit of tail. This took off the edge of the wonder: a hundred people can dine inside an inference, if you draw it large enough. The method might happen to fail for once: for instance, the toe-bone might have been abnormalized by therian or saurian malady; and the possibility of such failure, even when of small probability, is a great alleviation. The author before me is, apparently, the sole fabricator of his own premises. With vital force in the earth, and continual creation on the part of the original Creator, he expands our bit of a residence as desired. But, as the Newtonness of Cookery observed, First catch your hare. When this is done, when you have a growing earth, you shall

dress it with all manner of proximate causes, and serve it up with a growing Moon for sauce, a growing Sun, if it please you, at the other end, and growing planets for side-dishes. Hoping this amount of impalement will be satisfactory, I go on to something else.

(No. 28). Mr. Hailes continues his researches. Witness his new Hailsean system of Astronomy, displaying Joshua's miracle-time, origin of time from science, with Bible and Egyptian history. Rewards offered for astronomical problems. With magnetism, &c. &c. Astronomical challenge to all the world. Published at Cambridge, in 1865. The author agrees with Newton in one marked point. *Errores quam minimi non sunt contemnendi*, says Isaac: meaning in figures, not in orthography. Mr. Hailes enters into the spirit, both positive and negative, of this dictum, by giving the distance of *Sidius* from the centre of the earth at 163,182,008 miles 10 feet 8 inches 17-28ths of an inch. Of course, he is aware that the centre of *figure* of the earth is 17-1998 inches from the centre of *gravity*. Which of the two is he speaking of?

Some of my readers are hardly inclined to think that the word *paradox* could once have had no disparagement in its meaning; still less that persons could have applied it to themselves. I chance to have met with a case in point against them. It is the 'Philosophia Scripturae Interpretis, Exercitatio Paradoxa,' printed at Eleuthropolis, in 1666. This place was one of several cities in the clouds, to which the cuckoos resorted who were driven away by the other birds; that is, a feigned place of printing, adopted by those who would have caught it if orthodoxy could have caught them. Thus, in 1666, the works of Socinus could only be printed at Irenopolis. The author deserves his self-imposed title, as in the following:—

"Quanto sane satius fuisset illam (Trinitatem) pro mysterio non habuisse, et Philosophiæ ope, antequam quod esset statuerent, secundum vere logicæ præcepta quid esset cum Cl. Keckermanno investigasse; tanto fervore ac labore in profundissimas speluncas et obscurissimos metaphysicarum speculationum atque fictionum recessus se recipere ut ab adversariorum talis sententiam suam in tuto collocarent. Profecto magnus ille vir.... dogma illud, quamvis apud theologos eo nomine non multum gratiæ inveniit, ita ex immotis Philosophiæ fundamentis explicat ac demonstrat, ut paucis tantum immutatis, atque additis, nihil amplius animus veritate sincerè deditur desiderare possit."

This is properly paradox, though also heterodox. It supposes, contrary to all opinion, orthodox and heterodox, that philosophy can, with slight changes, explain the Athanasian doctrine so as to be at least compatible with orthodoxy. The author would stand almost alone, if not quite; and this is what he meant. I have met with the counter-paradox. I have heard it maintained that the doctrine as it stands, in all its mystery, is *a priori* more likely than any other to have been Revelation, if such a thing were to be; and that it might almost have been predicted.

A. DE MORGAN.

OUR WEEKLY GOSSIP.

A very deep disappointment has fallen on Manchester. The Queen will not be present at the inauguration of the commemorative Albert statue. Her Majesty fears the fatigue incidental to such ceremony, for which the Queen would have to break her journey southward. A sincere regret is felt that Her Majesty's health is not so good as when she honoured a similar ceremony at Darmstadt with her presence, and the lucky citizens saw the Queen walking in the market-place, in the evening, to take a last look of the memorial work of Art.

Prof. Ansted is about to publish, through the Messrs. Allen, a work on Physical Geography, which will be, it is hoped by the author, as acceptable to general readers as to especial students of the science, for whom it will also form a class-book. The respective works of Mrs. Somerville and Sir John Herschel were "exhaustive books" when they were published; but since that period there have been changes and progress in physical science, geology, and meteorology, and it is the treating with these new circumstances that will give peculiar interest to Prof. Ansted's volume.

Stanford's Map of Africa is almost large enough to take walking exercise over. Many a cunning

hand must have been concerned in its production; and the result is a nearer approach to perfection than has been accomplished by any other map. There may be a few places laid down that would admit of dispute; and it may be a question whether the Victoria Nyanza has the form and position in Africa which are here ascribed to it. In other respects, the map deserves the very highest commendation, not merely for its improvements and its corrections of long-standing errors, but also for its significant omissions. It reflects the greatest credit on all parties concerned in its production and publication.

The Coroner for Central Middlesex, Dr. Lankester, has put forth what may really be called a "manual" on 'Cholera: what it is, and how to prevent it.' The work is, in truth, a "handy book" of the subject on which it treats; and for sixpence the reader may acquire a knowledge of the history of Cholera, learn to know its symptoms, to prevent its assault, and how to meet it, with the best hopes of success, when the assault is made. Of the present attack, Dr. Lankester holds that it "has arisen from causes over which man holds almost supreme control." That control has not been applied against those causes, partly, perhaps, because of the universal ignorance as to the control itself. From our universities down to our ragged schools there is a general need, says Dr. Lankester, for "a larger teaching of those laws of life on which the health of the people depends."

The week's obituary includes the name of Charles Maclaren, who established the *Scotsman* newspaper, and lived to see it enter its jubilee year. Mr. Maclaren, whose most remarkable work was one on the topography of Troy, died in his eighty-fourth year. —The last of the Ponsonbys, as peers, the Baron William, expired on board his yacht, off Plymouth, bound for Madeira, on Tuesday. The barony was created in 1806, in the person of John Ponsonby (second son of the Earl of Beasborough), formerly Speaker of the Irish House of Commons. The Ponsonbys, of course, came over with the Conqueror, and were endowed with Cumberland acres. They have not done ill in the way of coronets. The Earl of Beasborough, Lord De Mauley, and the late Lord Ponsonby of Imokilly, being Ponsonbys and peers. The last line has failed; but the head of the family, i.e. the oldest male representative, is said to be plain "Miles Ponsonby, of Hale Hall, Cumberland." —We must add to the above the name of Lord Northbrook (Sir Francis Baring), one of the fifteen new peers created during the last session. The Barings are "new men," merchants who have passed from the counting-house to the House of Lords. Two coronets have been won by them, that of Ashburton and that of Northbrook. The late Lord Ashburton, it may be noticed, invented the phrase, "common things," in reference to the common ignorance of them.

Carlisle honoured itself last week by celebrating the centenary of the birth of one on whose labours may be said to be founded all modern scientific chemistry—John Dalton. Cumberland may well be proud of the poor weaver's son, who opened a school at the age of eleven, studied philosophy among his native hills, and sent his name forth to the ends of the world which interests itself in science, by his crowning work on the Atomic Theory.

One of Sir Edwin Landseer's finest pictures, painted when his eye, hand, and judgment were in their fullest vigour, has been bequeathed to the National Gallery, under reasonable stipulations, by the late Mr. Newman Smith. The picture is the celebrated 'Member of the Royal Humane Society,' the noblest figure of a dog that ever looked out from canvas. The picture is to remain with the testator's widow for life. It is then to pass to the National Gallery; but, if the trustees do not suitably hang it within six months, the picture is to become the property of the testator's brother. The trustees are not likely to let such a prize slip from them.

The Dean of Battle—chiefly at his own expense, but with aid from without, which he is still willing to receive—is restoring, through the competent

hands of Mr. Butterfield, the fine, interesting old church at Battle. Some years ago, when the ancient frescoes there, or, to speak more correctly, the mural paintings in distemper, were covered with whitewash, drawings were made of them by Brookes, of which prints were published. Mr. E. M. Ward, R.A., with others of kindred curiosity, has been effacing the barbarous whitewash, in order to restore to light and air the ancient pictorial history of Christ, attributed to the last part of the thirteenth or beginning of the fourteenth century. One object of the discoverers was to compare the mural paintings with the drawings; and, as far as they have gone, they find that the drawings do not correctly represent the paintings. Of the latter Mr. Ward describes the outline as being still perfect; but of the brilliant red and blue of the originals there is little left, save some patches of colour, the wrecks of an old glory.

Among the first effects of the Sanitary Act has been the closing, as unfit for human use, of twenty-three houses in Magdalen Court, Tooley Street, Southwark, the property of Magdalen College, Oxford, the "managers" of which declined to act in the matter. The police magistrates have ordered the premises to be shut up until repaired.

Half-crowns are no longer coined at the Mint, so says a recently-published Parliamentary paper. Florins have taken the place of these pieces in the issue. In like manner, the threepenny-piece is superseding the silver groat; no such coin as the latter has been sent out since March, 1865.

An Oxford Correspondent thinks we should not omit to mention, among the offices held by the Queen's late Ancient Serjeant, Manning, that he was also Recorder of Oxford, which office is of higher dignity than that of Banbury or of Sudbury.

We have received the following note from Miss Clarke:—

"The Lodge, Cambridge Park, Guernsey,
September 4, 1866.

"I did not see Miss Gifford's remarks on 'Common Seaweeds' until yesterday. It is quite true a friend of mine copied the Synopsis from her book. The occasion was this. Before I had ever heard of Miss Gifford's 'Marine Botany,' I was asked by Mr. Warne to write a popular and easy work on sea-weeds. Fifteen years ago I had studied them and the zoophytes in the rock-pools of my island home, and made from sixty to seventy drawings of their microscopic fructification. From time to time I collected and examined them anew. Landesborough was the only book I ever possessed; but Harvey's large edition of 'British Seaweeds' I had seen, and it had greatly helped me with rarer deep-sea plants. When asked to write an easy book, I inquired if any one already existed. A lady showed me 'Marine Botany.' It seemed a nice little book, but not at all the kind that Mr. Warne wanted. I thought over the subject, rambled along the coast, and formed a plan of my own, so different from Miss Gifford's that my best defence against her insinuations is to beg your readers to compare the two. It was very pleasant thus to concentrate the study of fifteen years. As I gazed into the deep pools at Moulin Huet, and turned over the hanging fungi on the Bordeaux rocks, the fullness of the subject was my only difficulty, as I was limited to a small book for cheap publication. The life of the seaweed is what I most care for. Every siphon in the Polysiphonia, every spore-case and urn on the beautiful *Dasya* and *Callithammon*, the poetry of the old *Laminaria* stem, and the wondrous beauty in scarcely visible parasitic plants, these have been my delight, and what I wished to point out to sea-side collectors. (I sent up plates of fructification, which are promised for the next edition.) These things enter not into Miss Gifford's book. It is systematic; and she is, doubtless, scientific and learned, which I am not. So, when my little work was written, from tide-pool to storm, I bethought me that some orderly index should be somewhere. I had only Landesborough and the borrowed book. I never dreamt of making a new systematic arrangement for sea-side readers, who would never read it; I then fore-left that and the making of an index to a young friend. I never even looked

at it, and had no idea of the scrape my carelessness would get me into. In the next edition I will take out Miss Gifford's, and give Landesborough's Synopsis. They are both very good for those who care about the matter. I am not likely, as she seems to fear, to write any more on that subject. I am engaged on an easy history of the Diptera—flies in the garden, flies on our window-pane, &c. They have long been my little friends. Few know them better than I do; but if Miss Gifford has already written on the subject, and will favour me with her book, I promise not to copy even her systematic arrangement.

"LOUISA LAKE CLARKE."

Shop-front literature is full of comic illustrations. The English advertisements in French hotels with their "Warm Baths at every o'clock," and in some German Hofs, with their "Here man dare not smoke," have their corresponding absurdities on this side the water. In the west suburb of London, a tobacconist's brilliant establishment has just been opened, over which is mounted the gilt inscription, in colossal letters, "Cigar Boutique." If the tobacconist's neighbour, the grocer, knows the difference between correct and incorrect French, the owner of the "Cigar Boutique" is likely to be treated as the grocer's coffee is said to be—"roasted daily on the premises."

The Royal Exhibitions to the Royal School of Mines, Jermyn Street, and the Government School of Science, Dublin, consisting of 50l. a year for three years, and free admission to the respective schools, have been awarded as follows: those to the Royal School of Mines to German Green, aged fourteen, monitor at the Lower Islington Public School, and Frederick J. M. Page, aged seventeen, son of a carriage-builder, London. Those to the Government School of Science have been gained by Charles G. Stewart, aged sixteen, chemist, Camden Town, London; John M'Allan, aged twenty-two, chemist's assistant, Dublin; and Stewart Williamson, jun., student of the Royal College of Chemistry, London.

We were glad to notice the other day that the practice of planting churchyards with flowers had been to some extent adopted in that of St. Paul's Cathedral. Why this very dingy edifice should not be made to rise from out of a sea of marigolds, or such like flowers that flourish in London, we cannot say. First among London churches so adorned was, we believe, that of St. Botolph's, Bishopsgate, where, not many years since, marigolds and hollyhocks were flourishing gorgeously. Readers of old poetry will remember the oft-repeated allusions to the marigold as the apt flower to such localities as these. Thus 'The Two Noble Kinsmen' of Beaumont and Fletcher contains, in the Bridal Song, reference to

Marigolds on death-beds blowing.

The sale of the Worcester Arboretum, to which we recently alluded, has taken place, and the land devoted to building lots, comprising eight streets. The price obtained was about 11,000*l.* It appears that Earl Dudley offered 5,000*l.*, if the folks of Worcester would raise a like sum for the retention of this place of recreation. These worthies declined to do this, and have lost their pleasure-ground.

'Parisians in London' is the name of a new sensational drama, to be produced at the Porte St. Martin, with all sorts of novel and marvellous effects. One of the scenes will be that of the Haymarket at night, with the dance, by the very nice people there, of Sir Roger de Coverley! Several of our street celebrities, beggars, tumblers, niggers, &c., have been engaged, to give the affair an air of greater truth.

The circumstance—which has been variously commented on in the papers—of sending out female convicts from France to be married, whether they will or no, with French convict settlers at Cayenne, is an old legal, or illegal, custom with our neighbours. Formerly, the persons who were condemned by the authorities to marry met each other in the church of Ste. Marina, where, in the earliest days, the ceremony was performed with a ring of straw.

The artistic and architectural worlds have been amused with the rhapsodies of some of our con-

temporaries with regard to the lately-finished cathedral of "Our Lady of Mercy," at Brégis-sur-Mer. To the non-professional reader it is not to state, that whatever may have been the name of the Abbé Haefliger in respect to the matter, and tact employed by him in procuring materials and ornaments for the lofty-pine edifice, nothing can be further removed from art. There are few buildings less impressive or beautiful to the educated eye than this huge

The way in which food is converted into energy power and heat is a question which has been debated among physiologists and chemists, and contending that albuminous, others that nitrogenous substances had most to do in producing a result. Prof. Donders, of Utrecht, in a paper published in a Dutch medical journal, has set forth views on the 'Constituents of Food and their Relation to Muscular Work and Animal Heat,' which is a highly-important contribution towards elucidation of the subject. He shows in his conclusions that mistaken notions prevail as to the amount of work performed. Some callings, he remarks, require rather an accurate use than great tension of the muscles, and referring although to dead food, he regards it rather as a morbid state than a vice. He finds the best muscular development under a mixed diet, muscular work and heat being both derived from the chemical energy of non-nitrogenous as well as of nitrogenous matter. The animal system needs both kinds of food, but assist in the production of heat which exists in certain relation with muscular work, and this relation becomes more favourable for work in proportion to the bodily exercise. In Dr. Moore's translation of the learned Professor's paper the whole argument is given at length, and is well worth perusal by those interested in the subject.

MR. MORBY'S COLLECTION OF MODERN HISTORICAL PICTURES is ON VIEW at the Royal Exchange Picture Gallery, 54, Cornhill. This Collection contains portraits of Holman Hunt—J. Phillip, R.A.—T. Faed, R.A.—J. Leach, R.A.—R.A.—Frith, R.A.—Rosa Bonheur—Goodall, R.A.—R.A.—Creswick, R.A.—Pickersgill, R.A.—Galders, R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Ansell, A.R.A.—Frost, R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—Linnell, sen.—Dulson, A.R.A.—Cooper, A.R.A.—Gale, R.A.—E. Hardy—John Faed—Frère—Ruisper—Bilsham—Lester—George Smith—Duvergier, &c.—Admission on presentation of address card.

SCIENCE

BRITISH ASSOCIATION.

SECTION A.—MATHEMATICAL AND PHYSICAL SCIENCE.

MONDAY.

Report of the Balloon Committee, by G. SYKES.

'Results of Balloon Ascents during the Past Year,' by Mr. J. GLAISHER.—At the first appointment of the Balloon Committee, it was charged with the determination of the law of the decrease of temperature with increase of elevation, as the primary object of research, and some two years since this law seemed to have been pretty well determined; but up to that time the experiments had been, for the most part, made in the months of summer, and during the hours of the afternoon. The Committee was then principally charged with the verifications of the results found by individual experiments at other times of the day and at other seasons of the year. In carrying out experiments, it was found that those taken in the morning hours did not accord with those taken in the afternoon hours, nor did those taken at one time of the year agree with those taken at other times. An accidental descent just at the time of sunset showed very little or no difference of temperature for a height of nearly half a mile. The question then arose as to whether it was possible, that at night the temperature might increase with elevation, and not diminish, as always heretofore had been considered and acted upon, whenever not entered into physical investigation. The Committee last year was therefore re-appointed, with special reference to night observations, at any time of the year, made within a moderate distance of the earth. To make day observations, principally in the winter months, at any hour in the day; those in summer to be made in the morning, the subject

range of temperature to be considered as of great importance. The first ascent, after the day at Birmingham, was made on October 11. When the sun had set for nearly three hours of an hour, and night had fairly set in, moon shining brightly, and the sky free from clouds, the balloon left Woolwich at 6h. 20m., the temperature at the time being 56°. Within four minutes a height of 900 feet was reached, at this time Mr. Glaisher failed in directing the light of the Davy lamp properly. When he failed, the temperature was 57°, and, increasing, reaching 1,300 feet high it had increased to 59°. The balloon then descended to 950 feet, the temperature decreased to 57° 8'. On turning to ascend again, the temperature increased to 58° at 1,950 feet high, being 3° warmer than the earth was left. On descending again, the temperature decreased to 57½° at the height of 850 feet and in the several subsequent ascensions and descensions the temperature increased with elevation and decreased on approaching the earth. On one occasion the highest temperature was met at the highest point. This result was remarkable.

The different degrees of the humidity of the air with in this ascent are no less remarkable. Considering saturated air as represented by 100, at commencement of the ascent, in the balloon, it was 95; at Greenwich Observatory it was 84; at the end of the ascent, in the balloon, it was 84 and at Greenwich it was 97. The state of the air was reversed, and would indicate that the air in the air had fallen. Its amount at the beginning of the ascent was 5 grains in a cubic foot of air, and at the same elevation was 4½ grains the same mass of air at the end of the ascent. Readings of the instruments were taken very fully, owing to the difficulty experienced in directing the light properly. Two self-registering maximum thermometers were tied down, one with a bulb resting on cotton-wool, fully exposed to sky, and the other with its bulb projecting under the supporting frame; their indexes were at the end of their columns of spirit on starting, at 56°; at every examination at each of these moments a space was found between its index which remained unmoved) and the end of the column of spirit, indicating a temperature closely approximate at all times to the temperature of the air.

Consequently, notwithstanding the clearness of the sky, the loss of heat by radiation must have been small. No ozone was shown at the Royal Observatory; but in the balloon, paper tests were used to 4, on a scale of greatest intensity covered as 10. It is impossible to convey any adequate idea of the brilliant effect of London, viewed at an elevation of 1,300 feet, on a clear night, when the air is free from mist. It seemed to the author as if he had felt when looking through a telescope at portions of the Milky Way, when the field of view appeared covered with gold-dust, as possessed of the power to see those minute points of light as brilliant stars, for certainly the brilliancy of London this night rivalled that of a view. Passing over Middlesex and parts of Buckinghamshire and Berkshire, to Highmoor, in Berkshire, the balloon descended on the farm of Mr. Reeves, at 8h. 20m., distant about 45 miles from Woolwich. The horizontal movement of the air at Greenwich in the same time was registered at 16 miles. The weather during the month of November was so boisterous to attempt an ascent at night, and no opportunity presented itself till the 2nd of December. The day was cloudless and held out the prospect of a clear sky at night. The balloon was filled and all ready before sunset. The temperature of the air just before leaving was 38½°; at 1,600 feet high, it had decreased 2°; unlike the previous ascent, the lowest temperature was always at the highest point, and the highest was at the lowest point of every ascent and descent, of which there were several instances. At the highest point reached, near nearly one mile high, the temperature was 50°, or 11° colder than when we left the earth, an hour and a half before. We then descended, and the view of ascending again still higher, when, unfortunately, at the height of 2,400 feet, the rope was thrown down by a jerk of the balloon and went out; just before this the temperature

was 32½°. On losing the light we continued the descent to the earth. At the height of 3,000 feet, the balloon changed direction, and moved with some west in the wind; on descending again we fell in with the S.E. current. Arrangements were made for ascents at night in January and February, and for several months the balloon was kindly stored at Woolwich for the use of the Committee; but for many months Mr. Glaisher was too unwell to attempt an ascent at night, and thus time passed into April. On the 29th of May, the balloon left at 6h. 14m., about 1½h. before sunset, in the hope of being able to remain in the air for as long after sunset as possible. The temperature of the air at this time was 58°, and was 58½° at Greenwich Observatory. It at once declined to 55° at 1,200 feet, and to 43° at the height of 4,200 feet; then further declined to 29½° at the height of 6,200, at 7h. 17m. On turning to descend, the temperature increased, but not uniformly, to 54° at 8h. 9m., at 440 feet above the sea, but very nearly touching the tops of the trees, being about 3° less temperature than when at the same height above the sea on rising. Our object was to be as near the earth as possible at the time of sunset, to discharge sand so quickly as to make the sun then appear to rise in the west. We did not succeed; at the time of sunset we were about 600 feet high, but directly passed over a hill, and on passing the ridge the balloon was sucked down, and it was only by a very free discharge of sand that Mr. Westcar prevented the balloon coming to the ground. We then again started upon a second ascent, to be as like the one we had just completed as we could make it. We turned to ascend at 8h. 9m.; the temperature, as before said, was 54°; again the temperature declined, but somewhat less rapidly than before. On again reaching one mile, the temperature had declined to 39°; and on reaching the height of 6,200 feet, the same elevation as we were three-quarters of an hour before sunset, the sun having now set near twenty minutes, the temperature was 35°, or about 6° warmer than when at the same elevation something more than one hour before. On turning to descend, the temperature changed very little, it being 35° to 36° for 1,000 feet downwards. It increased to 37° at 4,800, to 47° at 1,700, and to 54° at 700 feet; but here the increase was checked, and at 550 feet the temperature was 52½°; on ascending a little again the temperature increased, and decreased on descending, and was 50½° on the ground at a spot 300 feet above the sea at half-past 9 o'clock. At present at this time the temperature of the air was 52°. At the time of leaving the earth at 6¼ the air at Greenwich had but three grains of moisture in a cubic foot; at Windsor, near the Thames, there were 4½ grains. The air was damp. On ascending, the air at first became drier; but at the height of one mile was saturated, and was very nearly saturated at the same height after sunset. Thus the double ascent enables us to compare the temperatures at the same elevations, just before and just after sunset on the same day, and to estimate the amount of heat radiated from the earth at about the time of sunset till arrested at a place where the air was saturated with moisture, and was sensibly damp and cold, both before and after sunset. At heights exceeding 2,000 feet the direction of the wind was N. by W.; at the height of one mile the air was nearly calm, and at heights less than 2,000 feet it was N. by W., and these currents were met with always at those elevations. At all times during the ascent, whenever the sun shone upon a transparent bulb or a dull blackened bulb thermometer, the reading was a very little in excess of the reading of a shaded bulb, and was frequently the same even when the sun heat felt sensibly warm to ourselves. From all the experiments made it would seem that the decrease of temperature with increase of elevation is variable throughout the day, and variable in the different seasons of the year; that at about sunset the temperature varies but very little for a height of 2,000 feet; that at night, with a clear sky, from the only series of experiments made, the temperature increased with increase of elevation; that at night, with a cloudy sky, there was a small increase of temperature as the height increased; that in the double ascent on May 29, the one just

before sunset and the other after, it would seem that after radiation is set in the heat passes upwards till arrested where the air is saturated with vapour, when a heat greater by 5° was experienced after sunset than at the same elevation before sunset. Two years since, when Mr. Glaisher exhibited the mean results of the experiments then discussed, he did so with much confidence, and thought all that then was needed was to verify the results exhibited. Now, with increased knowledge, he speaks very differently, believing that many more experiments are necessary, and that they should not be confined to this country. Certain it is, from the very remarkable results obtained from the night ascents, which might, with a sufficient number of observations, have an important bearing both on the theory of astronomical refraction and on the theory of heat, that nocturnal observations deserve repetition and extension.

Report of the Rainfall Committee, by Mr. G. J. SYMONS.—The Report mentioned one striking result deduced from the Rotherham observations by Mr. Baxendell, viz., that the rain fell at a mean angular deviation from the vertical of 55° in April, 52° in May, and 36° in June, the mean of the entire series (not the mean of the monthly means) being 42° 13'. A short outline of the rainfall in the last two years was followed by details of the mode in which Mr. Symons has been enabled to draw up tables and diagrams illustrating approximately the fluctuations in the amount of rain year by year for nearly 150 years past.

'On the Spectrum of the Atmosphere and that of the Vapour of Water,' by M. JANSSEN.

'On a Portable Spectroscope and a Portable Hygrometer,' by M. JANSSEN.

Description of a New Proportion Table equivalent to a Slide-rule 13 feet 4 inches long, by Dr. T. D. EVERETT.

'On a New Process for producing Harmonious and Artistic Photographic Portraits,' by Mr. A. CLAUDET.—Perfection in the portrait would be attained, were it possible to do so, first by taking the image of the nose, then, after having altered the focus, the image of the eyes, and finally, after again altering the focus, the image of the ear, and then, from these various images, forming a collective portrait. Such an idea may appear impracticable, possibly even absurd, and it is sure on first thoughts to be rejected and condemned. Yet the author seriously proposed its adoption as one of the greatest improvements which will have been introduced in photography since its discovery.

'On the North Atlantic Telegraph,' by Mr. N. J. HOLMES.—After some introductory remarks, Mr. Holmes said:—It is well known that long, unbroken lines of submarine cables are placed at a very great disadvantage in their transmitting power, as compared with land wires; the retardation (or slowness of transmission of the currents) that takes place from the law of induction forms one very serious cause of interference. The constant flow of induced earth-currents through the wire, variable both in their intensity and direction, is likewise another disadvantage to the employment of long, unbroken lengths of submarine cables, and, however much mechanical ingenuity may overcome the retardation offered to the passage of the transmitting currents on the one hand, or the interference of the variable earth-currents on the other hand, it must be remembered that the same amount of ingenuity can with greater advantage be applied to shorter lengths of line not in themselves subjected in such a marked degree to the disturbing influences just mentioned. In every telegraph line the speed of transmission is at all times a most important element of success; and upon a long, unbroken line, where the whole capital is, as it were, absorbed and dormant during the transmission of any current, or succession of currents, this is of vital importance. Upon the speed, depends the tariff to be charged; upon the tariff, the earnings; and upon the earnings, the dividend. The magnitude and serious nature of the transmitting difficulties existing in all long, unbroken sea-lines has led to the contemplated construction of what is known as the Russian-American Line,—a land line of telegraph intended to reach New York from St. Petersburg by wires

through Siberia, and on to San Francisco, with a short sea section across Behring's Straits, a total distance of about 12,000 miles. This Russian-American line is already far advanced towards completion. By far the most important line of telegraphic communication between England and America is that to be immediately carried into effect, *vid* Scotland, the Faroe Isles, Iceland, Greenland and the coast of Labrador, and known as the North Atlantic Telegraph. A glance at the map in the direction pointed out will at once show that convenient natural landing-stations exist, breaking up the cable into four short lengths, or sections, instead of the employment by necessity of one continuous length, as between Ireland and Newfoundland. Not only will this subdivision of the cable reduce mechanical risks in submerging, but, what is of more importance, the retardation offered to the passage of the current through the several short sections is almost as nothing when compared with that of the unbroken length of 2,000 miles. Speed of transmission is obtained, and by that means a reduced tariff for public transmissions over the wire. Indeed, such will be the advantages gained in this respect, that the present rate by the Anglo-American line of 20s. per word will be charged on the new route at 2s. 6d., or even a less sum. The average depth of the ocean between Scotland and the Faroe Isles is only 150 fathoms, the greatest depth 683 fathoms. Between the Faroes and Iceland 250 fathoms, with about the same maximum depth between Iceland and Julianshaab, the intended landing-place of the cable in Greenland, the greatest depth is 1,550 fathoms; and between Greenland and Labrador rather over 2,000 fathoms. These lengths of cable and depths of ocean are both not only manageable but practicable, and no difficulties in the working exist that are not already known by reference to the practical working of existing cables under the conditions of similar lengths and depths. As regards the presence of ice, it is only at certain seasons of the year that the south-west coast of Greenland is closed. At other times this ice breaks up, and the coast is accessible to the Danish and other trading vessels frequenting the port and harbour of Julianshaab, the proposed station and landing place of the cables, and at such times the cables will be laid. Reference to the depth of the soundings up the Julianshaab Fjord will at once indicate the security of the shore-ends of the cables from interference by ice when submerged. The landing-places of the cables in Iceland are likewise in no way liable to be disturbed by ice of such a nature as to cause damage to the cable; and on the Labrador coast the risk of injury to the cable cannot be considered greater than that to which the Anglo-American shore-ends are exposed in the vicinity of the Newfoundland bank.

TUESDAY.

The PRESIDENT read the Report of the Committee on the Transmission of Sound-Signals under Water.—In the year 1826 M. Colladon made acoustical experiments in the Lake of Geneva. If these experiments should lead to an available means of communication between two ships in company at sea, or between a ship and the coast during foggy weather, an important purpose would be accomplished. At first the attention of the Committee was directed to repeating M. Colladon's experiments, substituting for the bell he employed cylindrical bars of steel from 6 to 8 feet in length, and from 1 inch to 1½ inch in diameter; these were supported on or suspended from their nodal points, and struck with hammers of different weights at one of their ends, so as to excite them longitudinally. These experiments were made in the large water-trough of the Polytechnic Institution, and subsequently in the ornamental waters of the Regent's Park; the available distance in the former case was about seventy yards. Employing Colladon's ear-trumpet, the sounds were very distinctly heard, and the sounds through the air were separated from them by a distinct interval even at this short distance. The character of the sound was, however, very different in the two cases,—that transmitted through the water being more abrupt, though in the latter they were mere

blows or impulses, as the method of excitation was not intended to produce continuous musical sounds. Prof. Hennessy, who resides on the sea-side, near Dublin, is willing to undertake such further experiments as would be required for testing the application of sound-signals in extensive spaces out at sea.—Our attention was next directed to the production of musical sounds under water. Those which appeared to be most available for this purpose were Cagniard de La Tour's syren, and pipes or whistles in which the vibrations were caused by currents of water in masses of the same liquid. When limited volumes of water were employed, powerful sounds were obtained in both cases; but in large reservoirs we met with an unexpected difficulty; for we found that musical sounds which could be heard through considerable distances in air became totally extinguished at very short distances from the point of origin in water. The rapid extinction of musical sounds in water renders it almost hopeless to employ them for communicating signals in that medium.

'On Meteoric Showers considered with reference to the Motion of the Solar System,' by Prof. HENNESSY.

'Remarks on a New Telemeter, a New Polarimeter, a New Polarizing Microscope, and various Spectroscopes,' by Mr. M. HOFMANN.

'On an improved Anemometer,' by Mr. L. P. CASELLA.

'On certain Phenomena which presented themselves in connexion with the Atlantic Cable,' by Mr. C. F. VARLEY.—The phenomena about to be described, the author, for want of a better term, described as examples of "Magneto-Electric Momentum." The cable on board the Great Eastern, nearly 2,400 miles in length, was coiled away in three tanks. On applying a battery to the near end, the distant end of the cable being insulated, a violent rush in, to charge the core as a Leyden jar, is the first phenomenon. During the first quarter of a minute the current is sent through a short circuit, to avoid injury to the galvanometer from the violence of the first rush. On removing the short circuit, the galvanometer is seen to decrease its deflection, and in some instances to go actually to the other side of zero before coming to rest. The galvanometer (a reflecting one, of Thomson's) was of such sensibility that with the battery used, 120 scale divisions represented the amount of leakage due to the entire cable. On applying to the distant end of the cable an instrument for measuring electrically the potential, the deflexion was seen to increase rather more than 1 per cent. beyond the full power of the battery, and then to settle down. This phenomenon the author saw on board the Great Eastern for the first time last year. On that occasion the cable was connected in the following way. There were 2,300 miles of cable on board, in four pieces, and the circuit was as follows. In the centre or main tank there were two coils, one a few miles in length, and the other about 800. They were so connected that the current passed first through the after tank, then through the short piece in the main tank (about forty miles), then through the 700 odd miles in the fore tank, back to the 800 miles in the centre tank. On applying a current to one end, two signals were received (one before the other) at the distant end; the short coil in the main tank acting like the primary coil of an induction machine upon the large coil in the centre tank. A still more interesting phenomenon presented itself this year upon discharging the cable, two distinct waves having been produced. The cable having been charged for some time, on connecting it to earth, a violent rush out took place through the short circuit of the galvanometer, and on removing the short circuit so as to make the current pass through the galvanometer, the deflexion due to the discharge of the remaining charge in the cable was seen to decrease and pass the zero, then increase again to a higher amount than before, and then gradually to subside entirely. This second momentum wave was a very small one, but still perfectly distinct. All these evidences combined clearly explain the causes. The magnetism caused by the first violent rush in when charging the cable, or the violent rush out when discharging it, produces a large

amount of magnetism about the end of the cable where the rush takes place. This magnetism, of course (as is well known), has a tendency to oppose the first effect, but on the charge or discharge decreasing in amount, the magnetism which had been engendered produces, as in the induction coil, a secondary current in the same direction as the first. This secondary current, added to that of the battery, causes the charge in the second and third tanks to be greater than what the battery alone was capable of producing, and in some cases this charge was sufficiently great to cause a discharge back again from the cable through the battery. When the cable was on board ship in coils, the rate of signalling through it was reduced nearly 50 per cent. by this action of coil upon coil. This brings to mind an experiment made by Prof. Henry, of Washington. It is a well-known thing that, on attempting to magnetize hard steel needles by placing them inside a helix, or even near to a straight wire, through which a Leyden jar is discharged, the magnetism of the needles will be uncertain. Prof. Henry found that the discharge of the Leyden jar was succeeded almost instantaneously by several reversals of current, that if the jar were charged with positive electricity, and discharging it through a wire or helix it was succeeded by a reverse current, or wave, and this again by several more, each one being weaker than its predecessor. He charged the jar first with positive electricity, to a very low degree, discharged it around the hard steel needle, and tested its magnetism. He found that, when the charge in the Leyden jar was very weak, the magnetism remaining in the steel needle was the same as that which would have been produced by a continuous current of positive electricity. On augmenting the charge a little, and discharging it, he found the magnetism to increase to a certain point, then to decrease, and ultimately to reverse. On augmenting the charge still further, he obtained magnetism the same as that first produced. As a positive current passing in one direction is only capable of producing one kind of magnetism, and it becomes perfectly clear that the magneto-electric action set up by the first discharge causes the Leyden jar to discharge itself and become charged for an instant with negative electricity, which again discharges itself and charges it with positive electricity, producing in that case alterations so rapid that the eye cannot detect them. The enormously long Leyden jar which the Atlantic Cable represents renders this phenomenon so slow that the eye can readily follow it, and so has confirmed Prof. Henry's deductions. While at Valentia the author carefully watched the cable as it was being paid out, and noticed that after the cable was laid, on applying a battery to Newfoundland while there was an instrument for measuring the potential at Valentia, the charge gradually augmented during the first minute and a half and then receded to about 1 or 1½ per cent., showing that this phenomenon is visible in a straight wire, though to a less degree than in a coiled cable. Electricity, *per se*, seems to have nothing analogous to momentum, for if a current of electricity be sent from a battery through a galvanometer and a shunt, that is to say, a derived circuit, and this shunt consists of bobbins wound with a single wire, in one direction, and if one of these bobbins be of such dimensions that on including it in the circuit, the deflexion will be permanently altered 5 or 6 per cent.; by the increased current passing through the galvanometer it will be found that on inserting such a coil the first shock will set the galvanometer oscillating violently to a very great extent. This is due to magneto-electric induction of the one coil upon the other, which gives the coil at the first moment a higher resistance. It is, therefore, usual in making such shunts or resistance-coils to wind them one-half in one direction, and the other half in the other direction, and such coils are free from this action because the one half neutralizes the effect of the other. Here, then, it is easy to impart all the phenomena of momentum to electricity by simply so arranging the conductor that it shall produce magnetism. This is best shown by a large electro-magnet, or induction-coil, for it will be found that the resistance offered to the current at

the first moment is greater considerably than when the iron has become magnetized, and on breaking the circuit the cessation of the magnetism carries on the current, producing those terrific effects which are found in the "Ruhmkorff" coils.

'On a New Method of Testing Electric Resistance,' by Mr. C. F. VARLEY.—In 1860, Prof. Thomson and Mr. Fleeming Jenkin invented a method of obtaining exact subdivisions of the potential of a voltaic battery. The apparatus consisted of a number of equal resistance-coils, say 100. These were connected one with one pole of the battery, and the other with the other pole. To the junction of each coil a piece of metal is attached, and a spring attached to a brass slide travelling along a square rod of the same metal traverses these different pieces, and so makes contact with whichever is desired. If the two poles of an electrometer be attached, the one to one pole of the battery and the other to the brass bar on which the slide travels, it will be found that at the one end we have the full potential power, and at the other end nothing at all, and half-way half the potential; this is too self-evident to require further explanation, and is explained in Thomson and Jenkin's patent, 1860. Prof. Thomson has recently succeeded in making reflecting electrometers of such sensibility that they will give 200 scale divisions for a variation of potential equal to one cell of Daniell's battery. In testing the Atlantic Cable this electrometer was used in the following way at Valentia, to get the potential of the ship's magnetism. The one pole of the electrometer was connected with the cable, and the other one with the slide, and by running it up and down the exact potential of the cable was measured. There were in the main slide 100 coils of 1,000 units each, and it became necessary to subdivide these again 100 times to get sufficient accuracy. Some difficulty presented itself in getting a method for subdividing these coils, and the author was fortunate enough to hit upon the following very simple method of effecting this purpose. The slide consists of two square brass bars, over each of which travels a piece of brass, to the bottom of which is attached a spring, pressing upon the studs connected with the resistance-coils. Instead of using 100 coils in the main slide, the author uses 101, and makes the two springs to embrace two coils. Thus, then, the two bars of the slide have invariably a resistance between them of 2,000 ohms. The two bars are connected with a second set of 100 coils, each coil having 20 units resistance, and the 100 coils making up precisely the same resistance as that of two of the coils in the main slide. These two circuits of 2,000 units each reduce the resistance to one-half, or to 1,000 units, so that the resistance of the 101 coils of 1,000 each is reduced to that of 100 coils. By passing the traveller along the 20 unit coils in the second slide an exact subdivision of the potential between these points is obtained; and in this way the potential of the battery is accurately and quickly subdivided to 10,000 parts. By these means Prof. Thomson has been able to introduce a method of testing, on the Wheatstone Balance system, so extremely simple that it should be made known as soon as possible. The battery is connected permanently to the main slide, so that a current is always passing through it. Its resistance, 100,000 ohms, is such that no sensible elevation of temperature is produced. The current is also passed into the cable through a definite resistance, R. At the junction between the end of the cable and the resistance R a key is attached, which is connected by either the reflecting electrometer or a reflecting galvanometer with the slides. That position is sought upon the slide which has precisely the same potential as that of the cable at the point where it joins the resistance R. If now the potential of the battery be represented by p , and the resistance of the junction of the cable with R be represented by p' , and if the two portions of the coil necessary to balance this potential be n and m , it will be evident, on the principle of the Wheatstone Balance, that $n : m :: R : \text{cable } x$ (the cable resistance). Thus, then, the resistance R being known, p and p' being known, and the resistance or position on the slide noted, the resistance of the cable is accurately obtained.

'On the Depolarization of Iron Ships, to prevent the Deviation of the Compass,' by Mr. E. HORSKINS.—The great importance of the subject induced the Lords of the Admiralty to place the Northumberland under the direction of the author, to test the practicability of his new system of depolarizing iron-clads. The magnetical conditions of the Northumberland were carefully surveyed, and the ship was found to be a very powerful magnet—the bow being the north pole and the stern a south pole. The radiating polar lines extended from the bow and stern respectively to the distance of 60 feet, within which limits the compasses were necessarily under the control of the magnetism of the ship. After she had been launched the ship was taken to the Victoria Docks, and placed in a contrary position to that which she occupied when on the slip. The ship's magnetic and polar conditions were again carefully surveyed. On the 4th of August the ship was depolarized, by means of two Grove's batteries, of five cells each, and electro-magnets, in a few hours. This experiment proved at once that the polarity acquired by an iron ship in building can be destroyed before leaving the dock; indeed, the result could not be otherwise, as it is merely applying a well-established principle to a new purpose. Magnets can be polarized and depolarized at pleasure, whatever their magnitude. A compass may now be carried round the Northumberland within four feet of the plates without being appreciably affected. Hence there can be no just excuse in future for allowing iron ships to be so much exposed to dangers owing to the errors of compasses arising from the acquired magnetism in building or from the disturbance of any masses of iron on board.

SECTION E.—GEOGRAPHY AND ETHNOLOGY.

TUESDAY.

'On the Physical Geography and Tribes of Western Equatorial Africa,' by M. P. B. DU CHAILLU.—The author commenced by giving a general description of the region of Western Equatorial Africa, which he traversed during his last journey, in 1864-5. There was a remarkable absence in the forests he explored of the species of animals which are so characteristic of Africa. He found neither lion, rhinoceros, zebra, giraffe, ostrich, eland, or gazelle. On the other hand, several peculiar species of apes were found, and it was the central home of the gorilla. The scarcity of birds and of animal life generally was also remarkable. The highest temperature observed in the interior was 98° Fahr., the lowest, 63°. In July the heat was never greater than 72°. The hottest months

were February to April, in which the rains were heaviest: as much as 7½ inches were once measured by him as having fallen within twenty-four hours. In the interior there was no distinct dry season, as on the coast. The author never, except on two occasions, saw the sky entirely free from cloud; and the cloudiness of the heavens increased the further he marched towards the east. Whilst making astronomical observations at night the sky would very often become suddenly covered by a coat of grey vapour, always coming from the south-east, and lasting an hour or two, but renewed more than once during the night. The distribution of the native tribes offered some interesting peculiarities. For instance, two tribes speaking the same language are sometimes separated by a third tribe, speaking a totally different language. The state of political disintegration is complete. No tribe is united under one chief, but is divided into many clans, each having its own chief; and in many cases each little village has its independent chief. The chiefs have not the power of life and death over their subjects, as in the tribes of Eastern Africa described by Speke, Grant and Baker. Their rule is mild and patriarchal. The population everywhere was scanty, and the distinctness of the tribes he believed to have been kept up by their not having come in contact in their migrations, but, owing to the wide extent of unoccupied territory, settled down without knowing of the existence of neighbours. It is only on the river banks that they have come into contact, as all the tribes press towards the rivers. There are no cannibals south of the equator. The curious hairy dwarfs live scattered in small hordes amongst other tribes. He found a few words in the native languages almost identical with words in the East African languages. It was an interesting inquiry, what existed in the thousand miles of unexplored country lying between the author's furthest point and the shores of the Albert Nyanza? We might conclude, however, that it was a country of considerable elevation, and probably wooded, varied and picturesque, for Baker saw towards the west a range of mountains, and the country from the west coast becomes gradually higher towards the east. Considering, also, the humidity of the climate, and the small size of the rivers which find their way into the sea, it might be concluded that there was a great drainage of waters towards some inland sea, or that there were other great lakes on the equator west of Albert Nyanza.

Mr. J. R. HIND stated that he had inspected the original records of M. Du Chaillu's astronomical observations, and that they were regular and accurate.

Mr. G. GROVE, Honorary Secretary to the Palestine Exploration Fund,—an association formed for the purpose of obtaining exact information on the physical features, antiquities, climate, &c. of the Holy Land,—read a Report on the Topographical Results of the first Expedition sent out by that association, towards which, at the last meeting, a grant of 100l. had been made by the General Committee. The expedition was placed under the charge of Capt. C. W. Wilson, R.E., with whom was associated Lieut. Anderson, R.E., and Corporal Phillips, as photographer. The party were well supplied with chronometers and other instruments, and their instructions were to make accurate and systematic observations between Damascus and Jerusalem. They were constantly occupied from December 1865 to May 1866. The present Report embraced the topographical investigations only, which, however, were very important. Forty-nine separate places, the positions of which were before unknown, have been accurately fixed, both in longitude and latitude, detailed reconnaissance sketches for maps have been made, on a large scale, of the whole backbone of the country from north to south, and of several outlying districts, such as the basin of the Lake of Galilee, the district of Samaria, and the valleys between Jerusalem and the sea. Passages were read from reports by Capt. Wilson and Mr. Anderson, detailing the method pursued in obtaining the observations, and testifying how carefully and systematically their work was done. An arrangement had been made with Mr. Murray by which these maps would very

shortly be made public, under the superintendence of Mr. Grove himself. A very substantial step has been taken by this association towards putting the map of the Holy Land right, and one which should encourage its supporters to still further efforts. The Report comprised a recommendation by Capt. Wilson that stations should be established and supplied with instruments for regular meteorological observations. Competent persons resident in the country had promised their services, and thus a great want would be supplied, as no observations on climate have been taken, except at Jerusalem and Damascus. Mr. Grove announced the intention of the association to persevere until every square mile in Palestine has been properly and accurately surveyed and mapped; till every mound of ruins has been examined and sifted; the name of every village ascertained, recorded, and compared with the lists in the Bible; till all the ancient roads have been traced; the geology made out; the natural history and botany fully known. In furtherance of these intentions, a second expedition will shortly be sent out to excavate in detail at Capernaum, Cana, Samaria, Nazareth, and Jerusalem. Another party (of whom it was hoped Mr. Prestwich, the eminent geologist, would be chief) will attack the geology and the natural history, so ably begun by Mr. Tristram. A work on the modern Syrians is in preparation by Mr. Rogers, of Damascus, under the encouragement of the Palestine Fund, as a companion to Lane's 'Modern Egyptians.' The names of villages, &c., are being collected by a competent resident Arabic scholar, and five meteorological stations are to be appointed, to which instruments will be furnished under the sanction of the Kew Committee.—In conclusion, Mr. Grove drew the attention of the meeting to the importance of these researches as corroborating the statements of the Bible, which purported to be mainly a record of facts, and of facts about certain definite localities. Hitherto the Book has been tested by internal evidence chiefly; the time has arrived when other tests must be applied to it—the tests afforded by a comparison of its descriptions with the country it describes. This test he was confident it would stand, and he called on the members of the British Association to support the investigation.

The Rev. H. B. TRISTRAM warmly supported the project. He insisted on the importance of the leisure and general facilities afforded by such an expedition, and urged explorations on the east of Jordan, where, though the towns might not have been so important as those on the west, yet they had the advantage of having been less disturbed.

'On the Pangong Lake, in Thibet,' by Capt. GODWIN-AUSTEN.

'On some of the Bearings of Archaeology upon certain Ethnological Problems and Researches,' by Mr. R. DUNN.

'On a Proposed Ethnological Congress at Calcutta,' by Sir W. ELLIOTT.—A congress of a novel kind has recently been proposed at Calcutta by Dr. Fayer, namely, an assemblage of living examples of all the races of men of the old world for ethnological study; to take place on the occasion of the Industrial Exhibition to be held in 1869-70. The proposition has been warmly taken up by the Asiatic Society of Bengal. At the same time the Council of the Society suggested a modified scheme, confined to the subordinate governments of Bengal, for an ethnological congress of all the tribes found in Bengal, Nipal, Burma, the Andaman and Nicobar Islands; to form part of the Local Agricultural Exhibition of 1867-8. Sir W. Elliott proposed in his paper a third scheme, intermediate between these two, namely, an assemblage of individuals of all the races found in British India. This would be more practicable than the larger scheme, and more useful than the smaller. To show the large field for ethnological comparison in this assemblage, the existing population was described as consisting of three principal divisions. 1. As descended from aboriginal races and the servile classes; 2. From the Tamil or Dravidian races; 3. From Hindi immigrants, whose language has been modified and perfected by Sanscrit. The first are represented by the small communities inhabiting mountain regions, dense forests, and

speaking the most ancient dialects deemed of Turanian origin. The second contains the more civilized Tamil peoples. The servile classes have naturally adopted the modern or polished Tamil, but that it is foreign to them is shown by their inability to pronounce words containing a remarkable Tamil letter, equally a Shibboleth to Europeans, and which is generally rendered by an *l*, or sometimes by an *r*. A striking characteristic of all the aboriginal races is their demonolatry, in the sense of the Greek word. They honour the spirits of their ancestors as beneficent beings. A festival observed annually, or at longer intervals, in honour of the village goddess, to propitiate her protection from loss of crops or epidemic disease, affords a curious illustration of the religious belief of this class. The officiating priests all belong to the servile class; and the ceremonies consist of offerings of cattle and saturnalia. The author referred to the Dhangars as remarkable for their love of truth and their similarity in this respect to the Gonds of Central India and the Sonthals of the North.

'On the North-East Province of Madagascar,' by Dr. RYAN, Bishop of Mauritius.—The author narrated a visit which he had recently made to the province of Vohimarina in north-east Madagascar, and gave numerous details of the harbours, towns, productions, native tribes, and government of the various districts. The province on the whole is mountainous, but possesses, along the courses of its numerous rivers, large and fertile valleys. The Betaimsaraka tribe was considered superior to the dominant Hovas in many respects. They keep their houses clean and neat. Many of them have beautifully fair countenances and a European cast of features.

WEDNESDAY.

'On the Reported Discovery of the Remains of Leichhardt in Australia,' by Sir R. I. MURCHISON.—Sir Roderick announced that, on the previous day, he had received from Dr. F. Mueller, of Melbourne, the welcome news that the Leichhardt Search Expedition, now in the interior of Australia, had discovered remains of the lost explorer. The news had been sent by Dr. Mueller in great haste, —the departure of the mail having been delayed a short time to admit of his forwarding the despatch, —and no details of the discovery were given. Sir Roderick gave a sketch of the movements of the Leichhardt Search Expedition down to the time when the latest authentic information had been received. It had met with great losses in horses and matériel at Cooper's Creek; but the leader, Mr. Duncan McIntyre, had succeeded in pushing his way across to the banks of the Flinders river, which flows into the Gulf of Carpentaria.

'On the Researches of Livingstone,' by Mr. W. F. WEBB.—Mr. Webb read an extract from a letter which he had just received from Dr. Kirk, of Zanzibar, stating that Dr. Livingstone's expedition had reached the residence of a chief, about 130 miles up the Rovuma river; and that, having found the chief a good man, he intended to make this place the starting-point for his exploration towards the northern end of Lake Nyassa and the southern end of Lake Tanganyika. Mr. Webb related portions of his own experience in the interior of Southern Africa, where he met with Dr. Livingstone in the early part of his career.

'Observations on the Character of the Negro Tribes of Central Africa,' by Sir S. BAKER.—In this discourse Sir Samuel passed in review the various tribes he had visited on his journey to the region of the Equatorial Lakes of the Nile, and in a series of sketches illustrated the principle that the character of the tribes depended on the physical conditions and productions of the locality they inhabited. He said that true negroes commenced, in ascending from Egypt, at 15° north latitude. The first tribes he met with were those inhabiting the region of morasses extending on each side the White Nile to about 5° N. lat. These were the lowest, both in corporeal condition and moral character. Their forms were emaciated and filthy; they went without clothing, had no religion, and their cookery consisted in grinding the bones of animals between stones to make soup of. No iron ore was found in this region, and consequently they were deprived

of the great civilizing advantages attendant on the art of working this metal. Other tribes helped by iron south who practise this art have been helped by it to attain a considerable degree of culture. The iron weapons of the Latooka tribe are of exquisite workmanship, and the Unyoro people have even invented a kind of hoe, which Europeans might imitate to their advantage. All the tribes who are thus favoured live in the elevated lands near the equator, and the iron dust which supplies them with the metal is found in the mountains. The presence of the Tsetse fly has a remarkable indirect influence on the civilization of the tribes. This fly is most capricious in its distribution—present in one area of country and absent from another. Wherever it is present no cattle can be kept; consequently the natives are deprived of this civilizing influence, for the possession of cattle elevates the character of a tribe in various ways; it promotes industry, ensures a supply of nourishing food, and, by the necessity of defending the herds against all comers, develops a warlike spirit and organisation. The Unyoro people, under the influence of these local advantages, have become the most advanced nation in Central Africa; they are well clothed and clean in their persons, courteous and dignified in demeanour, and susceptible of enlarged political organization. The speaker pointed out, in a clear manner, the way in which the tribes of Central Africa may be brought under the influence of European civilization and into an intercourse which would be beneficial both to us and to them. He showed that formerly a considerable trade existed between the east coast and the Equatorial Lakes, and that the line of trade extended south and north along their shores. Ptolemy was indebted for his knowledge of these lakes to the traders of his time. A trade with Europe might be developed along this line; but before any beneficial intercourse can be commenced the internal slave-trade must be extinguished. He gave his view of the negro character in general, and stated, as his conviction, that it was improvable only under the wise and considerate guidance of the white man. Commerce, properly conducted, would ultimately civilise the negroes of these rich countries of Central Africa.

SECTION F.—ECONOMIC SCIENCE AND STATISTICS.

WEDNESDAY.

'On Hindrances to the Success of Popular Education,' by the Rev. C. SEWELL.—The author said that our imperfect success in education must not be charged upon the construction of the system we had adopted, but upon its administration. It was almost impossible to plant an organization in an inorganic mass so as to be prolific; and for all purposes of popular education England was thoroughly inorganic. Her education had always been done for her. What popular education she had had in past generations had come from charity, neither general nor systematic in its operation. What little the State had done had been done by the free royal bounty of an Edward or an Elizabeth. England had never felt her want of education sufficiently keenly to submit to direction in the matter. One great secret of the success of popular education abroad is, that the preparation of a system of instruction and the preparation of the people to receive and use it had gone hand in hand. The absence of such a natural organization to work out the system of education was a great hindrance to our success. It was the statesman's duty to supply such an organization, and it was the educator's to supply a system and methods of instruction. It would be no unworthy occupation for a statesman to win the legislature to sanction an ordinance which should compel every part of our country to provide the means of education for the poor, as it is already compelled to find them food and shelter in distress. It appeared to some not impracticable for the religious bodies and the State to work in real harmony together, and not, as it were, upon the terms of an armed truce. After dwelling on the fact that many children were not sent to school for various reasons, such as the ignorance and greed of the parents, he said he doubted whether it would be wrong to impose some restriction on a parent's right to his child's labour when he had not intelligence enough to

consult that child's interest. Whether the State regulated the attendance of children, or, the next best thing, regulated their absence, it would be intolerable that the State should organize so great a boon and her subjects be left at liberty to neglect or ignore it.

Sir JOHN BOWRING contrasted our imperfect educational organization with that of China, where the competition exceeded all belief. Primary education was provided in all the villages, and the competitive examinations were entered into by children of eight and ten, and men of seventy and eighty. He had known men die under the influences of excitement, a man's success often provoking in those of his own community a delirium of joy. The humblest lads, from the obscurest villages, were often elevated to the highest offices of the state, solely because they distinguished themselves in these examinations. Sir John also referred to a canton of Switzerland, in which everybody was instructed, and in which more money was voted for public instruction than for any other object. He found women there following trades which required delicate manipulation, and earning 7s. and 8s. a day. They were making such things as clocks and musical boxes, which the men of Coventry would not allow women to learn to construct, lest the rate of wages should be lowered. The Chinese could impart to bronze and brass the sharpness of steel. Would it not be worth our while to acquire the art of doing that from the Chinese?—The Rev. W. CAINE, of Manchester, reminded the Section that there was a canon of the Church of England which required the clergymen of a parish to instruct the ignorant, both old and young, every Sunday afternoon, and, further, excommunicate a master and mistress who did not send a servant to receive such instruction. For two years he had personally obeyed the canon. Living as he did amongst the people, he believed that it was almost wrong to be giving help to the working people to educate their children. It took away from them all idea of independence. He found that the people who were thus assisted in the education of their children wasted their money on useless articles, whilst they would object to spend 2d. a week in education. If he were an autocrat, he would punish persons whose children were ignorant. With him it was rather an object to remove some of the obstacles to education, by taking temptations out of the way of the people, than to encourage education by assistance.

'On the Transfer of Real Property,' by Mr. T. BROWN.—It was calculated, he said, that one-third of the land in England was mortgaged. Every mortgage might be estimated to cost 5l., exclusive of stamps, and to be of an average duration of only five or six years. We could, therefore, readily gather what an immense sum was annually paid for the preparation of mortgage deeds alone. Perhaps in no case were the fictions of the law better exemplified than in a mortgage-deed, which was nothing better than a sham. Two-thirds of the matter was the repetition of an established form. The amount of the remuneration of the lawyers depended on the length of the deeds; and for short deeds, therefore, the payments would be ridiculously small. If it should be decided to abolish the present system of conveyance, on the ground of its artificial character, and there being no longer any reason for distinguishing between real and personal property, the time would be opportune, especially as the Board of Trade were obtaining statistical details to show the acreage of England, and the owners of landed property and the modes of cultivation, to attach to some standard survey map of England, and duly apportion by figures for reference all the landed property of England. It might be allotted, on the principle of a limited liability company, into so many shares, say of one acre each. These might be issued in the form of scrip, from a foot-registry, to the present owners of the land, upon their affording satisfactory proof of ownership; and they would then be transferable in the same manner as other shares. This plan need in no measure interfere with the law of primogeniture. The author deprecated any rash change.

'On the Violation of the Principles of Economic

Science caused by the Law of Distraint for Rent,' by Mr. C. TEBBUTT.—The author contended that the law of distraint for rent was a violation of the principles of Economic Science, especially as regarded land, the owner of which often had a security not possessed in houses, in the investment of capital, which was irremovable. The law secured rent to the landlord, even if he had so neglected his duty as to choose for his tenant a man utterly without skill, character or capital. The violation of its equity was equalled by its impolicy, as it affected the occupation and cultivation of the soil. Ownership was a great inducement to the development of the cultivation of the soil; but in England little land was owned by its cultivator. It was needful that in an arrangement between landlord and tenant nothing should interrupt the play of motive and interest. Yet at this point in stepped the law of distraint, giving absolute security to the landlord, and removing from his mind that pressure of motive and interest which rendered it needful for him to have the best tenant he could obtain, and to make every reasonable concession to obtain this end. The whole equity of the transaction was lost; little weight was given to the skill and capital of the tenant; and the landlord was enabled without danger of the loss of rent to bring in any man of straw to compete with the tenant of capital and skill. A lower standard of cultivation prevailed generally than would be the case if the disturbing law were entirely abolished.
